Campbell and Hayes divided first; Haight, second.

Ties on 13 for third:—

Castle	1 0 0 — 1	White	1 0 1 – 2
Hughes	1 1 1 — 3		

SPECIAL PRIZES.

For best average score in shoots Nos. 2, 3, and 6, a fine setter dog (thoroughly broken), donated by E. M. Quimby, Morristown, N. J.; value $100. Won by Mr. Francis.

For best average score of all the shoots combined except Shoot No. 5, a Remington new model extension rib pigeon gun, 32 inch, No. 10 gauge, 10 lbs., donated by A. Alford, No. 283 Broadway, New York; value $125. Won by Mr. Haight.

FOREST AND STREAM MEDAL, COMPETED FOR AT THE NEW JERSEY STATE TOURNAMENT.

For best average score in shoots Nos. 3, 6, and 7, an elegant gold badge, presented by FOREST AND STREAM Publishing Co., No. 111 Fulton St., New York; value $50.

Messrs. Frances and J. Lamberson tied for the FOREST AND STREAM badge; shot off in this order: First, two pair of birds at 18 yards; second, three single rises at 21 yards, three single at 26 yards, and all ties to be shot off at 26 yards. Following is the score:—

J. Lambertson	11 11 011 111 111 111 111 011—2[illegible]
Frances	11 11 111 011 111 111 111 111—21

Taken altogether the shoot was a grand success, and Messrs Eaton and Thompson deserve great credit for the way they managed it.

NEW YORK GUN CLUB—*Bergen Point, Oct. 25th.*—In the first event, which was a match between Colonel Butler and E. G. Murphy, fifty birds each, thirty yards' rise, for $500 a side, Colonel Butler won by a bird, killing 43 out of 50.

In the contest for the Challenge Cup, which has to be won three times in succession, there were eleven entries. Mr. W. Murphy won the match and the cup by a clean score of ten birds. He used a Greener hammerless gun. The subjoined is the full score:—

Name.	*Yards Rise.*		*Killed.*
W. Murphy	27	1 1 1 1 1 1 1 1 1 1	—10
W. Salmon	27	1* 1 1 1 1 1 1 1 1 1	— 9

Milner	25	0 0 1 0* 1 1 1 1 0	— 5
Armstrong	30	0* 1 1 0* 1 1 1	— 5
Murphy	30	1* 1 0 1 1	— 4
Edmunds	39	1 1 1* 0 [illegible]	— 3
Warren	29	0 1 1 1 1 0 0	— 3
Long	26	1 1 1 0 0	— 3

LONG ISLAND—*Westbrook, Oct. 18th.*—Match at 25 birds each; Hurlingham rules:—

Mr. Carroll Livingston, 30 yards, 11111, 11111, 11111, 11010, 01111. Killed, 22; missed, 3.

Mr. T. Van Buren, 27½ yards, 01101, 11111, 11111, 11111, 11110. Killed, 22; missed, 3.

Mr. J. G. Heckscher, 26 yards, 11111, 11101, 01110, 11111, 11111. Killed, 22; missed, 3.

Mr. R. Townsend, 26 yards, 10110, 10101, 01110, 11111, 1110. Killed, 17; missed, 7.

Mr. Perry Belmont, 29 yards, 10010, 01101, 01110. Killed, 8; missed, 7.

Mr. W. K. Vanderbilt, 23 yards, 00101, 11001, 0110. Killed, 7, missed, 7.

Mr. T. De Forest Grant, 28 yards, 11001, 01101, 000. Killed, 6 missed, 7.

Mr. W. Murphy, 30 yards, 00001, 01011, 0. Killed, 4; missed, 7.

Livingston won ties, with 4 straight, at 30 yards.

FOUNTAIN GUN CLUB.—*Brooklyn Driving Park, L. I., Oct., 6th.*—Regular monthly shoot for club badge, and a beautiful specimen of quail mounted on a panel, pre-

sented by J. H. Batty, of Parkville, L. I., to go to winner of badge. The following is the score :—

Brookfield, Oct. 14th.—There was a grand union glass-ball shoot at Lake Side Park on Saturday of last week. Thirty-eight participants were present from the Brookfields and Spencer, twelve from North Brookfield, eleven from Spencer, five from East Brookfield, and ten from Brookfield. Twenty balls apiece were shot at, and out of a possible 760, 429 balls were broken—an average of a trifle over 11 each out of 20. Out of this number E. M. Bliss, of Spencer, and his men got 206, and L. E. Bliss, of North Brookfield, and men got 223, beating the former by 17. The best score was made by Josiah Hobbs, of East Brookfield, who broke 19 out of 20. The twelve men from North Brookfield broke 143 out of a possible 240 ; the eleven from Spencer, 129 out of 220 ; the five from East Brookfield, 52 out of 100 ; and the ten from Brookfield, 105 out of 200. The following is the score complete :

LOG OF THE WAVE.

OCEAN MATCH, S. Y. C., CENTER CUP.

Entered :—*Mischief*, 68 ft. long ; *Regina*, 58 ft. ; *Wave*, 41 ft. 10 in. ; *Blanche*, 41 ft.

Wave crossed line Sandy Hook Lightship, 11.15 A. M., *Mischief* and *Regina* leading, *Blanche* some minutes behind, ran close in shore in hopes of getting land breeze, closed up with the *Regina* and *Mischief*; very light wind, which fanned us. Later the *Regina* and *Mischief* left us far behind.

Wind baffling and light all night. Friday 17th, wind light and ahead. 4 o'clock P. M., made out the *Blanche* astern about seven miles off, coming up with a favoring wind, more to the South. About same time made out the *Regina*. *Wave* went about to intercept the wind and meet it about half mile to leaward of the *Blanche*, then went about and gradually worked across the course of the *Blanche* heading for Cape May Lightship. We were then off Absecom. At sunset the *Blanche* was hull down to leeward and astern. The wind was freshing all this time till we reached the lightship, when it blew very hard. We rounded at 7.50 P. M. At this time the smoky haze had somewhat lifted which earlier had annoyed us in sighting the light, although Capt. Greenwood had made no mistake in his bearings. In compliance with the regulation we burned within a half mile of the light a Seawanhaka Club Signal (Costan light) and as we turned the letter "W," hailing and getting the time of the *Mischief* and *Regina*. The *Wave* carried her full jib and mainsail and topsail, and at no time did we carry less ; we did not set our storm jib.

About midnight, Capt. Greenwood was at the wheel, and reported seeing a light burned by a sloop which resembled the *Blanche*, but he was not sure, and did know what the signal meant.

During Friday night the sea was very heavy, but it did not break over the *Wave*, she proving herself, considering her dimensions, an excellent sea boat. About 6 A.M. Saturday morning, in attempting to carry boomed out our large jib-topsail, the light spar used for the purpose was snapped ; with that exception we broke nothing, nor did we carry away anything.

The *Wave* rounded Sandy Hook lightship Saturday, 10 o'clock A.M., hailing the ship and getting the time of the *Mischief* and *Regina*, and requesting them to take the time of the *Wave*.

With a regular time allowance the *Regina* would have been beaten by the *Wave* and, we believe, the *Mischief* also, but we have not all her measurements. The *Blanche* came in later, after not having rounded either the Cape May or Sandy Hook lightships.

We arrived at Court street, Brooklyn, the other yachts rendezvousing at Staten Island, about noon. Being desirous of getting back to his family at Tarrytown the owner of the *Wave* took the first train up the river. Mr. Williams, the only one who accompanied him during the race outside of the crew, sent notice of her arrival to the *Herald* office, which news was neglected or overlooked. Mr. Williams then took an early train to Princeton ; hence the wild rumors published in the papers which have not yet been properly contradicted, and which it is hoped this account will finally set at rest.

A HANDSOME BARGE.—Mr. Geo. Roahre, of Harlem, has recently finished for Philadelphia parties a very fine six oared barge, which promises to be a fast boat, and pulling strictly from the gunwale, cannot be ruled out from the Schuylkill races. The boat has a smooth bottom, being built of cedar with flush seams, only three lengths of veneer being used from stem to stern ; the framing is of oak, and gunwales and trimmings of white pine. Her model is handsome, and owing to a flat floor amidships she will draw little water and make a very steady ship. She is 41 feet long, extreme beam 3 feet, 10½ inches across gunwale; depth aft 13 inches, amidships 12½ and 13½ forward. Pulls six oars with coxswain and will be a valuable addition to the navy on the Schuylkill.

TO AMERICAN YACHTSMEN.—For complete records of all yacht races in England, as well as for a great variety of other matter of interest, such as cruises and yachting tales, read *Hunt's Yachting Magazine*, established 1852. Can be had of booksellers generally, or direct from Hunt & Co., 119 Church Street, Edgware Road, London, E. C., England. Published monthly, one shilling sterling per number.—[*Adv.*

Rational Pastimes.

THE GAME OF CRICKET.

DAFT'S ENGLISH ELEVEN VS. PHILADELPHIA FIFTEEN.—This grand international contest was commenced on the Germantown Cricket Club grounds, at Nicetown, Phila., on Friday, Oct. 10th, just twenty years to a day after the first international match played by George Parr's English professional eleven at Camac's Woods, Philadelphia, in 1859. It was continued on Saturday, and finished on Monday the 11th inst. Taking the match, all in all, in the opinion of the writer of this report, who, by the way, has witnessed every international game of importance ever played in the East, it was the most perfect exhibition of cricket ever seen in America. Although "Old Prob" predicted rain in the morning papers of each day's play, the weather was fine throughout, and visitors from all parts of the country were hospitably entertained at the club house during the progress of the match ; Boston, New York and other cricket centers sending large delegations. It was really startling to peer under the hats of the crowd, that framed the ground, and recognize the many faces of old players, whose names were familiar to the cricketing public of twenty years ago. It was a grand meeting of the clans, and many an old chap elbowed his way out of the dense throng and lost his seat for the day, to slap some old crony on the back, and over a glass of beer to talk of how they used, in the days gone by, to bowl each other out. There were so many present who seemed to have walked out of some old cricket picture, that in spite of yearly experience, we were fain to make the comparison of the cricketer of over twenty years ago and the one of to-day.

To those who remember the tinted engraving of William Lillywhite, as he appeared at Lord's Grounds, on July 25, "1853," with a huge high hat, and his spacious waist encircled by a girth, which would have enabled a draught horse to breathe at pleasure, it will be easy to depict the typical cricketer of the past. How changed is the one of to-day ; for the game is now courted both in England and America by much younger men, the best of whom are trimly built and well ribbed up, and much better fitted to play the old game in its new way. Who ever saw any cricketer of the last decade field with such quickness and accuracy, as both Ulyett and Selby did in this match ; was it not the perfection of the improved present day cricket ? See with what skill, the fast high deliveries had to be played as they bumped up from the very fiery and dusty wicket. No old slow coach could paddle away at them and not be caught. It required the quick and supple wrist of youth to meet them full, and keep them down, and even this did not always prevail ; for it turned out as Capt. Daft predicted, before a ball was bowled in the match, that *his* men would give chances from time to time, and the six catches made by the ever-alert Van Rensselaer, behind the wicket, proved that his prophecy was right.

This match was an illustration of the very great improvement in the game as played at this time, and of the great stride which has been taken by its American exponents. To make a comparison of the past and present, the figures of scores of twenty years ago have but little to do with it. The Philadelphia boys played the game well, and it is the excellent style of the young cricketers, like Thayer, that demonstrates the advancement, and points to whether we may expect to see in the future. This, aided with proper professional tuition, shows that it would not take the half of another score of years to produce an eleven that would hold its own against the best of comers.

THE GAME.

Capt. George Newhall having won the toss, elected to take the field, and at 12.15 P.M. Capt. Daft sent in Ulyett and Oscroft, to the bowling of C. Newhall (fast round) and D. Newhall (slow round). C. Newhall opened from the lower end, and his first ball went spinning to the ropes off Ulyett's bat—a very fine drive for 4. D. Newhall's first over was badly punished for 5 runs. Then both batsmen settled down to steady play, and continued to score off each bowler, until the fins showed 20 up, when Ulyett was well caught at slip by Van Rensselaer, off the fast bowler for 8,—20—1—8. Shrewsbury joined Oscroft, and after one had been added to the score, the new man on one of the finest late cuts ever witnessed on the Germantown grounds, was badly run out by his partner—21—2—1. Selby joined Oscroft, and by steady play the score crept up to 34, when C. Newhall got in on Selby's off stick—34—3—8. Capt. Daft filled the vacancy, and on his way to the wick-

ets received quite an ovation from the crowd which numbered over five thousand. The bowling of the brothers was of such good length, and so very straight, that when dinner was called at 2 P.M., Daft had been defending his wicket for forty minutes for only one run. The score standing at 44. After the intermission the innings was resumed at 2:45 P.M. Oscroft continued to pile up the runs with splendid hard cutting and fine all-round play; at the same time astonishing the spectators by stopping the shooters which C. Newhall from time to time put down, the perfect defence, and several magnificent cuts from Daft illustrating that he has been justly termed "the model bat of England." When the score had reached 66, Daft unluckily played a high one from C. Newhall on his wicket; he had been at the wickets over an hour for the small score of 5.—66—4—5. Barnes partnered Oscroft, and runs came but slowly, though the fielding was far below the usual Philadelphia average. Van Rensallaer who stood behind the wicket for the fast bowler, did excellently, but Butcher who performed the same office for the slows, was seemingly out of place; several overthrows at his end showing that a long stop would have been advisable, particularly with so many men in the field. When six more runs had been added to the score, Barnes' middle stump fell to a beauty from C. Newhall—72—5—3. Bates was Oscroft's sixth partner, and after getting a single was badly missed at mid-off by Geo. Newhall off C. Newhall. This error proved to be very expensive, for both batsmen got hold of the bowling, Bates hitting a 1, 2, 3, 4, and a 5, as the score book showed, in succession; the last hit being a gigantic smite to deep long on over the boundary ropes, with 101 up. Clark (fast round) relieved D. Newhall, and Law (medium round) took C. Newhall's end. After fifteen runs had been added, C. Newhall resumed his place, and Bates hit him splendidly to leg for 4. Oscroft was in the next over caught behind the wickets by Van Rensallaer off Clark. He had been at the bat three hours and forty-five minutes, and had played a wonderfully patient inning for 62 runs, the highest score of the match—120—6—62. Emmett followed, and Bates skyed a short pitch, one of Clark's, but though it dropped in R. Newhall's hands at deep long on, several thousand groans announced that it had not been held. After this second life Bates continued to score brilliantly until he was "run out" for the goodly total of 41.—138—7—41. Shaw joined Emmett, and just as time was being called at 5 P.M., the former lost his off-stump to C. Newhall—146—8—1. The crowd had been increased during the afternoon to over seven thousand, but although the excellent batting of the professionals had been applauded, there was a feeling of keen disappointment at the poor fielding of the Philadelphia team which on former occasions has been always good.

On Saturday at 11:20 A.M. Emmett and Pender resumed their places at the wickets, to the bowling of the brothers Newhall. Only three runs were added to the score of the first day's play; Emmett and Morley being both caught behind the wicket by Van Rensallaer; the inning closing for 149. Exactly at noon the English took the field, and before C. Newhall and Clark went to the wickets Ulyett gave an exhibition of wonderfully accurate shying; in three successive throws at the wicket from a distance of over twenty-five yards he knocked the leg, middle, and off stumps out of the ground. This performance was cheered to the echo. Shaw (slow round) opened the bowling from the club house end, and C. Newhall was at once caught at slip by Shrewsbury—0—1—0. Large filled the vacancy, and Morley (left fast round) took Clark's middle stump on an overpitched ball—0—2—0. R. Newhall joined Large, and at once opened his shoulders to a tice from Morley, which went to deep long off for 3. Both bats men then began an excellent display of cricket, the bowling and fielding being by far the best ever seen in this country. When the score had advanced to 23, R. Newhall in playing back to one of Shaw's, lost his off-stump—23—3—13. Caldwell followed, and after getting a double over cover point head, played a ball from Morley on his wicket—28—4—3. G. Newhall joined Large, and without scoring was splendidly caught by Ulyett at cover point—38—5—0. The fielding of Ulyett all through this innings was the finest ever witnessed, and Capt. Daft remarked that he had never known his team to do better, even in England. The spectators, which now numbered over 11,000—the largest number ever seen on a cricket field in this country—became wild with delight, and for a time neglected to applaud the byes with the same zest as if they were splendid cuts or hits. Brewster was Large's fifth partner, and without increasing the score poked one of Shaw's into Shrewsbury's right hand, at slip—30—6—0. Thayer fell to one of Shaw's break-backs—38—7—3. John Hargreave was finely thrown out by Barnes—38—8—0. R. Hargreave was Large's eighth partner; he opened with a fine out for 2, off Shaw, a drive off Morley for a double, and a beautiful cut for same amount. Large then snicked one into Shrewsbury's hands at slip, and retired, after being at the wickets one hour and three quarters for the top score—50—9—17. Law joined R. Hargreaves; the latter, after making the first leg hit of the inning, fell an easy victim to Daft at mid-off—52—10—8. At 3 P.M. there was an hour's intermission for dinner, and the play was then continued with D. Newhall and Law at the bat; the latter at once let Shaw get past him—58—11—2. Brown was not long enough at the wicket to show what he could do; he had but two balls from Shaw—58—12—0. Van Rensallear came next, and swiped about, much to the delight of the crowd. One was a mighty soaring drive. Shaw somewhat later, however, was seen to smile—68—13—8. Butcher, the last man, was the seventh on his side who did not trouble the scorers—70—14—0. D. Newhall carried his bat for a good eight, thus saving his side from following their inning by one run. Total 70. England's second venture was commenced at 3:40 P.M. Oscroft and Ulyett were the first to go to the wickets against the attacks of the Newhall brothers. Both batsmen completely collared the bowling, and by magnificent all-round play, assisted by a badly placed field, the score advanced to 44. Clark then took the ball from D. Newhall, and Ulyett was caught behind the wicket by the "nippy," Van Rensallaer off a high one from C. Newhall. The partnership had only lasted thirty-five minutes, and the scoring had been very rapid—46—1—16. Shrewsbury followed, and Clark got his leg-stump the first over—47—2—0. Selby joined Oscroft, and was finely caught by Van Rensallaer off Clark, without assisting the score—47—3—0. Bates succeeded, and when the score had increased to 54 Clark tumbled Oscroft's leg stump. Oscroft's inning for 30 had lasted an hour and a quarter and was the perfection of steady cricket. In England he has been nick-named "Job," on account of the many patient innings he has been known to play—66—4—30. Barnes was Bate's *vis-a-vis*, and the latter opened his shoulders and the eye of the throng by several splendidly hard drives and cuts. One hit was for 5, over the ropes on the on side, but a shooter from C. Newhall at last ended the fine young batsman's inning—68—5—12. With the fall of this wicket the stumps were drawn for the day. On Monday morning the sky was clear and bright, and the heat was intense; so remarkably hot was "Old Sol" that the "Britishers" must have believed in the truth of what Major Pawkins told Martin Chuzzlewit, that, "You will see the sun shine in America!" The game was resumed at 11:15 A.M., with Barnes and Daft at the wickets to the bowling of C. Newhall and Clark. Daft contributed 8, and was out to a bailer from Clark—81—7—8. Emmett joined Barnes, and the latter helped to increase the score by fine cutting and forward play, when he failed to stop a straight one from C. Newhall—111—8—14. Shaw partnered Emmett, and after both D. Newhall and Clark had alternated at the club house end, the latter was finely caught by Brewster at cover-point off C. Newhall. His 35 was the top score of the inning and was made up by hard and clean hitting; it contained three 4's, two 3's, and three 2's—126—9—35. Pinder followed, and Shaw fell to Clark, who was bowling splendidly, though the bumpy state of the ground favored the high deliveries—131—10—5. Morley the last man, was well caught by Brewster at long on, and the inning closed for 133. With 212 runs to the bad, Philadelphia, at 2:10 P.M., commenced its second inning, and for the small total of 67 the side was disposed of. The fielding of the foreigners was almost as fine as that of Saturday, and the bowling if anything was better. The venture did not contain a "double figure;" Caldwell and D. Newhall made the only stand. In the nine of the former there was a beautiful cut for 4 off the fast bowler. Thus ended the finest display of cricket ever witnessed in America. It was estimated that over 26,000 persons had passed the gates during the progress of the match, and a more orderly, quiet crowd was never seen. The annexed full score will show that the English won by 145 runs:

Umpires—Lockwook for English; Pearson for Philadelphia.

[Pinder kept wicket without a long stop. The several balls that passed him, he made no attempt to stop, supposing that they would take the wicket.]

A NOTED FOREIGNER'S FAREWELL ACKNOWLEDGMENT TO FOREST AND STREAM.—The editor of this journal has received the following letter from the Secretary of the English cricketers. It is marked "private," but we regard it as one of those confidences that are not abused in the use thereof; indeed, its publication may do good all around:—

COLONNADE HOTEL, *Philadelphia, Oct 23d*, 1879.

CHAS. HALLOCK—*Dear Sir*: Before leaving for England I beg, on behalf of Mr. Richard Daft and his party, to thank you for your admirable cricket reports, which have been characterized by a thorough knowledge of the game and great descriptive powers.

Your paper is evidently destined to fill the place occuped in English society by the *Field*, which gives great attention to cricket among other sports.

We trust that our visit here will have the result of increasing the taste for the manly game.

With every wish for the prosperity of your paper, I am, dear sir, Your obedient servant, EDWIN BROWNE, Secretary.

GENTLEMEN OF IRELAND VS. HAMILTON.—This two days' match was played on the Hamilton Club grounds on Oct. 13th and 14th, the tourists winning by 60 runs. The bowling and fielding of both teams was remarkably fine. Score:—

ARCHERY.

NEW YORK ARCHERY CLUB.—This organization although scarcely a month old evinces a degree of activity which leaves no doubt of the enthusiasm animating its members, every one of whom seems bent on making it a success by personal endeavors. On Saturday afternoon a large number of ladies and gentlemen assembled at the range in Eighty-eighth street and Eighth avenue, and some really good shooting was done. Among the archers were Mr. Ralph Wells of Sunday-school fame, and Mr. Geo. H. Sheldon, Fire Marshal of New York.

In the evening a regular monthly meeting was held at the residence of the President, Dr. A. B. DeLuna, when two ladies and seven gentlemen were elected to membership. Among the business transacted was the selection of colors, the choice falling on blue and gold, by which the New York Club will be hereafter recognized on the archery field.

A committee was appointed to select a suitable place for in-door practice through the winter. Hereafter, at the Saturday practice, two club badges will be shot for, to be awarded, one to the lady and one to the gentleman making the highest score; and on November 4th, the ladies of the club will shoot for a prize, rawhide-back bow, presented by Mr. John W. Sutton, and to be given to the one making the best score at two ranges.

Once a month the lady members will shoot for a prize to be designated in advance at the regular meeering of the club.

The New York Archery Club starts well, and judging by the work accomplished in its short existence, its success ssems certainly assured, and we may look upon it as an organization which bids fair to command the respect of its older rivals.

Applications for membership should be sent to the Secretary, Mr. James W. Auten, jr., 135 Pearl street, or P. O. Box, 4,476.

HAWTHORN VS. PEQUOSSETTE.—The Hawthorn Archers of Boston Highlands made a visit to the Pequossettes, at Watertown, Mass., on the 18th, and engaged in a friendly contest, with the following score. Ladies, 30 yards; gentlemen, 40 yards; 30 arrows each:—

PEQUOSSETTES.		HAWTHORNS.	
Mrs. Shackford	140	Miss F. Worthington	123
Mrs. Sibbee	110	Miss H. Smith	10
Miss Walker	97	F. H. Brackett	121
A. S. Brownell	107	R. Worthington	101
S. P. Abbott	103	G. A. Smith	74
N. D. Abbott	103	A. S. Plympton	66
E. R. Dwight	100	Add average	82
Total	760	Total	577

Among the many spectators were Mr. Griswold, of the Robin Hood Club of Nyack, N. Y.; Mr. Woodward, and several other lady and gentleman members of the Jamaica Plain Archers.

Eliot Hall, Newton, is being fitted up for archery practice and parlor skating, three days each week being given to each. Several of the clubs in this vicinity will thus have the benefit of indoor practice this coming winter.

A BEGINNER'S SCORE.—*Chicago, Oct. 22d.—Editor Forest and Stream:*—I am told that my archery scores, for a comparatively new hand at the business, are rather remarkable, and if such is the case, you may, if you see fit, make a note of a few of them. In a shoot with Mr. Brewster, 90 arrows at 60 yards, I made 73 hits; score 352. My greatest number of hits, 30 arrows, 60 yards, was 28 hits; score 128. My largest score at 60 yards, was 26 hits; score 150. This last score was made up of 5 golds, 8 reds, 8 blues, 2 blacks, 3 whites, equals 150. My 60 yard shooting has all been done since I umpired the match between Buffalo and Highland Park last month.

GRANGER SMITH.

MR. THOMPSON ON FLIGHT OF ARROWS.

Editor Forest and Stream:—

In your issue of Oct. 9th, Mr. Will H. Thompson gives his experience with arrows of different weights, and it is of great value, and I hope others will give us the results of their shooting in the same way, as from such data the best bow and arrow will be found. Mr. Thompson says: "Thus, if a shot gun be loaded with a mixed charge of ¼ ounce of No. 12 shot and ¼ ounce of No. 4 shot, and be discharged, *the No. 12 shot will start with a vastly greatly initial velocity* (italics mine) than the No. 4's, but will be overtaken by the 4's by the time a distance of forty yards is reached. The heavy shot will then pass away from the smaller shot and continue their flight to a much greater distance. This is precisely the case with arrows. The light arrows for about the distance of sixty, possibly seventy, yards will fly with greater speed, and consequently have a flatter projectory than its heavier rival, but at about sixty yards the resistance of the atmosphere overcomes the energy of the light shaft to such an extent as to place it on equal terms with the heavy one, and after this the rivalry ceases, the bulky fellow having the advantage in momentum. *The above facts being accepted, for they are beyond controversy true,* (italics mine) the question remains what is the best arrow?" When anyone lays down a proposition as true and beyond controversy, he should be very careful, and see that it was not the exactly opposite that was true. In a cylindrical, a chokebore, a half choke and a bell muzzle gun, no such thing ever did nor ever could occur. What kind of a gun Mr. Thompson used, I do not know, but I would like him to explain how that gun separated the different sized shot, and started the No. 12's off on their journey faster than it did the No. 4's, and how fast the wads travelled, or did he use wads? I am as mixed in my ideas of how it was done as the charge of shot was. In all the guns I have ever used or heard of the whole charge with both the wads left the muzzle of the gun at exactly the same initial velocity, and it could not have done anything else, as any one will see upon looking at it, and the wad being of lighter material, that is, the cross section is greater in proportion to their weight, was stopped by passing through the air very quick. The No. 12's obeying the same law, their cross section being larger in proportion to their weight, were retarded more than the No. 4's, and lost their velocity quicker, but they never had a higher velocity at any time. So it will be seen by the above that I do not accept the facts, and they are not beyond controversy.

I believe that a 4's arrow will, when shot from a bow of from forty to fifty pounds weight, give a lower trajectory for any distance up to 100 yards than any arrow of greater weight, and the record of the shots given by Mr. Thompson positively proves it by using his own logic. Of course the arrow must be stiff enough to stand the bowstring without springing, and there are plenty of that weight that will. The recorded flight of the arrows from the forty-four pound bow shows that the light arrows beat the heavy ones a little every time, but there was but little difference, and not worth talking about in the forty and the fifty pounds bow, while with the heavier the very light arrows sprung, and did not do as well. Now, Mr. Thompson is very positive in his advice to archers that they should not use bows over fifty pounds, and says that a forty-eight pound bow is heavy enough for the York Round. The light arrow, instead of flying very swift up to sixty or possibly seventy yards, and then being passed by the heaviest rival, is never passed until fully three-fifths of the distance (in flight shooting) is gone over. Any club can try this by two archers with bows of equal strength shooting light and heavy arrows with men stationed every twenty-five yards of the distance to watch the flight, the two archers shooting at the word and changing so as to shoot light and heavy arrows from each bow. The watchers can see which arrow is ahead and record just the place the heavy arrow passes the light one, and they will find that if the arrows go the same distance, that they both strike the ground together or nearly so, that up to 120 yards the light arrow is considerable ahead. The watchers should catch the difference just as they pass on a line at right angles to the line of flight. Let every club try this one afternoon this fall and send me the results; and I will work up the whole and send it to the FOREST AND STREAM for publication.

In experiments to try for the height of the trajectory, provide two light poles, twelve or fifteen feet long, and a spool of No. 30 white cotton thread. Put the poles on the ground about eight feet apart, and tie a thread, one end to each of the poles, every six inches, from about six feet from the bottom up to the top, so that, when the poles are upright, the threads shall all be taut and level across. If you are at the 100 yards range, erect the poles with the threads at right angles to the flight of the arrow, and about sixty yards from the archer—of course, so that the arrow, when striking the target, will pass between the poles. A watcher at the poles will see between which threads the arrow passes. The archer will then stand his unbent bow upright, with his thumb marking the height of his arrow when loosed; the watcher will raise his bow, until the upper end is exactly at the point where the arrow passed through the threads, and he will move his hand up or down the bow until the archer, taking sight over his thumb and upon the arrow in the the target, tells him his hand is in line. Now the length of the bow above the watcher's hand, is the height of the trajectory. At other distances the poles should be placed the same proportion, six-tenths of the distance. A few experiments of this kind will give American archers more real knowledge than all the books in the country. What we want to know, is what our bows and our arrows in our hands do, and which bow and which arrow suits us best, never minding about others' say-so. While my hand is in, let me have a word to say on the Messrs. Thompsons' deductions upon the twist given to arrows. I quote from their book, "How to Train in Archery," page 42: "An arrow was shot into the target, distant 100 yards, and chanced to touch a long iron spike which projected from the rude target-easel we were using. This spike had a very sharp corner, which cut a groove in the steel of the arrow as it passed; which groove, upon examination, was found to run spiraly around the shaft three times in six inches, or once in two inches.

"Now an arrow, shot with the full force of a fifty-two-pound bow, will fly 100 yards in two seconds. There are 3,600 inches in 100 yards. Therefore, if an arrow flies 3,600 inches in two seconds, and turns once in two inches, it will turn 900 times in a second; a pretty rapid rotation. Of course it starts with a much greater velocity. The average would probably be 1,200 revolutions a second."

Remember, that Mr. Thompson is now writing about an arrow that is feathered; to use his own words, "with feathers practically parallel to the steel of the arrow." Now an arrow with the vanes positively parallel, will not revolve once in 100 yards; in fact, it could not revolve any more than if it was held in a vice. But as to an arrow revolving once in two inches of endwise motion—to begin: no arrow, in its flight through the air, can have any more revolutions than the twist or pitch of the feathers. If the pitch is once in three feet, that arrow cannot by any possible means, while it is in the air on its flight, turn once in thirty-five inches, and it will not quite turn once in thirty-six, owing to frictional resistance, etc. The vanes of all feathers are curved naturally, and when put on while the shaft of the feathers may be straight, the vane has a curve so that arrow-makers use on an arrow all the vanes from the right, or all from the left side of the feathers. But no arrow ever revolved once in two inches in its flight in the world, and went fifty yards. Mr. Thompson says, as quoted: "The arrow starts with a much greater velocity. The average would probably be 1,200 revolutions a second." Now, in that peculiar shot-gun experiment, will Mr. Thompson tell us, in plain, simple English, how that arrow revolved and where it got its power to revolve, and how it could overcome the resistance of the several square inches of surface of the flat vanes that must have opposed such revolutions? An arrow vaned so that it would revolve once in two inches, would resemble at its feathers a propeller screw, and its dimensions would be described by an engineer as "an inch and three-quarters diameter, and two inch pitch," which is about the proportion of a good, high-speed propeller-wheel. To see just how such a thing would look, cut out a piece of paper exactly two inches wide, and five and a half inches long; draw a line diagonally, from one corner across the paper to the other, and bend the paper into a circle, with the line on the outside, and that line would be the path that the outer edge of the vane of such an arrow must take, and then believe that an arrow revolves once in two inches if you can. You might as well put a collar of that size on an arrow, and shoot it as such a feather. And I say positively, that no other feathering will give such results as Mr. Thompson says "practically parallel" feathers do. I am writing as I do, for one purpose: to get at the facts; and it is facts that every archer wants. If my brother archers will send me the results of their real experiments with bows and arrows, I will try and get the whole in shape for publication; not what happens to an arrow when it touches something, but its flight through the air; the weight of the bow, length and weight of arrow; time of the flight, divided into time of its ascending and descending distance; supposed height of trajectory—this is for flight shooting. And at the target, by the use of the cross-threads and poles, everything in feet and inches; height of trajetory, with weight of bows and arrows; distances, etc.

JOHN W. SUTTON.

New York, 95 Liberty street.

ATHLETICS.

YALE ATHLETICS—*New Haven, Oct. 22d.*—Annual fall meeting. The first event was the dash of 100 yards. Entries:—O. W. Dye, '81, S.S.S.; E. P. Brandt, '81; J. Moorehead, '80, S.S.S.; H. H. Hall, Law School; W. C. Witherbee, '80; C. H. Whitmore, Law School. Moorhead won in 11s.; Whitmore second, in 11⅕s., and Witherbee third.

In the tug of war '81 and '83 were represented as follows:—'81, Lamb, Keller, Collins, Fuller; '83, Hull, Rogers, Parker, Moorhouse. The victory was with '83 after a hard struggle in 1m.

The half-mile run had the following entries:—H. A. Hall, Law School; W. H. Pierce, '81; J. B. C. Tappan, '80; C. H. Whitmore, Law School; O. W. Dye, '81, Scientific School; T. D. Cuyler, '83. Only three started—Tappan, Dye, and Culyer. The latter won in 2m. 14⅘s. Tappan was second in 2m. 18⅗s.; Dye dropped out at the quarter-mile post.

In the mile-run Cuyler and Pierce started. At the half-mile post the men were nearly even, Pierce's time being 2m. 40s. and Cuyler's 2m. 41⅘s. Cuyler won in good form in 5m. 35s.

The five-mile "go-as-you-please" race had as starters Dye, Barker, and Norton. The first mile was made by Barker in 5m. 38s., by Norton in 5m. 39s., and by Dye in 6m. 1s.; the second mile by Norton in 11m. 45s., Barker in 11m. 55s., Dye in 12m. 20s.; third mile by Norton in 18m. 3s., Barker in 19m. 44s., Dye in 20m. 7s.; fourth mile by Norton in 24m. 55s., Barker in 26m. 55s., Dye in 27m. 52s.; fifth mile by Norton in 31m. 10s., Barker in 33m. 50s., Dye in 35m. 55s. Norton won, making the best collegiate time on record.

—The three-nights' billiard match for 3,000 points between Jacob Schaefer and George Slosson was finished in Madison Square Garden Saturday evening, and resulted in a victory for Schaefer, who scored a total of 3,000 points to Slosson's 2,604. The best runs were: Schaefer, 231, 143, 123; Slosson, 267, 162, 112.

—William Jackson and William Hickman, two colored river hands, had a friendly wrestle in a saloon last Saturday. Hickman threw Jackson, killing him instantly.

—The reported results of the man-horse walking match at San Francisco, six days, were:—

Horses—Pinafore, 559 miles; Nellie, 536 miles; Dan McCarthy, 517 miles. Men—Guerrero, 375 miles; Brodie, 262 miles.

—Mr. E. J. Horsman publishes a large catalogue of archery goods, toys, etc. Christmas is coming, and Mr. Horsman is one of the men who make Christmas stockings full of surprises for the boys and girls.

EFFECTS OF MOONLIGHT.

WILLIS, Tex., *Sept. 22d.*

Mr Editor:—It appears that they have all got the thing mixed up again, and require a little more correction to get them aright, and if you will allow this little scrap a corner in our "pet" paper, the FOREST AND STREAM, then I will give them my mite of experience.

I have done as much deer hunting as most anyone of my age, and I say that moonlight, or moon influence, does have much to do with the habits of deer and fish, and all other game animals. I have hunted by stalking or still hunting; by running them with hounds; and by fire-hunting; and I have this to say, that deer do the most of their feeding and travelling about during the time the moon is up or above the horizon, be that time day or night. I have observed this one thing very closely, for thereupon has always depended much of my success in this sport. It does not matter as to light or dark, as regards their seeing. They see well, most too well, at any time.

In a locality where deer are undisturbed by man or dogs, they feed nearly as much in the day as night, when the moon is up. If the moon has been shining all night, and you hunt them the following day, you will scarcely find one on foot, unless aroused from his bed. And when the moon has been up all day you can fire-hunt them all night and seldom shine an eye, unless found lying down, except during the last quarter of the moon, for then, the moon has been down nearly all day, and they become very hungry, at which time the majority of them feed nearly all night; and then is decidedly the best time in the month to fire-hunt. At this time the night is as dark as can be, up to from 11 to 2 o'clock, and every deer found any time during the night is on foot.

If you wish to find deer still hunting, go when the moon rises or is yet up, whether it be the forenoon or afternoon; but, if the moon is down in the daytime, let your rifle remain in the "rack," and you go about something else, unless you want to hunt them with dogs; if so then this is the best time, as they are more sluggish and ill-disposed to run far ahead of the hounds, and will circle and dodge around and give you a better chance for a shot.

As to fishing, the moon influence is amply verified. If you "go a-fishing" go between the new moon and the first quarter, or between the last quarter and the "change." At these periods the moon is up during the day, and diurnal fish will then be feeding and will tenfold more readily bite; but if the moon is about full and shining all night, it renders all animal life sleepy and dull the following day, and you will have little luck. You will be apt to return home with the old fisherman's "tale." I mean by diurnal fish, those that feed or bite in the day time, viz.: most of the scale fish. Most all game fish in this county bite only in the day time, such as black bass, white perch (*croppies*), sun fish, bream, etc., while nocturnal feeders, such as cat, buffalo, eels, gars, etc., bite mostly at night, and even those bite best at night when the nights are dark.

I have found deer best at night when the moon was high up in the heavens, but it would be as dark as a blacking box, the moon being obscured entirely by thick lowering clouds and drizzling rain, or not raining all the same; so this disproves the theory that the light of the moon is what they are after.

These very dark, cloudy nights when the moon is up, are the very best nights to fire-hunt, and it don't make any difference whether the day is bright or dark and cloudy, so the moon is up; that is the time the deer are up. This is not *theory*, this is practical experience gleaned from close and unbiased observation for years in the deers' range, walking after them, riding after them, hunting them by night with a lamp on my head, and waiting on their trails.

C. L. J

HOW TO SPELL MOSQUITO.—Worcester says it is variously written musquito, musqueto, musquetoe, moschetto, moschetto, mosquetoe, mosquetto, muscheto, muschetto, musketoe, muskitto, musqueto, and musquitto—fourteen different ways. The approved spelling is *mosquito*; plural *mosquitos*.

—Experiments with the electric light at Saratoga show that ordinary print can be read thereby at a distance seven and a half miles.

MANUFACTURERS OF THE

BRASS, SOLID HEAD, CENTRAL FIRE, RELOADING SHELLS AND CARTRIDGES.

ADAPTED to all military and sporting rifles and pistols, and in use by the ARMY AND NAVY OF THE UNITED STATES, and several foreign governments. Rim-fire ammunition of all kinds. Special attention given to the manufacture of

Cartridges for Target Practice.

SEND FOR ILLUSTRATED CATALOGUE.

Thread-Wound, Long-Range Shot Cartridge Cases.

For Muzzle-Loading and Breech-Loading Cylindrical and Choke-Bore Shot Guns.

Any desired closeness of pattern made at 50, 70 and 90 yards, with penetration superior to that made by the best choke-bores at 40 yards.

INDISPENSIBLE TO HUNTERS OF ALMOST EVERY KIND OF GAME.

Ten and Twelve Gauge now ready.

This Cartridge consists of two semi-cylindrical cases, wound with thread, containing one ounce of shot, heavy in front and light in rear, to keep it from turning. When the thread is all unwound by the friction of the air, the cases fly apart, and the shot scatters. The cases are sold empty, to be filled by the purchaser with any size of shot.

Price, $5 00 per Hundred. 20 sent post-paid for $1 00. Address

Sportsmen's Routes.

"THE FISHING LINE."

TAKE THE
Grand Rapids & Indiana R.R.
Mackinaw, Grand Rapids and Cincinnati Short Line
FOR THE
Trout, Grayling, and Black Bass Fisheries,
AND THE
FAMOUR SUMMER RESORTS AND LAKES
OF
NORTHERN MICHIGAN.
The waters of the
Grand Traverse Region
and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.
BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in those waters.
The TROUT season begins May 1 and ends Sept. 1.
The GRAYLING Season opens June 1 and ends Nov. 1.
BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory.
The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at many points.
TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with
Hay Fever and Asthma Affections.
The hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing.
During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.
Dogs, Guns and Fishing Tackle Carried Free at owner's risk.
It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide (an attractive illustrated book of 80 pages), containing full information and accurate maps of the Fishing Grounds and Time Cards, address A. B. LEET, Gen'l Pass. Agent, Grand Rapids, Mich.

DUPONT'S GUNPOWDER MILLS, established in 1801, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN,

Nos. 1 (coarse) to 4 (fine), unequaled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING,

Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.

DUPONT'S EAGLE RIFLE,

A quick, strong, and clean Powder, of very fine grain for pistol shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING," FFG and FFFG. The FG for long range rifle shooting, the FFG and FFFG for general use, burning strong and moist.

SPORTING, MINING, SHIPPING, and BLASTING POWDERS of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar, and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

F. L. KNEELAND, 70 Wall Street, N. Y.

N. B.—Use none but DUPONT'S FG or FFG Powder for long range rifle shooting.

THE HAZARD POWDER COMPANY

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only.*

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration.* For field, forest, or water shooting. It ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG in kegs of 25, 12½, and 6¼ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist.* The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* Powder of the country.

Superior Mining and Blasting Powder.

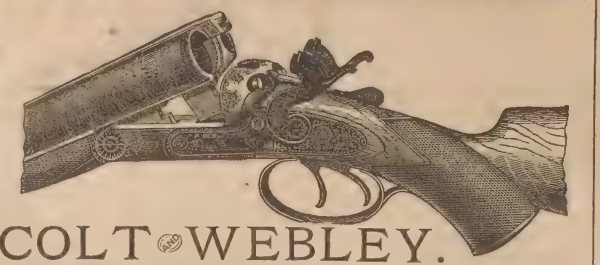
GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office,

88 WALL STREET, NEW YORK.

Miscellaneous.

A GOOD PLAN



The most profitable way of dealing in stocks is by combining many orders and co-operating them as a whole, dividing profits and risks among shareholders, according to the market, monthly. Each customer thus secures all the advantages of immense capital and experienced skill, and can use any amount, from $10 to $10,000, or more, with equal proportionate success. "New York Stock Reporter" and new circular mailed free. Full information for any one to operate successfully. Lawrence & Co., 37 Exchange Place, N. Y.

CURRITUCK SHOOTING.

FOR SALE.—An undivided half interest in about 200 acres of land at Currituck, S. C., comprising some of the best shooting points on the Sound. Price, $500; or will lease by the year for $50. For particulars apply at this office, or address S. H. W. Oct-tf

ENGLAND AND AMERICA.

COLT AND WEBLEY.

The two GIANTS in gun-making at the present time, are P. WEBLEY & SONS, Birmingham, England, and the COLT FIRE ARMS CO., Hartford, Conn. Both owe their marvelous success to the same two causes. First, that they learned just what constituted PERFECT GUNS. Second, that they applied labor-saving machinery to their production. The result is, THE BEST GUNS IN THE WORLD, AT VERY SMALL COST. You can now buy a COLT or a WEBLEY gun, which it is a pleasure to use, for no more than is commonly paid for guns bearing unknown or fictitious names.

Of WEBLEY'S GUNS we have the TREBLE WEDGE GUNS—every gun having beautiful Damascus or laminated steel Barrels, Rebounding Bar Locks, Pistol Grip, Lever For part, Double Bolt, and Extended Rib.

DOUBLE BOLT GUNS (Top and Side Lever). | WEBLEY-LANG SELF-COCKERS.
SINGLE BOLT GUNS (Top and Side Lever). | EXPOSITION GUNS (various styles).

The last four styles named above constitute a **JOB LOT**, which we are selling off at about half their real value. These guns are in NO WAY inferior to the Treble Wedge guns as regards quality of material or EXCELLENCE in shooting, and are the CHEAPEST lot of guns we have ever seen.

Of COLT GUNS, we have all the regular grades, and, in addition, THE CLUB GUN. This gun is made for US, with selected barrels and the very finest materials, and is designed especially for Glass Ball and Pigeon Trap Shooting. Gentlemen who indulge in these contests will be obliged to either shoot the COLT CLUB GUN, or lose the prizes.

Every one of these guns has an elegant heel plate, with the Rampant Colt in a circle, and the words "The Club Gun," beautifully embossed upon it. *Any* Colt gun not answering to the above description is not the Club Gun.

Besides the Webley and Colt DOUBLE guns, FOREHAND & WADSWORTH, of Worcester, Mass., make for us a SINGLE barrel breech-loader with Scott pattern Top Lever. These guns are very light and handy, and just the thing for BOYS or men who cannot afford to buy Double Guns. They cost but a mere trifle. We are happy to announce that we are the principal distributing agents at New York city for all three of the above-named manufacturers.

Shot-Gun and Rifle-Powders Revolutionized.

DITTMAR POWDER.

Champion Shot Gun and Rifle

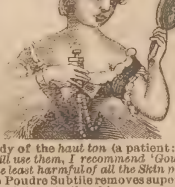
POWDER OF THE WORLD!

IS UNEQUALLED BY GUNPOWDER

for strength, accuracy, cleanliness, and gives little smoke, recoil, or noise. It is absolutely safer than gunpowder, as it cannot explode when not confined, and does not stain the gun or heat the barrels as much in rapid firing. Captain Bogardus, champion wing-shot of the world; Dr. Carver, champion rifle-shot of the world; Ira A Payne, and all the leading shots, use DITTMAR POWDER in their matches. Our challenge to shoot a long range rifle match, as published in our circulars, was never accepted, and is yet open to the world. Address

DITTMAR POWDER M'F'G Co.,

P. O. Box 836. 28 Park Place, New York.



NEW CROP VIRGINIA The new crop of tobacco from which **VANITY FAIR** and **FRAGRANT VANITY FAIR TOBACCO** and **CIGARETTES** are being manufactured, is without doubt the finest that has been grown in a long time, and possesses a rare fragrance and a mildness so much sought after by connoisseurs. The above are now put up by us and sold under the brand EXCELSIOR, throughout Great Britain and Europe. Try our Fragrant "HALVES"—Rare Old Perique and Virginia.

SIX FIRST PRIZE MEDALS. WM. S. KIMBALL & CO., Rochester, N. Y.

A Skin of Beauty is a Joy Forever.

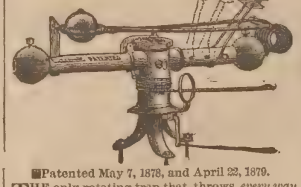
DR. T. FELIX GOURAUD'S

ORIENTAL CREAM, OR MAGICAL BEAUTIFIER

Removes Tan, pimples, Freckles, Sallowness, and every blemish on beauty. It has stood the test of thirty years, and is so harmless we taste it to be sure the preparation is properly made. Accept no counterfeit of similar name. The distinguished Dr. L. A. Sayre, said to a lady of the *haut ton* (a patient:)—"*As you ladies will use them, I recommend 'Gouraud's Cream' as the least harmful of all the Skin preparations.*" Also Poudre Subtile removes superfluous hair without injury to the skin.

MME. M. B. T. GOURAUD, Sole Prop., 48 Bond St., N. Y. For sale by all druggists and Fancy Goods Dealers throughout the United States, Canadas and Europe.

An Elegant Holiday Present. A gilt-bound Autograph Album, with 48 beautifully engraved pages, also 47 select quotations, all for 15 cts., postpaid. P. O. stamps taken. Agts wanted. Franklin Bros., West Haven, Ct.



$66 a week in your own town. Terms and $5 outfit free. Address H. HALLETT & CO., Portland, Maine.

CARD'S

Last Patent Target Thrower.

WITH IMPROVED SPRING AND NEW RUBBER STOP.

Protected by two United States Patents and one in Great Britain.

Patented May 7, 1878, and April 22, 1879.

THE only rotating trap that throws *every way*, or can be made to throw in any *desired* direction, or that can be made to throw *every way, except at shooters and spectators*, all of which are covered by the above patents. Remember you get no balls (unless you wish them) in your face, but have *right and left, and all other angles.* Send for circular. Price $10 at factory. No charge for boxing.

A GREAT INVENTION!

IMITATION

STAINED GLASS.

Patented December 3, 1878.

CURTAINS, SHADES, AND BLINDS

Dispensed with. New, Elegant, Cheap and Durable. It produces all the unique effects of a richly painted or Elegantly Stained Window. It is easily applied to the glass in Windows of Houses, Public Buildings, Churches, Steamboats, Street and Railroad Cars, Libraries, Parlors, Offices, Bath Rooms, Stairways, Transoms, Vestibule Doors, etc., with the full effect and brilliancy of variously colored ground glass. The article has *just been patented*, and not a single agency has as yet been established.

ONE GOOD MAN in each State wanted, to whom exclusive territory will be reserved for five years.

SAMPLES of three of the most beautiful styles will be sent prepaid with full instructions, wholesale prices, etc., on receipt of $1.00.

Agents Apply to **L. Lum Smith,** Patentee & M'f'r. 717 SANSOM ST., PHILADELPHIA, Pa. Sole Agent for U. S. & Canada.

READ the following extract from the *Representative Agents' Paper* of the world, *The Philadelphia, Pa., Agents' Herald:*

"We regard the above as the most remarkable and beautiful invention ever patented, and would advise the Agent readers of the *Herald particularly* to be on the alert to secure choice territory. The article is so simple, and yet will be in such universal demand, that it will undoubtedly meet with a most enthusiastic reception and large sale. It will offer the best opportunity for coining money that has ever been presented to Agents, and the business being light, neat and respectable, will be peculiarly adapted to ladies and gentlemen who from timidity, etc., have hitherto been debarred from engaging in the agency business, for want of some meritorious and desirable article to canvass for. Another very important feature of attraction is that all goods purchased will be promptly forwarded to even the most remote section of the country *free* of express or freight charges."

AGENTS' HERALD

The Largest, Spiciest, and only REPRESENTATIVE PAPER OF ITS KIND.

ACTIVE AGENTS GIVEN GOOD EMPLOYMENT EVERYWHERE

by over 200 responsible advertisers in this month's issue of the *Agents' Herald.* Grand outfit, including circulars, terms, and a beautiful 10x14 engraving of the *Smithograph*, sample card and full particulars of the AGENTS' DIRECTORY and sample copies of last month's *Agents' Herald*, all for 10 cents. Yearly Subscription, $1.00. One cent stamps taken. We cannot afford to give the paper away, so don't ask us. Address in haste, AGENTS' PUBLISHING CO., Phila., Pa.

Original.

IN MY SANCTUM.

BY NED BUNTINE.

IN my sanctum, never lonely,
Books and papers all around—
Rods and guns and trophies many
In each nook and corner found—
Here I love to sit and listen
To the pelting of the rain,
To the war of Autumn's tempests
Smiting on the window pane.

Closing eyes and waking, dreaming,
Hunt I over many a field,
See again the elk and bison
To my searching bullet yield—
See the Red-Skin look amazement
As the prairie monarchs fall
So fast and surely, deadly stricken
By the swift repeating ball

Hear the bull moose sound his trumpet
In the marsh of Tamarack—
Through my horn of birch-bark quickly
Flies the tempting answer back,
Soon I hear him madly crashing
Through the tangled underwood—
Be cool! A wound will only madden,
Let him have it—*Sure and good!*

Crack! old Tecumseh tells no falsehood:
See the monster reel and fall,
Spouts the red froth from his muzzle—
Quick! Your *knife* and end it all.
Not even *Bergh* at *this* could cavil,
'Twas so quickly, neatly done!
Hail—all hail the sturdy heroes
Of Forest, Stream and Rod and Gun.

In my sanctum oft I converse
Cheer'ly with my well-worn pen—
Getting answers fond and faithful
From the truest, best of men—
Those who love the Stream and Forest,
Good of heart and noblest are,
They're the friends I love to know,
Friends to *keep* and friends to *wear!*

A Winter in East Florida.

(SEVENTH PAPER.)

ST. LUCIE RIVER—JUPITER NARROWS—JUPITER INLET.

THE "norther" mentioned in the preceding paper lasted two days, and was followed by a slight frost, the only one experienced by us in Florida. Our sojourn at Fort Capron was passed very agreeably in hunting, fishing and beach-combing. At the inlet I procured some rare and interesting specimens of marine fishes, among them a Mexican star-gazer (*Astroscopus y græcum*), which possessed decided electric powers. We obtained some lumber and built a dingy, or tender for the *Blue Wing*, which was in constant requisition by the boys in rowing to the various camps of the turtlers and oystermen, and to the fishing-grounds and sea-beach. They had an object of special interest in a huge loggerhead turtle, which was moored to a stake in shallow water at the camp of Jim Russell. They went up daily to feed him oysters in the shell, and took great delight in seeing him crunch the bivalves like wafers, swallowing shells and all.

About sundown one warm and muggy evening the sand-flies put in an appearance and worried the boys considerably, as it was their first experience with these pests. They were soon enveloped in clouds of smoke from a hastily-built smudge, which seemed to only add to their torments. I know of nothing so aggravating and exasperating as sand-flies when one undertakes to "fight" them, for one is sure to lose his temper in the operation, and this seems to increase the ferocity of the insects. While one is vainly brushing, slapping and striking at them, they will crowd into his ears, nostrils and hair in constantly increasing swarms, seeming to be attracted by the violent flourishing of the sufferer's arms. The best plan is to heroically endure the burning, stinging and creeping torments for a few minutes, making no effort to drive them off, when in a short time one will get used to them, and will be surprised to find how little they will annoy him; though it will require the resolution of a martyr and the stoicism of an Indian to do this. It is only about the inlets and on the sea-beach that sand-flies are found, and they are only troublesome on still, sultry days about sunrise and sunset, seldom continuing their annoying visitations longer than an hour.

We finally set sail from Capron and went bounding along down river with a fresh breeze, soon passing Taylor Creek, some three miles below. A mile further on we were abreast of the site of Fort Pierce, on a high commanding bluff, where the fine parade-ground can still be seen sloping towards the river. We were now below the oyster-beds, and the river opened into a broad sheet of water called St. Lucie Sound, extending from Indian River Inlet to Jupiter Narrows. The mainland was now a succession of bluffs and hills well wooded with pines, and now and then extensive hammocks of hard wood and palmettoes, while on the level beach strip on the left were long rows of cabbage trees, with a dense undergrowth of scrub and sea-grape. Passing Bird Island we soon discovered the bay at the mouth of St. Lucie River, and just ahead of us on the beach side was the palmetto hut of "Old Cuba," nestling in an exceedingly rich hammock some twenty miles below Fort Capron.

"Old Cuba," as he is called on the river, "lives all alone in the little log hut," and is the only settler between Fort Pierce and Jupiter Inlet. As we put in and made fast to the end of his wharf he welcomed us heartily. He was a little, dried-up old fellow about five feet high, with a *machete* half as long as himself hanging to his belt. On his head he wore a broad-brimmed palmetto hat turned up in front, under which was tucked a banana leaf to shade his sparkling black eyes from the noonday sun. A pair of sail-duck pants and a white cotton shirt completed his attire.

"Mr. Cuba, have you any sweet potatoes to spare?" I asked.

"Sweet-a potato!" exclaimed he. "Y-e-s, plen-ty sweet potato. Plen-ty punkin', Plen-ty banana. Plen-ty cassava. Tomat—garlic—plen-ty."

In a clearing of a few acres in the centre of the hammock, well sheltered from the winds, he raised a profusion of tropical fruits, vegetables, sugar cane and tobacco. He is a Cuban refugee, and while digging the potatoes he gave us a history of his exploits in the liberating army of Cuba, where he was known by the *sobriquet* of the "Sand-fly."

After putting aboard a barrel of sweet potatoes, a bunch of bananas and some pumpkins, we bore away for the mouth of the St. Lucie River, some five miles below, opposite to which could be seen U. S. Life Saving Station No. 2 on the beach ridge, and five miles below that a gap in the line of trees marks the location of Gilbert's Bar—formerly an inlet, but now closed. In the broad bay at the mouth of the St. Lucie we saw growing great quantities of a grass-like plant resembling wild celery (*vatisneria*), upon which were feeding thousands of coots and ducks. We entered the river with the wind behind us, and went dashing along at a spanking rate. Suddenly I felt a severe shock, as the boat struck something beneath the surface of the water, which seemed to lift her up as she glided over it. Then there was a violent commotion in the water at our stern, which nearly capsized the dingy in tow, and we saw at the same time a curiously shaped head and a flipper lifted above the surface, which instantly disappeared, followed by a glimpse of a queer-looking tail, broad, flat and rounded. Ed sprang up, looking quite pale about the gills, and seemed inclined to "get out."

"Sit down, Ed," said I, "'tis only a sea cow, and it's more scared than you are."

"I thought it was a water quake," exclaimed Frank.

The St. Lucie is the largest stream emptying into Indian River, and its waters, including those of the bay at its mouth, are quite fresh. It is here that the sea cow, or manatee, flourishes, feeding on the aquatic grass in the river and bay. There have been several captured alive with immense rope nets within the past few years, one being caught in this manner by Old Cuba, which was kept in a crawl that still stands at the mouth of the river. It was shipped North during the Centennial year by Jim Russell, who reported to Cuba that it died in transit.

On the north bank of the St. Lucie are a number of high ridges sloping to the river, and well timbered. We saw several prehistoric mounds along that side of the river, some of which were on top of the ridges, and had, no doubt, been used by the Indians as signal stations, as they were quite bare of trees. The south bank is a succession of level pine forests, with a heavy undergrowth of palmetto scrub. We sailed up the river some ten miles to the main fork, where it divides into a north and a south branch. We camped on a burn in the open pine woods at the confluence of the two streams.

In this secluded spot we found game in abundance. The nearest human habitations were Cuba's and the station, some fifteen miles down stream, and across Indian River. Lake Okechobee was thirty miles due west. The North Branch some ten miles above separates into a number of streams, among which are Five and Ten-Mile Creeks, the latter approaching within ten miles of Fort Capron. The South Branch runs away down to the westward of Jupiter lighthouse, and has its origin in the Everglades. One small creek emptying into the South Branch just above our camp, I traced to its source in the saw-grass a few miles above. It was thronged with 'gators of assorted sizes, and I could have shot them by scores as they lay asleep on the banks; as it was, I astonished a few by prodding them with the boat-hook. As I quietly paddled along in the dingy I surprised many aquatic birds of various kinds—waders, swimmers and divers. Among the number the beautiful roseate spoonbill (*Platalea ajaja*), called by Floridians the "pink curlew."

The black bass fishing in the South Branch was really too much of a good thing. On favorable days, even with the fly, one soon tired of the sport, for it required no skill whatever to lure them from the dark but clean water. Those caught averaged four pounds, and the largest I took weighed nine pounds, though I saw some heavier ones in the main river. We caught here both mullet and sergeant fish, ten miles from salt water, though, on the other hand, I had previously taken black bass and bream in the brackish water near the mouth of the St. Sebastian.

One night the boys went out for a fire-hunt, and as I had a prejudice against that style of sport, I volunteered to keep the camp during their absence. They fixed the lantern on a pole, with a bright tin pan behind it for a reflector, which answered admirably. In an hour, all but Frank and Ben came in, bringing a fine buck; though it was not long before they, too, came back in great haste and quite blown. It seemed that after shooting the buck, Frank and Ben, being the only ones who wished to continue the sport, proceeded for a mile or more through the pine woods to a thicket near the North Branch, where they caught a glimpse of a flashing eye. While cautiously advancing, endeavoring to "shine the eye" of the supposed deer, they were startled and terrified by an unearthly, and, as Frank said, a "blood-curdling" yell proceeding from the thicket. Frank, in a tremulous voice, cried "Indians!" whereupon they beat a hasty retreat toward camp, to which they were guided by the fire of pine logs which I had kept blazing vigorously. A panther had been the cause of their alarm, and we heard him again during the night. The next day Frank brought in what he termed a young panther, but it proved to be a full-grown wild cat, which had run up a tree near the river where Frank was shooting 'gators. We saw a number of deer during our stay, but shot only one more as we had meat in abundance.

After spending a week in the delightful wilderness up the St. Lucie, we broke camp and proceeded down the river and across to the Life Saving Station in charge of Mr. Malden. It stands on a high ridge that is not more than seventy-five yards in width, and which separates Indian River from the sea. One can stand on the verandah of the Station and cast a stone into the water on either side. Along the beach is a barrier of dark coral-line rocks, seamed and fissured, and worn into hollows and caves by the ever restless sea. Beyond is an outlying reef, where the rollers break and form long lines of foam-crested combers, which chase each other in rapid succession and come tumbling and dashing on the rock-bound shore, thundering and roaring through the rents and caverns with an awful sound, causing the very earth to tremble beneath one's feet. By moonlight the scene is singularly beautiful, wild, and impressive.

We found at the Station a Mr. Dye of Lake Worth, and a boatman, named Sandlin, who had for a passenger a gentleman from New Hampshire, also bound for Lake Worth. Sandlin had a fine Boston-built keel yacht called the *Hero*. After supper, a favorable breeze springing up, Dye proposed to sail through Jupiter Narrows by moonlight, as he wished to leave Jupiter Inlet on the last of the ebb-tide on the following morning for Lake Worth. As the boys were eager to go on, the *Hero* and *Blue Wing* started about 9 o'clock and had just entered the Narrows about two miles below, when the wind began to lull. We proceeded a mile or two further to an expansion of the Narrows known as Peck's Lake, when the moon set, and the sky became overcast, threatening rain. We then sailed across the lake to Peck's Landing, near the sea beach, where we camped for the night. In the morning it was quite foggy, having rained heavily while we slept. After breakfast we broke camp and started again, the *Hero* leading with Dye as pilot, for it was impossible to see for more than twenty yards ahead. As she glided along with a good breeze, she looked like a phantom yacht in the thick fog. In a half hour, however, the fog lifted, and the sun shone out brightly, driving the owls to bed who had been hooting at us through the heavy mist.

Jupiter Narrows is about eight miles in length, and, below Peck's Lake is nowhere more than fifty yards in width, often narrowing to as many feet. The water is deep all the way through, but the channel is quite tortuous in its windings and turnings through the mangrove

islands, and a stranger should not attempt to follow it without a pilot or very explicit directions, for it is much more difficult to navigate than Indian River Narrows. There are current legends of unfortunate boatmen who have been lost, wandering about for days in the perplexing maze of the many islets and intricate passages.

In lieu of a topsail, I hoisted the peak as high as possible in order to catch the breeze over the mangroves, but even then we often had to resort to the setting poles to aid us in getting through. This is the most picturesque portion of Indian River. Being sheltered from the winds, the water is quite still and smooth, and reflects the dense green walls of the mangroves like a mirror; while small side channels lead off through the islands like streaks of planished silver. The trunks of the mangroves stand several feet above the water, supported by numerous arching roots, and from the branches depend innumerable other roots, long, smooth, and flexible, in the nature of a banyan tree. Groups of palmettoes are occasionally seen, around whose dark trunks are curiously interlaced the climbing stems of the India rubber tree, forming a rustic lattice-work of rare beauty, whose meshes are often filled with graceful air ferns and epiphytes with plumes of crimson bloom.

We stopped for a few minutes at a small hammock on our right called Indian Camp, where we procured some good water from a spring. This spot, about midway of the Narrows, and Pock's Landing are the only camping sites in Jupiter Narrows. We finally emerged from the narrow passage into Hobe Sound, as the balance of the river is called, extending from the Narrows to Jupiter, some ten miles in length and averaging about a fourth of a mile in width. The west shore is a range of high barren sand hills, with a number of long points projecting into the Sound, while the east shore is a continuous narrow hammock of great richness, standing well above the water and underlaid by a ledge of coralline rock. This hammock is known as the "Gomez Grant," being one of the old Spanish grants that have been so detrimental to the settlement of East Florida. (Were these grants rendered available to settlers by Government or otherwise, they would become rapidly developed; Merritt's Island being a case in point.) The channel runs close to the east shore, and in beating, one must give the points on the west side a wide berth. With the exception of an ugly oyster reef at the mouth of the Narrows, the navigation of Hobe Sound is quite easy for a distance of five miles, when Conch Bar is reached, from which point to Jupiter River the navigation is quite difficult in consequence of the many shoals and oyster beds. The channel is very crooked and narrow, and one must "drop the peak" and sail with slackened sheets unless he is well acquainted with its serpentine course.

Trolling for crevallé in Hobe Sound with the wind abeam is fine sport. There are several varieties (*Carangus hippos; Paratractus pisguetus*, etc.), called in the vernacular of Florida, jack, yellow jack, amber jack, crevallé, etc. They will take anything in the shape of a troll, spoon, squid, or even a bit of white rag on a hook. The boys were soon hauling them in by dozens, averaging about three pounds, most of which were thrown back again as soon as caught. The crevallé is a very active and handsome fish with predominating tints of amber and silver. It is not above mediocrity as a table fish when fresh, but dried and smoked it is quite toothsome.

From Conch Bar we saw the tall brick tower of Jupiter Light which we reached during the afternoon. It is a first-class, revolving light, made in France, and shows a succession of flashes, followed by a somewhat prolonged, steady light. The tower, a hundred feet high, stands on a bluff fifty feet above the water, at the confluence of Indian and Locohatchee rivers, where they unite and flow as Jupiter River for a mile to the eastward, and over Jupiter Bar into the sea. From the balcony surrounding the lantern, the view is at once grand and comprehensive.

First, we see Indian River stretching away for miles toward the north, where, in the distance we obtain but fugitive glimpses of it between the intervening hills and clumps of foliage, "like orient pearls at random strung." Then, the Locohatchee, winding along through the savannahs with many a devious turn, like a huge serpent gliding from the setting sun toward the sea. Toward the south lies a panorama of pines, cypresses and saw-grass with their varying tints of green, admidst which is a network of small streams glinting in the sunlight like a filigree of silver; while far beyond lies Lake Worth, a burnished shield on a velvet sward. Turning at last toward the east we behold grand old ocean, "dark, deeply, beautifully blue," stretching away to the vast horizon where the blue above meets the blue below.

J. A. HENSHALL.

A DEER HUNT IN MEXICO

I AM sorry for the unfortunate readers of FOREST AND STREAM who like good hunting but can't get any. I know how it is myself. I lived "over in Jersey" for seven years, and used to shoot "chippie birds" with the best of them, for lack of better game. This morning I came down from the plaza on the gallop, and as I reined up in the *patio* I saw my brother sitting with a "Ballard long range" across his knee. "Do you want venison for dinner? There are two deer on the cordon under the Palo Blanco"—a place some 200 yards above us on the mountain-side (it's all mountain down here). "Why don't you go for 'em?" "It's too essentially hot." "Bring me my rifle and cartridge-belt and bowie-knife, quick!" I yelled at the mozo. He grinned and did so. "If I don't nail those deer inside of ten minutes I'll sell my horse for a cold tortilla;" and then I started up the cordon, while Gus, my brother, nerved by my example, started for the gulch above to head them off.

When I got to the Palo Blanco there was nothing in sight but Gus in the gulch below me, slowly wending his way up, and some fresh tracks.

I went up the cordon a little further, lost sight of Gus, and as I was looking for a way to climb still higher I saw the chap I was looking for, watching me apparently from across the gulch, about twenty rods away. I remembered Mr. Van Dyke's advice—for though no chicken, I allow Mr. Van Dyke can leave me clear out of sight as a deer-hunter—and drew it fine on his shoulder. He ran about twenty feet and then tumbled and rolled through the brush about thirty yards plumb to the creek. When I cut him up I found the heart knocked into four pieces.

Gus yelled to me to "look out for the little one," and then I saw him right below me, with his rifle at a "ready." Just then the "little one" came out of the brush and ran to where I had shot the other, and Gus turned loose on her, and she came down also, rolling almost on top of the old buck, who had nine points, by the way. When we compared notes I found I rather had the laugh on Gus, as he was actually drawing a bead on the buck when I dropped it. He had a vernier back sight on his rifle that he had been doing some fancy shooting yesterday with, and as he took aim it was displaced by his hat-brim, and before he could replace it the deer was "kilt."

Notwithstanding that particular gentleman who some time since objected to correspondents cracking up their pet guns, I can't refrain from giving my rifle a puff. It is a "Ballard Pacific," and the best gun for the money that I ever owned or saw. It carries the 44.77 Berdan shell. I have shot more, missed more, and killed more with it than with any other one rifle, although I've owned rifles by most of the standard American makers, and used them. I've had it since the spring of '77, and hunted with it from Puget Sound down to here, and it is as good as ever, although it has a rather "chawed up" look, incident to all travellers. I forgot to mention that we killed our deer inside the city limits of a town of 1,500 people where shooting after sunset is followed by a fine of $5.

Can any of your correspondents beat this for hunting-grounds easy of access?

If any readers of FOREST AND STREAM should happen down here, they will have a hearty welcome and be shown perfect deer-hunting by EL AMERICANO.

San Dimas, Durango, Mexico, Aug. 23d.

Fish Culture.

THE MOOSEHEAD LAKE HATCHING HOUSE.—According to the Bangor *Whig*, the suggestion of the State Fishery Commissioners in their Report of 1878, has been promptly acted upon by the proprietors of the Kineo House at Moosehead Lake. A hatching house thirty feet by sixteen, containing eight troughs, eighteen feet in length by sixteen inches in width capable of accommodating one-half million of trout eggs, has been built under the superintendance of Mr. H. O. Stanley, of Dixfield. There is room not only to add to the number of troughs, but also by the addition of wire bottomed trays, such as are used by Mr. Atkins at the United States works at Grand Lake Stream, to double the capacity of the house. Mr. Dennen, whom everybody knows and respects as the proprietor of the Kineo House, is having a comfortable house built for the man in charge during the winter. The surrounding grounds are also to be improved, as it has already become a favorite resort for the sight-seers at the lake. Nothing so popularizes fish culture as to afford the people an opportunity to familiarize themselves with its simple details, and realize that it requires only the plain common sense and judgment needed to tend a stock of poultry, or milk a cow. Moosehead Lake will now not only have half a million trout eggs yearly hatched and turned into her waters, but will also add salmon to re-stock the exhausted waters of the Kennebec. Twenty thousand landlocked salmon from Grand Lake Stream, were this year contributed to her stock by the commissioners, as a future attraction to her anglers. If it pleases our legislative lawmakers, the commissioners will continue to add to her piscatorial wealth, and gladden the hearts of her fishermen, from the mouth of the Kennebec to Brussau waters, with both landlocked and sea salmon. While by the establishing of hatching houses at the sources of our great rivers, as at Rangeley and Moosehead, much expense is saved to the State in the wearisome and anxious work of transporting the young fry over a rough and new country, and even a more valued result is attained, in ability to plant the anadromous fishes at river sources, to which they will always again, by the dictates of instinct, seek to return. Above all, it imparts a knowledge of the laws of pisciculture, and its importance, upon the ground and among the people who most require its teachings. Who shall we now look to to give us hatching houses at Penobscot River sources?

DO BLACK SNAKES EAT FISH?—*New Haven, Conn., Sept. 26th.*—In the issue of FOREST AND STREAM for Sept. 25th, you informed a correspondent that both the water snake and black snake prey upon fish. Are you not mistaken in regard to the latter? I am very well acquainted with all of our species of serpents, and have noted the contents of stomachs of the two in question at least fifty times, never even expecting to find fish in the stomach of the black snake, on account of his habits in general.

The water snake (*Tropidonotus sipedon*) lives almost exclusively upon fish, frogs, newts, etc. The black snake (*Bascanium constrictor*) and pilot (*Scotophis alleghaniensis*) both prey upon mice, squirrels, young birds and eggs, frogs, toads, smaller snakes, and any such small animals as they are liable to find on either high or low ground; and I am almost positive that the two last named species would never attempt to catch a fish.

ROBT. T. MORRIS.

Our correspondent's point is well taken, for there is no experience so valuable as that which comes from careful observation. Nevertheless, we fail to find among our best authorities any positive evidence that black snakes do *not* eat fish. Both Profs. Baird and Good have replied to our personal inquiry regarding this trait, that they have no doubt that "black snakes would eat fish if they had a chance," but that they have never known of an instance of a black snake going into the water. Our own most direct evidence rests on the fact that a friend in Pennsylvania, (Moses C. Westbrook, Esq.,) lost many big trout which were taken out of his spring-head by snakes of *some* sort. Most of these were undoubtedly water snakes, for their odious presence was mainfested daily; but several black snakes were killed in the immediate vicinity of the spring-head (an octagonal tank twenty feet in diameter,) and it was assumed by many persons that they joined the water snake in their depredations, though ocular evidence of such fact was afforded. It was not at all necessary for the snakes to go into the water. They could lie quietly at their leisure on the grass just where the outflow *poured over* the screen, and were often detected there. The immediate vicinity was high land, sandy and rocky, as is the general character of the whole country. Rattlesnakes are numerous there, and these are known to occur where black snakes inhabit, although they are by no means good friends. A cat does not like water, but we think that both cats and black snakes would be attracted by a basin of fish placed conveniently in their way. We are not obstinate, however, in the position we take, and would like to leave the question open to discussion.

FISH PONDS AND ARTESIAN WELLS.—A Rochester (N. Y.) correspondent notes the successful trial in California of a project suggested by himself in this journal, some years since, namely, the supplying to fish ponds, water brought up by artesian wells. This plan may be adopted in localities where there is no natural supply, and the value of the fish which may be thus bred will more than balance the cost of the well. The method is worthy of further trial.

Natural History.

CANARY BIRDS.—Messrs. Reiche & Bro., 54 Chatham street, dispose of about 2,000 canary birds, so called, each week from August until May. Mr. Reiche states in a communication to the *Sun* that they are not genuine canary birds, but German birds. The native canary does not sing. It was when the canary was crossed with the linnet and the lark and the other song birds of Europe that the little musician which we know as the canary, came to exist. These birds are all bred in Germany. The inhabitants of the Harz Mountains supply the civilized world. There is not a cottage in all the region about Andreasberg and the Brocken that is not full of them. Some of the peasants raise as many as 300 in a year, but the average is perhaps twenty to a house. As much as $300,000 goes to the inhabitants of the Harz Mountains for their canary birds every year. They have bred them for generations, and fairs are held and prizes are offered to stimulate the breeders.

The wicker cages of soft white wood are made by the peasants who breed the birds. The canary that comes to America is confined to his cage for a space of about three weeks. Mr. Reiche sends an order for several thousand birds to his brother in Germany. He directs a number of agents to collect in the Harz enough birds to fill the order. The peasant has no general place of sale. The agents go from cottage to cottage, buying in one 500 birds, and in another 700, and so on. Instructions are given to send these birds to the port of shipment, to be there on Friday. On Saturday the ship sails. Men go with the birds to feed them and care for them. One man can take care of 1,250 birds.

They are two weeks coming from the Harz Mountains to New York, and they are never more than two weeks, and generally not one week in the shop, so their period of close confinement is not very long. They cannot be kept in such quarters, and whenever by any accident many are left on hand, they are at once sent out and sold by auction.

NEWSPAPER NATURAL HISTORY.—That member of the daily or weekly newspaper staff who is detailed to write up the game market reports frequently finds himself sadly in the woods; or to fit the figure to the fish market, away out of his depth. We have occasionally shown up the rare natural history attainments of the market reporter, and just now there comes to us from a Mississippi correspondent a clipping from what appears to us to be one of the patent outside papers, of a disquisition upon our grouse family. The item is credited to the Hartford (Conn.) *Times*, and if our surmise is correct that it has found its way into the coöperative lists of newspapers, who can estimate the amount of know-nothing knowledge that has been disseminated in country villages? As our Mississippi friend suggests, one single copy of the FOREST AND STREAM would let such a flood of light into that game reporter's soul as would shine forth for a year to come in his market reports. We are copied and "hashed over" week after week and month after month, but we never begrudge this uncredited use of our matter, for we feel a satisfaction in knowing that we are doing some good in the world by teaching people a few truths about the common things around them. We should be much more pleased to see our own natural history papers transferred bodily and without credit to the market report departments of the press than to see such displays of ignorance as are constantly appearing.

NORTHERN RANGE OF THE BLACK SKIMMER.—In our issue of October 2d we published an account of the taking of a specimen of *Rhynchopnigra* at Point Pleasant, New Jersey, and this week we are able to announce the capture of another on the shore of Martha's Vineyard, Mass. Previous to this paragraph, the only record of the occurrence of this species in New England was that given by Linsley in his catalogue of the birds of Connecticut, published in the *American Journal of Science and Arts* in 1843, but the fact that the bird had never been observed

in New England since that time has led ornithologists to look upon this record with some degree of suspicion. During the past summer, however, there seems to have been a considerable flight of shear-waters along the New England coast, and they have even reached as far as New Brunswick. The Nuttall *Bulletin* for October announces the capture of three specimens at Sandwich, Cape Cod, Mass., August 19th, and states that another was killed at Pettock's Island, Boston Harbor, the next day. Another was killed near Falmouth, Mass., August 19th. Mr. Geo. A. Boardman states, that late in August seven of these birds were killed off Grand Menan and Campobello Islands, and that they were seen at St. Andrew's, at the head of Passamaquoddy Bay. This remarkable flight of birds into a region in which, so far as known, they have never before been observed, is certainly interesting and curious. We print below our correspondent's account of his capture of a skimmer, merely suggesting that in all probability it was one of the flight spoken of above. We call attention, too, to his description of the flight of the birds and their manner of feeding. He says :—

In your paper of the 2d inst. I see mention made of the fact that at Point Pleasant, New Jersey, Mr. Davis, of Philadelphia, shot a black "scissor bill." This item of news particularly interested me, as I had shot last August, on the south shore of Martha's Vineyard, Mass., what I presume is one of the same birds, *i. e.* a "shear-water." It has the same characteristics of bill, etc., mentioned by your correspondent ; is quite black on the upper portions of the body and wings, but white on the belly and under parts of wings. Has a spread of about three feet from tip to tip of wings. Upper bill about three inches long ; under bill about 3¼ inches ; red at tips, black at base, and in shape much like the blades of a penknife of unequal lengths. I found the Islanders quite ignorant of the existence of such a gull ; nothing of the sort having ever been seen by the most omnipresent of shore bird shooters to whom I showed the specimen I secured. I only saw one flock of these birds—about fifty—and they made only a flying visit of about forty-eight hours just after a storm of unprecedented fury. They were quite tame, and at one time I found them almost too sociable, for I feared they premeditated an attack, which, considering the scissor-like character of their open beaks, would not have been acceptable. The chief characteristics of their flight was its wonderful ease and steadiness, as with bills open—the lower mandible submerged about two inches—they would skim over the water, following every little indentation and projection of the shore with an evenness suggestive of their beaks being on runners. I had never known of these birds being so far north as Massachusetts, hence my interest in your note following C. E. P.'s communication. I am still in doubt as regards to my bird being what is known as a black "scissor bill," owing to the fact of its having white on some portions of its body—this is not mentioned in the description of your correspondent. Will you kindly inform me on the subject?

R. H. R. M.

Our correspondent's bird was a *black* skimmer. We have but one species in North America.

BLACK OYSTER CATCHER.—I send the skin of a bird for identification, which I take to be a species of oyster catcher, was killed near this place, which lies in Lat. 49.12. 47 N., Long. 122.56.19 W. I have been familiar with it (although it is by no means very plentiful) for a long time, but having never seen it described in any work on ornithology, I thought perhaps it was unknown, and therefore take this means of ascertaining. Of course in this out of the way part of the world our libraries are not very extensive, and our means of establishing identification are limited, hence my reason for troubling you.

I reserve any remarks concerning its habits, characteristics, etc., pending your reply, when, if it is unknown, I shall be glad to supply you with what information I have or may be able to collect concerning it. Should you desire to keep the skin and have it mounted, I shall be pleased at your doing so ; if, however, you do not care for it, be kind enough to donate it to any institution you may think it would be of interest or value to. MOWITCH.

New Westminster, B. C., Aug. 28th, 1879.

Our correspondent further says, that the bird is non-migratory, that its winter dress does not differ from that of the specimen which was killed in July. He speaks of it as essentially a shore bird, inhabiting and breeding on rocky cliffs and islands, and says that it lays two very large eggs being nearly the size of ahen's eggs.

The bird is the black oyster catcher, (*Haematopus niger*) a Pacific Coast species, and we should be very glad to receive from Mowitch a biography of it.

THE FLORIDA GALLINULE IN NEW ENGLAND.—Referring to the capture of one of these birds in Connecticut, recently announced in the columns of FOREST AND STREAM, Mr. Ruthven Deane, so well known to most of our readers as an ornithologist of high standing, writes us as follows :

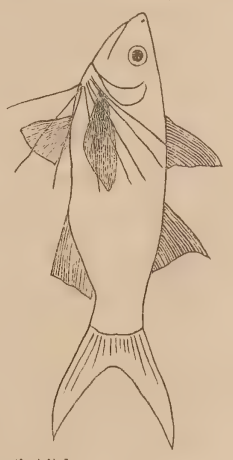
We have been inclined of late years to think that this species was to be found regularly, *in limited numbers as far north as Boston and vicinity*, and have every reason to think that it breeds here. In 1868 (Sept. 6th,) I took a young bird in Fresh Pond Marshes and saw others ; the same year Mr. Brewster took a young fall bird, and in June saw old birds. Since then specimens have been taken in the Concord and Sudbury Marshes and in other localities near here.

THE SKUNK PERFUME.—*Fishkill Landing, N. Y., Oct. 6th.*—I noticed a paragraph in FOREST AND STREAM of Sept. 18th by Wm. N. Byers in regard to the disappearance of skunk odor within a short time after its being given out by the animal. This strange occurrence happened but once, and never but once, under my own observation. It was in Connecticut and not in the region of sulphur springs. I was returning from a day's shooting with a friend, and as we turned into a lane that led to the house we saw a skunk come out from under a pile of old fence-rails a short distance in advance of us. My friend, who was a little way ahead of me, took a few steps towards the skunk and fired ; but his gun contained No. 10 shot, and much to our regret the beast began to kick and eject his odoriferous fluid in a manner that threatened to drive us out of the State. But now came a worse trouble. I had a dog, a setter, that I had only recently purchased, and he had a fondness for catching cats, and before I could stop him he had the skunk by the neck and gave it two or three shakes before he found out that he had hold of a different species of cat from any he had ever tackled before. But to shorten my story, to my surprise the smell was nearly all gone the next morning, and it could not be detected even in the long hair of the dog the next day. I have known the smell to remain on a dog for weeks, and why this should have disappeared in so short a time is more than I can explain. Can the editor?

G.

On a long-haired dog it is certainly noticeable for several days, but it is a well-known fact that it disappears more quickly in dry weather than in wet, and, further, that after the smell has ceased to become annoying it may be brought out again with all its original strength by the heat of a fire. We have on one or two occasions seen cases where a dog, apparently free from the smell, has laid down by the stove or fire and become so unpleasantly strong-smelling that he had to be driven from the room.

THE GULF THREAD FISH.—We have the following letter from our correspondent "Bexar," dated Corpus Christi, Texas, Oct. 12th :—



Mr. Editor :—I enclose a rough pencil sketch of a fish caught here which has latterly come into these waters. When taken he was found to be full of a silvery looking substance, which, put under a magnifying glass, proved to be young shrimp from one-eighth to one-quarter of an inch in length. This drawing is life size, and yet this little fish must have contained many thousand shrimps. The back was dark green, lightening to a bright silver gloss on the belly. For propelling apparatus he is better provided than anything in these waters. The scales are soft, small, and very thin and colorless. Is this a species of any valuable fish ? The eight long antennæ are fairly represented, and are found in no other fish here.

This very singular fish, of which we are enabled to present a sketch, has been once before referred to in these columns, as will be discovered by the perusal of the following valuable letter from Prof. Goode, to whom we submitted "Bexar's" drawing and description :—

UNITED STATES COMMISSION, FISH AND FISHERIES,
WASHINGTON, D. C., *Oct. 18th.*

Dear Mr. Hallock :—

I return herewith the letter of Mr. Johnson with accompanying drawing of unknown species of fish. The

fish is so rare that it has no common name, unless you choose to call it the "Gulf Thread Fish." It was described by Girard, in the report of the United States and Mexican Boundary Survey, under the name of *Polynemus octonemus*. You will find a note on the species by Dr. Bean in FOREST AND STREAM, vol. X., p. 420. Girard's specimens came from Brazos Santiago, Texas, and the species has since been found on the west coast of Florida. The family *Polynemidæ*, to which this fish belongs, is distributed through the seas of India to the Pacific, and and also in the tropical portions of the Atlantic. In the Indian Ocean there are eight species, all of which are said to be excellent as food, and from some of them isinglass is manufactured in large quantities. One of them, the *Polynemus indicus*, grows to the length of four feet, and a large individual will yield about two ounces of rough isinglass. Another species, *Polynemus tetradactylus*, is said to grow six feet long in the Ganges, and to attain the weight of three hundred pounds or more. The species of the family on the Atlantic coast of North America are three in number, and are all insignificant in size and of rare occurrence. Specimens and information regarding their habits are much desired by the National Museum. In India these fishes enter the rivers to spawn in the cold months. It would be very interesting to know whether the "Gulf Thread Fish" has a similar habit. Cannot some of your Southern correspondents make this a subject for observation? Yours very truly,

G. BROWN GOODE.

A WHITE-WINGED SURF DUCK.— *Ausable Forks, Essex Co., N. Y., Oct. 18th.*—I shot a duck in the river, in this village to-day, that I would like to have you identify for me. Description as follows : All jet black, except the wing feathers, from the elbow to the shoulder, which are white, and a white patch under the eyes. Eyes, light colored ; bill, brightly parti-colored, with a singular swelling at the base ; the tip of under mandible on under side resembles a man's thumb-nail ; legs, inserted high, seem to be better fitted for swimming than for walking ; feet, orange yellow, with dark webs ; plumage, very heavy and dense ; very thick skin ; weight, 3 lbs. 6 oz. Think it is a sea duck of some kind. Have several works on birds ; among them "Hallock's Gazetteer," "Jones' Birds of North America," etc., but do not find anything in them that exactly corresponds to the above description. If you will kindly help me, you will confer a great favor on

C. T. RICHARDSON.

Your bird is, as you suppose, a sea duck, *Pedemia fusca*. You will find it described on page 229 of the "Gazetteer." It is one of the ducks called coot along the New England seaboard.

CORMORANT IN WISCONSIN.—*La Crosse, Wis., Oct. 19th.*—Yesterday, while duck hunting on the Broken Gun, a famous slough for ducks, some miles above this city, I shot a bird which has puzzled everybody here. The characteristics are as follows : General color, black ; though on the back and outside of the wings, there are some feathers having dark centres, with black borders ; the breast and under sides of the wings are of a raven black ; the head is long and high ; the color is black and dark gray, mixed ; the bill, 3¼ inches in length ; the upper mandible hooked, the color being black ; the lower mandible and throat of a bright yellow, and bare of feathers ; the eyes set forward of the base of the lower mandible ; length, 33½ inches ; from tip to tip of wings, 49 inches ; neck, 6 inches long ; legs, set far back, of a black color, and very powerful ; feet, webbed—four toes ; tail, having twelve feathers, 6 inches long ; weight, 5 lbs. If you will tell me the name of this bird, you will greatly oblige me. CHAS. P. CROSBY.

Our correspondent's "duck" is no doubt a cormorant : very likely *Graculus dilophus*.

DUCKS ATTRACTED BY LIGHT.—At 3 A. M. on the morning of Wednesday, Oct. 22d, one of the keepers of Minot's Light, off Cohasset, on his watch heard some unusual noise about the lantern, and going up on deck picked up ten ducks, known on the rivers flowing into the head of the Chesapeake as coots (a small brownish duck with a short neck, large head and rather broad bill and stiff tail, very heavily and compactly feathered). Two were dead, two very badly hurt and six alive ; two escaped, and the four live ones were doing well last week in the hen house of Mr. Vinal, at Cohasset. I have shot many of them on Bush, Back and Gunpowder rivers, in Maryland.

J. P. H.

The occurrence is very common. The ducks are attracted by the light, and the force of their flight kills or hurts them.—[ED.

WILL WILD RICE GROW IN SOUTHERN LATITUDES?—*Editor Forest and Stream* :—Last spring I ordered Mr. Valentine, of Janesville, Wis., to send two bushels of wild rice to Pat. Kelly, living in Missouri on the 39½ parallel of latitude. The seed was planted on the 26th of March according to directions, and in due time the young plants came up and grew vigorously for a few weeks, but with the accession of warm weather they withered and perished almost simultaneously.

The conditions of the lake were regarded as being favorable for the growth of wild rice. It was supplied with water from springs that prevented it from falling below a certain point during the entire year, and maintained a large flow at the outlet. A portion of the bottom of the lake was composed of solid clay, over which a person could walk with the utmost ease, while other portions consisted of decomposed vegetation, into which a boat paddle could be thrust several feet without difficulty. The seed was sound on both of these bottoms in six or eight inches of water, and appeared to flourish equally well on each. My object in presenting the foregoing facts is to elicit information upon the subject. Does wild rice grow in the South? If not, what are its limits? I trust that some of your numerous readers will answer this question, as it may prevent other persons from repeating my failures. Mr. Kelly thinks that if the seed was sown in the fall it would grow in his lake. H. G. CAREY,

Indianapolis, Ind., Oct. 28th.

Doubtless some of our correspondents can throw light on this.

NOTE ON PORZANA NOVIBORACENSIS.—*Buffalo, N. Y., Oct. 12th.*—I have shot the yellow rail at Tower Hill, Southern Illinois, as late as the 23d of April. This was several years ago, and the bird was evidently in its migration, as it occurred in a small patch of marsh near the Mississippi, which I hunted close every morning. Later I obtained another specimen of it near Clinton, Iowa, on the 10th of April, 1879. My dog came in this instance to a point on it, and retrieved it alive. The ground was partly frozen at the time, and the English snipe, which formed the main object of my visit to that locality, had just commenced to arrive in small flocks. They were then, as usual, very lean and wild on account of unsettled habits and feeding grounds. A third specimen of yellow rail was obtained near Buffalo during the latter end of April. These were the only specimens of this bird I have come across, but it appears that its distribution is wider than generally suspected. They lie even closer than the Virginia rail, and fly laboriously, to settle down again within thirty yards. It is possible that they escape detection by their skulking traits, even where they are of common occurrence. CHAS. LINDEN.

—The special trains for Hartford, Springfield, and the North, in connection with the New Haven steamers, leaving Pier 25, East River, have been withdrawn for the season. The New Haven steamers (which are heated throughout by steam,) will leave as usual at 3 P.M. and 11 P.M. Passengers can connect with trains for North and East by taking horse cars from steamboat dock to railroad depot.

The Kennel.

OLD CARLO.

IT has been well said, that he is "a wise son who knows his own father;" and, if this adage holds good with respect to dogs, Carlo must have ranked with the Platos and Solomons of the canine race, for his father was a noble liver-and-white pointer that claimed the Isle of Great Britain as his birthplace. As to his mother, her origin is veiled in mystery; and, excepting a high degree of courage and a wonderful nose, he must have inherited from her his traits both of body and mind, for, from the end of his muzzle to the tip of his tail, he was as black as the River Styx, and showed as much of what has been styled, with more force than elegance, pure cussedness in his composition, as has ever been seen within the narrow compass of one dog skin. With regard to the prefix old—he did not merit this for the number of years that had passed over his head before he came into my hands. Indeed, he was scarcely eighteen months' old, when, together with a good record for rats, a certain liking, more fond than wise, for raw eggs, and with nothing to recommend him but the virtues of his sire, he passed into my possession. Yet he had not been an inmate of our home more than twenty-four hours, before he was dubbed Old Carlo by every member of the household, including the servants. I suppose he must have merited the title in some such way as a small boy's teacher is always, no matter how young he may be, styled old Smith, or Brown, and the gentleman in black is universally known as the Old Boy; that is, through the eternal fitness of things. However that may be, all I can say is, that no one who ever formed his acquaintance ever thought of disputing his title. Carlo had his peculiarities; which, indeed, is my excuse for writing this article. Some of these could be accounted for, while others must be relegated to that class of conundrums which "every fellow has to give up." Among the latter I must mention a decided unwillingness to follow me when riding, if I went out through the big gate. He would follow me through it willingly enough when I was on foot; and never refused to follow me when riding, if I sought any other means of exit. But, after me on horseback, through that gate he would not go; and all means alike, forcible and persuasive, failed to overcome this dislike.

As he never confided to me the secret of this misconduct, and I could not trace it to anything that had ever happend while he belonged to me, I am forced to ascribe it to inheritance from his unknown mother, or class it among those things "that no fellow can be expected to understand."

A less objectionable peculiarity was his fondness for music. All dogs have a fondness for the sound of a horn; and I have heard of some that recognized with delight the notes of the dinner-bell; but Carlo's weakness was for vocal music, and that of the most decidedly operatic type. "*Robert toi que j'aime*" and "Hear me Norma" were his especial favorites; and whenever the soprano reached her highest note, Carlo would rise upon his haunches, and, turning his head to one side, give vent to the most ear-piercing howls. There were not wanting some musical amateurs to declare that Carlo howls were not altogether out of accord with the music; but for this, occupying as I do the office of veracious biographer, I cannot vouch. His performances, however, were a never failing source of delight to my younger brothers, who were in the habit of enticing Carlo into the parlor, hiding him under the piano, and then begging my sister to sing, always requesting Carlo's favorite pieces, in which he never failed to join, greatly to their delectation and that of certain guests of theirs of the small boy persuasion. This was repeated from time to time, until my sister grew tired of having her powers subordinated to Carlo's performances, and then all regular exhibitions ceased. Occasionally, however, on the advent of a serenade, Carlo would find an opportunity to indulge his tastes and perfect his musical education, and he would do so in a way that filled the musicians with rage, but caused the hearts of the aforesaid small boys to overflow with joy. Although Carlo never developed any intellectual traits that were of especial use in the field, where his own comfort was concerned, he was by no means dull. In proof of this the following fact may be adduced: After Carlo had been mine for some two years, I became the fortunate owner of two really good dogs, but for the sake of old associations still retained my old friend. On cold mornings these dogs would invade the dining-room, and, unterrified by the servants, repose on the hearth rug. There they would remain until my father, who was always the first to come down in the morning, would come in and drive them out into the cold again. This move was not played on Old Carlo many times, before he discovered a sound defence to it. He soon learned to distinguish the approaching footsteps, and, while they were yet outside the door, he would bolt under the sideboard, where he would remain until all was still, when he would quietly steal into a warm corner, where he was generally overlooked and allowed to remain. One other peculiarity, and one that was of itself almost enough to destroy his usefulness in the field, was an uncontrollable desire to flush all birds that he or any other dog might point. This he would do with a *verve*, which, although in the course of time I became accustomed to it, was extremely disconcerting to novices, and frequently resulted in missed birds and certain expressions of feeling more forcible than elegant on the part of those unfortunates who chanced to be shooting over him. This habit, although I tried every method, from the check-cord to the whip and the spiked collar, I failed ingloriously to conquer. He would point steadily enough until all the guns had taken their positions, when in he would go, put up the birds, and, if a bird was at all awkward in getting away, it was ten to one that Carlo would catch it. As long as you held the cord he would stand as quiet as a lamb, and delude you into the belief that the fault was cured; but no sooner was the cord dropped, than he would be at his old tricks as bad as ever. Although, after frequent whippings, and an occasional peppering with small shot at long range, I at last prevailed upon him to lay aside his youthful habit of chasing, as unbecoming to a dog of experience; the fault of flushing I could never cure; and to show how it was ingrained in his disposition, I will relate the following incident: On one occasion, I had a large bevy of quail well dispersed; Carlo pointed; and, not having the fear of Mr. Bergh before my eyes, I deliberately stood on him, and thus getting him to down charge, walked up to the bird and killed it. The dog retrieved it as usual; and then resuming the hunt, soon found another bird. This he pointed; but not waiting for me to come up, flushed and chased to a considerable distance. Afterward he resumed his old habits, as much as to say, that he thus asserted his rights, and would respect mine so long as his own were not interfered with. One may well conclude that this was the last time that I attempted to break him from flushing. Justice demands that, having dwelt so long on his bad qualities, I should say something of his virtues. This I may well do, as the record is a brief one. No day was too long for his untiring energy, and no cover too dense or thorny for his invincible courage. Although months of the "puzzle-peg" failed to cure him of raking, he never failed to road and retrieve a wounded bird, no matter how slightly wing-tipped. But here the record must cease. Old Carlo has long been gathered to his fathers; and although his most partial friend dares not claim for him a seat in the canine Heaven, for which his taste for music so well fitted him, may it not be allowed one to hope, at least, that he has worked his way up to the higher rounds of purgatory, and has not for his sins been hopelessly consigned to the inexorable vengeance of the gods below.

Savannah, Tenn. WILL.

CANINE CHARACTERISTICS.

Editor Forest and Stream:—

From the close intimacy that has so long existed between myself and Queen, our setter, I have had ample opportunity to study her characteristics. From a puppy she seemed to know as well as the rest of us when the Sabbath came. My husband was in the habit of taking a stroll on this day, and always permitted her to accompany him, but never allowed her to follow him to his place of business. When he left the house on week-day mornings, she would not seem to notice it at all. But if he tried to leave her, or started off in the direction of his place of business without speaking to, or even looking at her, on the Sabbath, she would follow him, all the same, and could hardly be driven back.

A neighbor of ours had also a young setter—Bounce by name—so like our Queen in general appearance, that, at a little distance, it was difficult to distinguish one from the other. These dogs were remarkably attached to each other; they would gambol together like kittens for hours, and seemed to care no more for the society of other dogs than if they were of a different species.

The first time my husband took Queen hunting, this gentleman and his dog accompanied them. My husband shot a prairie chicken (pinnated grouse). It was lying near him on the ground, and Queen was jealously guarding it, when Bounce came up to give it an examination. A fierce fight ensued, and after that these dogs would not have anything to do with each other, and seldom met without quarrelling.

She seems to have a very jealous disposition. We had owned her about three years, when our little Charles was born. She seemed to consider him as infringing on her rights. If my husband held the baby on his knee it annoyed her greatly; she often climbed up and forced herself between them, and tried to push him off. She disliked the child very much, and when he was older she would not allow him to play with, or come near her, but would get up and run away, with an angry growl.

She has a great antipathy for small black dogs; she does not seem to dislike those of some other color half as much. I used sometimes to take her with me when I went out walking, and if a little black dog ran out to bark at us, in spite of all I could do to prevent her, she would gather it up, and shake it severely for its impertinence, while I would hasten on, for fear the owner might come out and demand an explanation.

She always informs me when the master is coming home—and the information is quite often very opportune. As soon as she sees him coming she runs quickly to me, and by many demonstrations of delight—such as wagging her tail briskly, and frisking about—seems to say: "He's coming; I'm so glad!" Sometimes she is quite a distance from the house when she sees him; but she never fails to run in and deliver the message. When she is in the house, and the doors and windows are closed so that she cannot see him coming, she knows his footstep, and will not bark; but if a stranger approaches the gate at such a time, her noise is almost deafening.

A relative with whom I resided some two years, while attending school, had a handsome, silky, black and white shepherd dog of unusual intelligence. This dog was always very much affected by music—vocal especally. There were two or three Sabbath school songs that always set him howling. The one entitled "Nearer to Thee" affected him the most. No matter who sung it, he never failed to howl pathetically, from the commencement to the close. It amused the children greatly, who thought he was trying to sing. He often followed them to the singing school, and "brought down the house" by coming out behind all the rest at the end of a tune.

An acquaintance of mine has a dog, that will, if chastized ever so lightly, run away from home, and be gone for days, and, sometimes, a week at a time, the family knowing nothing of his whereabouts; he will then return in a very forlorn condition. LENA.

MATERNAL INSTINCT.—Just how many thousands of birds and beasts find their way into the circle of newspaper fame in the course of a year it were a difficult task to compute. The latest candidate for such notoriety is the Brahma hen of Mr. M. E. Filliter, of Belleville, Ont. This plucky fowl being deterred from sitting, transferred her affections to four hound pups which had lately come into this world of strange happenings. The hen drove their mother away after a hard fight, and sheltered the dogs beneath her wings. Strange to say the unnatural affection of the hen was returned by the puppies, which seemed to prefer her society to that of their mother. Being deprived of their natural nourishment one of the pups died, and the others were returned to their parent, but the hen had to be locked up in order to prevent her breaking in again on the interesting family circle. And a later number of the Belleville *Intelligencer* reports an escape for Biddy, another defeat of the mother hound, and another puppy killed by kindness. The hen went to the block.

A DOG WITH A SCENT FOR MONEY.—A Virginia paper tells this story of Mr. David S. Forney's dog: "Mr. Forney took his dog into the house (this was not at home—therefore not a trick,) and gave us his pocket-book, with instructions to carry it a distance to the field, and place it somewhere on the fence, in a direction that the wind would blow from it to the house. We did so, and returned. Mr. Forney came out with his dog, sat down, and said nothing, nor did he speak to the dog. Presently the dog pricked up his ears, and commenced to sniff the air, started off in a direct line to where the pocket-book was, passed it a few feet, came back, reared upon the fence, got it, came to its master, and laid it in his hand. We took a number of hats to the outer edge of the lot; these he brought in, selecting his master's first."

MOHAWK VALLEY NOTES.—*Amsterdam, N. Y. Oct. 30th.*—There has of late been a growing interest through this section in breeding a finer strain of dogs than has been shot over by our local sportsmen; though several quite fine setters are owned here, not until lately has a true interest been taken in the pointer, of which, I presume, as fine a specimen (Ferguson's lemon and white bitch, pure blood,) as exists in the county, is owned here. She was lined yesterday by Mr. Lewis's lemon and white dog, of Syracuse, and if success attends the effort, as fine a strain of pointers as the county ever saw may be expected, and will be found in the Mohawk Valley. The weather is becoming gradually colder, and before many days our woodcock shooting will have an end.

J. H. S.

If our correspondent had given us the *names* of the dog and bitch alluded to, it would have added to the value of the information.

—A hunter with a dog and gun was roving over the farm of Mary Jane Pratt, of Iroquois County, Ill., and she ordered him off the premises. "Oh, you ain't in any danger; I ain't hunting old maids," was his reply. Returning to the house, she brought out a gun, and blazing away, killed the hunter's dog. He threw up his hands and yelled, "Do you mean to murder me?" "Oh you ain't in any danger, I ain't hunting for fools," she replied, but she brought the gun again to her shoulder. Her husband appeared and prevented further bloodshed.

—Dr. Rawlings Young, of Corinth, Mississippi, claims the name, Rhoebe II, for black and white setter puppy six months old, by Dash III out of Rhoebe; bred by Harvard Kennel Club, Cambridge, Mass. Also, the name of Nova II, for red Irish setter bitch, fourteen months old, by Blixer (Elcho Erin) out of Easter (Rufus II–Moll II).

—Mr. Benj. H. Lee, of New London, Conn., claims the name of Neff for a red Irish setter pup, by Lincoln & Helyar's Arlington, out of Wenzel's Doe, whelped September 7th.

—The red Irish setter bitch, Peg Woffington, owned by Mr. W. H. Bradley, of Chicago, Ill., has been bred to Dr. Wm. Jarvis's champion Elcho.

YACHT DESIGN.

Editor Forest and Stream:—

Seeing so much in your valuable paper on yacht building, with so many conflicting ideas and principles, I thought I would put some things on paper in reference to a subject which I have studied out and proved practically through an experience of thirty years.

Most writers on this subject have one or two good principles or ideas which they advocate, and were there no other principles to operate against them they would be all right. But there are many things brought into operation which have to be considered in building a successful yacht; hence the failure of most writers as well as builders. One person has one particular principle uppermost in his mind, and a second has another, a third still something else, and these hobbies they are apt to run wild on, to the exclusion of all others. But he who can understand the workings of all influences acting upon sailing vessels when under way, and so properly combine the elements of success, will be able to construct the most satisfactory yacht.

Of course, some consideration should be taken of the work any particular craft will be required to do, and the principles best adapted to that work should be most prominent in her construction. Now, I wish to notice some things that several writers have said in your paper from time to time, and to point out where they are right and where they are wrong, in my opinion.

First, then, I will notice the small Corinthian cutter in your number of Jan. 30th. In an article on that subject you say the ordinary sloop yacht can lay claim to but one advantage over the Corinthian, and that is in the matter

of draft. There are other advantages which the ordinary sloop yacht will have over such a boat as is drawn in the paper referred to, which, to my mind, is of the greatest importance, both in smooth water and in rough. The main one is speed, which I have not seen taken into account by any writer. A fast vessel can be worked to windward against a heavy sea better than a slower one, although the slower one may be a dryer sea-boat.

Undoubtedly the little Corinthian would be a very comfortable little craft, as upset her you could not—certainly an excellent quality—and she would have good accommodations for so small a craft; but I think her designer claims too much for her. He says he will have over six feet standing room under skylight. According to the drawing he will have but five feet under deck, with but two feet of level floor to stand on. Then he must have a deep skylight; and how much better is that than a "mansard?" I think, too, she will draw more water, and be less out of it, than he claims for her. She will be well out if she is six inches less.

But I am more interested as to speed and seagoing qualities than anything else. It is evident that the designer thinks she will be fast, which to me is preposterous. In practice, in this country, at least, such vessels, or even a modification of them, have never been known to be any match for the ordinary centreboard boat; and the reasons are plain, if you look at the principles governing the action of the water upon bodies passing through it, as well as the action of bodies upon the water. In the first place, then, no body or boat with a great vertical curve in the bottom lines can be made to pass through the water easily. In these very deep boats the bilge is a great distance below the deck, and you have to cut both ends up to her deck, or nearly so. In the drawing under consideration take the vertical line drawn through her, intersecting the lower part of the bilge, and you have a line with much more curve than the ordinary sloop-yacht. The "straight fore and aft" theory is one extreme, and this is the other, but the worse of the two. A medium will pass through the water much easier than either.

I object also to the lower part of her frames being made concave, especially forward. The water must pass from the bottom of her keel upward toward the surface as the boat passes along. Such a shaped frame the water cannot pass over easily. Aft they must be somewhat concave, in order to give the right shape to the waterlines, the water operating differently on the boat apt from what it does forward. This concave bottom also creates a suction in the hollow, which also is detrimental to speed.

I object also to a raking stern-post. The rudder cannot act on a fair principle, but when turned, tends to draw the stern of the boat downward if she is moving through the water, and the greater the speed the more it pulls down. Then, again, the great draft of these boats is against speed. It is a well known fact that any body will pass through the water much easier near the surface than at a greater depth. The water, of course, has to be displaced as the vessel moves forward. On the surface she displaces but just the water equal to her own immersed bulk, but as you go down deeper she has not only to displace water equal to her own immersed bulk, but also all the water between that and the surface has to be moved. The power required to move the water but a few inches at the keel of these deep boats will move it many feet at the surface. Engineers are well acquainted with this principle. In blasting rocks under water, by simply placing cans of explosives on the rock and exploding them, the weight of water above offers such powerful resistance that the rock is shattered before the water can be moved. But no such result can be obtained near the surface. The principles in operation here are the same as in a moving vessel.

There is still another obstacle to speed in deep boats, Mr. A. C. Smith, in one of his lectures before the Seawanhaka Yacht Club, says, in substance, that it is not the boat that takes the most hold of water that necessarily does the best work in going to windward; but the object should be to get the best results with the least hold of the water, as the friction of the water does much to retard her progress. The less surface you get, the less friction. This is true, and he might have added that this unnecessary hold of the water requires power to force it through; hence motion is retarded on that account. It is also found by experience that you can have too much hold of the water, as well as not enough. Often it is found that a boat does better with a part of her board than she does with all of it down. With a centerboard this can be regulated, but with a keel you have to drag it all whether you need it or not. Narrowing the boat will not help her; she would have less power and would require more ballast, when she would only settle deeper in the water, and require as much or more power to force her through. So much as to speed.

Now as to sea-going qualities, I think the little *Corinthian* is not a fair type of the English cutter or of some of their imitations here. I think she is wider, with not so much deadrise as they have, and higher out of water, consequently will make a better sea boat. People may and do differ as to what qualities constitute a good sea boat. Now if going through the sea instead of over it constitutes the best kind of a sea boat, then the English cutters and the imitations here are the best, but not for me. It is a notorious fact that these deep, narrow boats do not lift readily in a sea way; they go through the waves, not over them, the crew having to hold on to prevent being washed overboard, while at the same time a wider and more buoyant boat will be comparatively dry. For this there are several causes. In order to be understood as to the principle I wish to illustrate, I will take an extreme example. Take a piece of plank eight or ten inches wide, two inches thick, and two feet long; cut one edge thin and sharpen the ends. Now set it up edgewise in the water and it will represent your deep, narrow boat; again, lay it on the side and it will represent your wide and flat boat. Now place some weight suddenly on the board up edgewise, and see how quickly it will go down. Put the same weight on the same board lying flat on the water and observe how slow it moves downward, thereby showing a greater resistance than when in an upright position. Just so with the boats. A wave rises suddenly under the bow equivalent to placing weight on top. One is so narrow and sharp that the water cannot take hold of here to lift her readily, hence it rises up and over her before she can lift so as to keep above it. The other type being broader and flatter, the water as it rises takes more hold of her and carries her up with it, so keeping her above it. Hence she is a dryer boat. And this is not all. Your deep, narrow boats of course will not upset. But the same natural laws or principles that keep her from upsetting also prevent her from rising quickly in a seaway. The principle, as is well known, is one of leverage. You have your ballast way down in her keel. The surface of the water is the fulcrum, the mast the lever. Now, if the boat heels that lead must be swung upward and to windward, or the boat must be thrown over and to leeward. Just so when she rises forward on a wave; the ballast must be swung forward and upward, or the boat must be thrown backward and her stern downward. It is like swinging a heavy weight at the end of a long stick. Her movements in rising and falling forward must necessarily be slow on that account, while with the flatter and shoaler boat, which has her ballast inside of her, it is but a matter of lifting the ballast up and down, and the boat will readily adapt herself to the conformation of the surface of the water. Hence the water has less opportunity to get on her deck. Still another factor is in operation here in favor of the wider boat being a dryer one, particularly when the boat is moving quickly through the water, for the greater the speed the more powerfully it operates. I allude to the flaring bow. Deep, narrow boats cannot have the flare on the barpins that a wider and flatter boat may have. Years ago "South Side" boats were built very full forward. As most of them were cat-rigged it was thought they must have buoyancy forward to keep them from running under, but it was found that a sharper boat with a flare would run her bow out of water when the full boat would "pitch pole." So with yachts in being driven through a heavy sea. With a flare there is a constant tendency to run her bow out of water, but with no flare the reverse is the case. Now as to the amount of ballast a boat should carry, Mr. A. C. Smith makes some comparisons favoring light ballast. Among the rest he says the *Mohawk* beat the *Dauntless* in a heavy sea, though of inferior model, and with but forty tons of ballast, while her competitor has much more. I think he is mistaken as to the result while going to windward but correct as to going before the wind. The reasons for this are very plain. In the first place the *Mohawk* is much the larger boat, and then she has the advantage of being a centre-board boat, and so ought to have beaten the *Dauntless* any way. Her light ballast was in her favor going before the wind. But I cannot agree with Mr. Smith as to light ballast being the best in going to windward in a seaway. My experience proves to me that any boat needs a heavy amount of ballast to work to windward well, particularly in a heavy sea, because the resistance of the water to the boat's passage through it is very unequal at times. Every sea that strikes her "kills" her headway in a measure; but if she is ballasted heavily it acts like a balance wheel to machinery in keeping up a steady motion. It should be placed as near midships as possible, leaving the ends free to rise and fall, as on a pivot, and the boat will be lively in a seaway. Something should be said also as to rig, as that has much to do with a vessel being a good sea boat or not. It may be taken for granted that all the deep, narrow yachts being built for heavy weather are also rigged for that purpose, while the greater part of the centre-board yachts being built more for speed are also rigged for that purpose. Hence they have too long spars and too much sail for heavy weather. Rig them for it, and ballast them properly, and I think they will make as good sea boats as the other type. But I think a medium between the two will make a better boat than either of the others in any weather.

To illustrate what I have said, I will make some comparisons of the performances of several yachts. Take the sloop yacht *Arrow*. She is an embodiment as far as could be done consistently with the work she was required to do, of all the principles advocated above. Look at some of her performances in company with other yachts. Take the regatta of the New York Yacht Club in June, 1876. Surely the water was lumpy enough on that occasion for any amateur or old salt either. Her competitors were the *Vindex*, *Gracie*, and *Addie*. The *Vindex* and *Addie* are about the size of the *Arrow*, but the *Gracie* is much larger. They all started several minutes ahead of the *Arrow*, but she passed them all before reaching the Southwest Spit. The *Gracie* and *Addie* got but a little way outside of the Hook, and were obliged to return; the *Vindex* followed on, she being one of the deep, narrow, sea-going boats, and a keel boat, and rigged for heavy weather. The *Arrow* is not rigged for heavy weather, being required for fast sailing, chiefly; she has heavy spars and large sails. But with this disadvantage she beat the *Vindex* nearly fifteen minutes, taking but little water on deck and none in her cockpit, while the sea swept the deck of the *Vindex* from end to end, and the man at the wheel was leg deep in water all the way from the Hook to the lightship. Again, look at her performances with the rest of the fleet. Fourteen yachts started ahead of her; the time they started ahead ranging from twelve minutes down, yet she was the first round the Spit, third round the lightship, and fourth home. It could not be expected that she would sail with the large schooners in such a wind and sea. It was free wind nearly all the way out and all the way back, yet but two schooners beat her out and but three home. These were the *Idler*, *Palmer*, and *Wanderer*. Others of the best schooners of the fleet were in this same regatta, as the *Madelene*, *Tidal Wave*, *Rambler*, *Alarm*, *Restless*, *Estelle*, *Comet*, but they all came in behind the *Arrow*. She has sailed seven races since then, fully sustaining her reputation as in this one, coming in first boat in all of them but one, and that was a Corinthian race, which means she was sailed by a crew who knew nothing about the business, but only one schooner, the *Estelle*, beat her even then. The following extract is from the New York *World* of June 9th, 1876, in an account of the regatta spoken of above. "The third yacht to round" (the lightship) "was the sloop yacht *Arrow*, a most wonderful vessel, and easily the fastest sloop in this country. For a vessel so disproportionate in size, to have hung on to a yacht like *Palmer* in such weather as that of yesterday, is something that has never been done before in the history of yachting here." The *Wayward* is another of the same type, though smaller, and she has done equally as well. The *Addie V.* was another, before being altered, winning the Bennet Cup without allowance of time over five of the largest and fastest sloops at that day, one of them being the *Gracie*, as first built, and the *Addie V.* was the smallest of the six. Still farther back we have the *Mansing*, another of the same type, which several times beat the famous *Julia*, although more than twenty feet shorter. But the *Arrow* and the *Wayward* are the latest improvements of the type. One of your correspondents says a good model for a small yacht is not "worth shucks" for a large one. True enough, but why? Because in order to get sail enough on a large yacht to make her go, if of the same proportions as a small one, her spars would have to be so long, and reach so far overboard that it would be difficult handling them. But the main reason is, that a large yacht, to be a good sailer, must go through the water much faster than a smaller craft; consequently she must be much sharper and narrower or she will pile the water up forward so she would not go.

(To be continued.)

HOOSICK FALLS, *Oct. 27th.*—*Editor Forest and Stream:*—Being a constant reader of your valuable paper, and seeing an article called the "Hanlan and Courtney Race," in which Mr. Hanlan receives all credit as being the best sculler in the world, and Courtney no word of praise, I, for one, will say I do not see why a man, or even his own backers—whoever they may be, or of what stamp—would be so corrupt and mean as to cut their own sculler's boat when he had nothing to lose and something to win, as he was to get $2,000 if he lost, and $6,000 if he won. It looks to me as if the boats were cut by the other party. Courtney gave Hanlan a postponement; why not extend the same courtesy to Courtney until he might get another boat? Mr. Courtney may be in bad company, but I think they tried to buy him off, and, failing in so doing, watched their opportunity and destroyed his boats. He is the best man who has ever pulled a race with Hanlan, and Hanlan, being champion, wanted to win, and found money had no temptation, as Courtney was going to row for all he was worth. I cannot see how Hanlan won any money, as it was given in this way: ($6,000) Six thousand dollars prize, providing there was a race; and, if Courtney would row him, even though defeated, he should receive $2,000. Please tell me how Hanlan won? There was no race. How was he entitled to any money? C. H. Y.

Hanlan won in consequence of the generally accepted rule among sportsmen: "Play or pay." Courtney has refused to accept the articles recently forwarded him by Hanlan, because they contained a clause to the same effect. If "Play or pay" is fair for one, it is for the other. The fact is, Courtney has no wish to meet Hanlan; or, at least, his actions can only be interpreted in that way.

Furs and Trapping.

THE FUR TRADE OF TO-DAY.

WHERE THE SKINS COME FROM AND THEIR COST—THE FASHIONS AND PRICES FOR THE COMMING SEASON.

THERE never was a time when furs were in so great a demand as now. Animal life of every kind, in Europe, Asia, Africa and America, is slaughtered in increasing proportion for the hides alone. For this purpose thousands of hunters and trappers are employed, and great companies have established themselves and distributed their agents. The Hudson's Bay Company in North America has its posts strung all the way through the Canadas from Nova Scotia on the Atlantic to British Columbia on the Pacific coast. At these posts it collects immense numbers of the skins of bears, wolves, foxes, minks, otters lynxes, beavers, fishers and muskrats, and those of martens (known as Hudson's Bay sables), and sends them to its headquarters in London. The Alaska Commercial Company, chartered by the United States, flays a hundred thousand seals a year and ships their skins direct to London. The great firm of C. M. Lampson & Co., London, receives from America furs similar to those imported there by the Hudson's Bay Company, and also skins of the sea otter, the raccoon, the skunk and the opossum from the United States. Other fur companies with large capital are seated in various quarters of Europe. The yearly production of raw furs throughout the world is worth from $18,000,000 to $22,000,000, and the whole amount of the fur trade, including manufactured goods, is valued at about $100,000,000.

The great fur-marts in Europe are London, Leipsic, and Nijni Novgorod. At these points semi-annual sales (or fairs as they are termed) take place; and here the representatives of leading fur houses from all parts of Europe and America meet to make their purchases during the months of March, April and May. The fur trade of Leipsic alone is estimated at $6,500,000 a year. Sable and raccoon fur is the great staple in Russia; red fox in Turkey and the Oriental countries; skunk in Poland and adjacent provinces; muskrat in Germany, France and England.

New York is of course the principal fur-mart in this country, and the main depot of the shipping trade. Here are no organized companies. The business is carried on by private firms of large means and long experience. The business directory of the city gives the names of more than a hundred and twenty furriers and fur merchants, forty-three of whom (indicated by a *) are importers and wholesale dealers:—

Of the skins used in America the greatest number are from American animals, though the seal skins from Alaska, like those which are taken at Shetland, at the Cape of Good Hope, at Cape Horn, and at Lobos Island, near Montevideo, go first to England to be dyed. There are American dyers of seal-skins, who drive a large and flourishing trade; but they have never been able to dye these skins as well as the London dyers do.

The skins of sea-otters, brook otters and beavers are dyed as well here as abroad; but most of the dyers are English or Irish. As for dressing skins of all kinds, that is admirably done in New York; indeed it is skilfully done by the Indians of the plains and the northwestern mountains. The manufacture of furs into robes and garments is nowhere so well accomplished as in New York, although in this task, again, foreign workmen and women are extensively employed. The testimony of the proprietors of large establishments is that Frenchmen and Germans make the best furriers, American cutters, they say, "haven't the knack of matching and workmanship."

The most splendid and costly furs are Russian sable, sea-otter and black and silver fox. The Russian sable is the finest of all the martens, and, since it is not very prolific, its skins are costly. The best and darkest are obtained in Yakootsk, Kamtschatka, and Russian Lapland. The fur varies from a rich brown to a deep jet-black, with points of hair tipped with white. This constitutes its peculiar beauty, but it has also the peculiarity of being fixed in the skin, so that it will turn with equal freedom in all directions, and lie smoothly wherever pressed. The best sables are almost monopolized by the imperial family and nobility of Russia, and only a few find their way into other countries. Some, privately procured in Siberia by Jewish traders, are brought annually to the Leipsic fair. A muff of "crown Russian sable" is now worth in New York from $1,100 down to $300. Sets (by which is meant a muff and boa) of sables not of the very highest quality cost $500 to $550. Sets of sea-otter are valued at $150 to $250, and sets of black and silver fox at $150 to $250. These high-priced furs are bought only by the rich, and are not generally fashionable.

The delicate and silken fur of that little animal, the chinchilla, which burrows in the valleys which intersect the hilly slopes of the Andean region from Chilli to Peru, is long, of a clear gray color upon the back, softening to a grayish white beneath. It is used for muffs, tippets, lining to cloaks and pelisses, and trimmings, and is most becoming to young ladies and girls. A chinchilla muff and boa cost from $50 to $60. Ermine has no longer a considerable market here. For street wear it has been entirely given up except for children. All mink furs taken in the right season, are durable, but they quickly fade. New York and Canada minks are the darkest and best, and sets of these which once were sold for $125 to $150, can now be bought for $100. The fur of the skunk, described by the trade as the Alaska sable and suddenly popularized a few years ago, is still in fashion. When it was first introduced even its vile smell could not repulse its admirers, and now that a process has been discovered for completely deodorizing it, it will continue to sell because of its glossy beauty and its cheapness. English-dyed furs of the American lynx are equally liked. They are black and handsome, but frail. A single season will finish a set of them, which like a best set of Alaska sable is cheap at $20 to $25.

Seal skin has been said to have lost its hold upon the American market. This is not true. No other fur can take its place for cloaks and coats and ladies' jackets. Even sea otter, which, dyed in London, is much handsomer than seal for muffs and boas, is too cumbersome for sacques. In fact seal skin is in great demand this fall for sacques—in greater demand than ever for large and expensive ones. They are made large and longer, and in more graceful shape than heretofore, and though most of them are plain, some of them are splendidly trimmed with bands of the fur of the black and silver fox, sea otter, brook otter and beaver. They have become comparatively cheap. The most beautiful sacques (though perhaps not the most durable), made of "pup Shetlands" skins, sell for $300. The best Alaska sacques bring $125 to $250. Seal sacques American dyed can be bought for $80, $90 and $100. They look well for a time, but the largest New York houses decline to invest in them because they will not last. Seal sets of the first quality (muffs and tippets) are offered by the Gunthers at $50 and $60. If fur warehouses were not already stocked with seal skins, these prices would be raised in view of the diminution of the production. The ruthless murder of seals in Shetland has almost depopulated their abodes, and the decimation of seals, both young and old, which is going on in Alaska must shortly arrest the propagation there. The numbers of seals which are found in other localities specified near the commencement of this article are relatively small.

One of the most comfortable and luxurious uses to which furs are put is the lining of warm winter silken wraps.

Quantities of furs are used for trimmings.

At any of the great fur-houses, and especially at the houses of C. G. Gunther & Co., 19 Union square, and C. G. Gunther's Sons, 184 Fifth avenue, one's eye may look upon a very embarrassment of riches in robes of fur.

MINK NOT AMPHIBIOUS.—It was, indeed, a remarkable statement of your correspondent, noted in last FOREST AND STREAM, that he had kept a mink under water for ten consecutive hours without drowning it. There can be no question but that that mink was strictly amphibious, but any old trapper will tell you that ten minutes is more than most of 'em can stand. Our trappers say that a mink caught in a box trap and held under water a few minutes is about ready to skin. S. N. C.

TRAPPING IN PENNSYLVANIA.—*Dugdale, Chester Co., Oct. 30th.*—Trapping has about begun in this vicinity for skunks, and bids fair to exceed last season's catch, though I think that prices will not reach last year's figures.

Rational Pastimes.

THE GAME OF CRICKET.

DEPARTURE OF THE FOREIGN TEAMS, ETC.—Richard Daft and his team of English professional cricketers sailed for home in the *City of Richmond*, of the Inman Line, on Saturday afternoon, Oct. 25th. The Gentlemen of Ireland team and a large number of their friends also sailed for home from this port on Oct. 29th in the Cunard Line's steamer *Scythia*. It is reported in Philadelphia that Alfred Shaw, the great Nottinghamshire bowler, has been engaged by the Chestnut Hill Club for the season of '81. Capt. Daft has engaged to send out new professionals for several of the Philadelphia and New York organizations. G. Lane, professional of the Staten Island Cricket Club, sailed in the *Celtic*, of the White Star Line, on Oct. 30th.

DAFT'S ENGLISH TEAM VS. MERION TWENTY-TWO.—The gentlemen of the Merion Club, of Ardmore, Pa., were not fortunate in regard to weather in their two-day match against the English cricketers on Oct. 21st and 22d. The game began in threatening weather and ended in quite a heavy rain storm on the second day; this interruption caused the match to be a draw, although it was virtually a one-inning victory for the foreigners. The continued drought had made the wicket, which is usually a good one, very fiery and bumpy. In spite of this, however, Eph. Lockwood made a most brilliant essay at the bat, which contributed the fine score of 88, while he saw out no less than seven of his compatriots. The bowling of Braithwaite, the home club's professional, is said to have been excellent; it was effective, as is shown by the bowling analysis. Shaw, the Nottingham bowler, again performed wonderfully, particularly in the second inning, and three of the home club contributed double figures. Stroud, 16; Fox, 10 and 13; and R. Williams, 10. Annexed is the full score:—

NEW GROUNDS.—The Philadelphia Club, of Philadelphia, has secured a spacious ground at the northwest corner of Broad street and Fisher's Lane, San Francisco (Cal.) is to have a cricket ground. The Newark Club, of Newark (N. J.), has leased a fine field situated at the southern boundary of the city.

NEW CLUBS IN OHIO.—There are four clubs at Cleveland, the Forest City, Rising Sun, Mechanic, and Excelsior. Columbus has a club, and also Amherst, Ashtabula and Elyria each have one.

ST. GEORGE'S (3D) VS. ORANGE.—A mixed team of members of the Orange and Newark clubs proceeded to Hoboken, N. J., on Oct. 16th, and was fearfully beaten on a one inning's score by 163 runs by the home organization. Score :—

ARCHERY.

A NEW ARCHERY CONTEST.—We want a new combination of the words "bow" and "beau," "arrow" and "narrow," into a compound quadrilateral pun. We want it so much that we are willing to pay for it. Our soul is weary with much reading of weak efforts. Give us something strong. Many a man can make a pun who cannot draw a bow. This competition need not be confined to practical archers. We cannot allow any shooting at other targets than the one we have got up. No jokes about William Tell count. Now draw your arrows to the head.

—On the 11th of Oct. a match was shot between L. L. Peddinghaus and C. G. Slack, of the Arden Archers, of Marietta, Ohio, upon one side, and Will H. Thompson and John A. Booe, of the Wabash Merry Bowmen, upon the other side, the two members of the Arden Archers being allowed to add 40 per cent. to the scores made by them. The result proved that this per cent. was too great a handicap for the two Merry Bowmen, and they were badly beaten, though they shot splendidly. The two Ardens made fine scores, as the details below show. Single York Round :—

Total								830

—On the 18th of Oct. three members of the Wabash Merry Bowmen shot 90 arrows each at 60 yards with the following score :—

	—1st 30— *Hits.*	*Points.*	—2d 30— *Hits.*	*Points.*	—3d 30— *Hits.*	*Points.*	—*Total*— *Hits.*	*Points.*
Theo. McMechan	22	92	19	93	25	111	66	296
M. Thompson	25	117	25	121	26	122	76	360
W. H. Thompson	27	123	30	196	28	168	85	487
Total								1,143

—In answer to the questions propounded by several correspondents, we can say that all the arrows used by Mr. Will H. Thompson in the series of experiments in flight shooting, reported in our issue of Oct. 9th, were of the regulation length of twenty-eight inches. A longer arrow would have given a trifle greater flight, but would have endangered the bows used. It seems pretty well settled that the range of an arrow is confined within 300 yards.

—Match between Dean V. R. Manly, of the Toledo Archers, and John Wilkinson, of the North Side Archers, of Chicago, Oct. 18th, Double American Round :—

	—40 *Yds.*— *Hits.*	*Points.*	—50 *Yds.*— *Hits.*	*Points.*	—60 *Yds.*— *Hits.*	*Points.*	—*Total*— *Hits.*	*Points.*

Totals	60	348	56	288	43	163	159	799

This was certainly a very close match, and the shooting was extremely fine for archers who began the use of the bow this summer. The fifty yards' scoring of each of the archers would do credit to a veteran of three years' practice. When an archer of six months' practice scores above 400 points at the American Round in a match shoot he is a competitor to be watched in the future. We prophecy larger scores than these are many months from these archers.

WABASH MERRY BOWMEN.—*Crawfordsville, Oct. 27th.*—Two members of the Wabash Merry Bowmen last week shot the Double York Round with the following result :—

	—100 *Yds.*— *Hits.*	*Points.*	—80 *Yds.*— *Hits.*	*Points.*	—60 *Yds.*— *Hits.*	*Points.*	—*Total*— *Hits.*	*Pts.*
M. Thompson	54	288	52	192	40	210	146	690
W. H. Thompson	87	311	71	303	44	232	202	846

Oct. 27th.—Twenty-four arrows at 60 yards :—

W. H. Thompson	22	118	Mrs. John Lee	19	81
Maurice Thompson	21	101			

Several members of the club are getting ready for a winter campaign against the rabbits, vast numbers of which abound in the vicinity of Crawfordsville. There is no finer sport than hunting rabbits with the long bow.

—The North Side Archery Club, of Chicago, challenged the Brooklyn Archers for a match at the American Round, the North Side Archers to shoot three men against four of the Brooklyns. The result was a disastrous defeat of the challengers, the Brooklyns walking away with the fine pheasantwood bow kindly offered as a prize by Mr. E. I. Horsman, of New York. We append the score :—

BROOKLYN ARCHERS.

REAL ESTATE IN THE WEST.—The Denver Land Co. offer in another column alternate lots in their addition. These alternate lots are in fact given away, though a nominal charge of one dollar is made for the deed. The Company limit the number purchasable at this price to five lots. Many of the large cities of the West have been started in a similar manner, and those who secured lots then, find themselves now in possession of valuable property. The opportunity does not often present itself of making an investment in Real Estate at such prices. The reliability of the Company and their title to the property being well established, there could be no risk, with a fine prospect for a rapid increase in value. Denver has had such a wonderfully rapid growth, it is probable that the land offered will be speedily taken up.—[*Adv.*

—Dr. T. Felix Gouraud's Oriental Cream, or Magical Beautifier, advertised in another column, is a matter of deep interest to all who would have their skin free from the baneful influence of the elements or free from tan, freckles, or sallowness, or other skin blemishes, giving it a soft pearly whiteness and leaving the complexion clear and bright as crystal.

It is recommended because its properties have been tested more than a quarter of a century by the very elite of American and continental society. While its naturalness of operation is such that the use of the cosmetic is not suspected, it is entirely certain to beautify the face and impart the evidence of refinement and culture. It meets the wants of refined ladies who require a harmless efficient beautifier.—[*Adv.*

NEW PUBLICATIONS.

FOUR MONTHS IN A SNEAK BOX. By Nathaniel H. Bishop. Boston: Lee & Shepard. 1879. Price, $2.50.

Mr. Bishop, who is the author of "A Thousand Miles' Walk Across South America" and "Voyage of the Paper Canoe," seems to have a penchant for starting out alone on novel expeditions. He is one of the sort of men who made the sixteenth century an era of discovery. Had our friend lived in those shining days of adventure his name would have come down to us with those of Drake and Frobisher and Raleigh and Hawkins. But in that case we should not have had these admirable books of adventure.

Our readers may remember the author's first voyage in a paper canoe from Quebec to the Gulf of Mexico, in the winter of 1874–75. The adventurer then followed the inland waters of the Atlantic coast. In his last voyage he procured a Barnegat sneakbox, a staunch little craft twelve feet long, and rowed down the Ohio and Mississippi rivers, 2,000 miles, to the Gulf of Mexico and the mouth of the Suwanee River.

We need not say that in recounting his adventures Mr. Bishop has made an entertaining volume, full of incident, humor and information. The book is well illustrated and is further supplied with charts especially prepared for it by the Coast and Geodetic Survey Bureau.

—Little's Soluble Phenyle is a valuable deodoriser and antiseptic; is an excellent article for disinfecting and purifying, and may be used in a score of ways.

—See advertisement of Mr. Orgill. Any party needing a first class field dog, would do well to communicate with him.

Answers to Correspondents.

MINNIE, Auburn, Me.—Please send real name to editor FOREST AND STREAM. It has been mislaid.

R. L. L., Monon, Ind.—Will you please recommend to me some responsible firm to which I may ship game and fur? Ans. C. G. Gunthers' Sons, 184 Fifth avenue, for furs, and Knapp & Van Nostrand, Washington Market, for game.

W. L. B., Saugatuck, Conn.—We published the other day a communication from Titusville, Fla., from which we should judge that might be a good locality for trapping.

C. A. McC.—The *Muriel* is 40 ft. waterline, 46 ft. over all, 9 ft. 4 in. extreme beam, about 6 ft. 9 in. deep. Built last year by Piepgrass, corner Franklin and Clay streets, Greenpoint, L. I. Belongs to Mr. Chas. Stillman, of New York. Will soon be laid up at Piepgrass' yard for the winter. Draws a little over seven feet.

L. A. S., Saratoga, N. Y.—1. My shooting is grouse, woodcock and snipe. Would not a gun of 6 lbs. 16-guage be as effectual as a heavier one of larger bore? 2. Are 16-guage paper shells made? 3. Are "crimpers" for that gauge made? 4. Is a choke or cylinder preferable for such shooting? Ans. to 1, 2 and 3. Yes. 4. A choke-bore would be preferable in a gun of that calibre.

H. L. R., Phœnixville, Pa.—I have a Gordon setter bitch six years old, who has had several litters of pups. She has been lined twice recently, but both times has failed to have any pups. Can you tell me the cause and the remedy? Ans. Possibly she was too fat, otherwise we cannot account for it, unless it was the fault of the dog.

B.—You can get pear-wood batteus and ship canals or same of vulcanized rubber at Keuffel & Esser, Fulton street, New York. The latter are expensive. The cutter *Freda* has 18 ft. hoist to mainsail with long gaff. Sail area of lower sail about 800 square feet. Do not fancy Windermere yachts for open water. Regular cutter would behave better and be cheaper and roomier.

C. E. W., Galena, Ill.—I have some 3/0 paper shells which I loaded this fall for duck shooting but was unable to go. Will they shoot as well if kept until next fall? They have five drachms powder and a thin card wad over it, then two pink-edge, then shot and another card board wad over that? Ans. They will probably be perfectly good next season if kept dry. They may want reaming before using as the shot wad is apt to get loose.

A. R., West Chester, Pa.—I have a dog troubled with a breaking out along his back near the root of the tail. It seems to be an eruptive skin disease and very itching, as he bites it furiously. I have an impression that it is seated in the blood? Ans. Give your dog internally six drops of Fowler's solution twice a day and rub the afflicted part with crude petroleum. Wash and dry it well first with Castile soap.

H. O., JR., Stamford, Conn.—1. Which place would you recommend as the best for one day's sport among the ducks, Barnegat or the south side of Long Island, and the best way to get to same; also how much would it cost? 2. Where in Jersey could good quail shooting be obtained about the second week of November, and who to address? Ans. 1. Both places excellent just now. 2. Address Chas. A. Smith, Forked River, New Jersey.

G. R. W., Dryden.—Do I, now a resident, require a license to shoot in Atlantic county, N. J.? To whom shall I make application for the same? What is the fee? Ans. You may apply to Maj. W. H. Walker, Vineland, New Jersey, for permit to shoot in Atlantic county, which is one of the five counties of the State under the jurisdiction of the West Jersey Game Protective Association. The fee is $5, we believe.

EVA.—To preserve spars during winter, slush down with mixture of white lead and tallow. Always preserve your boat from the weather, especially on the sunny side. Tack or lash old canvas, burlap or matting around. Keep her clear of the mud and wash of the tide, or keel will rot away. Sweep snow off her decks. Air below during fine days. Stop all leaks that may develop about the bits, partners, bolts, etc., as the wood dries. Haul out clear of sheds and shanties and insure for fire. Comb up all lanyards. Stow sails and gear where they will not mildew and out of the way of rats, mice and thieves.

TYRO.—The sail area for a 15 ft. cat boat, as given by you, 14 ft. hoist, 18 ft. boom, 10 ft. gaff, will make an effective sail, having less hoist and more head than usual. It is an error to suppose that lofty narrow sails are better or sit closer to the wind than those of less hoist and more head. This will be more fully explained in a future issue. By changing to the sloop you will find your boat carry less in running free. The cat rig is not admissable except in smooth water, and even then it is unhandy in many respects and makes a boat wild on her helm. Running free in a cat we take to be a device of the Evil one to ensnare individuals temperate in language.

C. J., Washington, D. C.—My dog is continually flopping his ears. He will sometimes get up in the night and give a howl, and commence shaking his head furiously. What shall I do to prevent the flopping? Ans. Your dog has canker of the ear. We presume it to be internal, as you would have noticed any sores on the outside. After washing the ear with Castile soap and warm water and thoroughly drying, pour into the cavity a little of the following mixture, holding the flap down for a few minutes until it has had a chance to penetrate. Goulard's extract, and wine of opium, of each half oz.; sulphate of zinc, half drachm; water, eight ounces, mix.

A. H. M., Philadelphia.—Three of us expect to shoot in Nelson county, Va., next month. Can you tell me if we shall require licenses? We prefer to have them if they are procurable and important. Also can birds be shipped home? I mean in small quantities for private purposes only? Ans. There is no license required for shooting in Nelson county, and birds can be shipped to Philadelphia between Oct. 15th and Jan. 1st. The only thing for you to do is to get permission to hunt from the parties on whose land you propose to shoot over. As all lands in the State are posted by general law, and without permission, some one might have your party arrested for trespass. There is no trouble about gentlemen hunting anywhere. Pot hunters get warmed up sometimes.

P. H., Bloomsburg, N. J.—A setter pup has had distemper for about three weeks, and still coughs and sneezes. He seems very healthy and eats heartily; food, table scraps. His sight is affected, and he will run against you, when called, before he will stop. When exercised will soon show weakness in his hind-quarters; seem to give way to one side, and he falls over; is kept in a stable with plenty of sun and clean straw; age about eighteen months. What would you recommend be done with him? What is the cause of his sight being affected? and weakness of hind-quarters? Ans. It is not uncommon for the sight to be affected after an attack of distemper. It is better to do nothing to the eyes as they will probably come all right with returning health. We should give the dog a wine glass of codliver oil with two or three drop wine of iron in it every day.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

—AT—

No. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpariel type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

***Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, NOVEMBER 6, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of mail service if money remitted to us is lost.

☞ Trade supplied by American News Company.

PERSONAL.—Fayette S. Giles, Esq., the original promoter of the Blooming Grove Park enterprise, arrived in New York last Friday in the steamer *Amerique*, from Europe. He is, at present, a resident of Geneva, Switzerland. He is stopping at the Hoffman House.

PERSONAL.—Mr. Alex. Pope, jr., of Boston, author and artist of Upland Game Birds and Water Fowl of the United States, has received from the Emperor of Russia an order for one of his wood carvings of birds, specimens of which have been so admired at Tiffany & Co.'s and Schaus' in this city. Mr. Pope is now engaged on a work similar in design to the Game Birds, the subject being the most celebrated dogs of every strain owned in this country.

OBITUARY.—Capt. E. B. Staples, of Sarasota, Florida, died at his home on October 21st, from hardship and exposure. He was a gentleman of education and refinement, but his necessities compelled him to find occupation among the common fishermen at one of the salting establishments on the West Coast. He was well known to the readers of FOREST AND STREAM as "Major Sarasota," having contributed a series of ten articles descriptive of coast life and cruising in that section. He was employed in the Custom House at Pensacola until two years ago, when his ill health compelled him to resign this position, and in this precarious condition he sought to earn bread for his family. He leaves a wife with a broken arm, and two children to continue the battle of life. Perhaps some of our well-to-do readers will feel like contributing a mite to the widow. Remittances can be made directly to Sarasota, or intrusted to our care, or sent to Dr. Chas. J. Kenworthy, Jacksonville, Florida.

A DESIRABLE FLORIDA TRIP.—Dr. C. J. Kenworthy, of Jacksonville, Fla., sends us the name of a New York gentleman, well known to the Doctor and to our ourselves, who desires to find one or two comrades for a trip to the western coast of Florida this winter. Dr. Kenworthy says, and we can endorse it, that this is an unusual opportunity to secure the companionship of a genial gentleman and an enthusiastic sportsman. Having spent four winters on the coast between Cedar Keys and Charlotte Harbor, he is thoroughly conversant with the fishing grounds, etc. We shall be happy to put any of our readers in communication with the gentleman; and Dr. Kenworthy offers, as usual, to give all FOREST AND STREAM friends whatever practical aid he can.

THE NATURAL LAW OF DISTRIBUTION.

THE very respectable source from which the following criticism emanates entitles it to consideration, though the dogmatic attitude assumed by the writer is not at all consistent with his concealment of his own name, and the appointment of a friend as sponsor for his communication:—

San Francisco, Oct. 8th.—Editor Forest and Stream:—In your issue of Sept. 18th., your editorial "A Western Fish Cultural Association," contains the following:—

"The American Fish Cultural Association, composed of naturaliste, fishermen, fish mongers, fish breeders, and others interested in the subject, is an institution which has existed for many years. Its scientific discussions have been learned and useful, but its economic results have not been sensibly apparent. Transplanted fish we find cannot be made to thrive in localities where they are not indigenous; nor can foreign animals be permanently engrafted upon the fauna of another country. The Creator has managed the distribution of species, and man's efforts to change their habitat can never be more than partially successful. The cisco, the whitefish and the lake trout will always be most at home in the great lakes; the basses, the perches, and the esocidæ in the vast middle tier of States; the shad, the salmon and the striped bass in the East; and the carps and the suckers in the warmer waters of the South and the great plains. On the Pacific coast is a system of fauna almost wholly distinct—barred out by an impassable mountain range. Nay, more; all the combined science of fish culture seems unable to rehabilitate fresh waters which have passed within the precints of civilization, or to produce by artificial propagation more than a flabby and insipid counterfeit of their natural denizens."

I do not desire to discuss the question whether a Western Fish Cultural Association is advisable or practical, but I do wish to combat the correctness of the conclusions in the above quotation from your leader of Sept. 18th.

Horses, cattle, asses, goats and sheep were not natives of this continent. Yet they seem to have been "permanently engrafted on the fauna of the country." Wheat, rye, oats, barley, and other cereals, are all imported plants, natives of other countries, and seem to have been permanently added to the flora of the country. The English Pheasant is a native of the country about the Caspian Sea, yet it seems to have been permanently added to Great Britain and the North of Europe. Catfish, (*Amiurus albidis*) natives of the Schuylkill and Raritan, from sixty-nine fish taken to the Pacific coast, where the Creator did not "manage" to distribute *any* of the species, have increased to millions, and are in nearly all of the rivers and lakes of California, a strip of territory seven hundred miles long and one hundred and fifty wide. They are as regularly sold in all the markets as the most numerous and common Pacific coast fish. Carp, originally from China, have been spread over all of Europe, and seem to be "permanently engrafted" among the fish of that country. Nine brought from Hamburg to California, in 1872, have increased until some rivers and lakes are filled with them, and they form a material source of supply of fish food to numerous people of the counties away from the coast.

Less than a million young shad from the Hudson, placed in the Sacramento River, are filling our rivers and bays with this luxury. In five years from the first planting of 100,000, shad in their season were regularly on the fish stalls of the markets of San Francisco, selling it is true at 75 cents per pound, but sufficiently numerous for all who would pay that price.

If it were true that foreign animals, fish, birds, and plants could not be permanently grafted on the life of another country, the Editor of FOREST AND STREAM would never have existed in America. H. D. D.

We regret that exacting demands upon our space have prevented our giving attention to the above sooner, for we really have been impatient to demolish our disputatious friend. Of course we have sufficient regard for our editorial reputation not to make scientific statements except upon a basis of study and careful investigation. We know that the interesting statements made in the foregoing communication as to the successes in fish culture, are *facts*. They are the gratifying results of persistent efforts of intelligent men, and show how much men can do—not in setting aside the natural distribution of the species, but in adapting the indigenous creatures of a given habitat to a foreign locality. All these successes were duly announced in these columns as they occurred, and most of them were *first* made public through the medium of this paper. Nevertheless, we thank our correspondent for again giving them deserved prominence by re-enumerating them, though we had not forgotten them. It is very true that the climatic zone which extends from the Atlantic to the Pacific is so nearly uniform in its conditions as to render the transplanting and acclimatation of some of its fishes comparatively easy. Some species may even thrive by the interchange; yet we doubt if any of us will live to find the number very large, or that man's efforts to change the natural distribution of species will even be "more than *partially* successful," as we have stated in the paragraph under discussion.

Just here we may say that, in throwing down a challenge to us, our correspondent has not treated our premises fairly; else he would have accepted our qualification contained in the word "partially." We did not make the broad, sweeping assertion which his charge implies, because we used the statement that "transplanted fish and foreign animals cannot be permanently engrafted upon the fauna of another country" in their entirety and aggregation, but only *partially*.* The word "distribution" implies in itself that some creatures are better fitted for existence in one locality than another; the term "habitat" signifies separate locality.

Our friend has gone far out of his way in begging the question. But since he has done so, let us see how nearly he has established his point as respects his horses, cattle, asses, goats, sheep, &c. It will be easy to refer to Wallace's great work on the "Geographical Distribution of Animals." There we discover that in Tertiary time no less than thirty distinct species of equine animals existed in America, and some of them (those which appeared in the Pliocene) were not apparently different from the modern horse. These only became extinct at a comparatively recent period, for several species existed during the Quaternary period. One breed of English cattle, from which some of our native stock may well have descended, are believed to be the direct and unmixed descendants of the European Urus, which eminent naturalists have pronounced not to differ more than specifically from the bison of our West. The sheep is considered by naturalists to have been directly derived from an Old World species of monplon, or argali, which differs very slightly from our Rocky Mountain bighorn. Domestication has caused the variation which we see at present between the wild and the domestic species. As to the so-called English pheasant, instanced by our "senior wrangler," it certainly does well in Great Britain, but it is to all intents and purposes a domestic fowl, being protected in every way, and the eggs usually hatched by barn-door hens. The races of men, although World's inhabitants, existing in all countries and climates, do not thrive equally well in all zones.

It is apparent that if an animal be transported from one part of the globe to another, and placed in a situation where the conditions of its new life are not materially different from those of its native habitat—*i. e.*, where climate is essentially the same, food similar and equally abundant, and the character of the country fitted to the peculiar wants of the species, it will flourish, unless exposed to the attacks of enemies. On the other hand, if an animal of the tropics be transferred to temperate or arctic climes, or *vice versa*, it will not survive the changes of its environment; it must sooner or later perish.

*We may interpolate here that potato bugs are one undoubted exception to the general law.] As far as investigation has discovered, they will thrive *anywhere*.

SOME SPORTSMEN'S FINDS.—The "sportsman" is coming to be as much of a hero in yarn spinning as the fisherman used to be. If anything strange is discovered in the woods or on the mountain tops it was "a sportsman" who did it. The papers of the past few months have contained from time to time mention of a sportsman who, like Ali Baba, discovered a pot of buried treasure; a sportsman who found a man hanging to a tree; another who found himself lost, and a fourth—this species is very rare—who, having been found guilty by the judge, found himself in jail for breaking the game laws. In France they have *permits de chasse*, with which the would-be sportsman must be equipped before going forth to the fray. Hence, when a young gentleman arms himself with a *permit de chasse* and a blunderbuss and leaves home, the natural presumption is that he has gone to gun the wild bird of the wilderness. So when M. Angost, the treasurer of a great Parisian mercantile house, left home the other day for a hunting frolic, his wife kissed him good-bye, beseeched him with tears streaming down her cheeks not to let himself that horrid gun shoot, and sat her down, like Penelope, to sigh for his return. The day appointed for his coming passed by—no husband. Time went on, and no treasurer. The wife became anxious about her spouse; the firm about their money, of which large sums had been entrusted to the keeping of the absconded man. Finally the safe was broken open, and—the money was there, ever sou of it. Hardly had they counted it before the missing sportsman appeared. Confusion reigned supreme. The employers made their best apologies for their distrust, and the distracted wife—well, it had been well for that husband had he never returned. For instead of hunting, as it leaked out, he had been off on an excursion, *a la* Rinaldo and Armida, with an old flame. The quail never piped again for that man. Not to be outdone by the French, the American story-teller comes forward with his little tale, which is equally characteristic of the genius of the Yankee imagination. The daily papers last Sunday contained telegraphic reports from Pownal, Vt., something to this effect:—

Much excitement prevails among the sportsmen of this vicinity over the story that a wild man was seen on Friday last by two young men while hunting in the mountains south of Williamstown. They describe the creature as about five feet high, resembling a man in form and movement, but covered all over with bright red hair, and having a long straggling beard, and with very wild eyes. When first seen the creature sprang from behind a rocky cliff and started for the woods near by, when, mistaking it for a bear or other wild animal, one of the men fired and, it is thought, wounded it, for, with fierce cries of pain and rage, it turned on its assailants, driving them before it at high speed. They lost their guns and ammunition in their flight, and dared not not return for fear of encountering the strange being.

There is an old story, told many years ago, of a strange animal frequently seen along the range of the Green Mountains, resembling a man in appearance, but so wild that no one could approach it near enough to tell what it was or where it dwelt. From time to time hunt-

ing-parties, in the early days of the town, used to go out in pursuit of it, but of late years no trace of it has been seen, and this story, told by the young men who claim to have seen it, revives again the old story of the wild man of the mountains. There is talk of making up a party to go in search of the creature.

A DESIRABLE SHOT GUN POLICY.

FROM the way matters are shaping themselves of late, it would seem that reconciliation between the North and South was to be effected by a species of "shot gun policy" after all. But thanks to the peace-loving dispositions of those who carry the guns, no larger shot than number eight will be used, and although innocent blood will be shed at the uprising, we are confident that the more sanguine the conflict, the stronger will be the union and the more thoroughly the peace basis established.

Already the note of preparation has sounded, and soon the choice shooting localities of Virginia, Tennesee, the Carolinas, and Florida will be invaded by those fortunate gentlemen of the North whose time and means are such as to permit an indulgence in that sport for which the South is so justly celebrated—quail shooting.

And what will be their reception in that favored land? Ask those who have felt the cordial handshake and know by actual experience what true southern courtesy is, those who have trod shoulder to shoulder behind the dogs, with the big-hearted colonels, majors, and captains who composed their entertainers and were always so glad to see them. The novice who gets his ideas of our southern brethren from the tone of the political press, and who finally, after smothering many a gloomy doubt and fear yields to his love of sport sufficiently to risk (?) a trip South, will, to his surprise, look in vain for "bloody chasms" and "gory shirts;" listen to no purpose for "rebel yells" and vengeful mutterings against the "Yankees." On the contrary he will learn many a lesson in the art of good breeding, good sportsmanship, and delicate hospitality, and will come home with new if not golden opinions anent the boys across the line.

The sportsmen of the South are poor in this world's goods. The war swept everything away; but from the wrecks of that direful time they have laid good foundations, and are already building substantial superstructures that speak of fortune not far off. But in spite of reverses the same old hearty hospitality that characterised their fathers still exists in all its purity, and he who comes intent on sport will not be disappointed.

A majority of the letters from southern correspondents of FOREST AND STREAM, after detailing the variety and quality of the shooting and fishing in the writer's locality, close with an earnest invitation to their northern brethren to "come and share with them the glorious privileges." That these invitations are hearty and spontaneous, arising from unselfish motives, we can testify by a ripe experience, and many northern sportsmen are taking advantage of these kind inducements offered, and are reaping abundant rewards socially and in the field.

It were useless to attempt a description of the delights of autumn sports in the South. Only those who have been there can realize what these glories are. Imagine weather like that we enjoyed during the first weeks in October, long drawn out, extending to and over-lapping the holidays. Happy days, when the quail lie like stones on the hillsides and in the stubble—while we, at the North, are bending over registers and base-burners. Happy the man who can leave the whirl and activity of our northern cities and seek some quiet spot in "Dixie," where quail and good company do most abound, and enjoy a month of unalloyed pleasure in the field; verily he will come home with whatever of animosity he may have had toward our southern friends completely obliterated from his heart. And who can say that this intercommingling of northern and southern sportsmen will not redound to general national good? Who knows but that it has been ordained that to the peaceable knights of the shot gun shall be given the honor of effecting that reconciliation which the actions of political demagogues seem to make an utter impossibility.

When Captain John, formerly of Stonewall's brigade, invites a couple of northern men—old soldiers—with whom he is acquainted, only through the medium of an animated correspondence, to visit him at his pleasant Virginia home for a season of jolly fellowship in the field, and vies with his good wife in every effort to make the Yankees happy, does it look as though the spirit of '61 prevailed to any alarming extent? And when Captain John introduces his new friends to the boys—all old Confed's—is their reception a cold one, or are any slighting remarks made alluding to the past when they met face to face on the field of battle? Far from it. A warm handshake and a hearty welcome greets the strangers. Schemes are at once set on foot for their delectation. Judges leave the bench, lawyers push aside their briefs, and merchants drop business for the nonce, while the cold blooded denizens of the north are filled with wonder at the preparations going forward.

The above is no fancy sketch. Hundreds have been there, tasted the sweets of unassumed good fellowship, and returned taking hundreds more with them. And so the good work goes on, silently, yet effectually healing the wounds that years of political strife would only cause to gape the wider. The southern people recognise this, and encourage the coming of the sportsmen. They know that this great army is a peaceful one, a jolly one, a wealthy one, with its eyes open and with capital to invest, and being fond of peace and jollity, and being in need of capital to develope the paralyzed resources of their country, they encourage what may be termed the "shot gun policy," to the exclusion of the wily politicians.

The southern sportsmen—and under this head come the intelligent masses of the South—are not responsible for the actions of the lawless desperados whose crimes are a foul blot on the history of our country, and sportsmen visiting the South will find a peace-loving, contented, happy people, with whom to tarry for a while will afford an era in social and sporting life never to be forgotten.

H. W. D. L.

POT HUNTING PAR EXCELLENCE.

Chicago, Oct. 17th,

THERE is a report current here in Chicago that parties from the States won't get permits to fish the Nepigon next season. Some fishing parties up there this summer caught fish and threw them away stinking; their greed overcoming all sense of decency in their desire to take big strings of fish. Like all such men they care nothing for the law, but if they get a chance shoot deer during the time they are fishing. I heard M—— boast of shooting one a year ago last August.

I am inclined to think our rivers and streams suffer more from men like these, who have a mighty small conscience, than from Indians. The harm they do indirectly is greater than their own deeds.

Last summer Messrs. —— and —— came home from fishing full of Michigan, and sent two gentlemen up on the plains of the Au Sauble, deer hunting. Both of them were members of a large wholesale house, and wealthy men; yet they came home, having killed and sent home twenty-seven deer, and sold some of them to commission men to help pay their expenses! This is pot hunting with a vengeance! I heard A. boasting of this as an instance of how fine the sport was on the plains of the Sauble, and of the prowess of his friends. At another time such a piece of ruthlessness will not be kept concealed. I will ring changes in every sportsman's journal that will give me room for letters. Is it any wonder that the Kanucks growl and grumble at the ruthlessness of Americans? Some fishermen never know when to stop fishing, and because they are on another soil do all the damage possible, both to streams and forests. CANDOR.

REMARKS.—It is just such abuses as these which have compelled the discriminating laws of which so much complaint is made as respects Nova Scotia and New Brunswick; and, indeed, we may come nearer home, and say as respects the non-resident laws of Delaware, New Jersey, and other States. Strangers who wantonly waste the property of those who receive them as guests cannot expect to be very long tolerated in such indulgences. We have been cognizant of abuses on the Nepigon for years past, and have on more than one occasion exposed the offenders. In consequence thereof permits to fish were refused fully six years ago, and no persons were supposed to be allowed on the river without them by the warden in charge. But as these permits cost nothing save the asking, and as the warden could not well refuse respectable visitors the privilege when they asked it, nor prevent their fishing if he refused, the requiring of permits has become a sort of dead letter. We are glad that our Chicago correspondent has brought the matter into notice again, and although good honest men will have to pay for the delinquencies of others, we have no doubt that they will cheerfully sustain any decision of the Canadian Government, requiring fishing privileges to be paid for, and empowering the warden to enforce his prerogatives.

As to the deer slayers of Michigan, they are reckless and ruthless beyond comparison. We doubt if the Indians waste meat. The very considerable amount of venison which they kill is dried for winter consumption. They kill deer when they can get them the easiest, to be sure, and that is in midsummer; but the meat is generally utililized, *even to the entrails*, as those well know who are loudest in their accusations against the red men.

It is the spirit of vain glory which prompts novices in the chase to demonstrate their prowess in a fashion which true hunters would despise, and which elicits only the contempt of experts, although their unseasonable half-fledged trophies may astonish the small boys and namby-pamby maidens of their hearth-rug circle. This spirit of vain glory should be humiliated. Why, here are our friends Van Dyke, *et al.*, who shoot their birds with the rifle, and take only cross flights at that; while that old veteran "Bear Paw," who has weathered forty years in the Rockies, and is even now half snowed under in his Montana camp, studies carefully the weights of his projectiles and the measurements of his powder, that he may give the greatest odds against the poorest chances on the very antelope, elk, and big horns which he shoots for meat! Shame on the deer slayers of Michigan, and of every other place! Why men, the old professionals whom you would emulate, wouldn't put you on guard at a sheep ranch outside of the settlements. They could see clean through you at sight,

—Another person poisoned by a careless or incompetent apothecary! Pharmacy sake, can't this vile slaughter be stopped?

The Rifle.

RIFLE SIGHTS FOR NIGHT SHOOTING.

Editor Forest and Stream:—

Seeing sometime back an article on night shooting, and the plan on which a rifle ought to be fixed for it so as to enable the sportsman to see the fly I give my experience after twenty years night shooting:—

When I first commenced night shooting, I began it with an English rifle, a muzzle loader. I had heard from some one that putting a dab of chalk and water on the fly of the rifle enabled one to see well enough to shoot at night; I tried the plan; it was true that the fly was visible on moon-light nights, but I could not distinguish it on a dark night. I invariably found that on aiming and firing at an animal the bullet flew over the beast. I then put the rifle aside and took to a smooth bore, and on putting the chalk and water as before, I could see the muzzle perfectly, but found that the bullet went under the beast. Whilst I was in this fix I happened to make the acquaintance of a neighboring native chief, who was a great sportsman, and on mentioning to him my difficulty, he told me that I ought to aim low with a rifle and high with a smooth bore. I tried the plan, but with the uncertain light of the moon I oftener missed than hit. I then determined to try some experiments. I began with the old Enfield. I loaded it with a round ball and measured out and pegged a hundred yards from my target. I found that the round bullet went too high. I did not touch the hind sight, but made the fly long and kept firing until I got the proper height of the fly for the round ball to hit the bull's-eye. I then took the rifle out at night and had a bang at some deer, but to my disgust I found that the bullet fell low, I then put on another fly, making it ¼ of an inch higher than the old fly. I then found that the rifle was perfect for night work, but then again on using it in the day time I found that the rifle carried low. I raised the sight to the 200 yard notch and shot again; then I found to my delight that the ball went true to the mark up to 100 yards and any distance between. I then took my double gun and made a sight on the same plan as the rifle, and shot with it until I got the gun true at 75 yards with the sight resting in the 200 yard notch, and when the sight was shifted back to the 100 notch the gun was true for night work.

If you were to take a common Snider rifle and alter the fly, and raise the sight to the 200 yards, loading with a round ball, you would find that at 100 yards your rifle would carry true in the day time, but if you want the same rifle for moonlight shooting you must put a dab of chalk and water on the fly, and shift the sight back to the 100 yard notch, then you will find that the rifle would be true at night for 100 yards.

All rifles, whether carrying a spherical or conical ball must be fixed in the same way for night and day shooting, as well as smooth bore guns; the fly must be ¼ of an inch higher for night shooting than for the day time. If gunmakers were to fix their guns and rifles in this way sportsmen would have a rifle or shot gun fit for night and day shooting, and the sportsman would only have to put a dab of chalk and water on the fly for night work.

A. SHIKAREE.

Bella Harcea, India, Goruckpore.

CREEDMOOR TRAINS.—Hereafter the Tuesday, Wednesday, and Saturday trains will be discontinued, and special trains on Wednesdays and Saturdays will carry competitors to matches announced on November programme of the N. R. A. Train for afternoon matches will leave Hunter's Point at 1.35, and Flatbush avenue, Brooklyn, at 1.30, P. M. For morning matches train leaves Hunter's Point at 9.30, and Brooklyn at 9.35, A. M.

NEW YORK vs. BROOKLYN.—The New York and Brooklyn Rifle Clubs shot a friendly team match, eight men on a side, on Oct. 22d at Locust Grove, L. I., under the rules of the National Rifle Association. The range stands east and west, and the sun shines in the eyes of the shooters. The "elevations" were found to vary considerably in comparison with either Creedmoor or Brinton ranges.

After the teams had assembled it was found that the New York Club were short one man, but as they had met together for a friendly match, the Brooklyn Club very generously suggested that they select one man to shoot twice, Mr. J. W. Mangam being the man so selected. The following are the scores:—

NEW YORK RIFLE CLUB—*J. S. Conlin, Captain.*

W. H. Dunlap	4	5	5	5	4	4	4	5	4	5—45
E. B. Barker	5	4	4	4	5	4	5	4	5	4—44
A. J. Howlett	4	4	4	4	4	4	5	4	5	4—42
J. W. Mangam	4	4	4	4	5	4	4	5	4	4—42
J. S. Conlin	4	5	5	4	4	5	4	3	4	4—42
J. W. Mangam	4	4	4	5	3	5	5	4	4	3—41
F. J. Donaldson	4	4	5	4	5	4	4	5	4	0—39
E. T. Davis	5	4	5	4	3	4	1	0	4	4 87
Total										332

Average per man, 41½.

SOUTH BROOKLYN RIFLE CLUB—*James H. Roche, Captain.*

J. B. Hazelton	5	4	4	4	5	4	4	4	5	5—44
C. J. Glover	5	4	5	4	4	5	4	5	4	4—44
D. Trotter	4	4	5	5	4	4	4	4	5	4—43
F. A. Stratton	3	4	4	5	4	4	4	4	3	4—41
Dr. G. W. Weltry	3	5	4	4	4	4	4	4	4	1—40
James H. Roche	4	3	4	4	4	4	4	4	4	4—39
C. H. John	5	4	5	5	3	4	0	4	3	8—38
J. F. Burns	3	3	3	5	3	5	4	3	4	3—36
Total										325

Average per man, 40¾.

After the match the New York Club was invited to a grand luncheon prepared by the Brooklyn Club, which made the day one to be pleasantly remembered by both clubs. It was also decided to shoot a return match at Brinton Range on Wednesday, Nov. 5th.

NEW YORK, *Utica*.—Annual Fall Meeting of the Mohawk Valley Rifle Association. Competition 2, at 500 yards was shot with a very troublesome height. Competition 8, at the last two distances, and competition 9, throughout were shot in a young tornado. Competition 10, was shot with thermometer below freezing and with our first snow on the ground.

Competition No. 1.—Directors' match, open only to directors of the association; 200 yards, standing; any rifle; five rounds; prize, directors' gold badge, to be competed for

at each regular meeting and held permanently by the winner of three contest :—

R. Winegar	4 4 3 4 4—19	J. C. P. Kincaid	3 3 3 4—16
W. I. Martin	3 4 3 5 4—19		

No. 2.—Soldiers' match, open to any member of any military organization ; Remington military rifle ; 200 and 500 yards ; five rounds at each ; position, 200 yards, standing ; 500 yards, any :—

B. A. G.

Buffalo, Oct. 16th and 17th.—The annual fall meeting of the Bay View Rifle Association took place on the Lake Range on these two days. The Eighth Division Match was the first competition ; open to company teams of seven men each at 200 and 500 yards shooting. At the first distance the shooting was very close. At the second distance, however, the leading team fell away very much. The prize-taking teams were :—

	200 *Yds.*	500 *Yds.*	*Total.*
13th Separate Company, Warsaw	130	119	249
Fourteenth Separate Company, Batavia	119	108	227
Co. B, Seventy-fourth Regt., Buffalo	121	100	221
Eleventh Separate Company, Westfield	134	75	209

A Short-Range Team match, open to teams of seven men from any company or club, had five teams, all of them with military rifles. The Sixty-fifth Regiment team men, firing ten shots each, scored 264 to 261 by the Eleventh Separate Company team. The Warsaw company had 252, and the Seventy-fourth Regiment team 243.

An All-Comers' at 200 yards, ten rounds, military rifles, with a first prize of a clock, led to a hot contest, but with a fresh wind the draft was too heavy on most of the marksmen, and E. E. Farman, on a score of 45, coolly walked off with the prize.

The Laflin & Rand medal, at 500 yards, military rifles, was the next match contested. A good light, but a poor wind tried the men, but there was little contest for first place, the scores standing :—

	200 *Yds.*	300 *Yds.*	500 *Yds.*	*Total.*
H. S. Mulligan	4 5 5 5 5 4 4 5 5			2—44
L. F. Kirchmeyer	4 5 4 5 5 4 4 5 4 3			0—39
C. T. Watkins	4 5 3 5 3 2 5 4 5 2			2—37
C. D. Arnold	3 5 5 4 2 2 5 3 5 5			2—36
H. A. Menker	4 4 3 3 0 4 5 5 5 5			3—36
W. Pickering	4 4 5 4 0 2 5 5 4 3			3—36

The second day was not a favorable one, a storm of wind, rain and bad light making the day as bad as could be. The Shaw Badge was first contested for ; five rounds each at 200, 300 and 500 yards ; military rifles. This was a well contested match, the final winner having to fight hard for his place. The scores stood :—

	200 *Yds.*	300 *Yds.*	500 *Yds.*	*Total.*
C. H. Walker	18	21	21	60
H.A. Menker	19	17	19	55
T. S. Waud	16	17	21	54
L. P. Kirchmeyer	18	14	20	52
C. D. Arnold	17	18	17	52
G. C. Farnsworth	14	15	19	48

At 400 and 600 yards, with military rifles, five rounds each range, the next match was fought for the Lawson medal. There were but few contestants, and these few shot poorly, as follows :—

	400 *Yds.*	600 *Yds.*		400 *Yds.*	600 *Yds.*
C. T. Watkins	18	20—38	P. P. Beals	21	5—26
G. C. Farnsworth	16	13—29	H. A. Menker	19	4—23
L. P. Kirchmeyer	21	5—26	C. C. Penfold	10	11—21

The "Plumb" medal, at 200 and 500 yards, ten rounds each distance. At these favorite military distances the shooting was fair, as below :—

	200 *Yds.*	500 *Yds.*		200 *Yds.*	500 *Yds.*
L. P. Kirchmeyer	39	41—80	G. C. Farnsworth	35	33—68
H. A. Menker	36	37—73	C. C. Penfold	32	34—66
T. S. Waud	36	35—71	C. T. Watkins	37	25—62

The wind-up match was a "baby" match for non-prize takers at 200, 300 and 500 yards, the Hickox medal being the first prize out of the possible 75. Watkins, the Warsaw man, was again the winner, as by the following scores :—

	200 *Yds.*	300 *Yds.*	500 *Yds.*	*Total*
C. T. Watkins	20	17	14	51
T. S. Waud	16	14	20	50
G. T. Quimby	16	19	13	48
P. P. Beals	19	10	16	45

MASSACHUSSETS—*South Framingham, Oct. 28th.*—The annual rifle match of the Massachusetts Volunteer Militia, which has been twice postponed, was held here to-day. As there were but few teams qualified to shoot on the State grounds at South Framingham and for State prizes, and as it was desired to open the competition for association prizes to as many as possible, it was agreed a short time since that any team might shoot for the latter prizes at Walnut Hill, under certain restrictions. Six teams were qualified to shoot. Of these five appeared, Company D, First Regiment, preferring to shoot at Walnut Hill. By this action they lost the second prize, for although their score was the second highest, they were debarred from holding that prize, which is the State cup, and must be on the State range. The weather was rainy, and the wind at the opening was coming in strong puffs and difficult to control. The light, however, was perfect, and as the rain increased the wind subsided. The first prize, the cup offered in 1875 by the Providence Tool Company, to be the property of the team winning it in three successive competitions, was carried off by Company A, Sixth Regiment, Wakefield, whose score, 103, was the highest ever made in the State match. The cup was won last year by Company D, First Corps of Cadets. The second prize, the State cup, goes to Company A, Second Corps of Cadets. Appended are the scores ; five shots per man at 200 yards :—

COMPANY A, SIXTH REGIMENT.

Private John A. Bailey	8		
Grand total			38

The Officers' Match was the next shot, with seven entries. Lieut. Rockwell outran the others, and accordingly for the next year he holds the officers' medal, a gold Maltese cross with appropriate decorations. The scores were :—

Lieutenant H. T. Rockwell, D, 1st	4	4	5	4	4—21
Colonel Nat. Wales, 1st	5	4	4	3	5—21
Major Edward Hobbs, 2d Cadets	4	5	3	5	4—21
Major A. B. Hodges, 1st	3	4	4	4	4—19
Colonel Melvin Ilcal, 6th	4	3	3	4	4—18
Major Henry Parsons, 6th	3	4	2	4	3—16
Major David Clark, 2d	3	3	0	0	3— 9

Company M, Sixth Regiment, Milford, brought with them a handsome and artistic leather medal of the size of a small cart wheel. It was inscribed on one side, "Not for the best shot—200 yards," with a representation of a target pierced with an "outer" very near the edge, and the other was the name and date of the match. It

was placed in the officers' competition, and Major Clark was the happy recipient.

The Individual Match was very largely patronized, a total of 170 entries being made at the two ranges. The weather conditions at Walnut Hill were similar to those already given, except that the smoke hung across the range, and rendered good sighting very difficult. A good deal of interest was manifested by the participants, which was enhanced by the uncertainty in regard to what scores were being made at the other range. Notwithstanding the unfavorable conditions, some brilliant shooting was done, as will be seen by a perusal of the scores below. Major Hodge, First Regiment, led off with an excellent 24. The individual prizes were awarded to Major Hodge, Private Parker and Sergeant Brown in the order named. Following are the scores, five shots per man :—

AT SOUTH FRAMINGHAM.

Major A. B. Hodges, 1st	24
Sergeant F. N. Brown, 1st Brigade N. C. S	23
Lieutenant H. T. Rockwell, D, 1st	22
Private W. S. Cushman, C, 5th	22
Corporal H. J. Preston, C, 5th	22
Colonel Nat. Wales, 1st	21
Major Edward Hobbs, 2d Cadets	21
Private C. A. Hill, C, 5th	21
Corporal W. H. Merritt, A, 2d Cadets	20
Private M. C. Laflie, C, 5th	20
Private E. C. Spofford, A, 2d Cadets	20
Sergeant G. F. Jacobs, M, 6th	20
Sergeant H. L. Carpenter, M, 6th	20
Private D. M. Houston, A, 6th	19
Private A. D. Gardner, A, 2d Cadets	19
Major H. Parsons, 6th	18
Corporal W. W. Kellett, A, 2d Cadets	17
Major D. Clark, 2d	16
Private J. I. Farwell, C, 5th	15
Sergeant C. W. Lang, A, 2d Cadets	15
Private E. Kinsman, M, 6th	15

AT WALNUT HILL.

Private C. A. Parker, D, 1st Cadets	5	4	4	5	5—23
Private L. Eddy, D, 1st Regiment	4	4	4	5	5—22
Private W. E. Russell, D, 1st Cadets	4	5	4	4	5—22
Private C. W. Hinman, D, 1st Regiment	4	4	5	5	4—22
Private E. Bennett, D, 1st Regiment	4	4	4	5	5—22
Sergeant J. B. Parker, A, 1st Cadets	5	4	5	4	4—22
Private H. C. Gardner, D, 1st Regiment	4	4	4	4	5—21
Corporal L. H. Wightman, D, 1st Cadets	4	4	4	4	5—21
Sergeant J. B. Osborn, 1st Regiment N. C. S	4	4	4	5	4—21
Sergeant P. S. Anderson, A, 1st Regiment	5	4	4	5	4—21
Corporal W. Lithgow, D, 1st Regiment	4	5	4	3	5—21
Sergeant G. S. Rice, A, 1st Cadets	4	4	3	4	5—20
Corporal G. E. Everett, D, 1st Regiment	3	4	4	4	4—19
Sergeant A. S. Dabney, A, 1st Cadets	4	4	4	3	4—19
Corporal C. C. Wemyss, D, 1st Regiment	3	4	5	3	4—19
Private F. C. Brownell, D, 1st Regiment	3	4	3	4	4—18
Private H. Holyke, A, 1st Cadets	4	4	4	3	3—18
Private J. C. Butzer, H, 5th Regiment	5	3	3	4	3—18
Corporal D. Rice, A, 1st Cadets	2	4	5	4	2—17
Major W. A. Smith, 1st Regiment	3	2	3	3	5—16
Sergeant W. A. Hayes, jr., D, 1st Cadets	3	4	0	5	4—16
Private E. Brooks, A, 1st Cadets	4	4	3	5	0—16

In a private match between teams of ten men, firing each ten shots at 200 yards, the team of Company D, First Regiment, beat that of the First Corps Cadets by 385 to 351 points.

Milford, Oct. 22d.—Company M, Sixth Regiment, M. V. M., held their annual company target shoot to-day on their range at Felton's Farm. For the prize of a gold scarf pin for best individual score by the selected team, following were the scores made :—

Whitney	4 5 4 4 4—21	E. C. Carpenter	2 3 4 4 3—16
Jacobs	5 3 4 4 4—20	G. D. Carpenter	3 4 4 3 4—18

For the prize, a nickel-plated clock for best individual score by other members of the company, following are best scores, out of twenty-six competitors :—

Kinsman	19	Harden	13
Carpenter	18	Osborn	12
Cook	17	Howard	11
Bailey	14	McLoughlin	10
Buxton	14	Hemenway	10

For the prize of a silver and glass flower-holder to best individual score by honorary members, the following were the best scores ; three shots each :—

Morgan	11	Claflin	4
Wilcox	9	Hale	4
Sumner	8	Chaffin	4
Jewell	8	Spaulding	3
Rice	6	Littlefield	11
Fales	6		

Upon conclusion of the shooting, which was at 200 yards distance (Springfield military rifles, Creedmoor targets), the company marched to their armory, where, after the supper, came the presentation of prizes, in a few happy remarks by Lieutenant Cooke and speeches by guests. SUMNER.

NEW JERSEY—*Columbia Range, Oct. 23d.*—A match took place to-day between the Zettler and Empire Rifle Clubs ; 200 yards ; ten men a side ; Creedmoor targets ; possible, 50. The weather was very disagreeable for shooting :—

ZETTLER TEAM.		EMPIRE TEAM.	
C. G. Zettler	45	H. Holton	45

G. A. Kuhndahl, umpire.

GREENVILLE, PA.—*Oct. 30th.*—On Tuesday, Oct. 21st, Otto C. Wilkins of Cooperstown, Venango Co., Pa., did the wonderful feat of breaking 985 balls out of 1,000 with his rifle, shooting a distance of 15 feet. This entitles him to the championship of the world. Wilkins is a young man of nineteen summers, of pleasing address, whose sense of honor is too high to be made a tool of by the gambling fraternity ; he was accompanied by his father, a social, genial gentleman. Dr. Carver who has a world-wide reputation as a rifle shot, only broke 885 out of 1,000, and only shot 12 feet. John E. Graham, of Erie, Pa., recently beat his own score by making 944 out of a possible 1,000. Now Otto C. Wilkins comes to the front with a score of 985 out of a possible 1,000. The shooting was done at the grounds of Greenville Sportsmen's Club, the balls were tossed by Master Will Highlands, who did it admirably. J. C. Hobaugh acted as referee. We append the following summary of the score :—First hundred, 98 ; second, 97 ; third, 100 ; fourth, 98 ; fifth, 98 ; sixth, 100 ; seventh, 100 ; eighth, 99 ; ninth, 97 ; tenth, 98.

During the shooting he made one run of 272 without a miss. He used a Remington rifle, 32 calibre and the Carver target composition ball, manufactured here by J. H. Waugh & Co. M. H. B.

MARYLAND—*Baltimore, Oct. 21st.*—An exciting contest took place at Patapsco Rifle Range to-day between rifle teams, six a side, of Company A, Fifth Regiment, and Bond Light Guards, a crack cavalry company of Worcester county, Md. The contest was a return one, the cavalry team having outshot the city soldiers at Ocean City in July last, during the encampment of the Fifth Regiment at that resort. The terms of the match, for six silver Maltese crosses, were off-hand shooting with Springfield rifles, 50 calibre ; Creedmoor target; at 100 and 200 yards range ; ten shots to each man : the highest possible score at each range per man, 25. The teams were :

Company A, Fifth Regiment : F. T. Redwood, captain ; J. P. Henry, J. T. Blackiston, J. W. C. Johnson, C. Irving Dunn and J. K. Randall.

Bond Light Guards : J. W. Pitts, captain ; William J. Pitts, James P. Henry, Joseph Miller, A. J. Powell and Charles Taylor.

When the teams arrived on the grounds the sky was overcast with leaden gray clouds and a slight rain was falling, which later changed to a regular downpour, rendering it exceedingly difficult for the riflemen to shoot well. At the close of the 100 yards shooting the total score stood 125 to 129, in favor of the Worcester County team. Interest now centered in the 200 yards range, in which the Baltimorcans were resolved to do their best. The last man to shoot was Capt. Pitts, of the Guards ; on his third shot his rifle was accidentally discharged before he caught sight, and the bullet plowed the field half way to the target. His fourth shot scored four more points, and as the Baltimore team led by only three points, his fifth and last was watched with great interest. Capt. Pitts took careful aim, and fired, but the red flag of the markers soon signaled those who were waiting in anxious expectancy for the result that he again scored nothing, so that the victory was with the team of Company A. The official score was as follows :—

	100 *Yds.*	200 *Yds.*	*Grand Total.*
F. T. Redwood	5 5 4 4 5—23	3 3 4 4 4—18	41
W. J. Pitts	5 4 4 4 4—21	3 3 4 0 3—13	34
J. P. Henry, Co. A	5 4 4 4 4—21	3 5 3 4 0—15	36
J. T. Blackiston	4 4 5 4 4—21	2 3 3 4 3—15	36
Joseph Miller	4 4 5 4 5—22	2 4 3 3 2—14	36
C. I. Dunn	4 4 3 3 4—18	0 2 4 3 3—12	30
A. J. Powell	5 4 5 4 4—22	2 4 4 5 2—17	39
J. W. C. Johnson	4 4 4 4 4—20	2 4 4 0 4—14	34
Charles Taylor	5 4 4 5 4—22	3 4 3 3 2—15	37
J. K. Randall	5 4 5 4 4—22	3 4 3 2 4—16	38
J. W. Pitts	5 4 4 4 4—21	3 5 0 4 0—12	33
Totals	Company A, 125 ;	Guards, 129.	
Grand totals	Company A, 215 ;	Guards, 212.	

In the evening the visiting riflemen were entertained by the Baltimoreans with a supper at the Athenæum. It is thought these matches will be the means of encouraging target practice among the military of the State, and there may soon be in Maryland an inter-State contest for prizes, as is the case in New York.

WASHINGTON, D. C., *Oct. 25th.*—The twelfth and last contest in the Harkness badge match was held by the Columbia Rifle Association on the Benning's Range today. The day proving very unpropitious for fine rifle practise at long range, the scores were very materially knocked down below the usual averages of this club. The afternoon was chilly and rough, although the sky was clear, the thermometer being down to 58 deg. when the firing began at 1.30 o'clock, and was 52 deg. at the close, at 4.15 o'clock. At the beginning the wind was a stiff, unsteady "twelve o'clock fish-tail," and during a part of the time at 900, and afterward it increased in strength and changed direction to two and three o'clock on the great dial, and good scores were simply out of the question, owing to its sudden freaks. The following are the aggregates made :—

COL. J. O. P. BURNSIDE.

800 yards	68	1,000 yards	63
900 yards	65		
Grand total			196

C. H. LAIRD.

800 yards	65	1,000 yards	62
900 yards	64		
Grand total			191

A. A. ADEE.

800 yards	64	1,000 yards	60
900 yards	64		
Grand total			188

P. J. LAURITZEN.

800 yards	61	1,000 yards	66
900 yards	59		
Grand total			186

Gen. John Coughlin acted as range officer and umpire, and Dr. John Parsons as scorer.

This last contest did not change the leading scores in this match, which was begun on the 19th of July. There have been twelve contests shot, the highest three scores of each contestant which are counted in the match being as follows :—

COL. J. O. P. BURNSIDE.

800 yards	214	1,000 yards	218
900 yards	216		
Grand total			648

CHARLES H. LAIRD.

800 yards	214	1,000 yards	217
900 yards	215		
Grand total			646

P. J. LAURITZEN.

800 yards	203	1,000 yards	222
900 yards	217		
Grand total			642

DR. S. I. SCOTT.

800 yards	200	1,000 yards	214
900 yards	219		
Grand total			633

Col. Burnside shot in ten of the twelve contests, and averaged for the whole 207 8-10. C. H. Laird shot in ten contests, and averaged 206 4-10. Mr. Lauritzen entered and shot in eight, averaging 198¾. Dr. S. I. Scott entered and shot in six, averaging 205⅔. J. M. T. Partello shot in one match, and made 208.

—There may be no connection between good pigeon shooting and the manufacture of a table sauce, but our friends who long ago knew Mr. King as an extraordinary pigeon shot, now claim that the excellence of the King Sauce Royal is due to the manufacturer's principles of always hitting the right spot.

—A correspondent who has used the Law's patent corrugated brass shells writes in high praise of their reliability and general excellence.

Game Bag and Gun.

GAME IN SEASON FOR NOVEMBER.

Moose, *Alces Americanus.*
Caribou, *Rangifer caribou.*
Elk or wapiti, *Cervus canadensis.*
Red or Va. deer, *C. virginianus.*
Squirrels, red, black and gray.
Hares, brown and gray.
Reed or rice bird, *Dolichonyx oryzivorus.*
Wild turkey, *Melegris gallopavo.*
Pinnated grouse or prairie chickens, *Cupidonia cupido.*
Ruffed grouse or pheasant, *Bonasa umbellus.*
Quail or partridge, *Ortyx virginianus.*

Swans, Brant, Wild Ducks, Geese, &c.

☞This table does not apply to all the States. It is meant to represent the game which is generally in season at this time. State regulations may prohibit the killing of some species of game here mentioned.

THE HAMMERLESS GUN.

Editor Forest and Stream :—

Knowing that you are interested in all improvements in guns which add to the comfort or safety of sportsmen, I would like to call your attention to a fact in regard to hammerless breech-loading guns, as made by Mr. Greener. To show you how true what I say is, I would beg leave to ask you to look at the lock of the gun I now have apart. This gun was sold four months ago, and has been used incessantly since that time. The locks are now as clear from gas and foul as when first put together, and I am sure you will be surprised at their wonderful simplicity, there being fourteen less pieces in the locks of a Greener hammerless than in the old-fashioned locks with hammers. This abolition of fourteen separate pieces, taken in connection with the fact that the parts of the hammerless are much larger and stronger, will of itself eventually drive guns with the hammer out of the market. When we realize that nine-tenths of the accidents from breech-loaders are directly traced to the catching of one or both of the needless hammers (which in a few years will be as objectionable as the old flint and tinder box of our fore-fathers) surely no sportsman who buys a new gun will be satisfied with something that in a few years will be entirely superseded. I can see but one side worthy of notice to the discussion which has been going on in the London papers on this subject, and if there are any American arguments in favor of hammer guns I hope they may be ventilated in your paper, so that sportsmen may act intelligently on this subject.

New York, Oct. 27th. HENRY C. SQUIRES.

We have examined the gun locks alluded to by Mr. Squires, and find them not only in excellent order, but marvels of simplicity. That the hammerles gun is the gun of the future, there seems little doubt. The principal objection raised against it (although the want of locks does seem at first to give it any lack of symmetry) is on the score of safety, the gun being cocked by the action of loading. There is a great deal in habit, however, and the careful sportsman will soon remember that his gun when loaded is cocked also, although there is a safety catch on the side of the lock which, when placed in position secures the hammers. In order to overcome this objection, some manufacturers use an automatic safety bolt which fastens the hammers in such a manner that the gun cannot be fired until the bolt is removed. This, however, seems to us to destroy the principal advantage the hammerless gun has over those of the old style, for the reason that almost as much time must be consumed in removing the bolt as would be occupied in lifting the hammers, the great point claimed for the new gun being rapidity of firing. Dr. Carver in his English expeditions used one of Mr. Greener's hammerless guns, firing in his exhibitions for 130 days without removing the locks for cleaning or oiling, an amount of work, probably, that few guns would be called upon to go through in years of field shooting. Very many sportsmen in this country have ordered hammerless guns, and we would advise the curious in such matters to call at Mr. Squires' store, No. 1 Courtland street, and see them.

FACTS AND FANCIES ABOUT SHOOTING.

NO. 2.—BY A. WINTER.

IN writing on a subject concerning which so much has been, and is being said and written, I desire to make a special disclaimer as to the possession of any peculiar advantages for gaining information about shooting and sporting matters generally. One thing I can say, however, without egotism—the little I do know of the theory and practice of wing-shooting and the management of dogs, I have learned by experience. I can by no means claim immunity from the difficulties that present themselves to beginners, for I am confident that I ran the gauntlet of them all.

As my experience accumulated, I was enabled to discard what I had found to be worthless; while on the other hand, I availed myself of everything that a practical test had demonstrated to be of utility. As long ago as I can remember, I had a strong passion for field sports, and while I was no stranger to the old-time pointer, and the method of handling him, I found myself at the close of the war ignorant of the first principles of legitimate field sports. The first dog I ever owned was a pointer ; I begged him from a man who was taking him out to kill, to cure, as he said, a strong penchant the dog had for sucking eggs. Very well do I remember the exalted feelings that mastered me, the first time I took him into the field. I had purchased a new gun, elegant equipments, game bag, etc., and against the advice of several sportsmen a sack of No. 3 shot. But then I had gained my idea of the vulnerability of game from certain boyish experiences with the doves that frequented the fields on my father's plantation. These experiences had transpired during the war, when the term "iron-clad" was so familiar, and I had come to think that these same doves were enveloped in a panoply of iron ; and thinking, as matter of course, that the lively "Bobbies" were equ

as well prepared for the assaults of their puissant enemies, my idea was to send a tearing, smashing charge after them that would do the business beyond all peradventure. It was on a bright, breezy day in October, and scarcely had Old Sol begun his westward journey, when I sallied forth to deal dire destruction among the unsuspecting birds that frequented a large stubble field not many rods from the house. To guard against contingencies—not contingencies with me however—I took with me a negro boy to carry the game and the extra ammunition. I had not gone fifty paces before "Jim" made a splendid point. The colored moke who came with me saw the birds on the ground, and persuaded me to give them both barrels instanter. Scorning to take such mean advantage, I bade the dog hie on! in an instant the whole atmosphere seemed alive with whirring quail; and bang! bang! roared my gun. As soon as the smoke cleared away, I bade "Jim" go fetch. "Lord, boss," exclaimed the negro, "you didn't kill none!" I was not to be convinced, however; and for an hour I made the patient dog search for the birds that were doubtless quietly feeding hundreds of yards away. To make a short story of it, I shot away the whole sack of shot and killed but one bird; and, to this day, I am not sure whether I killed that one, or the dog caught it. To say I was crestfallen and disgusted, but feebly expresses the truth. But *nil desperandum*, thought I; I can do better than that, and I will do it. The first thing I did was to get shot better suited to the business in hand. I foreswore wing-shooting for the time, and devoted my time to the Herculean task of teaching myself to throw my gun so as to cover any desired spot, without seeking aim after it touched the shoulder. In order to do this, I placed my target on a wall, and, the moment my piece touched my shoulder, I discharged it. By diligent practice, by the opening of the next season I could cover my target on the instant; and could even bring down a bird occasionally. With the over-sanguine hopefulness incident to my youth, I begun to think I had mastered the difficult problem of wing-shooting, and even looked forward to the time when I would be able to vanquish some of the veterans who had quizzed me so unmercifully on my first failure. Aside from my great confidence in what I had achieved, I was still willing to listen to the advice of those whose experience and skill I could but respect. And my readiness to follow advice, without questioning its correctness, was to me the source of nearly as many woes, as was to Greece "the wrath of Peleus' son." One sportsman would say, "Don't shoot too quick; be deliberate and cool; and be sure you cover your bird before you pull trigger." Very excellent advice in its way, too; the only trouble is being able to do it. Knowing the gentleman who proffered this advice to be an excellent shot, I tried to follow it; and the result was, that by the time I succeeded in covering my bird, the bird had generally covered about one hundred paces and was out of danger. Seeing that I was on the wrong tack, I feel into the other extreme; shot too quick; and the ground over which I hunted had the same appearance as though a patent reaper had passed over it. As a last resort, I appealed to the oldest sportsman I knew, a veteran and an excellent shot, one whom I thought had certainly mastered the ethics of the profession. He told me to wait until the bird had got straight, and then, if shooting at a crossing bird, to hold on and to keep my gun moving, and the lateral motion would be imparted to the charge of shot, thus throwing it forward enough to balance the flight of the bird during the interval of the passage of the shot from gun to bird. Of course, in shooting at a bird going straight away, no particular plan was recommended. I had, theretofore, believed it necessary to aim ahead of crossing birds: but after this I succeeded in getting all I had ever heard, or read, on the subject of wing-shooting inextricably mixed, and the result was, I verily believe I could not have touched a barn door sailing ever so deliberately through the air. At last, in sheer desperation, I cut loose from all preconceived ideas, all that I heard, and branched like "Little Bullet" into the wild field of experiment. Reasoning on the basis that I had a vague idea of killing, I certainly expected my charges to make some of the most improbable angles known to the exact sciences. It is not necessary to detail here, the various steps by which I finally reached what I conceived to be the correct practice in wing-shooting. I will premise, without another disclaimer, however, I do not claim to be able to shoot more than respectably. Unfortunately I labor under a misfortune which will forever preclude the hope of being a dead shot; but, when I miss a fair bird, I know that it is my fault, and not the fault of the principles I have adopted. Neither do I desire to antagonize the pet ideas of any other sportsman; I can merely recommend my plan as having proved satisfactory, to me, at any rate.

My first injunction to a young sportsman would be: Learn to throw your gun just where you want it, and do this before you ever go into the field. Of course, if you can do this to begin with, so much the better; but I must say, that I have never known a single tyro who could do it. Try the experiment I have before mentioned; place a target on the wall, and endeavor to cover it with your gun the moment it touches the shoulder, and be sure you fire on the instant. You can see after a few shots whether you have an inclination to throw too high, too low, or right, or left, and can remedy the fault. Continue this line of practice until you approximate perfection; besides, it will answer a good purpose in getting you rid of a kind of gun shyness, natural with every man. After you have done this, the next thing is to try your hand on something in motion; anything that will not fall with too great a velocity when thrown into the air will answer. Commence on as nearly a perpendicular drop as possible; and, by aiming just under it, you will have the satisfaction of seeing that you have hit it very handsomely. Continue this, varied by an occasional straight-away shot, until you are satisfied you understand the principle involved, as well as the practice. It would be well to try to hit objects at the various angles, getting at last to square-across shots, remembering to aim always ahead of crossing objects, the distance ahead to be governed by the velocity of object, angle at which it is crossing, and distance away. A practical test will best determine this, for strange as it may seem, the distance to aim ahead will vary with different men. Always keep in mind the first lesson learned, to shoot as soon as the gun gets level to the shoulder. Nothing is more disgusting than to see a man poking after an object with his gun; besides, such a one can never attain the same proficiency as a quick snap shot, to say nothing of the want of grace of such a sportsman. A thorough course in what I have mentioned, cannot often fail to make the beginner an expert in the kind of shooting involved. I know that killing birds is quite another matter; but I am sure there can be no better introduction to the field than the plan recommended. Before introducing the beginner to the serious part of his business, I cannot forbear a word on the contradictory theories advanced as to the best way of hitting a crossing bird.

It would seem to a casual observer, that there is very little room for differences. If one man, by holding on his birds, kills, how can it be that another man, who holds well ahead, does the same thing? It is certain that the law governing projectile forces cannot be changed to suit the caprices of each man. Can it be that what is known as personal equation, will account for the difference? While it is a fact I do not pretend to deny, that in one man volition precedes action but by an infinitesimal space of time, while in another the vital forces are slow and sluggish in their action, I am not disposed to think that this fact accounts altogether for the contradiction in question. After making some allowance for this personal equation, which, as I stated before, I am willing to do, I am inclined to think that those who claim to hold on their birds are mistaken. Such sportsmen all admit, I believe, that they keep the gun moving until the moment of discharge. Now, as it is very difficult to keep the gun directly on a moving bird, by following it, I take it that, while claiming to hold on, the man actually holds ahead of every bird he kills. As I prefer not to poke after my birds, I hold ahead, and sometimes have the satisfaction of seeing my bird fall.

In my next, I propose to speak of what the young sportsman should do in the field. I am aware that I have inverted the order usually followed, in speaking of the sportsman before the dog; but, in my opinion, a comparison between the number of trained sportsmen, as compared with the number of trained dogs in our country, is decidedly in favor of the dog.

Cairo, Geo., Sept. 23d.

CANADA—*Quebec, Oct. 25th.*—Once more I sit down to give you a few items of Quebec news. They are not very interesting or plenty just now, as our shooting has not been of much account this fall, with the exception of snipe; most other kinds of birds have been almost a failure. Our ruffed grouse shooting is a thing of the past, as the abominable law passed in the Province of Quebec to suit a few interested parties, allowing the snaring of hares has almost exterminated this fine bird. Proof of this is very easy. Any one has only to examine the grouse exposed for sale in the market, and out of every hundred birds looked over not one will be found that was shot, but all show the marks of the snare noose on the neck. This state of things is a crying shame and speaks ill for the sportsmen of this province, who do not bestir themselves and try and have the evil done away with or very much modified, so that our grouse may again have a chance to become somewhat plentiful. Woodcock have been fairly plenty, but nothing like the numbers of former years. Ducks we have had none as yet, except at the islands down the river some miles below the city. Snipe, as I said before, is the one exception to the general scarcity; they have been very plenty, and large numbers have made a permanent stay here, especially about Grondines, and Chateau Richer beaches. Hares, as usual, are plentiful. No scarcity of them so long as the wire noose is allowed. Other kinds of game are not worth speaking about at all.

CAP. ROUGE.

CONNECTICUT.—*Birmingham, Oct.*—The Pequots of this place went on their 20th annual hunt to-day, which will terminate on the following Tuesday night, with a grand supper and soiree. This party of gentlemen are ever ready to take up the gun and go on the "war path" for a battle with the birds.

BUCKEYE.

NEW YORK—*Noyac, Oct. 28th.*—A correspondent from the old Indian village, located four miles from Sag Harbor, on what is called the North Sea Shore, says of duck shooting in that place:—

"We have not had as good sport this month as usual with us in October, owing to the extraordinary mild weather we have had; but the cold snap of Saturday and Sunday brought the birds to our bay in goodly numbers, and now the sport may be said to be in full operation. We have the Forester Club down here, and the members are enjoying the field exercise greatly. They have done a little in partridge shooting, and got some hares, and they are "laying low for black ducks "every morning on the beach. But you don't know what that sentence, "on the beach," implies. Well, I will tell you. There is a long, low strip of sand bank which joins the Wiggin's Farm here with the promontory known as "Jessup Neck," and over this sand bank the ducks fly to and fro from Noyac Bay, even to Peconic, and back again. They generally rise up about daylight, and pass and repass until about nine in the morning. Those who go "on the beach" start before daybreak, and, after having their luncheon they make a nest of the dry seaweed to lie down in—alike for comfort and to hide in—and there await the passage of the flight of the ducks. For the privilege of going on the beach, you have to pay a dollar toll to the Wiggin's family, which is for the season.

The quail are very plentiful here now, and there is going to be great sport on November 1st, when a regular regiment of shooters will take the field. To those coming here for ducks I would say, stop at Mrs. Haven's, or at Pierson's; both are good comfortable boarding places. The terms are six dollars a week at Mrs. Haven's, or a dollar a day. They will send for you to the depot, if you notify them.

Rochester, Oct. 24th.—Woodcock shooting very good since season opened. Weather during nesting period was favorable, and the birds arrived at maturity in fair numbers. Some very satisfactory bags were made in August and September on the birds bred hereabouts, but the cream of the cock shooting has been during the present month. Almost fabulous numbers of woodcock have been shot within a few miles of Rochester, both by men who shoot for sport and those who turn their game into money. Two of the latter class recently shot forty-seven fine cocks in the western part of this county in a day and a half. There is a belt of country running from the Genessee River almost to the Niagara that was, and except when too much cultivated still is, one of the best regions for woodcock to be found anywhere. The stories the elder sportsmen tell regarding the number of birds shot there in their younger days, almost makes one regret that he is not a grey beard and sigh for the days that are past and gone. Time was when grey plover were here in millions every fall, but of late their visits are few and far between; a dozen birds would be regarded good shooting on lands where a hundred have fallen to one gun in a day. This year there have been very few shot here, the prevailing drouth not being favorable to them. Some of our best snipe grounds are as dry and hard as the "remainder biscuit of a sea voyage," and I believe a dozen of my favorites have not in the aggregate been brought to town this season; more is the pity say I.

I have seen a great many quail within walking distance of this city, but what between clearing the woods, deep snows and innumerable good shots, there is scarcely a bob white in Monroe country. We are better off with ruffed grouse, that fine bird holding possession of a few fastnesses in spite of a hundred enemies. This year mast is abundant, and the covies, or shall I say packs of grouse, are scattered, and the prospect is that he who shoots many will have to work hard. As I write, information comes that thousands of ducks are in the lake off our duck shooting waters, the bays and ponds within fifteen miles of the of the city. A storm will drive them inland, and then big guns will find work to do. No geese flying yet.

C. R.

NEW JERSEY.—*Forked River, Nov. 1st—Riverside House.*—Duck shooting has now fairly begun and a bag of twenty-five or thirty broadbills is no unusual day's sport. Mr. Havens shot three fine geese one day last week within a few hundred yards of the house. We are located at the best and most convenient point on Barnegat Bay, within forty-five minutes sail of the gunning grounds. Being situated directly on the water, parties coming to the Riverside House avoid a long stage ride, as at all other places on this coast. The prospects for fine quail shooting were never better in this section. A.

WISCONSIN.—*Baraboo, Nov. 8th.*—Ducks of all kinds are here in large numbers. J. H. Brewer and G. J. Train have just returned from a few day's shoot at Crystal Lake, about fifteen miles from here, with a wagon box full of greenheads, having had fine sport, being the first ones there this season. Tom Scott, Dan Miner, and Liman Potter, also had fine sport at ducks on the Catfish River near Wannakee. Some of the Madison sportsmen are mourning over a lot of decoys that were shot at that day.

ED. H.

—The ducks are still flying lively down on the island, and Wm. N. Lane's house is crowded with gunners. There never has been so favorable a season for shooting in thirty years.

MISSOURI STATE TOURNAMENT.

KANSAS CITY, *Mo., Oct. 24th.*

Editor Forest and Stream:—

The sportsmen of the State were well represented at the Convention of the State Sportsmen's Association, held in this city, Oct. 21st to 24th, by delegates from the following clubs: Dardenne Shooting Club of St. Louis, St. Louis Gun Club and St. Louis Sportsmen's Club, Pleasant Hill Club, Kansas City Amateur Gun Club, Kansas City Gun Club, St. Joseph Gun Club, and Trenton Rod and Gun Club. The constitution of the Illinois State Sportsmen's Association was adopted. The officers for the ensuing year are: President—Chas. G. Epperson, of Macon City Gun Club; First Vice-President—Dabney Carr, of St. Louis Gun Club; Second Vice-President—J. K. Stark, Kansas City Gun Club; Recording Secretary—J. S. Chase, Kansas City Amateur Club; Corresponding Secretary—P. A. Smedley, Macon Gun Club; Treasurer—Paul Francke, St. Joseph Gun Club; Board of Directors—B. F. Buzard (St. Joseph), H. C. West (St. Louis), W. Williams (Macon), D. S. Hall (Kansas City), John F. McAfee (Pleasant Hill)—appointed by Vice-President Dabney Carr; Committee on Rules and Regulations—Edgar Gainotte (Kansas City), Dr. Washington (St. Louis), N. E. Barnes (St. Joseph), J.M. London (Macon), H. B. Brown (St. Louis).

The shooting was exceptionally fine, the Missouri sportsmen showing themselves well able to cope with the expert shots from abroad, among whom were Messrs. S. A. Tucker and Buell Lamberson, who are well known as the agents of the Parker gun. The following summary of the work done makes an unusually creditable showing:—

Tuesday, Oct. 21st.—Match at six single birds; 21 yards; prizes of $50, $25, $15 and $10. Messrs. Tucker, Erb, jr., Williams, Werk, Jones, West, Hauworth, Miller and Hershey tied on 6 straight, and again on 3 straight at 26 yards; Tucker, Hauworth and Hershey on 3 straight at 31 yards; again, same conditions; and Tucker and Hauworth a fourth time, finally dividing. McGee, Stockwell, Albright and Hall scored 5 each; McGee, Stockwell and Albright tied again on 3 at 26 yards, McGee winning with 3 at 31 yards. Bowles, Allen, O'Meara and Watson tied on 4 each; Watson, Bowles and Allen again on 2 out of 3 at 26 yards, Watson winning with 3 at 31 yards. Lister and Patrick tied on 3 each, Lister winning shoot off at 26 yards with 3 straight.

Second Match.—Ten single birds; 21 yards rise; prizes $90, $45, $30, $20 and $15:—

Scott, Jones, McGee and Williams tied on 10, McGee winning shoot off with 3 straight at 26 yards. Underwood, Werk, Smith, Lister, Fredericks and Stockwell tied on 9; Smith, Fredericks, Underwood, Lister and Stockwell again on 3 at 26 yards, and Smith and Fredericks divided on a tie of 3 at 31 yards. O'Meara, West, Allen, Watson, Hersey and Miller tied on 8; O'Meara, Miller, West and Hershey again on 3 at 26 yards, O'Meara winning with 3 at 31 yards.

Third Match.—Ten glass balls; 18 yards; prizes, $50, $25, $15 and $10:—

Erb, jr., Lister and Allen tied on 10 each, Erb and Lister dividing first on a second tie of 3 at 21 yards, Tucker, Hauworth, O'Meara, Smith and Williams having tied on 9; O'Meara and Smith divided on a second tie of 3 at 21 yards. Mallett, Davis, West and Miller scored 8 each; Miller and Mallett tied again on 2 out of 3 at 21 yards;

Miller won with 3 straight on second tie. Erb, sr., and Patrick divided fourth on 7 each.

Fourth Match.—Five pairs double birds; 18 yards; prizes, $100, $50, $30 and $20:—

Miller and O'Meara killed 10 straight, and divided. Tucker, Judy and McGee killed 9 each, and Judy won shoot off with 6 straight. Werk, Bowles, Erb, jr., Hershey and Young tied on 8, Erb winning shoot off with 6 straight.

Fifth Match.—Six single birds; 21 yards rise; prizes, $50, $25, $15 and $10:—

Scott, O'Meara, Hershey, Allen, Miller, Stockwell, Jarrett, Watson and London made clean scores, and Watson, Allen and London divided on a second tie of 3. Judy, Camp, McClelland, Williams, Jones, Wilson, Werk and Young tied on 5, Judy and Werk dividing on second tie of 3. Fredericks, Evans and Smith divided fourth on a tie of 3.

Wednesday, Oct. 22d.—Sixth match; six single birds; 21 yards rise; prizes, $50, $25, $15 and $10:—

Lister, Allen, Smith, O'Meara, Jarrett, Stockwell, Fuller, Houghton, Reed and Boone tied on 6; Allen, Reed, Jarrett and Boone again on 3 at 26 yards, Allen winning on 3 at 31 yards—Hershey, Judy, Barnes, Den, Albright, Walmsley, Miller, McGee and Young having tied on 5, and Hershey, Miller, Den and Walmsley again on 3 at 26 yards. Miller and Hershey divided on 2 out of 3 at 31 yards. Brinker, London, Watson, Werk and Williams scored 4 each, Williams winning with 3 at third shoot off, 31 yards. Oberg, Squires and Hall tied on 3, Oberg winning shoot off with 3 at 26 yards.

Seventh Match.—Ten single birds; 21 yards; prizes—first, Remington Creedmoor rifle ($125) and ten sacks shot ($20)—total, $145; second, Fox breech-loading shotgun ($75), ten sacks shot ($20)—$95; third, powder and shot, $60; fourth, 1,000 U. M. C. paper shells, shot, $32.50:—

O'Meara, Barns, Erb and Allen tied on 10; Allen, Erb and Barns on 2 out of 3 at 26 yards, Allen winning with 3 at 31 yards. Tucker, Boone, Werk, Lister and Hall tied on 9; Tucker, Werk and Lister again on 3 at 26 yards, on 2 at 31 yards, on 3 again, and finally divided. Den, McGee, Judy, Miller and Hershey tied on 8; McGee and Miller again on 3 at 26 yards, McGee winning with 3 at 31 yards, Brinker and Squires tied on 7, Brinker winning shoot off.

Eighth Match.—Ten glass balls; 18 yards rise; prizes, $50, $25, $15 and $10:—

Erb, jr., and Young tied on 8 and divided first. Hauworth, O'Meara and McGee tied on 7 and divided second. Den, Miller and London tied on 6 and divided third. Lister and Patrick tied on 5, Patrick winning shoot off.

Ninth Match.—Ten single birds; 26 yards; prizes, $125, $75, $50, $30 and $20:—

Erb, Stockwell and Williams tied on 10 and divided. Tucker, Hauworth, Miller, Watson and Hershey tied on 9; Hershey, Watson and Hauworth again on 3 at 31 yards, Hauworth winning second shoot off with 3. Young, Werk, Stocker, Smith, Boone and O'Meara tied on 8, and Young won on shoot off—3 at 31 yards. Van Horn, Hall, McGee and Fuller tied on 7, Fuller winning on fourth shoot off. Allen, Patrick, Jarrett, Lister and Albright tied on 6, Allen winning second shoot off.

Tenth Match.—Three pairs double birds, 18 yards; prizes, $50, $25, $15 and $10:—

Den won first with clean score. Miller, Lister, Hershey, Erb, sr., Boone, Allen and Scott tied on 5; Miller and Lister again on 4 at 25 yards and divided. Fuller, Smith, Van Horn, Brodie, Williams, O'Meara, Stockwell and Brinker tied on 4. Fuller and Smith again on 3 at 21 yards and divided. Patrick, Barnes, McGee, Stocker, London and Judy tied on 3 and Patrick won shoot off at 21 yards.

Thursday, Oct. 24th.—Ten single birds, 21 yards; prizes, $50, $25, $15 and $10:—Tucker, Williams, Smith, Reed and Fuller tied on 10; Fuller, Smith, Williams and Tucker again on 3 at 26 yards, Fuller winning with 3 at 31 yards. Boone, Walmsley, Erb, jr., Allen, Jones, Stockwell, Hauworth and O'Meara tied on 9; Hauworth and Stockwell again on 3 at 26 yards and divided. Miller, Lister, Jarrett, Brinker, Hershey, Thomas, Werk, London and Young tied on 8; Miller and Jarrett again on 3 at 26 yards, Miller winning on 3 at 31 yards. McGee, Underwood, Gardner, Watson, Stephens and Albright tied on 7, McGee winning second shoot off with 3 at 31 yards.

Twelfth Match.—Ten single birds, 21 yards; purse, $315:—

Hanworth, Morris, O'Meara, Allen, Werk, Erb and Fuller tied on 10; all but Morris and O'Meara again on 3 at 26 yards; Allen, Erb and Fuller at 31 yards; Allen and Erb three times again, Allen finally winning with 3 on final shoot off. Tucker, Williams, Lister and Hershey tied on 9; Tucker, Williams and Lister on 3 at 26 yards; again at 31 yards, Tucker winning final shoot off with 3. Thomas, Watson, Cunningham, Stockwell, Jones, Miller, Judy and Fredericks tied on 8; Fredericks, Stockwell and Miller again, 3 at 26 yards, again at 31 yards, Fredericks winning finally. Sharp and McGee tied on 7 and divided.

Thirteenth Match.—Team shoot, two members each; ten single birds, 21 yards; prizes, $125, $65, $40 and $20:—

Tucker and Erb, jr., made clean score of 20 and took first; Hanworth and Cave divided second with Miller and Stockwell on score of 19; O'Meara and Cunningham, Allen and Smith, and Miles and Watson tied on 18, O'Meara and Cunningham winning shoot off with 5 out of 6 at 26 yards. Underwood and Fredericks, Werk and McGee, Hershey and Lister and Fuller and Reed tied on 17; the first three teams again on 6 at 26 yards, the first two again at 31 yards, Underwood and Fredericks winning on final shoot off.

Fourteenth Match.—Sweepstakes, 15 single birds, 26 yards; Williams, Cunningham, Erb, Hershey, Miller and Werk tied on 14; the first three dividing on 3 in shoot off. Tucker, Stockwell, Allen and Smith tied on 13 and Tucker won shoot off.

Sixteenth Match.—Ten single birds, 21 yards; prizes, $50, $25, $15 and $10:—

Young, Scott, Ferguson, Boone, Werk, Smith, Miller and Barnes tied on 10; Boone, Werk and Miller again on 3 at 31 yards and divided. Cogwell, O'Meara, Cunningham, Watson and McGee tied on 9, and after four tie shots, Cogwell and O'Meara divided. Stockwell, Hall, Allen, Hershey, Williams and Buzard tied on 8, Stockwell winning on third shoot off. Erb and Stocke divided fourth.

Seventeenth Match.—For purse of $300 and gold medal; team State championship shoot; 15 single birds, 21 yards:—

KANSAS CITY GUN CLUB.

Underwood	1 1 1 1 1	1 1 1 1 1	1 1 1 1 1—15
McGee	1 1 1 1 1	1 1 1 0 1	1 1 1 1 1—14
Fredericks	1 1 1 1 1	1 0 1 1 1	1 1 1 1 1—14
Werk	0 1 1 1 1	1 0 1 1 1	1 1 1 0 1—12—55

ST. JOSEPH GUN CLUB.

Tucker	1 1 1 1 1	1 1 1 1 1	1 1 1 1 1—15
Erb, jr	1 1 1 1 1	1 1 1 1 1	1 1 1 1 1—15
Barnes	1 1 1 1 1	1 1 1 1 1	1 0 1 0 1—13
Batcheller	0 1 1 1 1	0 1 1 1 1	1 0 1 1 1—12—55

ST. LOUIS GUN CLUB.

Hauworth	1 1 1 1 1	1 1 1 1 1	1 1 1 1 1—15
West	1 1 1 1 0	1 1 1 1 1	1 1 1 1 1—14
Carr	0 1 1 1 1	1 0 1 0 1	1 1 1 1 1—12
Garrison	0 1 0 1 1	1 0 1 1 1	1 0 1 1 0—10—51

KANSAS CITY AMATEUR CLUB.

Walmsley	1 1 1 1 1	1 1 1 1 1	1 0 1 1 0—13
Houghton	1 1 1 1 1	1 1 1 1 1	1 1 1 0 0—13
Hungerford	1 1 1 1 1	1 0 1 1 1	1 1 1 1 0—13
Stark	1 0 0 0 0	1 1 1 1 1	0 1 1 1 1—10—49

Ties on 55:—

Underwood	1 1 1	Erb, jr	1 1 1
Fredericks	1 1 1	Tucker	1 0 1
Werk	1 1 1	Barnes	0 1 1
McGee	0 1 1—11	Batcheller	0 1 1— 9

In shooting off for State championship medal, given to one making best individual score, Messrs. Tucker and Hauworth tied again on 3. As these gentlemen do not belong in Missouri, they presented the medal to the association, to be shot for again next year.

Eighteenth Match.—Twelve single birds, 26 yards' rise; prizes, $110, $60, $40, $25 and $15:—

Tucker, Carson, McGee, Allen, Erb, jr., Stockwell, Miller and Werk made full score of 12; Tucker, Erb, Miller and Werk dividing after a second tie of 3 at 31 yards. Underwood, Hershey, Scott and Watson tied on 11 and divided second money. Erb, sr., Boulware and Jarrett tied on 10, Jarrett winning sixth shoot off with 3 at 31 yards. Walmsley and Stark divided fourth on tie of 9; Stocke and Hall taking fifth on tie of 8.

Match No. 20.—Five double birds; purse, $100:—

Erb won first with score of 10 straight. McGee, Miller and Werk tied on 9; McGee and Miller again on 4, McGee finally winning. McGee won a match rare, 19 out of 20 birds. Several sweeps followed, and one of the most interesting contests was a match between Messrs. Judy, Allen, Lister and Smith, forming a team to shoot against the Kansas City Gun Club Team—Messrs. Werk, Underwood, Fredericks and McGee—15 single birds each man, 21 yards. The Kansas City boys killed 59 out of 60, against their opponents' score of 53.

Sea and River Fishing.

FISH IN SEASON IN NOVEMBER.

FRESH WATER.

Black Bass, *Micropterus salmoides; M. nigricans.*	Pike or Pickerel, *Esox lucius.*
Muskalonge, *Esox nobilior.*	Yellow Perch, *Perca flavescens.*

SALT WATER.

Sea Bass, *Sciænops ocellatus.*	Cero, *Cybium regale.*
Striped Bass, *Roccus lineatus.*	Bonito, *Sarda pelamys.*
Weakfish, *Cynoscion regalis.*	Kingfish, *Menticirrus nebulosus.*
Bluefish, *Pomatomus saltatrix.*	

A FISH-IN' STORY.—Truth is averred to be stranger than fiction. The piscatorial Munchausen may reel off his tale and mystify his audience, but the grave, matter-of-fact professor comes along and lays his scientific fact in the scales, and the beam descends. A case in point is the following note from Prof. Theo. Gill, of the Smithsonian, which we candidly acknowledge rather rebukes our incredulity. But the Professor must, in his own behalf, admit that the fish, that is the outside fish he talks about was slightly stretched; and this reminds us that there are more fish in the sea than have ever been talked out of it:—

In looking over my file of FOREST AND STREAM, as I am often wont to do, I noticed the paragraphs entitled "An Iowa Fish Shoot" (vol. 12, p. 194) and "Fish Swallowing fish" (vol. 12, p. 236), wherein you express some evidence of skepticism as to the truth of a pickerel fifteen inches long having been swallowed by another twenty-six inches long, ironically remarking: "We have often told bigger ones than that ourselves. Let us see; 15 into 26, once and 11 over!" Now, dear FOREST AND STREAM, what will you say to a fish swallowing one several times larger than itself? Perhaps you will think it incredible, but nevertheless it is the fact that there are deep-sea fishes that are capable of such feats, and which have been actually found with others much larger than themselves in their stomachs. Such is the specie known as *Chrasmodus niger*—a deep-sea form of the family of Gadoids (codfishes), or a nearly related one, which occurs off the island of Madeira as well as in the Caribbean Sea. This species has been twice caught with fishes larger than itself in its capacious interior. And when I say larger, I mean it in every sense—longer, higher, broader and, of course, more bulky. The last one recorded, caught off the island of Dominica, was 6¾ inches long, and with its stomach empty would have measured less than one inch in height, while the fish it swallowed was 10½ inches long and 1⅜ inch high, and evidently weighed several times as much as the gormandizer. I leave you for the present to swallow and digest this story as you best may, but if you wish further information, am ready to give it.

THEO. GILL.

Let us have the rest of it, Professor!—ED.]

THE SIX POUNDS FISH-AS-YOU-PLEASE-BELT.—They keep a public record of their big bass out in Cincinnati. The town clerk registers their weight along with the weights of the babies, the marriage licenses, etc. So when a new fish is to be recorded the daily papers send their reporters to the town hall to copy out the registration of all previous piscine wonders. The *Every Saturday Night* thus records the progress of the emulous competitors:

The catching with rod, hook, and line of a Lake Erie black bass that weighs six pounds has always been considered with our anglers as something extraordinary, and when it does happen a great fish talk ensues, and comparative catches are brought into requisition. The first six-pound bass that there is any note of here was caught some ten years ago at Put-in Bay by John Stettinius of this city. The event was celebrated by a supper given by the lucky angler to his friends. It cost $100, but John was made superlatively happy in the wearing of the champion belt. The next big catch was made by Dr. Sterling, of Cleveland, at Middle Island, Lake Erie. The weight was 6½ pounds, thereby entitling the doctor to the belt. He held it for some time, when Captain Tinker, of Cincinnati, a few years ago, caught at Middle Island a 6½ pound black bass. Then comes Captain Brown, of Dayton, who a few weeks ago, at Pelee, caught one that pulled the scales to 6¼ pounds. And now comes that old veteran angler, Alex. Starbuck, who caught, according to Mr. Cameron's scales, the next day after Brown's catch, one that weighed 6¼ pounds. This bass, with others, was sent for distribution to Mr. Barnes, groceryman, at the southeast corner of Mound and Sixth. When he opened the box he was surprised at the size of *the* big bass and concluded at once to weigh him. He did so in the presence of his clerks, and the bass balanced the beam at seven pounds. If there are any doubting this—and it is such a monster bass that there probably may be some who do—Mr. Barnes and also his clerks are willing to be interviewed on the subject. Hand that belt, this way, Captain Tinker, for Aleck would like to wear it awhile.

—The mossbunker fisheries of Port Monmouth, N. J., have just closed, and the season has been very successful. Over 25,000,000 fish have been taken. The oil averages three gallons to a thousand fish, and the scrap yields seventy tons to a million fish. The scrap readily sells for $30 per ton, and is used as a fertilizer.

FISHING AT COHOES.—*Cohoes, N. Y., Oct. 13th.*—The river here is deep only in places, and we have to do a deal of wading in order to reach the pools where the fish are. At low water the fish are to be found in the holes, which are numerous. We have no good fishing until we get above the Falls, as the knitting-mills use chemicals which drive the fish away. At the base of the Falls are several large basins, which in years gone by were excellent spots for the angler, but now a paper-mill just above seems to drive the fish from them. Occasionally we take a few bass on the east side, but there is not enough sport to pay the angler for his trouble. Below the Falls, about three-quarters of a mile, is the State dam, which also was an excellent place for pike-fishing, but the last few years could not take many there. In the summer one can almost walk across the river without wetting his feet; but some years ago it was different. The old dam was lower than the present one, and it was hard work to wade across. Then we had good fishing, and it was fine sport to strike a pike which would weigh three or four pounds, standing in water waist deep and very swift. It required considerable engineering skill to land them, but I have taken a great many there. Above the Falls we do not meet with good fishing-grounds before reaching Crescent, distance three miles, where we have some fine riffs for pike and bass angling. Niskayuna, six miles above, is also a noted place for parties from Cohoes to camp, and large quantities of fish are taken there with the fly during the months of August and September. I have given you a description of the angling here as it is at present. What it used to be, the Rev. Johannes Magapolines thus describes it in 1642: "In the river is great plenty of several kinds of fish—pike, eels, perch, lamphreys, suckers, catfish, sunfish, bass and shad. In the spring in May the perch are so plenty that one with a hook and line can catch in one hour as many as ten or twelve can eat. My boys have caught in less than an hour fifty, each a foot long. They have a three-pronged instrument with which they fish, and draw up frequently two or three perch at once. There is also in the river a great plenty of sturgeon, which we Christians do not eat, but the Indians eat them greedily." In the year 1647 in the month of March, when by a great freshet the water was fresh almost to the great bay, there were two whales up the river, and one turned back and the other stranded near the great falls of Cohoes. No particular path was selected by the sturgeons, but they assembled at the bottom of the great falls of the Mohawk. The river in 1800 furnished pike, bass and trout. (Masten's History of Cohoes, pages 3 and 5.) According to actual measurement the Falls are 1,440 feet long by 86 feet high.

H. M.

PENNSYLVANIA, *Greenville, Nov. 3d.*—Hon. Arcus McDermett, P. J., and N. C. Packard, Fish Warden of this locality, have been sojourning at Erie for a few days for the purpose of fishing. The Judge caught and landed safe in the boat two muscallunge, one weighing 18 lbs, the other 22 lbs., avoirdupois. Packard not to be out-done, landed one weighing 27 lbs. They caught several others of less weight. M. H. B,

WASHINGTON TERRITORY—*Spokane Falls, W. T., Oct. 1st.*—This place is a paradise for game and fish. The latter are very abundant, of large size and the gamiest the writer ever saw. It is no uncommon thing for a party of two or three anglers to bring home from 40 to 75 pounds of the beautiful trout peculiar to this region, and whose home, from all accounts, seems to be that beautiful sheet of water, Lake Cœur De Alene, of which the Spokane River is the direct outlet. I took yesterday, in less than two hours, sixteen trout, whose aggregate weight was 22 pounds, the largest I have yet taken, and that of an individual, four pounds. In the meantime I shot seven fine mallard duck. Game of all kinds may be had in plenty, from ducks to bear. Some idea of the great number of deer may be had from the following: Last winter the troops stationed at Fort Cœur De Alene made a "draw," that is, formed a large circle and gradually drew to a centre, inclosing a large space; the result was 200 deer, and a number of bears, cayotes, etc., On a previous occasion, at Lake Pend Orille, nearly double the amount was so secured. I have taken trout until I am ashamed, but the sport of hooking and landing a three or four-pound fish may in some manner excuse me for the slaughter of the innocents. MULTNOMAH.

WASHINGTON TERRITORY.—*Spokane Falls, W. T., Oct. 8th.*—I went out for a couple of hours the other afternoon and caught eighteen trout that weighed thirty pounds, but took no one of extra size until yesterday, when a beauty of 4½ pounds graced a string of five. A party of us went to Lake Cœur D'Alene last week, but found that the fishing there at this season was not as good as in the river, although the fish were larger, one of fourteen pounds being reported, and others of 11¼ and 10 pounds respectively had been taken some time previous. In about a month the sport will be excellent at that point. The lake has been described in your columns before, and it is certainly one of the most beautiful and attractive sheets of water in the world. In my last I said that the soldiers made the drive by which so many deer were killed; I was slightly in error; it was made by the soldiers and Indians together. Salmon are putting in an appearance in large numbers below the falls at this place, and the Indians are very busy spearing and curing them for their winter's food; some large ones have been taken—one, I believe, weighed fifty odd pounds.

MULTONMAH.

LADY ANGLERS.—The London *Standard* has this pleasant bit of angling chat about the gentle art:

There are no records to tell us whether ladies angled in patriarchal times, but we know that they did so in the days of old Greek and Roman civilization. Plutarch informs us that no less celebrated a lady than Cleopatra was a votary of the angle, and that she and Antony spent no inconsiderable portion of their time in fishing matches. So keen at last did their rivalry become that recourse was had to artifice in order to insure victory, at least by the mean spirited Antony. Vexed at the superiority of the Queen in the art, he instructed divers to take live fish and place them on his hook. They effected this so cleverly that he pulled up fish after fish, and completely turned the tables on his mistress. She pretended to congratulate him on his good fortune, and to admire his dexterity, but by some means had gained knowledge of the trick he had practiced and determined to have her revenge. Another match was arranged, and in presence of a large company of friends specially invited to witness it the fishing commenced. Antony soon had a bite, struck, and pulled up a large salted fish, to his great disgust and the intense amusement of all present. The murder was out; Antony's trick was exploded; for on this occasion a diver, specially instructed by the Queen, had anticipated the one employed by Antony, and had fixed the salt fish on his hook. But though we cannot claim for this country the first lady angler, we can claim a lady as the author of the first book ever printed on angling; for within the years of Caxton issuing from his press at Westminster the "Dictos and Sayings of the Philosophers," in 1477; Wynkon de Worde published the famous "Booke of St. Alban's," wherein Dame Juliana Berners, the good and accomplished Prioress of Sopwell, discourses on "the dysporte of fysshyng. She was probably a lady angler herself, as the very full instructions she gives in reference to the art indicate that she must have had practical experience of it; but, however this may be, she strongly commends the pastime "to all that be virtuous, gentle, and freeborn." That angling was a pursuit followed by ladies after her time, and yet a considerable number of years ago, may be gathered from a book on fishing published in 1675, under the title of the "Accomplisht Lady's Delight." Edmund Waller, the most charming song writer in the English language, and forever to be remembered as the author of the ode, "On a Lady's Girdle," and himself, as Isaak Walton tells us, "a lover of the angle," sang in praise of lady anglers two centuries ago. But whether lady anglers in past times were few or many, skilful or unskilful, enthusiastic or the contrary, certain it is that now they muster strongly. Many of them are very successful performers, and the majority as keen sportswomen as can well be imagined; indeed, when a lady takes thoroughly to angling she generally becomes as ardently devoted to it as the most inveterate Waltonian of the other sex. Lady salmon fishers are now to be found on most of our English, Scotch and Irish salmon rivers, lochs and lakes, and Norway is visited by them; while in America they whip freely the well stocked waters of various districts. Our trout streams in all directions receive their attention; they try conclusions with the tenants of the pike preserves, and the humbler denizens of our fresh waters have to succumb to their skill and perseverance. True that lady anglers have difficulties to contend with which men make but light of, but these are overcome by various devices, or lessened by their having some one of the other sex in attendance upon them. Salmon fishing is very hard work with the heavy double-handed rods generally used, but for ladies lighter ones are specially made, and, the weekly records of good fish taken in various waters show that with such tackle they get quite their share. It was all very well for the late Public Orator of Cambridge to have launched the following *jeu d'esprit* apropos of an announcement in the *Field* that the beautiful Miss —— had caught a salmon of seventeen pounds:—

Not artificial flies my fancy took;
Nature's own magic lured me to your hook;
Play me no more—no thought to 'scape have I,
But land me, land me, at your feet to die.

FLY FISHING FOR SHAD IN OCTOBER.

A NEW SENSATION IN ANGLING.

Editor Forest and Stream:—Some years since the angling fraternity was considerably exercised over the account of taking full-grown shad with the fly at Holyoke Dam, Mass. I was much interested on the subject and wrote to Mr. Thomas Chalmers, whose accounts and scores I had heard and read so much about in the FOREST AND STREAM. He wrote me full particulars, and also sent me a case of shad flies, which I tried according to directions. I never succeeded in obtaining a single rise. In the fall of the same season I was fishing for perch on a reef in the middle of the Hudson one afternoon in company of a friend, when we succeeded in catching fifteen fish, exactly similar to the shad, averaging three-quarters to one pound each. This was a great surprise to me. The natives pronounced them herrings, flip-jacks, skippers and various other names. I have taken them regularly every season since, and during this present month of October I have had great sport with them. I have sent specimens to Prof. Spencer F. Baird, and to Seth Green. They both pronounced them to be the winter or salt water shad. I take them on a light fly rod, with either live bait or with a fly. The most killing fly seems to be a dark-brown. Any dark fly, I think, will do. The best time to fish is at half tide, ebb or flood, and the best time to catch them is at daybreak or sunset. It is of no use fishing at mid-day, unless the day be overcast and cloudy. These fish seem always, when seen, breaking or jumping from the water, to be feeding on young shad, from one to one and a quarter inches in length, and when they feed it is just the time to fish for them. I generally go out to fish from 5 to 6 P.M., when the tide serves, and have made some pretty good scores. My best score was forty-one; lowest, seven. The run is about over at present. They leave as soon as the water begins to grow cold. Then the feed (young shad) disappear. The fishing usually lasts about three weeks, beginning about Oct. 10th and lasts nearly to the close of the month.

New Hamburg, N. Y., Oct. 28th. P. A. M. VAN WYCK.

FISH POISONING FROM CHEMICAL REFUSE.—An extraordinary scene was witnessed on the Dee in England a few days ago. A storm washed a quantity of poisonous liquids from Pickhill Brook, which drains several lime and lead works into the Dee, and the fish immediately began to sicken and die. They hastened to escape the poisonous water, and came floating down the river in thousands. Some were dead, and others were hurriedly rushing down stream to escape out to sea. At the causeway beside the old Dee mill a large crowd had congregated to see salmon and salmon trout, pike, roach, and bream frantically endeavoring to throw themselves over. Hundreds of men and boys lined the river, busily engaged in killing fish, and several fine salmon were caught.

OUTLINE OF A WESTERN PLEASURE TRIP.—One of our far-Western correspondents, who doesn't think much of long-distance travelling, has cut out the following summer route for the editor of this paper:

Let me suggest a good trip for you next summer. Start about July 1st to 20th; go to Bismark, thence to the Yellowstone River, via Northern Pacific Railroad; then take a steamer to Gallatin, Montana (from there, by good wagon road, it is only about 400 miles to Cœur De Alene Lake); thence twenty-eight miles to Spokan Falls, where you will probably meet the Northern Pacific Railroad coming towards you from the west. One hundred and forty miles of railroad brings you to the junction of the Snake and Columbia rivers, where you will find splendid steamers to take you to Portland, Oregon.

Just think of it; only 400 miles of wagoning, by the best of roads, in the finest of weather, amidst the grandest scenery on the continent, along beautiful mountain streams, and through the wild passes of the Cœur De' Alene Mountains.

There is no use of telling you of the fish and game. You know it by heart.

As to the danger of your scalp adorning some wigwam, it is *nil*. I would consider it just as safe to take my wife over the route to-day as to drive down Broadway, and I think for me it would be safer. W. B. B.

New Tacoma, W. T., Oct 6th.

A FLORIDA CRUISE.—In another column will be found the advertisement of Capt. Thomas J. Miller, of Brooklyn, a competent sailor, who proposes to navigate Florida waters this winter.

—Geo. Rockwell of Fulton, Oswego Co., N. Y., publishes a map of the Thousand Islands which will be found both correct and up with the times.

BASE-BALL.

THE LEAGUE SEASON OF 1879.

THE PROVIDENCE NINE THE CHAMPIONS—THE STATISTICS OF THE CAMPAIGN.

The League championship campaign of 1879 has ended, and the close of the race for the League Championship Pennant leaves the laurels of victory in the hands of the Providence Club, the Bostons (who won the pennant in 1878) taking second place this year, and the Buffaloes (the international champions of 1878) third position, the Chicagoes occupying fourth place, owing to their having sustained more defeats than the Buffaloes had. Never before in the brief history of the League championship contests has there been a season in which the struggle for the pennant was so close as it was this year. Not until the very last week of the campaign was it at all sure as to which would be the winning team. The result of the first month's contests in the arena gave such a lead to the Chicago team that it began to be regarded as almost a sure thing that that nine were "the coming champions," and they began to be heralded as such by the League organ of Chicago. But after the end of May had seen the Chicago Club team in the van with a record of fourteen victories out of fifteen games played that month, the innate strength of some of the clubs then in the background, and the undeveloped weakness of those which had started with a lead, began to be manifested. Gradually but surely the Boston Club's team began to take up its position nearer the leading teams, and just in proportion the Chicago Club commenced losing the vantage ground, while the Providence team, which had been regarded as secondary in playing strength to the Cincinnati nine, gradually worked its way up to a position close to the leading team. The record of games won and lost each month of the season shows that in May the clubs leading in the race were as follows:—

Clubs.	*Games won.*	*Games lost.*	*Position.*
Chicago	14	1	First.
Providence	10	5	Second.
Cincinnati	8	7	Third.

By the end of June a change had been made in the position of the three leading nines. Though Chicago still led in per cent. of victories, with Providence second, Buffalo had supplanted Cincinnati, the latter having been obliged to give way to Buffalo, as will be seen by the appended figures of the June contests:—

Clubs.	*Games won.*	*Games lost.*	*Position.*
Chicago	9	3	First.
Providence	9	5	Second.
Buffalo	8	6	Third.

The end of July saw a still further change in the record of the months' games, for during July Buffalo held the lead, being first in won games during July, Boston second, and Cincinnati third, Providence and Chicago having both lost ground during the month, as the appended record shows:—

Clubs.	*Games won.*	*Games lost.*	*Position.*
Buffalo	13	4	First.
Boston	12	6	Second.
Cincinnati	11	7	Third.

By August the two eastern nines began to exhibit their innate strength to advantage, and it was in this month that the Chicago nine lost its position as leading the van in the pennant race. In the record of the month's games the three successful teams were as follows:—

Clubs.	*Games won.*	*Games lost.*	*Position.*
Providence	16	3	First.
Boston	16	3	Second.
Buffalo	8	6	Third.

September, the last month of the season, saw the bad management of the Chicago Club, leave its mark on the pennant race, the "coming champions" of the previous May having returned to a rear position a badly demoralized nine. The record of the month's games was as follows:—

Clubs.	*Games won.*	*Games lost.*	*Position.*
Providence	14	4	First.
Cincinnati	13	8	Second.
Boston	11	7	Third.

The above records very plainly show what the respective teams might have done under proper management. As it was, the two best managed teams went to the front irrespective of their reliable strength as estimated by the batting and fielding averages of the previous season's play. Thorough discipline, harmony in working together as a team, temperate habits, and honest efforts to "play for the side," outside of pool-room influences, met with their just reward; while the teams with players well up in the batting and fielding departments of the game, but having members who were either addicted to drink or were subjected to the temptations of pool ring gamblers, necessarily went to the rear. Other teams who escaped these two drawbacks suffered so much from incompetent field captains and the lack of harmony that all their real strength was more than offset. By the middle of Sept. not only had the question of winning the pennant been narrowed down to two competitors, but one promising team, through bad management, had been forced to go into bankruptcy, the Syracuse nine being disbanded on the 10th of Sept. Though this favored the record of the Chicago Club, it did not prevent the Providence and Boston clubs from retaining first and second positions, and when the season ended, on Oct. 1st, the relative position of the clubs placed Providence the victor in the race, followed by Boston as a good second, Buffalo third, Chicago fourth, Cincinnati fifth, and Cleveland sixth, with the Syracuse team bringing up the rear, owing to disbandment.

The full record of the season showing the games won and lost, as well as the victories and defeats which count in awarding the pennant, is as follows: The names of the clubs are given in the order of victories counting, except in the case of the Buffalo and Chicago clubs, for though they tie in legal victories and defeats, the fewer defeats sustained by the Buffalo Club in actual play gives them the precedence.

	Providence.	Boston.	Buffalo.	Chicago.	Cincinnati.	Cleveland.	Troy.	Syracuse.	Won.	Played.	Drawn.	Per cent. of Won Games.	Victories Counting.	Defeats Counting.
Providence	..	8	6	7	10	8	10	10	59	84	5	.705	55	23
Boston	4	..	9	4	7	10	11	9	54	84	6	.628	49	29
Buffalo	6	3	..	6	7	8	11	5	46	78	4	.592	44	32
Chicago	5	8	6	..	3	8	8	8	46	79	4	.582	44	32
Cincinnati	2	5	3	8	..	8	9	8	43	80	3	.543	38	36
Cleveland	4	2	4	4	4	..	5	4	27	82	3	.311	24	53
Troy	2	1	1	3	2	6	..	4	19	75	3	.253	19	56
Syracuse	2	3	3	1	4	7	2	..	22	70	3	.357	15	57
Games lost	25	30	32	33	37	55	60	48	316					

The record of series won, lost and tied in the contest for the pennant, is as follows:—

	Series Won.	*Series Tied.*	*Series Lost.*
Providence	6	1	3
Boston	5	0	3
Chicago	4	1	3
Cincinnati	4	0	4
Buffalo	3	2	3
Syracuse	1	0	5
Troy	0	1	5
Cleveland	0	0	6

The total runs scored by each club were as follows;—

Club.	*Runs in Victories.*	*Runs in Defeats.*	*Opponents' Runs.*
Providence	550	81	420
Boston	472	93	443
Cincinnati	354	133	451
Chicago	343	112	429
Buffalo	291	95	428
Cleveland	179	143	484
Syracuse	161	128	479
Troy	140	163	458

The general average of the eight clubs is as follows:—

Club.	*Fielding Average.*	*Average First Base Hits*	*Fielding Errors.*
Boston	895	297	421
Buffalo	894	248	419
Providence	883	291	503
Chicago	872	261	530
Troy	856	230	588
Cleveland	844	232	645
Cincinnati	841	267	646
Syracuse	839	223	542

On another page will be found the complete record of the League championship games giving the data and score of every match game played as well as the total figures, as published yearly exclusively in the FOREST AND STREAM.

—The postponed contest of the Williams College, (Mass.) Athletic Association took place as follows:

Saturday, Oct. 18th.—Throwing base-ball, won by Fish, of '82; distance 346 ft. 8 in.; tug of war, class team of eight. Only '81 and '82 enlisted; prize won by the '81 team, who pulled their opponents over the line twice in succession.

Saturday, Oct. 25th.—Mile walk between Matz and Davis, both of '82; won by Matz; time, 8m. 45s.

C. K. OLIN.

—Cocoa is known the world over for its great nourishing and strengthening properties. The Chocolates and Cocoas of Walter Baker & Co., having stood the test of a hundred years, are highly recommended for their excellence and purity, and are for sale everywhere by grocers.—[*Adv.*

DIVING DECOY CO.
Rochester, N. Y

A NEW FIRE.—The London *Athenæum* says: A correspondent has sent us a startling letter from Miss M. Betham-Edwards, from which we give an extract: "I send you the particulars of a recent scientific invention, just patented, and destined, without doubt, to play a very important part in our economic history. I think it must be regarded as a solution, for once and for all, of the great coal question, not only among ourselves, but abroad. M. Bourbonnel, of Dijon, the celebrated lion and panther slayer, lighted upon the following discovery by hazard, and after six years persistent investigation brought it to entire 'workable' perfection. He discovered, by means of two natural substances, inexhaustible in nature, the means of lighting and maintaining a fire without wood or coal—a fire instantaneously lighted and extinguished; a fire causing no dust, smoke or trouble; a fire costing one-tenth, at least, of ordinary fuel; and, what is more wonderful still, a fire, the portion of which answering to our fuel, is everlasting, that is to say, would last a lifetime. M. Bourbonnel's invention comprehends both stove and fuel. The fires could be on the minutest scale or on the largest. They would be used for heating a baby's food, or for roasting an ox. Being lighted instantaneously, they will be a great economy of time. M. Bourbonnel at once patented his invention, and a body of engineers and savants from Paris visited him, and pronounced his discovery one of the most remarkable of the age. He has had several offers for the purchase of the patent in France, but wants to sell it in England, his own occupation being in another line. Any English gentleman or firm wishing to see his fires or stoves, could do so by writing to him a day or two beforehand. His address is M. Bourbonnel, Dijon. I have seen these fires and stoves. There is no mistake about the matter. It is as clear as possible that here we have a perpetual and economical source of fuel. Two hundred years ago the discoverer would surely have been burnt as a wizard."

Pointer "Dora"—liver and white, out of "Queen" and "Sancho," in whelp to Croxteth.

Blue Belton setter "Silk," in whelp to Ranger I.

Irish setter "Moya," out of Col. Hilliard's "Palmerston;" will be bred to Rover I.

English Setter "Donna," white and lemon, in whelp to Ranger II.

Pups out of all the above first-class bitches can be secured by an early application. Besides I offer for sale pointers, setters of minor quality, but of good thoroughbred stock; full pedigrees. Particulars will be furnished on application to

A. E. GODEFFROY,
Guymard, Orange Co., N. Y.

COCKER SPANIEL
BREEDING KENNEL
OF
M. P. McKoon, Franklin, Delaware Co., N. Y.

I KEEP ONLY COCKERS of the finest strains. I sell only young stock. I guarantee satisfaction and safe delivery to every customer. These beautiful and intelligent dogs cannot be beaten for ruffed grouse and woodcock shooting and retrieving. Correspondents inclosing stamp will get printed pedigrees, circulars, testimonials, etc. j10

FOR SALE.—Imported English setter bitch Psyche, lemon and white, black nose and eyes, one year and a half old. This bitch is one of the best bred in America, being out of Rhoda, first prize winner at N. S. Show of 1878, and litter sister to Mr. Macdona's celebrated Field Trial winner Ranger; sire, the best, pure Laverack in England. Will be sold very low. Address, JAS. BRYCE, Jr., Madison, N. J. Oct30tf

CLUMBER SPANIELS FOR SALE.—The pure clumber spaniels Trimbush and Fairy, are offered for sale. Trimbush was imported direct from the kennels of the Duke of Newcastle and is a perfect dog of the breed. Price for the brace $150. Address WM. M. TILESTON, Sept19-tf

The Kennel.

ASA L. SHERWOOD,
Skaneateles, N. Y.

GORDON ENGLISH, AND FIELD TRIAL SETTERS
OF PUREST STRAINS.

Imperial Kennel

Setters and Pointers thoroughly Field Broken.
Young Dogs handled with skill and judgment.
Dogs have daily access to salt water.
N. B.—Setter and Pointer puppies; also, broken dogs for sale; full pedigrees. Address H. C. GLOVER, Toms River, N. J

A RARE CHANCE.—Whelps for sale, out of champion Fire Fly, by champion Elcho. Also, whelps out of Belle ("Pride of the Border"—Kirby), by Carlowitz. Address H. W. GAUSE, Wilmington, Del. Oct. 9, 1mo.

PINE LODGE KENNELS.—I am prepared to take a limited number of dogs, either setters or pointers, and train them thoroughly. I give my puppies seven months' work out of the twelve, and guarantee satisfaction, if the dog has all the natural instincts. References on application. Prices, $50 and $75, according to length of time I keep the dog, with discount to parties at long distances. A. WINTER, Cairo, Thomas County, Georgia. Oct 2,tf.

DOGS BROKEN FOR FIELD SPORTS.—A few more well-bred setters or pointers will be taken. For particulars concerning game, terms, etc., enclose a stamp. Price low and terms easy. Any dog taught to retrieve. E. & C. VON CULIN, P. O. Box 18, Delaware City, Del.

RATTLER.—In the Stud.—Blue belton, Llewellin setter, winner of three bench prizes, by champion Rob Roy, winner of five English field trials, out of the pure Laverack bitch, (Pickles). Will serve bitches at $20. Litters warranted. Inquire of L. F. WHITMAN, Detroit, Mich. jan 2tf

ST. BERNARDS FOR SALE.—The undersigned, wishing to reduce his kennel offers for sale several magnificent imported Mount St. Bernard dogs and bitches, carefully selected from the best European strains. To be sold for no fault. For prices, pedigrees, etc., address.
LE ROY Z. COLLINS,
Sept 18-tf Lancaster, Mass., U. S. A.

25 FOX HOUNDS AND PUPS FOR sale or exchange for Sporting Implements. The finest bred and fastest in America. Every dog warranted. L. M. WOODEN, 119 Bowers Block, Rochester. ju24 tf

FOR SALE—Champion Berkley pups, red Irish setter pups, by Champion Berkley, out of Aura, she by Blarney, out of Eileen, both imported. Whelped June 29, 1879. ROBT. SAUTHOFF, Box 1, South Windham, Me. Sept 25-tf

LAVERACK BLOOD LOR SALE.—Pups by the renowned sire of prize-winners, the pure Laverack setter dog Carlowitz; orange and white ticked, lemon Belton and chestnut Belton; dams of whelps from prize-winning stock; whelped July 3d and July 12th; price lower than the lowest. Also two whelps by Carlowitz, dam Princess Nellie, she by Pride of the Border, by Petrel. M. VON CULIN, Delaware City, Del. Oct9,tf

I WILL SELL THE BALANCE OF MY valuable Kennel of Setters at the following sacrifice, which is less than one-third what they have cost me: The pure black-and-Tan Gordon bitch, Midge, a great beauty, and winner of the first prize and best brood bitch at Philadelphia Show, and for speed, endurance and scenting powers in the field she has no better; price $100. Imported red Irish setter bitch Floss, winner of prizes at the following shows: Dublin Show, Ireland; Centennial, St. Louis, Baltimore twice; New York and Philadelphia. She is a great beauty, and a fast worker in the field; price $75. Imported red Irish setter bitch, Colleen, winner of prizes in England and here; price $75. The red Irish setter bitch Nora; a slashing strong bitch; only two and a half years old, and the making of the best field worker that I have ever seen; price $40; a great bargain. A handsome Llewellyn setter bitch; a beauty and a capital bitch in the field, and a good brood bitch; her price, only $65. One brace of handsome puppies, five months old; large, strong, healthy pups, out of Arnold Burges' celebrated Champion Field Trial and Bench Show winner Druid, and the Llewellyn bitch, Leda; price $20 each. This is a rare chance to obtain a pure breed dog at a low figure. Full pedigree will be furnished with all of the dogs. C. Z. MILEY, Lancaster, Pa. Oct23,tf

Sportsmen's Routes.

"THE FISHING LINE."
TAKE THE
Grand Rapids & Indiana R.R.
Mackinaw, Grand Rapids and Cincinnati Short Line
FOR THE
Trout, Grayling, and Black Bass Fisheries,
AND THE
FAMOUR SUMMER RESORTS AND LAKES
OF
NORTHERN MICHIGAN.
The waters of the
Grand Traverse Region
and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.
BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in those waters.
The TROUT season begins May 1 and ends Sept. 1.
The GRAYLING Season opens June 1 and ends Nov. 1.
BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory.
The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at many points.
TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with
Hay Fever and Asthma Affections.
The hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing.
During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.
Dogs, Guns and Fishing Tackle Carried Freeat owner's risk.
It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide (an attractive illustrated book of 80 pages), containing full information and accurate maps of the Fishing Grounds and Time Cards, address A. B. LEET, Gen'l Pass. Agent, Grand Rapids, Mich.

GUNPOWDER.

DUPONT'S

RIFLE, SPORTING and BLASTING POWDER.

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1801, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN,

Nos. 1 (coarse) to 4 (fine), unequaled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING,

Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.

DUPONT'S EAGLE RIFLE,

A quick, strong, and clean Powder, of very fine grain for pistol shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING," FFG and FFFG. The FG for long range rifle shooting, the FFG and FFFG for general use, burning strong and moist.

SPORTING, MINING, SHIPPING, and BLASTING POWDERS of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar, and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

F. L. KNEELAND, 70 Wall Street, N. Y.

N. B.—Use none but DUPONT'S FG or FFG Powder for long range rifle shooting.

THE HAZARD POWDER COMPANY

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for up-land prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration*. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG in kegs of 25, 12½, and 6½ lbs. and cans of 5 lbs. FFFG is also packed in 1 and 1 lb. canisters. Burns strong and *quick*. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* Powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office,

88 WALL STREET, NEW YORK.

ENGLAND AND AMERICA.

COLT WEBLEY.

The two GIANTS in gun-making at the present time, are P. WEBLEY & SONS, Birmingham, England, and the COLT FIRE ARMS CO., Hartford, Conn. Both owe their marvelous success to the same two causes. First, that they learned just what constituted PERFECT GUNS. Second, that they applied labor-saving machinery to their production. The result is, THE BEST GUNS IN THE WORLD, AT VERY SMALL COST. You can now buy a COLT or a WEBLEY gun, which it is a pleasure to use, for no more than is commonly paid for guns bearing unknown or fictitious names.

Of WEBLEY'S GUNS we have the TREBLE WEDGE GUNS—every gun having beautiful Damascus or laminated steel Barrels, Rebounding Bar Locks, Pistol Grip, Lever For part, Double Bolt, and Extended Rib.

DOUBLE BOLT GUNS (Top and Side Lever). | WEBLEY-LANG SELF-COCKERS.
SINGLE BOLT GUNS (Top and Side Lever). | EXPOSITION GUNS (various styles).

The last four styles named above constitute a JOB LOT, which we are selling off at about half their real value. These guns are in NO WAY inferior to the Treble Wedge guns as regards quality of material or EXCELLENCE in shooting, and are the CHEAPEST lot of guns we have ever seen.

Of COLT GUNS, we have all the regular grades, and, in addition, THE CLUB GUN. This gun is made for US, with selected barrels and the very finest materials, and is designed especially for Glass Ball and Pigeon Trap Shooting. Gentlemen who indulge in these contests will be obliged to either shoot the COLT CLUB GUN, or lose the prizes.

Every one of these guns has an elegant heel plate, with the Rampant Colt in a circle, and the words "The Club Gun," beautifully embossed upon it. *Any* Colt gun not answering to the above description is *not* the Club Gun.

Besides the Webley and Colt DOUBLE guns, FOREHAND & WADSWORTH, of Worcester, Mass., make for us a SINGLE barrel breech-loader with Scott pattern Top Lever. These guns are very light and handy, and just the thing for BOYS or men who cannot afford to buy Double Guns. They cost but a mere trifle. We are happy to announce that we are the principal distributing agents at New York city for all three of the above-named manufacturers.

P. O. Box 4,309. H. & D. FOLSOM, 30 Warren street, New York.

Shot-Gun and Rifle-Powders Revolutionized.

DITTMAR POWDER.

Champion Shot Gun and Rifle

POWDER OF THE WORLD!

IS UNEQUALLED BY GUNPOWDER

for strength, accuracy, cleanliness, and gives little smoke, recoil, or noise. It is absolutely safer than gunpowder, as it cannot explode when not confined, and does not stain the gun or heat the barrels as much in rapid firing. Captain Bogardus, champion wing-shot of the world; Dr. Carver, champion rifle-shot of the world; Ira A. Payne, and all the leading shots, use DITTMAR POWDER in their matches. Our challenge to shoot a long range rifle match, as published in our circulars, was never accepted, and is yet open to the world. Address

WILD TURKEY.

(Meleagris gallopavo.)

THE purpling twilight's melting blue,
Is fading with its transient hue,
The red cloud that erewhile did float
The heavenly vault like painted boat,
Now with a denser shadow creeps
Across the darkening upper deeps.
The glow that late the river's tide
With its encrimson'd blushes dyed,
Hath vanish'd, and the rushing flood
Flows gloomy past the bordering wood;
Now to their roosts wild turkeys stray,
And ambush'd hunters seek their prey.

This wandering, shy, secluded bird,
This roamer of the forest-ground,
Thro' all the western wilderness,
In dense, embowering haunt is found.
In all the groves that shade the shores,
Of Mississippi's swelling flood,
And where the grand Missouri pours,
Thro' every dim and tangled wood,
In multitudes immense they roam
Afar from human step and home.

So shy, that scarce the hunter's gun
May harm them, bursting on the wing,
So fleet, that scarce pursuing steed
Its rider within shot may bring;
But only may he lie in wait
Like bandit watching for his game
And lure the victims to their fate—
The whistling ball, the rifle-flame.

Seek them where gloomy shadows fall
Beneath the forests grim and tall,
In the deep alder-brakes, or where
The dark pines lift their spears in air,
And there where slow a streamlet creeps,
Or swift through bushy ravine sweeps,
Hid in the ferns that droop around,
Your call deceptive, cautious sound;
Soon will you hear the answering note,
From the embowering thickets float,
Soon will you see the noble game
Step forth—then steady be your aim!

All stratagems, all cunning wiles,
The settlers fail not to employ;
For when the springing maize-field smiles,
Their flocks the tender ears destroy.
Then trench is dug, and train is led
Of sprinkled corn along the trail,
And where the treacherous feast is spread,
The flock is swept with volleying hail.

ISAAC MCLELLAN.

A Winter in East Florida.

(EIGHTH PAPER.)

LAKE WORTH—A SEMI-TROPICAL PARADISE.

THE last chapter left us near sundown on the top of Jupiter Light-house, enjoying one of the grandest and wildest views of land and water in Florida. We camped at the foot of the bluff, and slept with the huge eye of the lantern flashing and gleaming on us, as it kept watch and ward over the vast expanse of the sea. During the war the tower was used in the interest of the blockade-runners. Whenever the coast was observed to be clear of cruisers a preconcerted signal brought the adventurous little coasters, from the Bahamas, or Bermudas, safely over Jupiter Bar into the harbor beneath, from whence the contraband goods were transported via Indian River to Jacksonville. The picturesque white cottage of Superintendent Armor and his assistants stands at the foot of the tower embowered in a grove of semi-tropical foliage. It is built of coralline rock, and is surrounded by a spacious vine-clad verandah, while near it beneath a grand old cocoa-nut tree is a well dug through the solid rock, whose waters are as fresh, sparkling and cool as a mountain brook.

There are two routes, an inside and an outside one, from Jupiter to Lake Worth. The former is some eighteen miles in extent, and follows a winding creek that empties into the Locohatchee just above the light-house, to the saw-grass, then through the puzzling mazes of the latter to the "Haulover" on the bank of Lake Worth, where there is a wooden tramway some three hundred yards long. The boat is here hauled out and placed on a car, and then transported along the wooden track to a small bluff bordering the lake, down which it is slid on the wooden rails into the water. Only the smallest boats, less than five feet beam and drawing less than a foot of water, can proceed by this route. It is, at best, a laborious all-day job. The outside route is but ten miles by sea from Jupiter Bar to Lake Worth Inlet, and can be sailed in an hour or two with a fair wind. The only difficulty, when the sea and wind are right, is at the inlets, which are quite narrow, and each has an angle in its channel at the worst possible place. Nevertheless, the outside route is greatly to be preferred, and should be taken by anyone at all versed in sailing. With a westerly wind the sea is, barring rollers or a heavy swell, comparatively smooth, and the worst that can happen with these contingencies, is a slight touch of sea-sickness to those easily affected in that way, though the short sail will generally obviate that disagreeable feature. A fresh breeze from any point east of north or south, however, soon kicks up a disagreeable sea, and none but thoroughly good sea-going craft, well handled, should then attempt the passage. Sometimes boats are kept waiting a week or two for a favorable opportunity to make the short but often hazardous run.

We decided the next morning to go at once to Lake Worth, as there was a fresh wind blowing from the west, and the sea was pretty smooth. Sandlin's passenger and half of our party concluded to walk the beach, some twelve miles, in preference to trusting themselves on the "briny." Accordingly, after putting the "tramps" across to the south side of the inlet, the *Hero* with Sandlin and Dye, the latter a good pilot, and the *Blue Wing* with Frank, Ben and myself, started with colors flying, on the last hour of the ebb-tide. We hauled the dingy aboard, placed her athwart midships, and went out over the Bar riding some rollers that made Frank and Ben open their eyes and look wistfully towards the party tramping along the beach. We kept about a mile from shore, and as the wind began to freshen had a delightful sail. We soon sighted the inlet at Lake Worth, and as we drew near its rocky mouth the breakers looked somewhat alarming to Frank and Ben, and dampened their enthusiasm for the time. The wind had now veered round to the south-west, and we were sailing close-hauled, giving the boys their first taste of ocean spray. Frank, who had been trolling, here drew in a king-fish weighing some thirty pounds or more.

The inlet to Lake Worth is through an opening in the beach bluff, running due east and west, some fifty yards wide and of about the same length. From its north side is a long ledge of black rocks running out into the sea and trending towards the southeast some 150 yards, over which the breakers dash and roar with tremendous fury, thus protecting the inlet proper from the sea. This ledge runs at an acute angle with the beach south of the inlet, with an opening between the end of the reef and the beach of about 100 yards, though the channel is scarcely one-fifth of that distance in width. The tides rush in and out through this narrow passage with great force and swiftness, and it will be at once apparent that one must make the run in on the flood, and out on an ebb tide. We sailed down below the ledge, came about, and went in on the port tack with the wind abeam. At about seventy-five yards from the end of the ledge the channel turns suddenly to the west, through the inlet proper into the lake; and in making this turn Dye put down the helm of the *Hero* too soon, causing her to run on a submerged reef making out from the shore. Dye made the mistake by a wrong calculation in regard to the tides. When we left Jupiter on the last of the ebb, Mr. Armor informed us that we would reach Lake Worth after the turn of the tide, and go in on the young flood. As it was, we had made the sail of ten miles in little more than an hour, being half an hour ahead of time; consequently there was not water enough at low tide where the *Hero* stuck to carry her over the reef, the channel being a few yards further to the north. Dye and Sandlin immediately sprang overboard and towed her off into the channel and so into the lake, for the tide was still running out, and the water was not over four feet deep even in the channel. Seeing their mistake I followed the channel, but as I made the turn to the west we came under the lee of a group of palmettoes on the south shore of the inlet which shut off the wind. The sail shaking, the *Blue Wing* lost her headway, and soon began making sternway towards the reef of rocks outside, both wind and tide carrying her in that direction, where she would soon have been knocked to pieces by the breakers. I was about to order Frank and Ben to let go both anchors, when we could have safely waited for the tide to begin to make, but, in imitation of Dye and Sandlin they both jumped overboard and towed her into the lake and around into a sandy bight just above the inlet. After the turn of the tide I pointed out a school of sharks in the inlet to Frank and Ben, saying:

"If you had seen those customers, boys, I don't think you would have gone overboard without orders."

"Golly, Ben!" exclaimed Frank, "just fancy one of those fellows taking four pounds of veal out of the calf of your leg at one bite!"

It was noon before the tramps arrived. They were quite fagged and wished they had come by water, until Frank told them of our experience in running the inlet, whereupon they seemed more reconciled to their walk, especially as they had picked up some beautiful shells and other marine curiosities. Frank further told them that in towing the *Blue Wing* into the lake he and Ben were compelled to carry the setting-poles to drive off the sharks which, he said, swarmed around them by hundreds, and in proof of his assertion he took them to the inlet and showed them the sharks still swimming there. He even pointed out one big fellow that had made a grab at his leg, and tried hard to make the boys see where he had jabbed him with the pole "just over the left shoulder." Of course the boys did not know then that the sharks came in with the tide.

Some two months later, on our return, Frank and I run these inlets alone with a heavy sea and a strong southeast wind, but as the wind was aft it did not matter much. We tied the two setting-poles together in the form of an X, and towed them astern as a drag, which prevented the sea from breaking over our counter. Frank was quite seasick during the passage, but I roused him up as we entered Jupiter Inlet, where I needed his assistance in gibing at the turn in the channel. We went in on three immense rollers, which Frank said were as "high as a house." They were at least high enough to give me a good view of the channel for a long distance ahead when mounted on the top of one. A scull-lock fitted to the stern is highly important in running these inlets, for very often while on the summit of a wave or roller the rudder will be entirely out of water, rendering the craft for the time being unmanageable, with great danger of her "broaching to," or getting into the trough; but when steering with a long oar in the scull-lock this difficulty is avoided. I have been somewhat minute, with a risk of being tedious, in the description of the route from Jupiter to Lake Worth; but my excuse must be that tourists or sportsmen seldom go to Lake Worth, as the boatmen do not like to risk their boats outside; and further, a description of the country below Jupiter has never before been published in the columns of FOREST AND STREAM.

Lake Worth is a fine sheet of water, twenty miles long and from a fourth to two miles wide. It runs north and south, parallel with the sea shore, from which it is separated by a strip of land varying in width from a hundred yards to half a mile. Originally it was a fresh water lake, but since the cutting of the inlet has become, of course, salty. The head of the lake, near the inlet, is quite shallow, with numerous shoals, snags and old wrecks, which renders it impossible to follow the narrow channel, which runs from the inlet due north a few hundred yards, when it suddenly turns sou-west, until the west side of the inlet is reached at a point nearly opposite to the inlet; from thence there is plenty of water down the lake in any direction. At the head of the lake is the Haulover of the inside route to Jupiter. Opposite the inlet is a good camping site at the mouth of a stream of good fresh water, abounding in black bass and bream. The west shore of the lake is level, and clothed with a pine forest all the way down to the foot, or south end, of the lake, where a large fresh creek empties its waters, having its source in the Everglades, and through which, in seasons of high water, there is an inside route to Biscayne Bay. The east shore is a continuous narrow hammock, with a remarkably rich, reddish-brown soil, similar to that of the Bahamas. It stands well above the lake, and is underlaid by coralline rock, which crops out all along the shore. The hammock is thickly wooded with palmetto, sweet-bay, crab-wood, Spanish ash, satin-wood, indiarubber, stopple, live oak and other valuable timber. Crab-wood is especially desirable for ornamental purposes; it is of a rich, creamy-white color, with a dark, nearly black heart, and is similar in weight and density to lignum vitæ, and is susceptible of as high a polish. Among the small trees and shrubs are cocoa, the sea-grape, myrtle, and the tropical paw-paw, or bread-fruit. The trees and shrubs are draped with luxuriant vines and creepers, which retard one's progress materially—especially the "wait-a-while," which trips up one's feet, catches one under the chin, ties one's legs together, and takes other entwining and affectionate liberties with one's person. This vine is so small and long, so slender and strong, that it is not noticed until one is helplessly involved in its coils, when the quickest way out of the difficulty is to make a liberal use of the hunting knife.

There is a strip of lowland lying between the hammocks of the lake and sea-shore which can be very easily drained, which consists of a deep, rich soil of inexhaustible fertility, that would be wonderfully productive of sugar cane, bananas and other plants requiring a rich, moist soil. The hammock land is eminently suited to the cultivation of pineapples, cocoanuts, guavas, dates, limes, etc., while the pine land on the west shore back

from the lake, and out of reach of the winds, would produce oranges, lemons, figs, pomegranates, tamarinds and other tropical fruits in the greatest abundance.

The lake literally teems with fish of the finest flavor:—pompano, bluefish, sea-trout, sheepshead, king-fish and drum, together with green turtle and crabs, while oysters are beginning to grow at the head of the lake. Among the pines on the west shore, and on the savannahs bordering the Everglades deer are quite plentiful, while bears, panthers and wild cats are common in the thickets and brakes.

The settlement at Lake Worth is in the hammock on the east shore, and comprises some twenty-five families, mostly from the Northern and Western States, who exhibit an amount of pluck, thrift and enterprise unusual in Florida. Finding the saw-grass route to Jupiter inadequate to their wants, they cut an inlet to the sea a mile or two below the present one, which, however, soon filled up with sand, despite their earnest efforts to keep it open. They then, at immense labor, cut the existing inlet south of the rocky reef before mentioned, which bids fair to become a permanent one. They are making specialties of the culture of pineapples, cocoanuts and sugar cane, and being practically below the frost line, will be entirely successful in their undertaking. Although the settlement was but two years old last winter, there had been set out nearly one hundred thousand young cocoanuts, together with many acres of pineapples, guavas, sugar cane, etc. Cocoanuts pay about fifteen dollars per tree a year, and the trees can be utilized at the same time, by judicious planting, as wind-breaks. Pineapples and bananas are raised from shoots or suckers, which fruit in eighteen months from the time of planting. After fruiting the old plant dies, and is succeeded by several new shoots, which in turn fruit the following season. Ten thousand pineapple plants are put on an acre of ground, and pay from $800 to $2,000 per year. One thousand banana plants to the acre pays from $1,300 to $3,000 per year. This, it will be seen, is as profitable as orange culture, and one begins to realize his income the second year from planting; while in the case of an orange grove one must wait from eight to ten years to begin to reap the benefits of his investment. Sugar cane produces from 1,000 to 4,000 lbs. of sugar, and 300 to 400 gallons of syrup per acre, and needs to be planted but once in five years, or longer, as the new canes sprout or "rattoon" from the old roots. During our stay we had green peas, green corn, beans, turnips, Irish potatoes and tomatoes, while the sweet potatoes were by far the best that we had in Florida.

Lake Worth might truly be called a semi-tropical paradise; the climate is simply delightful; its close proximity to the sea and its nearness to the gulf stream render it peculiarly fitted for the invalid, who is rapidly restored to health under the genial influences of the balmy and chlorinated breezes, which temper the heat of summer and render the winter one continental season of spring and Indian summer. I was informed by the settlers that they suffered much less from the heat in summer than they did in their old homes, and in fact some of them preferred the summer season to the winters.

Among the settlers are Chas. Moore, an old sailor and the first settler; Mr. Skoog, a Swede; Pat. Lennon, an exiled Fenian; Messrs. Spencer, Dye and Andrews, from New York State; Messrs. Dimmick, Gear, Moore, Bradley, Brown and Pierce, of Illinois, and others. Mr. Chas. Moore has a grove of bearing cocoanuts set out some thirty years ago. Mr. Moore has sailed round the world several times and spent many years of his life in the Mediterranean; he thinks the climate of Lake Worth the finest in the world, even better than that of Southern Italy.

We made our first camp about two miles from the south end of the lake, on the west shore, near a clump of cabbage palmettoes and near a small brook of good water. It is a delightful camping spot, and we found plenty of game. One day Ed was picking up shells on the beach, walking with his head bent down nearly to his knees, when two deer approached within thirty yards of him, stamping and snorting at the strange object. We watched the proceeding from a distance, but Ed was so absorbed in his pursuit that he remained unconscious of the presence of the deer until Queen went rushing past him and alarmed them, when their whistling caused him to look up just in time to get a glimpse of their white tails as they disappeared in the brush. We often saw deer come down to the edge of the lake near our camp. In an hour's trolling we could always secure a dozen fine bluefish, weighing from three to ten pounds each. Tiring of these it was only necessary to procure Capt. Dimmick's seine and make a haul or two for a supply of that most delicious of all fishes—the pompano—with perhaps a green turtle and a mess of crabs. Frank, one day while deer-hunting in the pine woods, shot a large rattlesnake, measuring over five feet in length and four inches in diameter at the middle; he had but four rattles and a button. This, with a small one killed on the St. Sebastian, were the only rattlesnakes we saw in Florida. Aquatic birds of many kinds are numerous about Lake Worth, among them ducks, snipe and plover. In the creek at the foot of the lake are hordes of alligators and some crocodiles. I saw a stuffed specimen of the latter in the possession of Mr. Pierce.

A few days after our arrival at Lake Worth Sandlin and his passenger started back to Jupiter and Indian River, Sandlin sailing the *Hero* and the passenger walking the beach. The wind, which had been west, backed up to the nor'east soon after the *Hero* put to sea and began blowing hard. Sandlin attempted to put back, and by some means the mainsail gibed suddenly, twisting off the rudder head. Although the boat was fitted with a scull-lock in the stern, Sandlin carried no oar, having carelessly left both oar and anchor on Lake Worth; consequently, the gallant little *Hero* was beached and knocked to pieces during the night, a sacrifice to carelessness and stupidity. J. A. HENSHALL.

—The American News Company, which provides good things innumerable for the mind, has now undertaken the task of providing for the smokers' comfort as well. They supply the "Manhattan" and other brands of fine cigars, which are much cheaper than the usual tariff and of very superior quality, as we can testify.

—It is evident, says the Kingston *Freeman*, that Courtney and Hanlan have not as much roe in them as a last year's shad.

TROUTING IN THE BLUE RIDGE.

FIRST PAPER.

ELEVEN o'clock upon a hot sunny day, with low water, is a poor time for a trout fisherman to open his attack. For almost always—even upon the most likely of days—the fish, we all know, stop feeding for a period during midday. But, under the existing circumstances, the outlook was so generally dismal, that it was rather from a sense of duty than any other consideration that we sallied forth to the river bank, leaving our horses and traps to the care of the hospitable Yack.

The northern part of the stream requiring a little previous diplomacy to ensure an immunity from interruption on the part of the riparian owners, we confined our attention on this first afternoon to the southern fork, which contains about six miles of fishing. Over this distance we spread ourselves; the racing, bungling, jealous system of pool, alternate pool, fishing, that some people are idiots enough to pursue in the face of common sense, not being in favor with any of our party. There is always a fascination to me in following up the course of a fresh stream, more especially when at every bend the ever-changing glories of mountain scenery present to the eyes some fresh delight. Such stimulants were indeed badly needed on this particular day, for I don't think one of us rose a fish till 5 o'clock in the evening. Splendid pools in long succession succeeded one another; but it was in vain that, with an enthusiasm and diligence natural on the renewal of a long discarded and much loved sport, I dropped my coch-y-bondee and and March brown upon every possible spot in which a trout could be; not a rise, not a touch, not even the yellow flash of a coquetting troutlet beneath the surface that so often restrains the ardent angler from actually consigning his rod to its case. Old Sol glared down upon our heads, and gave us a mild foretaste of the benefits he was going to bestow upon us in July, till, for my own part, I cried "Enough!" and, winding up, sought the shelter of the forest shade, there to cogitate upon men and things piscatorial, and drive away the flies with fragrant clouds of Mr. Carroll's famous Lone Jack. Ah! those anglers' noon-day hours, when solitude is our lot; lunch stowed finally away, the flask emptied; the branches waving above our heads; the ceaseless rush of the water in our ears—what wonder if the present and the future, be they bright or the reverse, are apt to give place to memories of the past that hold so dear a place in every true angler's heart. The brook trout knows no differences of race; wherever you find him, his surroundings are much the same; the same familiar music falls upon your ears as you approach his home. In every quarter of the globe he responds to the same changing conditions of the atmosphere; and as the frequenter of Scottish streams puts up his rod upon the banks of New England or Canadian waters, a quiet smile of contemptuous pity will play round the corners of his mouth when some well-wishing but narrow-minded son of the forest offers to show him "where the trout lie." None of the local genii had as yet appeared upon the scene. Here and there, high up on the mountain slopes, lank figures could now and again be descried struggling and scrambling behind still lanker mules, and the cries of these ethereal beings would remind one from time to time that the destroying hand of man was still round us. At length a change came over the face of all things; that indescribable change that in hot dry weather tells the long suffering angler that his time is come; that he must be up and doing. The sun has crept nearer the tops of the mountains, and his rays fall flickering on the pools and shallows broken by forest trees. A cooler and damper atmosphere begins to pervade all things; a gentle breeze comes rustling through the aspens and poplars and scatters the cherry blossoms like flakes of snow upon the gradually ruffling pools. The long wished for flop, flop, sounds from beneath yonder rock, and draws our attention to a bite of flies that come sailing down through the golden light, and slipping on a coachman for our coch-y-bondee, are soon fast in a half-pounder.

Little, however, was done by any of us in the short space of daylight that was left, and I don't think Mrs. Yack had more than thirty fish in all to clean that night, though it must be said that there were thirty trout, and not, as is generally the case in mountain brooks, ten and twenty that hope to be some day. My experience that evening was quite enough to convince me that the river was most assiduously fished. As evening approached figures armed with long saplings issued from the woods, and with bare feet skipped over the rocks. They were the riparian owners; the legitimate proprietors of the fishing. I had been told that the present of a page in my book decorated with ancient feathery friends on which the teeth of many trout in many lands had left their mark. Influenced, perhaps, by the hope of such magnificent gifts, I found these gentry not merely unantagonistic, but civil; nay, even in some cases, almost brotherly, including the tenderest inquiries after my relatives, my business, my full name, and the after my relatives, my business, my full name, and the number of children I had, but invariably culminating in a fly, and a blessing on the one part, and a lordly wave of the hand on the other, indicating that I was at liberty to fish were I pleased.

Our talk over the welcome fire that night was of trout and red hackles, of split bamboos and Kendal gut, of creels and landing nets, and many other such like topics of which half a dozen years ago would have been in those that half a dozen years ago would have been in those parts unheard of. Before midnight mountains but mere empty sounds. Before midnight rain began to fall, and the morning, though not actually a wet one, had a promising look about it that cheered us considerably, and as we sallied forth, after despatching a hearty breakfast, it was, I think, with more buoyant steps that we brushed the rain drops from the spruces and cedars that lined our path up the stream, and though the water was still as low as before, it was with a more hopeful feeling that facing up stream I made my first cast. At that very instant a heavy bite of flies came sailing down the very pool on which I commenced operations, and from it I drew in three casts three trout weighing a pound and a half between them, which for an over fished stream was not a bad beginning. For an hour they rose right merrily, and I took in the course of that time some twelve or four-teen short plump game little fellows ranging from four to ten ounces, but did not see or touch as far as I could tell, a fish under a quarter of a pound.

About ten o'clock down came a miserable thin misty drizzling rain, not the good honest downpour that starts fish feeding, nor the light sunny showers that bring the surface of the water to life, but a dark, cheerless mist, which experience has taught me associated with low water is generally undesirable. So it proved on this occasion; the experience of the day before returned, after an hour or two of which, C—— appeared with a face of woe and an empty basket, having failed somehow or other to take advantage of the early feed, and with unmistakable visions of "home sweet home" glancing through his brain. We comforted one another for a time, however, and discussing our lunch once more, started forth, and had barely wetted our lines again before the clouds settling lower and lower on the mountains and rolling in black masses from every side, began to pour out their contents in a very determined manner. The forests above our heads began to roar, the surface of the stream to churn, and the trout at the same time began to rise in a manner they had not hitherto favored us with. It was simply a question of how long before the water thickened. I turned my face down stream, lengthened my line, and let them have it. I happened to be without my landing net, and bitterly did I repent it. At every throw a fish fastened, and nearly every fish was large enough to make me feel thankful that I was still young and active. I have before, brother angler, called your attention to the folly of despising half pounders in a dear mountain stream at the end of May.

If you are on the top of a high rock, and in that position hook a gentleman of the above mentioned calibre, and if you are using as fine tackle as you ought to be on such an occasion, you will, unless you choose to pay out line, which is unadvisable in a broken and narrow water, most decidedly have to "git out from thar," and that remarkably quickly when the said party turns his head down stream. Many a good fish I lost on that luckless afternoon in the landing, and much of that precious hour and a half that the water took thickening did I waste in endeavoring to "drown" golden bellied fellows whose vigorous vitality seemed unquenchable. I had, however, unaccountable luck in encountering no obstacles in the shape of other ardent fishermen, and managed, after arriving, drenched to the skin at Yack's, where the river was raging pea soup color past the doors, to lay about on the table thirty-three trout weighing eleven pounds, none, oddly enough, over half a pound and none under a quarter. That this is my first and as yet sole day's fly fishing in the Blue Ridge, I have only myself to blame; and as I think of it there involuntarily rises out of the mist of old schoolboy days the well worn line: *O mihi præteritos referrat si Jupiter annos.*

RINGWOOD.

SPORT IN DAKOTA.

Editor Forest and Stream:—

The question, can the Indian be civilized, is no longer an open one, at least so far as one "noble red" is concerned, for a few days since he rode through this city in an open wagon, drawn by a pair of ponies, sitting flat on the bottom of the wagon, dressed as a white man, holding over his head a lady's parasol; while for a coachman, his wife, or squaw, sat on a seat in front, with a blanket wrapped close about her head, holding the reins. Now, that fellow showed plainly that he recognized the fact of the equality of woman, and must have been more than civilized—in short, *fashionable.*

At Saratoga, Long Branch, and Cape May the squaws drive the fashionable turnouts, and the footman (who sometimes fills the positions of both husband and footman), sits behind, without even the protection of a "parasol."

Out here the sunshade has taken the place lately held by the tomahawk and knife, and, joking aside, the Indians are rapidly becoming comparatively good citizens. They still delight in getting themselves up in all the fancy rigging they can beg, buy or steal, and parading through our streets; but these sights are becoming rarer each year, and will soon only be remembered as a pleasant reminiscence of the early settlement of Dakota.

We have other and more pleasant reminders, however, that this is a new country, in the game that is so plenty all around us. Of course, the buffalo have left this section, although several have been killed this fall in eastern Dakota—one only a few miles west of Watertown, the western terminus of the Winona and St. Peter Railroad; others west and north of Fargo. The deer are gone to the Black Hills and the country of the Yellowstone; but the antelope remain—much like the Frenchman's flea, and about as hard to catch or shoot. Antelope steaks are plenty during the winter months.

Now comes the feathered game—geese, sand-hill cranes, ducks, prairie chickens (some of the sharptailed fellows, too), quail, snipe and a few woodcock.

It would do an Eastern sportsman's heart good to see the millions of geese and ducks that cover our prairies in the fall, not to speak of the chickens.

By the way, the latter are now "flocking," as we call it—that is, they assemble along in October in immense flocks, and exercise such wonderful vigilance that it is almost impossible to approach near enough for a shot. I was so fortunate as to kill three on Saturday last, returning to town from a country trip. They are fat and good, and grain-fed.

The boys capture lots of geese (with shot) going to and returning from their feeding grounds to the sand-bars in the Missouri River here. They fly out to and from the grain fields at morning and night, crossing the railroad just below the city in large numbers. The boys take cover in the willows along the bank, and shoot them as they fly. The fusilade sounds like a skirmish line.

For pinnated grouse look near the settlements, especially near wheat fields. Very few, comparatively speaking, are found out on the open prairies, away from the settlements.

It is of but little use to attempt to shoot wild geese on the large lakes. Up North they rear their young. You must wait for their autumnal flight South, and shoot them, as we do here, when they halt for food and rest. We have good shooting here for weeks after the waters of northern Dakota, Minnesota and Michigan are closed by the ice king.

I can advise sportsmen wishing a good, long season, with plenty of feathered game, to come to the vicinity of Yankton. We pride ourselves on having the prettiest

little city west of St. Paul. Yankton has over five thousand inhabitants, first-class hotels, churches, schools and —saloons.

The sportsman can purchase everything he needs of the public-spirited dealers in such goods right on the ground here, and, gentlemen of the rod and gun, citizens of Yankton will give a sportsman's welcome to all gentlemen coming for sport; and among others who will do all in their power to make their stay a pleasant one is the subscriber, J. E. WEST.

Yankton, Dakota.

Fish Culture.

A SUCCESSFUL FISH CULTURIST.—Mr. Seth Perkins, of Cairo, Illinois, has the best set of hatcheries in the State. Like Seth Green, the New York State fish culture pioneer, Mr. Perkins took his one from nature. It was away back in 1838, as he was one day fishing for salmon trout in a Canadian stream, that his attention was attracted to the movements of a female fish. Carefully watching her movements in the sand, the fisherman learned something which he then and there resolved should some day be utilized. His first successful venture in fish culture was in 1864 when he placed some trout spawn into a jar, then stripped in the milt and stirred it up with the fish's tail.

Mr. Perkins ascribes his success in this work to the careful adaptation of water and fish. He is always sure to have the proper degree of purity and temperature for a particular kind of fish; giving as much attention to this as a farmer does to the ground for his seed.

CHEMICALS IN THE CONNECTICUT RIVER.—Dr. Wm. Wood, of East Windsor Hill, Conn., writes to Professor Spencer F. Baird, under date of October 13th:

It may be of interest to you to know that your salmon are not all lost. Last Friday, 10th, I was with a party of three, fishing in Snipsic Lake, and one of our party caught a salmon that weighed 1¾ pounds. This is the second one taken since the pond was stocked, as I was told. The other was caught this summer and weighed twelve ounces.

Cannot something be done to save our fish in Connecticut River? There in an establishment at Holyoke, Mass., and another at Windsor Locks, Conn., that are manufacturing logs into paper, and I am told that the chemicals used for that purpose are let into the river twice a day, and that the fish for half a mile come up as though they had been cockled. Both of these factories are at the foot of falls where the fish collect and stop in great numbers and are all killed. Our shores and sand bars are literally lined with dead fish. Three salmon have been found among them within two miles of my office. They were judged to weigh ten, twenty, and twenty-five pounds. The dead fish are so numerous that eagles are here after them. I have received nine that have been shot here in the past two seasons.

The section of the law touching this, reads as follows, and we see no reason why this is not a clear case for the commissioners:—

§ 3. Every person who shall knowingly permit any *substance deleterious* to fish, to flow or drain into, or be placed in any waters having fish therein, shall for each day during which he shall permit the same, forfeit not exceeding $100 to any informer.

LIVINGSTON STONE TO E. A. BRACKETT.

CHARLESTOWN, N. H., *Oct.* 31*st.*

Mr. Editor:—

I think no one can blame me for being almost out of patience because I cannot get a square answer from Mr. Brackett as to whether I ever said, what the Massachusetts Fish Commissioners report represents me as saying, *viz.*: "That all the California salmon die after spawning."

I deny explicitly that I ever said it, and I want the writer of the report to either retract his statement or prove it. I paid no attention to the letter of Mr. Brackett in FOREST AND STREAM of May 29th, about what I had written concerning the salmon of the McCloud River, because it did not take up the question under discussion, which concerns not the dying of the salmon in the McCloud River, but the dying of "*all the California salmon*," as the Massachusetts report puts it. I not only admit, but I reaffirm with more emphasis than ever, what I said in my report of 1872 to Prof. Baird, that "All the salmon that go up the McCloud River, die after spawning," but I never said that "*All the California salmon* die after spawning," and to illustrate the difference between the two statements, let me say that the McCloud River is a small mountain stream of less size than the Charles River of Mr. Brackett's own State of Massachusetts, while the area of California, to quote the school geographies, "is larger than that of all the Atlantic States north of the Potomac."

Now, if Mr. Brackett should make a statement about the fish in Charles River, and I should write in my report that he had made this statement about the fish in all the rivers of Maine, New Hampshire, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware and Maryland, would not Mr. Brackett and every one else think I was in the last stages of lunacy? Yet such extravagance on my part would be no more preposterous than what Mr. Brackett has done in applying a statement of mine about the salmon that ascend the McCloud River, to all California salmon. He has stretched and expanded this little snow fed stream of the Sierra Nevada till it is made to cover an area larger than all the Atlantic States from Canada to the Potomac. I will charitably infer that Mr. Brackett's geography is responsible for his wild conclusions, and not any conscious intention on his part to misrepresent facts. I know perfectly well that all the California salmon do not die when they spawn, and I have always known it since my first experience with them, and the Massachusetts Commission would as soon think of saying that all the codfish in the ocean die after spawning, as I should of making that statement about all the California salmon; but the dying of the salmon that go up the McCloud is altogether another thing, and if Mr. Brackett wants to take up the question of the fate of salmon of the McCloud River, I will agree to furnish him with such overwhelming evidence of the truth of what I have reported about their dying, that he will never want to hear the subject mentioned again. LIVINGSTON STONE.

SALMON IN GREEN BAY.—Prof. Spencer F. Baird sends us the following letter, with the indentification of the specimen referred to as a Californian salmon, about ten inches in length:—

MEHOMINEE, MICH., *Oct.* 29*th.*

Prof. SPENCER F. BAIRD, U. S. Commissioner, Washington, D. C.

DEAR SIR: I send you herewith a fish, which I take to be a salmon. It was caught in a net, about ten miles down shore from here, and salted before found by Capt. Sanders, who, in looking the lot over, found this one and brought it in. I think it is the first of the kind ever caught in the waters of Green Bay. Will you please inform me, either by mail or through columns of FOREST AND STREAM what kind this is; also its probable age? Have you any record of others being caught around here or in Lake Michigan? I think I will be able to get you some valuable specimens during this season, as Mr. Kumlien told me of a few specimens wanted, and fishermen here tell me they will save them as perfect as possible.

R. J. SAWYER.

FISH CULTURE IN NEW HAMPSHIRE.—*Manchester, N. H., Nov. 3d.*—My colleague, Mr. Powers, writes me that he has taken his twentieth salmon at the Hatchery at Plymouth, making eleven females and nine males, ranging from twenty-eight to thirty-eight inches in length, and has already taken over 30,000 eggs. This is, I believe, the first record of a large lot of ova taken from fish which have returned to the waters from artificial planting, and is worthy of a big mark in your records of fish culture.

Powers also says that he has taken over 100,000 brook trout eggs, and is getting more daily. Our breeders began to spawn September 28th, this year; October 8th, last year; October 18th, year before last. Livingstone Stone attributes the earlier date of spawning to the uniform temperature of the spring water in which the fish are kept.

SAM WEBBER.

P. S.—Your list of Fish Commissioners makes me a Dutchman, "Weber;" please correct. S. W.

Natural History.

PRESENT STATUS OF PASSER DOMESTICUS IN AMERICA.

IT is unnecessary to remind the readers of FOREST AND STREAM that for several years past war has been raging in ornithological circles on the subject of the English sparrow. While not taking any very active part in the conflict, preferring to occupy the position of a spectator rather than that of a combatant, we have opened our columns freely to writers on both sides of the question, and communications from the two champions of the opposing armies have several times appeared in FOREST AND STREAM. Although, as has been said, we have not taken any prominent part in the debate, we have had from the first an opinion on the subject under discussion, and have not hesitated from time to time to express it. For some time past—whether because both sides were exhausted by the fury of recent battles, or because the pro-sparrow army is small and their opponents numerically very strong, we do not know—there has been a lull in the conflict. The Boston *Journal* and *Advertiser* have ceased to print the usual weekly column or two on one side or the other of the question, and the pages of the *Naturalist* no longer bristle with the sharp, incisive paragraphs with which Dr. Coues is wont to dismember the unfortunate enemy who may meet him when he has his war-paint on.

We are glad that there has been a cessation of hostilities, even though it be only temporary. Let no one fancy that the war is over, or even that an armistice has been arranged. Nothing of the kind. The rest, brief though it has been, will serve to give fresh strength and energy to the hostile forces, and before long we may expect to hear of new movements, in comparison with which all previous engagements shall appear as mere petty skirmishing. Already our ears catch the not distant mutterings of fresh encounters.

The period of inaction has certainly not been wasted by the anti-sparrow party; for its leader, Dr. Coues, has prepared, and recently published, in the Bulletin of the U. S. Geological and Geographical Survey of the Territories, a contribution to the literature of this subject which will be likely to prove a formidable weapon against the friends of the sparrow. The full title of the paper is "On the Present Status of the *Passer Domesticus* in America, with Special Reference to the Western States and Territories." It is a small, unpretentious pamphlet of less than twenty pages, but between its tee-colored covers there is meat so strong that we tremble for the digestion of some of our Boston friends who will have to swallow it.

The paper is simply a bibliography of the sparrow war. Dr. Coues opens with a couple of pages calling attention to the rapid increase and dispersion of the birds and to the danger to the crops unless some measures be taken to put a check on this increase. He states that it has occurred to him that the simplest way of bringing the matter before the people and causing them to realize the danger, which he regards as imminent, to be feared from the English sparrow, is to give in detail, with comments, the history of the controversy. The bibliography which follows, and which he has compiled, contains nearly two hundred titles, mainly from newspapers, and is annotated throughout, so that the main points of all the more important articles are given. To show how widespread an interest has been taken in this controversy, it is only necessary to mention some of the well known naturalists who have written on the subject. Besides Drs. Brewer and Coues, the former of whom is credited with a score of articles favoring the birds, and the latter with a dozen antagonistic to them, we see the names of Dr. Charles Pickering, C. V. Riley, J. A. Allen, C. Bendire, R. Deane, H. A. Purdie, H. A. Hagen, W. Brewster, and many others.

The paper is most interesting and valuable. It would be still more so were it possible to give the names of all the authors whose articles are cited. This is manifestly out of the question, since, as has been said, most of the articles belong to the fugitive literature of the daily press, where anonymas do most abound. Dr. Coues earnestly requests that he may be informed of any additions or corrections which the reader may notice, and we feel sure that he will gratefully acknowledge any help of this kind which he may receive.

HAIR WORMS.

THE extraordinary and inexcusable carelessness of many newspapers in reporting natural history matters is so well known that it seems almost superfluous to call attention to it. Every now and then, however, some extravagant blunder arouses our indignation, and we hopelessly rise up and enter our protest against the idiotically stupid errors that are propagated by careless scissors wielders. The erroneous statements which are made and set in motion through the press in this way would not be so bad if it were not for the fact that a very considerable portion of the newspaper reading public believes implicitly that every thing that appears in print is of necessity true. They do not know, as do the readers of FOREST AND STREAM, that a large proportion of newspaper writers are densely ignorant on all subjects, and that three-fourths of the remainder are so careless about their facts that their statements must be accepted very cautiously indeed. The polite reader may, of course, turn away his face, and with a smile whisper to himself: "*Mutato nomine*, the fable may be related with regard to yourself, my dear sir." True enough, oh reader; but you must remember that FOREST AND STREAM is a publication which is read by people, many or most of whom understand the subjects of which it treats, and that, therefore, any editorial blunders are at once noticed and speedily criticised; so that in self-defence those who write for it are forced to be exact as to their statements and cautious as to how they treat matters about which there is any controversy. We ask nothing better than that when you catch us blundering you should bring us up to the snubbing post with a round turn.

We have been moved to grumble on this subject by a clipping from the San Francisco *Call*, sent to us by our valuable friend and correspondent, T. S. V. D., of San Diego, Cal. The astute individual who brandishes the scissors in the *Call* office had cut from a recent issue of FOREST AND STREAM (July 31, '79,) a note written by N. A. T., of Texas, in which he states that he had seen horse hairs in process of transformation into snakes, or worms. We appended to this communication an editorial note, stating in brief terms that the superstition referring to this supposed transformation was respectable only on account of its age, and that the habits of *Gordius* and its allies were now quite well known. All of this correction, however, was omitted by the *Call* man, or boy, and N. A. T.'s communication was printed without a word of explanation or comment. The story is such an old and positively decrepit one that it could not have been copied for the purpose of surprising or startling any one. The smallest boy is familiar with and possibly believes it during a few years of his callow juvenility, but scarcely any one else who takes the trouble to think about the matter credits it.

For the benefit, however, of such of our readers as have been interested in "hair snakes" during boyhood, we propose to give a very brief outline of some of their habits and peculiarities. The development of these Entozoa, though very obscure and difficult to trace, has yet been made out with a considerable degree of clearness; and, for the main additions to our knowledge of this difficult group, science is indebted to Dr. Joseph Leidy and M. A. Villot. It has recently been found, too, by Messrs. Riley and Packard that the hair worm is a valuable ally of the farmer, in that it is a formidable enemy of the locust, which has in recent years done so much damage to crops in the West. One observer indeed states that, in a certain section of Minnesota, these worms destroyed in 1875 as many hoppers as any other enemy. The worm or worms are found coiled up within the locust, occupying almost the whole inside of the body.

The *Gordius* is most easily found in late summer or early autumn in still pools of water near the shores of creeks or rivers, and though really quite common, is easily overlooked, owing to its resemblance to the fibres of dead vegetation likely to be found in such situations and among which it often lies. Sometimes several are found together twisted and knotted into a tangled mass, and

Dr. Leidy infers that these knots suggested to Linnæus the name given the worm, from the famous Gordian knot of antiquity.

This worm is very tough and elastic, and is, besides, extremely tenacious of life, and will live and move for some time after being cut in pieces. It has no jaws nor vent, and no stomach nor intestinal canal, nor, so far as known, has it any system of blood vessels or nutritive tubes. The generative organs, the ovaries of the female and testes of the male, extend the greater part of the length of the body on each side, and uniting terminate, below at the genital pore. There are no eyes or special sense organs. The eggs are laid in the water in long chains and are enormously numerous, and they are deposited very slowly during a period exteuding over two weeks or more. Dr. Leidy estimated the number produced by a specimen of the Variable Gordius, nine inches in length, as 6,624,800, the eggs being 1-5,750 of an inch in length by 1-1,000 in width. The young are developed and hatched in about four weeks, and in escaping from the egg they pierce the egg membrane, or shell, by the aid of the armature of the head.

The young is now about 1-450 of an inch in length, and its first move is to gain a comfortable resting place in which to pass this first stage of its free existence. This it soon finds in the fly larva, which share its watery home, and it lives encysted in them. In this stage the worm is active. The second stage of the larva's life begins when the fly larva, in which it has been domiciled, is swallowed by a fish. The process of digestion sets free the worm, which now proceeds to bore into the mucous lining of the fish's stomach, where it remains inactive and motionless for some months. At length, in spring it bores through its cyst and escapes into the stomach of its host, whence it is carried off with the fæces into the water. Here it undergoes great changes, and before long it increases in size, the integument grows harder, and when it is about two inches long it begins to move, turns brown and is soon a perfect "hair snake."

These hair worms are found principally in locusts, grasshoppers, katydids and crickets, but they are by no means confined to these. Dr. Leidy has reported one from a cockroach, and they have been discovered in beetles, moths, bees, flies, spiders, and other small animals. It is difficult to comprehend how larvæ, developed in water, could ever attach themselves to creatures like grasshoppers, katydids, etc., which never go near the water, and Dr. Packard has indulged in some ingenious speculations relative to this point, on which, however, further observations are needed.

The account of these worms, which we have thus given, brief as it is, and stripped of all its technicalities, will show our readers the absurdity of the old belief that these worms are animated horse hairs.

SECOND INSTALMENT OF AMERICAN ORNITHOLOGICAL BIBLIOGRAPHY.—In volume fifth of the Bulletin of the U. S. Geological and Geographical Survey of the Territories, Dr. Coues has published a very valuable paper bearing the above title. Our readers will at once call to mind the extremely important contribution to this subject which the author gave in the first part of his "Birds of the Colorado Valley," and will remember that the list of Faunal Publications there presented referred to North America, in the sense in which that term is usually employed by ornithologists. The present work treats of the rest of America, and is much less extensive than the other, including only about 700 titles. It is, however, no less accurate, and, we are told, scarcely less complete; so that it cannot fail to be of the greatest service to all students of ornithology.

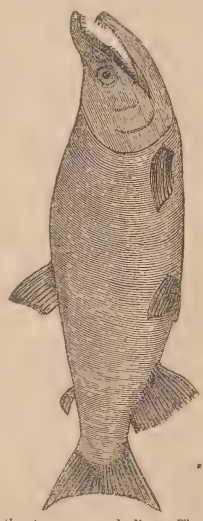
The importance of the bibliographical work which Dr. Coues has undertaken can scarcely be overestimated. No one who has not done something in this line of work can form any idea of its tediousness as compared with original research, and scientific men generally should be most grateful to Dr. Coues, that with his brilliant powers, he has been willing to undertake so necessary, yet so thankless, a task.

OUR GAME BIRDS.—The number of game birds and wild fowl which afford sport to the sportsmen and profit to the market venders is really quite astonishing. The Mobile *Register* has taken pains to enumerate those which are described in "Hallock's Sportsman's Gazetteer," and finds them to be classified as follows:—

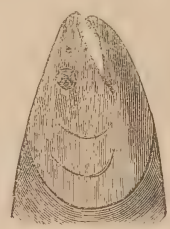
Wild turkey, one species; woodcock, one species; grouse, nine species; snipe (Wilson), one species; quail, six species; plover, eight species; beach birds, twenty-six species; rail, eight species; sea crow, one species; rice bird, one species; swan, two species; wild geese, three species; brant, five species; shoal water ducks, twelve species; sea ducks, twenty-four species; total, 109 species.

The summary occupies nearly two columns of the *Register*.

RATTLESNAKE BITE REMEDY.—*Rico, Col., Oct. 15th.*—While in Arizona a few years ago I learned that aqua ammonia was a sure cure for the bite of a snake, and since then I have cured three cases of rattlesnake bites without any difficulty or injurious effects whatever. First apply a few drops of ammonia, and in a few seconds wipe off, and with a sharp knife cut through the skin just deep enough to bleed, about a quarter of an inch in length and directly through the wounds, and immediately apply ammonia, and occasionally add a drop or two more as it becomes absorbed or evaporated, and in a couple of hours the swelling will be nearly gone. Apply a drop of carbolic acid to cauterize the wound and prevent a local sore. Give ten or fifteen drops of ammonia in about half a pint of whiskey, taking about a wineglassful every five minutes; but cease giving the whiskey as soon as the patient begins to feel its effects. Water will do if whiskey is not at hand. The ammonia taken internally destroys the poison in the system. When I am hunting or travelling where there are rattlesnakes I carry a small vial of ammonia and carbolic acid.



C. H. C.



—A curious illustration of the practical good sense and ingenuity of some British birds is reported by a railway engine driver on one of the Scotch lines. He has noticed that certain hawks of the merlin or "stone falcon" species, make use of the passing of the trains for predatory purposes. They fly close behind, near the ground, partly hidden by the smoke, but carefully watching for the small birds which, frightened by the train as it rushes roaring past, fly up in bewildered shoals. The merlins, then, while the little birds are thinking more of the train than of lurking foes, swoop on them from the ambush of the smoke and strike them down with ease. If they miss they return to the wake of the carriages and resume their flight and their hunt. They can, it seems, easily keep pace with an express train and outstrip it when they please.

THE REDFISH OF IDAHO.

FORT WALLA WALLA, W. T., *Oct. 13th.*

AFTER many promises from different parties I have finally received a pair of the long desired redfish, packed in a couple of sacks, and salted. As this fish is a sufficiently curious looking fish, and a copy of it might perhaps be interesting to many of your Eastern fish sharps, I skirmished around at once for an artist, and found the man I was looking for in Lieut. G. B. Backus, of my regiment. He has done it! Now don't make fun of our work, and please bear in mind that these fish had been opened and the entrails taken out, and were then carried on the back of a cayuse (if you know what that is) for about a hundred miles, more or less, and when they finally reached me they were in anything but the original shape. I have therefore amused myself in taking the kinks out of one of them, and have restored it as much as possible to its original shape, etc., and made it look like the inclosed drawing. I think Mr. Backus succeeded very well in making a faithful representation, and if it does not look natural, and as the fish does in life, it ought to.

The male, of which a full-length drawing is inclosed, is certainly an odd-looking customer. As you will see, the female lacks the hooked nose, but they are otherwise shaped alike. If anything, I think these fish are still a little broader in proportion across the middle, and a little more humpbacked. In the male at this season of the year (these fish were caught about Oct. 5th and 6th) the prevailing color in the back and sides is a bright carmine red fading slightly downwards towards the sides, extended as indicated in the drawing by the transverse shading. The belly and lower part of the sides appear to be of a silvery-grey color. The upper and lower jaw of the male is steel-blue, very dark in front and gradually fading towards the back part of the head. The gill-covers are silvery greenish. The large upper fin and the lower posterior show also traces of the carmine tint. The upper fins are bluish green. The jaws are armed with several rows of formidable teeth. The female differs in the shape of the head, which is of a deep steel-blue throughout, lacking the hooked nose. The body of the specimen before me shows at present but little carmine red, and the prevailing color seems to be a purplish blue: but earlier in the season they are said to be of the same color as the male. In other respects the shape of the body is about the same as that of the male. I shall put the fish in alcohol and send them to Prof. Baird.

CHAS. BENDIRE.

We are very proud to receive this drawing of the redfish. It makes the *fourth* original American fish published in this paper. We are inclined to class this fish among the salmon, rather than the trout. It will probably be found identical with one of the Alaska varieties. For additional information see our issue of Oct. 23d ultimo.—[ED. FOREST AND STREAM.

ANIMALS RECEIVED at CENTRAL PARK FOR THE WEEK ENDING NOV. 8TH, 1879: One Wagler's conuro (*Conurus wagleri*), presented by Dr. Lewis Hall Sayre, New York City. One ruddy flamingo (*Phœnicopterus ruber*); habitat Cuba; presented by Dr. Henry F. Aten, Brooklyn. Four black swans (*Cygnus atratus*); bred in the Menagerie. One puma (*Felis concolor*); bred in the Menagerie. Two wart hogs (*Phacochœrus æthiopicus*). Two Virginia deer (*Cervus virginianus*); bred in the Menagerie.

W. A. CONKLIN, Director.

The Kennel.

KEEP YOUR DOGS IN CONDITION.—It is astonishing how many dogs are improperly kept; that is, fed badly and not exercised sufficiently. Nine-tenths of the diseases to which dogs are subject, even if not all of them, can be traced to these causes. Bad feeding soon shows itself in disease of the blood and skin, as well as in the presence of worms. We thought that everybody who kept dogs for field work as well as pets knew better than to feed them on raw meat alone, but of late we have had several correspondents apply to us to know what ailed their dogs, and mentioned the fact that they were fed on raw meat. When dogs are being worked constantly day in and day out, this kind of a diet may not do so much harm, as the constant exercise may enable them to throw off impurities that might otherwise remain in and poison their blood. We have known in California, where meat will remain in the open air for a long time without tainting, of a horse being shot—one that had eaten rattle-weed and was consequently worthless—and his hind quarters skinned and suspended in a tree as food for the dogs on a shooting expedition. The meat in a few days became dry and hard, almost like what the Mexicans call *carne seca*. This diet did not appear to injure the dogs, but a good dose of physic was given them when they reached home, and their regular diet resumed.

Dr. Gordon Stables, in a recent article in the *Live Stock Journal*, speaks of a Newfoundland dog which was brought to him and whose owner said he was "a little out of sorts, but was suffering more particularly from external canker of the ear." It transpired that his food had consisted of greaves, barley-meal boiled, raw sheep's paunches, and "what he could pick up out of doors;" and he exhibited the following interesting symptoms:—He was thin in body and bad in coat, which was dry and dusty, showing an inactive state of the unctuous follicles; the skin, too, was scurfy; he had slight internal canker, with both external ears badly ulcerated, probably from scratching or rubbing his head along the ground, to relieve the stiffness and itching of the ears. His nose, however, was cold and wet, and his eye bright enough, and he ate well. A dose of worm-powder, however, brought to light a handsome bunch of cucumerines, and some ounces of a broad white tape-worm. There was sufficient to account for the dog being "a little out of sorts," and as no one in his senses could expect to permanently cure the canker without first putting the system into order, the treatment was devoted to that, and the animal soon got well and fat.

Dogs, particularly very young ones, are much inclined to pick up any kind of filth they may find, another fruitful cause of disease. As an alterative tonic in cases of blood or skin diseases, the Doctor recommends the following to be given twice a day with meals:—Quinine, twelve grains; sulphate of iron, twenty-four grains; arseniate of soda, two grains; extract of chamomile, one drachm. To be divided into twenty-four pills, two to be given at a dose for a pointer or setter.

COUNTESS BEAR.—We are indebted to Mr. Harry Bishop, of the Montview Kennel, located near Columbia, Maury Co., Tenn., for a photograph of the celebrated English setter, Countess Bear, winner in England of the Field Trial Derby in 1875, imported from England by him. Countess Bear was bred by Mr. Llewellin, and in color is white with lemon markings. She is by the celebrated Dan, out of the no less celebrated Countess, whom, as far as we can judge by the photograph, she resembles, particularly about the head.

ALBANY DOG SHOW.—A dog show will be held at Albany, N. Y., in connection with the Annual Exhibition of the Eastern New York Fanciers' Association, from Jan. 24th to 27th, 1880. The premium list is not yet out, but will be printed in these columns when ready.

ACTION AGAINST A KENNEL CLUB.—An important case was tried in London the other day in which Mr. Lowe, Secretary of the English Kennel Club, was defendant, and the plaintiff an exhibitor at the last dog show of the kennel club at the Alexandra Palace. The case was important as being a precedent in deciding the amount of liability which attaches to managers of dog shows. The report of the case in the English papers states that the plaintiff proved the delivery of the dog under the rules of the club to the exhibition, where it obtained favorable mention; but it was not returned to him, but was lost through the negligence of the club's servants. It was urged on the part of the defence that the dog was not lost at the Agricultural Hall (Alexandra Palace), as on checking the catalogue the dog was found to be forwarded to Halifax, as the hamper was delivered and the dog was missing. Mr. John Douglass, called, said he was manager of the dog show at the Agricultural Hall on the date in question. Every effort had been made, both at the police and railway stations, to trace the dog, but without effect. According to rule 18 the exhibitors were entirely responsible. There could be no doubt that the dog was entered and the deposit of £1 paid; but as the plaintiff was not a *bonâ-fide* member of the club he could not claim special damage for any loss or accident, and he was cognizant of the fact at the time he entered his dog. At

this stage of the case the learned Judge remarked that the plaintiff had failed to prove any personal negligence on the part of the committee, and that from the evidence adduced he felt justified in ruling in favor of the defendant, and that if a case was required for the Superior Court he would grant one. Judgment was accordingly entered for the defendant with costs.

THE BUSH DOG.—The Zoölogical Gardens, Regent Park, London, have recently had an addition in what the authorities, after much tribulation, have decided to call a Bush dog, although doubt appears to exist as to what the animal really is. It was brought from British Guiana and is the first specimen ever landed in England. In describing it an English contemporary says:—

At present the Bush dog is quite a baby, its age only being estimated at about six months, and later on it may possibly present more outward canine properties than it has hitherto developed. In shape and form it forcibly reminds us of a young badger, being long in body and low on the leg, with a somewhat thick though badgery head. It has a short stumpy tail, and its prevailing color is a brown, more or less dark. It knows the sound of its attendant's voice perfectly well, and on his approach hurries up to the bars of his cage and manifests great delight when he caresses it. Simpson expresses no doubt as to its being a dog pure and simple, and bases his opinion on the fact that it barks; but we must, nevertheless, confess to feelings of scepticism on the subject, and feel more inclined to give it a place in the marmot family. At its present age the state of its mouth cannot, we opine, be a sure and certain guide; and patience must be exercised to await that development of the Bush dog which age alone can bring about. Its weight, we should say, was now about ten or twelve pounds; but it is expected to reach forty or fifty pounds. Its sex is female.

A PENNSYLVANIA COON HUNT.—The following report of a coon hunt is from the Uniontown, Pa., *Genius of Liberty*. What the Genius of Liberty has to do with a coon hunt, is beyond us. We print the account in all the richness of its original diction. There is an aroma of the woods about it, which it were folly to destroy by vaporizing with English grammar:—

Wish Miller and his Five coon Dogs accompanied by Daniel Bierer Jr went to the Residence of Theodore Brown in Franklin Township calling him up and telling him they had come for some sport and wished him to accompany them. He excepted the Invitation. After caring for thar horses Every thing Ready they started Oute. Not long after entering the woods the dogs started a cold Traile but soon routing him they tread him up a large tree amonce the Rocks. On coming up Brown Telling the boys to cut eny tree the dogs barked up as the timber all belonged to him. They come to the conclushun it woldent Doo to cut the tree as they ware sorrounded with large Rocks and the coon wold get away. Miller liting his Lamp and Examing the tree he soon seene his Eys shining in the top Like too bals of Fire. He asked Brown whare the nearist house was that had a Gun, brown Informing him that Lige Hill was the Place they cold Pecure a gun. Leaving Daney at the tree with the dogs Brown and Miller started for Hills house on Redstone crick. Rousing up mr hill he Joined them with his gun coming up to the tree miller taking the Lamp telling mr Brown to hold it Sow the Lite wold shine on the sites of the gun. he Leveled the peace and shot Down come coon with the Ball hole Betwene the Eys a veary Larg One. The Foure then started Oute and in thare night Hunt captured seven coons and a number of *opossoms*. The last one they caught was Old Zip the Largest coon on Record waying 28 lbs. They had to Fall too treas for him at Last cought him in Redstone crick below Hills bridg. He fought bravely. At one time he was aboute to Drownd one of his Favorite dogs, miller plunging in gitting the coon by the tale while the dogs was fiting him and puled him to the Riffle whare the Fite was ended.

N. A. K. C. FIELD TRIALS.—*St. Louis, Nov. 4th.*—Mr. J. A. Nichols, of Syracuse, N.Y., donates to the National American Kennel Club a solid silver cup, value $150, to be run for annually at the N. A. K. C. field trials until won three times by one party, when it is to become the property of the winner. It goes with the first prize in the Free-for-All stake. No extra entry fee is charged for it. The winner must own the dog run. The N. A. K. C. is to require security from the winner for the safety of the cup until it passes from the ownership of the club. The addition of the Nichols Cup, which is to be known as the "Nichols Champion Cup," will make the first prize in the Free-for-All stake worth winning—$250 cash and a cup worth $150.

The following gentlemen have subscribed one hundred dollars each to the N. A. K. C., as a guarantee fund for the approaching field trials, thus securing, in any event, the prompt payment of all prizes in full:—Capt. J. W. Foster, Leesburg, Va.; E. C. Nichols, Battle Creek, Mich.; Luther Adams, Boston, Mass.; E. F. Stoddard, Dayton, Ohio; L. H. Smith, Strathroy, Canada; Dr. N. Rowe, *The Field*, Chicago; St. Louis Kennel Club, St. Louis, Mo.; M. C. Campbell, Spring Hill, Tenn.; Montview Kennel Club (through Harry Bishop), Louisville, Ky.; H. W. Gause, Wilmington, Del.; E. C. Sterling, St. Louis, Mo. Circulars containing a programme of the coming trials, with the rules of the N. A. K. C. under which they will be run can be had on application at your office or to me.

J. W. MUNSON, Sec.

N. A. K. C.—*St. Louis, Nov. 6th.*—The annual meeting of the National Kennel Club will be held at Patoka, Ill., on Nov. 24th. Election of officers for the ensuing year takes place at this meeting. JOHN W. MUNSON, Sec.

THE COACH DOG.—Having seen in your issue of the 23d an article on the "Dalmatian," or Coach dog, I would say that we had in our family in the East a coach dog which would run between the fore legs of the horses and would stay in his place at least a couple of hours, and only leaving it to fall back under the carriage on seeming to become tired, or bothered by the dust. This dog was very affectionate to us all. On the horses being taken from their stalls to be harnessed, he would show his delight by what one could call dancing, that is, jumping up and down on all four feet. Getting old, and having trouble in eating, we had him killed. G. C. W.

THE WICKED FLEA [FLOURISHETH] WHEN NO MAN PURSUETH.—*Editor Forest and Stream*:—I have just tried a remedy for fleas on dogs, which is so efficacious that in return for the many cures you have given me for the ills which dog flesh is heir to, I send it you:—Liquid potash, ½ ounce; turpentine, 1 ounce; carbolic acid, 2 drachms; water, 1 pint. Apply with a sponge, and then wash the dog by putting him into a barrel of water. After this, if you occasionally apply a little of the wash to the dog's belly and between the fore legs, not washing it off, you will find one great objection which ladies have to dogs in the house has been removed. My dogs must be where I am, and hitherto I have tried to persuade my wife that a dog is a flea trap, so to speak, and that if my dogs were not in the house to collect the fleas, the suffering caused by their steeple-chases would be much greater, but since the application of the wash the race is ended and with it my flea trap theory. GUNNER.

Walkerton, Ont., Nov. 2d.

LARGE LITTER.—*New York, Nov. 3d.*—My Irish setter bitch, Nell, whelped yesterday thirteen pups—ten dogs and three gyps—dark red, with one exception. This I consider an unusual litter. Nell is bred from my old bitch, Nell No. 1, from Mr. Gubner's kennel. The sire is Sergeant Woodward's Bush (Marshal's Rock, Al. Wood's imported bitch). Marshal's Rock is out of Gubner's celebrated Irish bitch (name of latter slips my memory at present), by Putnam's Dan. THOS. H. DWYER.

CURE FOR HYDROPHOBIA.—A German forest-keeper, eighty-two years of age, not wishing to carry to the grave with him an important secret, had published in the *Leipsic Journal* a recipe he had tried for fifty years, and which he says had saved several men and a number of animals from a horrible death by hydrophobia. The bite must be bathed as soon as possible with warm vinegar and water; and when this has dried a few drops of muriatic acid poured upon the wound will destroy the poison of the saliva and relieve the patient from all present or future danger.

—See Kennel advertisement of John Johnson, North Manchester, Conn.—[*Adv.*

—Any one desiring to purchase a gun would do well to attend the sale of the stock of Francis Tomes advertised in this issue.—[*Adv.*

—On the 27th Sept. last the Irish setter bitch, Queen Bess, out of M. Goldsmith's Plunkett and Nell (owner, Wm. H. Finck, Kingston, N. Y.) whelped as fine a litter as one would like to see. Very little white on them. (See advertisement.)

JOHN DAVIDSON AT HOME.

Editor Forest and Stream:—

Thinking it will prove of interest to many of your readers to know something of John Davidson "at home," I write you this brief sketch of a short visit recently enjoyed while on my way home from the West. I arrived at Monroe (Michigan) about 7 o'clock in the evening, and was met at the depot by Mr. Davidson, who heartily greeted me and welcomed me to his home, which we reached after a drive of some three miles. His house is on a large tract of open land skirted with trees, giving a clear range of several hundred acres; a better place for raising stock of all kinds could hardly be selected, and for dogs it is *par excellence*, sufficient game being found in the immediate vicinity to successfully work the dogs, although after seeing a few shots made by my host I wondered at there being any birds for "miles around." To say that he is a "crack" shot is not enough, for he is a dead shot at almost limitless range; with such a "gun," and dog so seldom equalled, the birds in their immediate proximity if expectant of attaining a ripe old age—when the *cuisine* would scorn them—had better "light out."

Of course an anxiety was experienced to see the dogs. No doubt many have curiously wondered, as has the writer, while seeing dogs judged at New York, whether the judges ever owned a dog that would be allowed to remain in the ring with those who bore off the ribbons. I can safely say that John Davidson never judged better dogs than those he owns. Soon after reaching the house the English setter dogs, Afton and Douglass, were led in for examination. Douglass is a large, finely built dog, black, white and tan, heavily ticked; he has a well-formed chest and loin, a fine head and good underpinning. He is litter brother to Lincoln & Hellyar's Minto (first New York, '79), being by Davidson's Dash, out of imported Doll (Doll being sister to Druid Dart, etc.) Douglass is as staunch as a rock and carefully roads his birds, dropping at scent, and working to a safe distance becomes immovable; no breaking to shot or wing or careless flushing of birds there. Field trial or show ring, they can't all leave Douglass. Afton is a beautiful orange belton, three years old, by Adams' old Rock, out of Davidson's Flora (first Chicago, '76). He (Afton) has the finest black eyes that ever dog had, and taken all together is one of the best made setters extant. As Mr. D. says, "it is hard to say where he could successfully be changed."

Perhaps his color might be made better, but I am not sure. I should care to change it, for a more evenly marked Belton would be hard to find. To see him range at once causes one to think him the fastest dog they ever saw. I think he can run "all around" most of those I have seen work, and many call him the fastest dog in America.

I said they can't all leave Douglass, bench or field, but I am afraid Afton would leave them all. I should most assuredly feel nervous in leading any of the "cracks" before the judges when Afton was there. His disposition and training are perfect, and who shall say but Afton is the coming dog, the native-born to "scoop" the "blues."

Speaking of blue bloods brings to mind quite a string of them at this "native" kennel. Imported Doll (before referred to), imported Ailsa, and a magnificent litter of Rob Roy-Doll whelps one year old. One of these would prove a valuable addition to any kennel, and they are as good in the field as they are rich in blood. Rob Roy pups will soon be a treasure rare, and none better could be found to-day than these if indeed this fortunate "nick" has not proved the thing. Those puppies are winners, sure. The bitch of the kennel, to my fancy is the roan Tyne. Perhaps Tyne wouldn't prove a bench winner, but perhaps she would; her chest, loin, magnificent style, head, and limbs would most assuredly not pass unnoticed. As a field worker she ranks high with the best. Two darkly ticked gyps—one by Afton, one by Douglass—attracted our favorable notice. Numerous puppies by Afton, out of various dams, attested his meritorious qualities as a sire, one dog being almost a counterpart of him. This dog would be a "rich find" for some one.

The kennels found here are not elaborate, but clean, and the extensive range so close at hand keeps all the animals in excellent health and condition. I saw no "weeds" or sickly sore eyed brutes; all showing the excellent care and careful management and training of an experienced hand. The entire number of dogs here found must reach thirty, and if an addition were to be made to our kennel of English setters we should order of the man who makes no false representations and deals frankly with all—John Davidson.

Some of my friends have asked me "could not better ones be imported?" I answer, "Perhaps so, but I should not know where to order them."

Before closing I must mention the excellent dog, Rattler. Both he and his owner are blue bloods, and show themselves to be gentlemen. Mr. Whitman was stopping with Mr. Davidson for a few days' shooting, and I had an excellent opportunity of examining Rattler. To say that he is a beautiful light colored blue Belton, by Rob Roy, out of the celebrated Pickles, suffices to show that he numbers with those (where there is alway room) at the head. BANDIT.

HOW THEY HANDLE DOG FIENDS IN KANSAS.—*Topeka, Kan., Oct 31st.*—In Abilene, Kan., on the Kansas Pacific Railroad, Mr. Jack Nash owns a handsome and valuable black-and-tan fox hound that is a favorite and the pet of the town.

"Wichita Tom" is a fancy rough, wearing high-priced, flashy clothes, who goes from town to town and trains with the floating class of gamblers. On Oct. 28th some strangers admiring Mr. Smith's dog offered him a hundred dollar bill for him, which was declined. "Wichita Tom," who was loafing around, said "he would soon bring the market value of the brute within them figures," and drew a pistol and shot the dog through the jaw, knocking four of his teeth out, mutilating him very seriously. Then came "Big Tom's" turn. He was set upon by the indignant witnesses and handled in Kansas style, but was rescued by the town authorities and put in the lock-up to answer for the only charge that could be brought against him—discharging firearms within the city limits; no action for cruelty to animals or for damages being tenable under the present State statutes.

But Kansas' love for its dogs is as strong as its dogs are fine, and it acts in these cases according to circumstances—a law in each case. "Wichita Tom" got the protection of the lock-up at 3 P. M., and at 3 A. M., when the moon hung low in the West, about fifty Abileners took Tom from his quarters, led him not gently to the railroad bridge, strung the begging craven up to a sleeper and let him hang three minutes by the watch. Then they let him down alive and told him he had twice as much vitality as they credited him with, and would have to try him again, and hoisted him once more for a minute, let him down again, brought him to and told him if he would start right off they would reprieve him until he came to town the next time. And "Long Tom" left.

Kansas, with its innumerable fine dogs and splendid field for game, needs a general and thorough law to protect them. The shooting is excellent this season, and I will say to brother sportsmen who wish to find a good quail point that they will find it at Topeka. The "Palace Hotel" is the best kept in the State, and is a good point to operate from. The proprietor, Mr. Stanton, of New York, and his son are thorough sportsmen, and cannot only make their guests happy and comfortable, but can direct them to all the best fields for quail, chickens, and wild fowl. I only stopped over here for a couple of days to give some puppies a little practice on quail, and found them very plentiful. I have shot through the State for the past seven years, and prefer the latter part of November and the month of December as a time. B.

Yachting and Boating.

A NATIONAL YACHTING ASSOCIATION.—A meeting was held in this city last Monday evening of the delegates who convened in response to a call issued by the Jersey City Yacht Club last March. Representatives were present from the New Jersey, Hudson River, Columbia, Salem, Mass., Manhattan, Empire and Jersey City. A committee of five was appointed to prepare an address to the yacht clubs of the United States and to call a convention of representative yachtsmen for the formation of a national association. The work of such a body would be to issue a pamphlet semi-annually giving information in regard to yachting, a list of members, and of the lengths of yachts, their rigs, owners, and records, location of the clubs, a record of their regattas, and a complete report of the proceedings of the association. It was not contemplated that the association should interfere with the local management of the clubs. Each club would retain its individuality, and only when the com-

mon interests of the clubs required it would action be taken by the association. The committee meet again to-night.

THE NICE REGATTA.—We have received from the Regatta Committee a partial programme of the races to be sailed at Nice on March 11th and 12th under the Presidency of the Prince of Wales. The prizes are so large and so well worth winning that we shall be surprised if English yachts are not well represented. It is almost useless to hope, perhaps, that any American yachts will go over, even to sail for a prize worth almost as much as the stakes in the Derby, yet it would be very gratifying if they should do so. The first race will be for the Grand Prix de Nice, value 25,000 francs, with a work of art offered by the French Yacht Club, for pleasure yachts over twenty tons. The second is the Prix Fulton, value 20,000 francs, for steam yachts. The next is the Prix de la Baie des Anges, value 10,000 francs, for small yachts. There is also a prize of 5,000 francs for four-oared boats rowed by amateurs.

Important prizes and medals will be awarded to those yachts which come in second, third and fourth in each race.

The Harbor Masters of Nice and Villefranche, as well as the municipality of Nice and the Regatta Committee, will render ever service in their power to the owners of yachts during their stay in these ports.

FOG SIGNALS.—Capt. Barker, a practical seaman, has devised an ingenious system of fog signals, by which any two vessels meeting each other on the high seas might not only learn of each other's presence, but be apprised of the course each was steering, and thus be enabled to avoid collision.

Capt. Barker has been for months past engaged in constructing a fog horn that will sound any course. Each four points of the compass is represented in Barker's system by long and short sounds, as follows: For any course between north and north-east, one long sound and two short ones; north-east to east, one long sound and three short; east to south-east, one long sound followed by a short one and another long one; south-east to south, one long sound, two short ones, and another long one; south to south-west, two short sounds and one long; south-west to west, three short sounds and one long; west to north-west, one short sound, followed by a long one and another short one; north-west to north, four short sounds. Thus every course signalled from north to south, and having any easting in it, begins with a long blast, and every signal from north to south having any westing in it, begins with a short blast. Since in every course there is either easting or westing, excepting due north and south, the master of a ship may know at once which side of the polar line a ship is approaching, and the subsequent sounds tell him almost her exact course.

The apparatus now on exhibition at 153 Centre street may be used in sailing vessels. By the turning of a crank, compressed air is forced through a fog horn or siren.

THE RACE FOR THE CENTER CUP.—*New York, Nov. 11th.—Editor Forest and Stream:*—On reading the log of the yacht *Wave*, in the "Centre Cup" contest, published in your issue of Oct. 30th, I find it stated that on "time allowance" she would have won. At the time of the race one of the large dailies took occasion to comment on the inequality of the contest, owing to the unequal size of the boats and to the absence of any time allowance. The result proves the inaccuracy of this statement and of the *Wave's* claim.

In order to establish the facts, I have obtained the necessary data from official sources, and find that with the ordinary time allowance of the Seawanhaka Club over its New York Bay course, the *Mischief*, of 1,277 feet, would allow *Regina*, of 790 feet, 11m. 6s.; and *Wave*, of 601 feet, 17m. 18s. The length of this New York Bay course, carefully measured, is thirty-two nautical miles; that of the Cape May course is 202 nautical miles; consequently, increasing the time allowance in the ratio of 202 to 32, we have as the actual allowance over the longer distance. *Mischief*, of 1,277 feet, allows *Regina*, 790 feet, 1h. 9m. 58s., and *Wave*, 601 feet, 1h. 49m. 8s., and that *Regina* allows *Wave* 39m. 10s. The *Mischief* rounded the Sandy Hook light-ship at 3h. 2m., the *Regina* at 7h. 30m., the *Wave* at 10h., A.M. Consequently the *Mischief* beats *Regina* 4h. 28m., or 3 8-10 times the allowance; the *Wave* 6h. 58m., or 3 8-10 times the allowance; and the *Regina* beats *Wave* 2h. 30m., or 3 9-10 times the allowance.

These figures speak for themselves and show the *Mischief's* superiority on this occasion at least. It must also be conceded that the remarkably light weather was highly favorable to the smaller vessels. ROBERT CENTER.

THE MINERVA AND AU REVOIR.—*Bristol, Pa., Nov. 4th.—Editor Forest and Stream.*—I have seen in your issue, Oct. 30th, an answer to a correspondent, "Minerva," in which you say that the judges did not show consistency in their action. I am not aware in which light the question has been put to you, but the facts in the case are these: The course was altered, and all the captains, with the exception of the *Au Revoir's*, understood it. The conditions were also understood, and were as follows: That no outrigger, paddles or poles, or any weight outside the hull were to be used. The *Minerva* was the first boat home by a half a minute, the *Au Revoir* second, she having sailed a wrong course—the original one. Before the race was concluded, one of the judges, Capt. Fennemore, being rather unwell, returned home over the river. On the question being put to the *Minerva*, she acknowledged dropping her anchor to keep her from drifting, which virtually ruled her out; and the *Au Revoir* having sailed a wrong course we decided to sail it over again; and that is where I think the consistency of the decision comes in, with all due respect to the *Minerva*. F. THORNBER, one of the Judges.

YACHT DESIGN.

(CONTINUED.)

Here let me say that where nearly all critics and expounders in this line are stranded is because they base all their calculations, or nearly all, upon the vessel's performances while she is standing still, forgetting that the relations to nearly every principle governing sailing vessels are changed when the sail is filled with wind and the vessel in motion. Mr. A. C. Smith, in one of his lectures, says: "It is found that lateral resistance decreases as you go aft when the vessel is in motion." This apparently is correct, yet it is not. It is not that lateral resistance decreases as you go aft; that is impossible, but that it increases as you go forward, and this is caused by the pressure of the canvass and the motion through the water. The increase of this lateral resistance is shown in the heeling of the vessel. The stronger the pressure of wind, the greater the lateral resistance—hence the more the heels. That the center of lateral resistance moves forward when the vessel is in motion, is shown by her tendency to luff; the greater the speed, the greater this tendency; and on account of this lateral resistance forward it is difficult to keep a vessel on her course when driven with great speed, and particularly so with wide boats. The pressure is the greatest on her leeward bow, because the sail not only presses her forward, but to leeward also, and the water strikes her there with its greatest force because it strikes her there first; hence the increase of lateral resistance forwards when the vessel is in motion. If this principle were not true a well-balanced vessel would not steer harder at one time than at another. So, too, if a vessel could be held from going ahead, there would be no more griping at one time than another. There is still one more principle affecting vessels with a tendency to make them luff when being driven with sails. It does not affect narrow, deep boats so much, but it does affect shoaler and wider boats very much, especially those with flaring sides. It is this: Let a boat stand straight in the water and the configuration of her water line is the same on both sides. But now let her heel, and her bilge is lifted out of water, perhaps half way down to her keel; hence the water line on that side is much straighter than it was. The other bilge is forced further under water; hence the water line on that side is more convex than it was, making of course in that position a crooked boat with the straightest side to windward. Now start her ahead, and of course she will describe a curved line, and can only be kept straight by turning the rudder in opposition to the curve. In relation to forefoot, the idea that gripe is necessary to make a vessel hold on is of course absurd. Gripe, or forefoot, has nothing to do with it. If the vessel has sufficient lateral resistance, and the sails are placed on her in such a position that she will handle well, she will hold on with or without much forefoot. Also, a vessel with forefoot well cut away and drawing much the most water aft will undoubtedly make the best sea boat. As Mr. A. C. Smith says, you can have a shorter bow-sprit, which is one advantage. But the main advantage is in the action of the sea upon the vessel.

Waves run before the sea with great velocity and power. Let a vessel take the ground where she cannot give to leeward when they strike her, and note the effect. Now these waves, moving before the wind with such velocity and power, strike the vessel forward first and carry her bow round with it with almost resistless power, and that is all there is about it. A vessel with small fore-foot and deep drag aft has less surface forward for the sea to get hold of, and more surface aft to hold her in position and keep her steady, than the opposite type. Hence she does not fall off so much, and, other things being equal, must make a better sea boat. Every vessel should have a certain amount of drag, according to her build; the sharper forward, the more drag. It should be sufficient, and no more, than to make the water strike the bottom with equal force, as near as can be, along its whole length. If on even keel it strikes too heavy forward, she will not work well. If too much drag, she has to push her way through the water bottom first, and she will not go. The keel only should run down in vessels of great drag, and not the bottom. Even then she has to push the bottom of her keel through the water, and, as it is not sharp, must decrease her speed. All the advantage there is in a long fore-foot is in the way of speed; you can get better and sharper lines, and the boat ought to go faster in ordinary sailing.

In the FOREST AND STREAM of April 17th I notice an article from Martin Gale. He proposes to "look into the matter of centre-board vs. keel, in an unprejudiced manner, and carefully weigh the merits of each," instead of which he views the whole thing from a single standpoint; or at least can see but one thing from any standpoint he may take, and that appears to be a deep, narrow keel-boat that will outsail a shoaler and wider one. That is, he is trying to see it, but I apprehend that his sight will grow dim before he succeeds. I am not an "inveterate centre-boarder." Keel boats have some good qualities, but speed is not one of them. Yet I do not admit that "two boats, having the same initial stability, immersed surface, sail area and displacement, the one having the greater beam will meet with more resistance, and hence be a slower boat than the other." I say I do not admit any of this, unless the draft of water is the same. I have treated this whole subject in a former part of this article, but as Martin Gale goes on to demonstrate this theory and to "reason out what might be," perhaps I may be able to show him where his reasoning is at fault. He begins by chopping off the sides of a wide boat and putting what he chops off into her bottom, and here is the difficulty. If he only chopped off her sides she would go through the water easier than before, but of course would not have the same power; but when he adds to her bottom what he takes off her sides, it is impossible for her to pass through the water as easily as before. Can he suppose there is no resistance to motion through the water save on her sides? A boat has at least three absolute curved lines, fore and aft; one on each side and one under her bottom. Now he chops off her sides and so takes some of the curve off of each of the side lines, but what he takes off both the side lines he adds to the curve of the bottom line, thus adding to that curve what he takes off both side curves. Consequently there is more resistance to her passage through the water than before, because of the greater curve of her bottom fore and aft. To this add the extra power required in a moving body to displace water at a distance below the surface, beyond what is required to displace it at the surface (see former part of this article on displacement) and you will by no means, with the same power, have as fast a boat as before he chopped her sides off. DAVID KIRBY.

Rye, Westchester Co., N. Y.

We take pleasure in laying before the public the views of one of the most experienced yacht builders, whose successes in the *Arrow*, *Windward*, etc., entitle his views to full consideration. Though we do not subscribe to all of them, Mr. Kirby's letter contains much of interest, and can be read to advantage by all. The chief issue upon which we differ from the above is Mr. Kirby's statement that it is more difficult to pierce water at a depth than nearer the surface. This is an error. Water, being incompressible, cannot be any denser or thicker below than near the surface, and offers no more resistance to passage through it than anywhere else. A vessel at rest already displaces her weight in water, and when put in motion the fluid flows around her sides into the wake by the lines offering the least obstruction, be they water lines, diagonals, sectional or normals, hence the mere fact of a vessel drawing more water than another is no detriment to her speed. Resistance is due to friction and form, and depends therefore upon limiting the "wet" surface to the smallest area consistent with enough lateral resistence, and so arranging the form that it will go through the water in the most insinuating manner; in other words, commencing with no bulk at the stem, then gradually enlarging upon the amount until the largest section has been driven through, when the bulk passing through should again be gradually diminished to nothing at the stern post, the water being left in as perfect a state of rest as possible. This arrangement of bulk is best effected by adopting cross areas in the design, which correspond in the amount of their areas to the lengths of the ordinates of a cycloidal curve, situated at corresponding distances on a base line of same length as the load water line of the design. In other words, the cross areas of the most economical designs should correspond to what is known as "wave line areas." Then give the whole fair easy lines all around, and the problem has been put in the best shape. As to the cardinal dimensions or proportions to be adopted at the outset, they must always remain open to the builder's choice, and must be settled upon by experience and the purposes in view. Once fixed, however, the design, to be most favorable to speed, must be given areas of a wave line nature, with no abrupt angles, and the wet surface must be restricted to the least necessary for the lateral resistance required.

An examination of the numerous fast yachts has invariably shown that, with or without the builder's knowledge, a wave line form has been closely approximated, while, on the contrary, notably slow yachts are deficient in one or both of the above requirements. To the first class belong *America*, *Sappho*, *Comet*, *Elephant*, *Idler*, *Arrow*, and *Windward*, built by our correspondent as well—all of them successful, and all of them very close approximations to "wave-line" construction.

Friction is kept low in the deep cutters by raking post, round up fore-foot and rocker keel. In many examples this type of yacht has actually *less* skin, even including keel, than the centre-board sloop. From our own experience in both types we unhesitatingly pronounce the cutter much superior to the shallow sloop in all that is essential to a safe, able and satisfactory yacht of moderate tonnage. The cutter is handier, easier of motion, easier on her helm, safer, abler, dryer and cooler below than the sloop, impressions arising from a want of experience in them to the contrary notwithstanding. The sloop is no cheaper, if as well and fully equipped as is the custom with cutters, and the most successful sloops carry as much lead. Their only claim to superiority over the cutter lies in a slightly more moderate angle of heel and in lighter draft, when the board is lifted and they are sliding to leeward like a crab, or are sailing free. The first will interest consumptive individuals and highly nervous parties who prefer a few degrees less heel coupled with a continuous liability to capsize; the latter can only attract those who prefer sailing on a mud flat to open water more than waist deep.

With these two classes a sailor has little sympathy, and to him that vessel which can be driven without upsetting, whose spars and canvas are under the fullest control, and which offers most deck room and can buck the seas most successfully in any weather; which can be steered without gymnastics; which will not broach to and yaw wildly, that vessel is the one most likely to attract him. With the gradual development of seamanship and a preference for open water sailing, we confidently look forward to a period when the sloop will be consigned to the nursery as a toy, and the cutter become the recognized craft for cruising as well as racing, for there is no reason why the cutter cannot be made as fast as the sloop on an average; certainly when in her own element, plenty of sea room and a long sweep to the wind. We reserve a more systematic review of the question for the future, but may add that our correspondent, Mr. Kirby, has brought forward many ideas of his own accord which closely resemble the dicta of naval science, for which he deserves a full share of credit.

Women's Column.

SPORTSMEN AND SPORTSMEN'S WIVES.

Editor Forest and Stream:—

I had not expected that my article on a "Sportsman's Wife's Tribulations" would meet the approval of sportsmen generally; and am not surprised that "Diana" who admits that a "taste of sporting was born in her," should endeavor to defend their course.

I trust, however, that she will not make herself miserable for fear that I will not permit my husband to go gunning as often as he desires; it never occured to me that I might prevent it. Enduring from my husband's setter that which even "Diana" admits she would not tolerate is, I think, sufficient evidence of my submissiveness.

"Diana" writes: "I think the duty of a good wife is to enter into a husband's joys and sorrows, and to sympathize with and aid him in all his pursuits as far as possible."

Knowing this full well, and having learned by sad experience that it was with me a physical impossibility to accompany my husband upon his gunning tramps, not to speak of the baby, which can neither be taken or left, but must be staid with, I made for him a wondrous "shooting coat," whose labyrinthian pockets are his pride and joy. And many a night I've sat alone and waited, and kept the supper warm for that belated hunter; and as the weary hours dragged by, excuse me if I've sometimes felt that a "kid glove party" with my husband by my side might be preferred to this; sometimes, I think, unknown to him, I'll write this up for his beloved paper, and to read it there may help to see the other side; but this is not the time, so I dismiss the thought; and place his supper on the table, and as he does it ample justice, I take those lovely birds from out their hiding places, and praise their size and beauty; and though I dread to kill an insect, and have been ridiculed for rescuing common flies from death, I listen with seeming interest and delight, to his tales of bloodshed, wounded birds, etc. He thinks that as I cannot accompany him on these grand hunting exploits, I will enjoy hearing his adventures.

Nevertheless, when the baby gets old enough to take care of himself, if my health will permit, I may act upon "Diana's" suggestion and endeavor once more to cultivate a taste for field sports.

That there are worse means of recreation than gunning I am well aware, and I am thankful that of two evils my husband chose the least, but like every other good thing it is too often carried to excess; and, I doubt not, there are many ladies and good wives too, whose circumstances make it impossible for them to accompany their husbands on their hunting trips, who will find themselves guilty of yearning for a portion of their husband's society, even during the "open season." LENA.

Editor Forest and Stream:—

My husband, alas! is a sportsman, one who owns a dog, a shot gun, a rifle, and a revolver. He is, I believe, considered something of an expert with them all, but having had several years' experience with having them all in the house, am not afraid of either; in fact I educate the canines in a measure, and so they become acquainted with my wishes and try to please me. I never shall forget the first puppy my husband owned, a pointer six weeks old, which he brought home one day in his overcoat pocket, and said it would soon grow and be so much company for me; but I found before morning what excellent company, and so did the neighbors.

My husband hired a tenement in a block in the city of N. B., and of course there was not, or seemed not, to be a place for the dog; so when it came time for retiring he tied him to the kitchen door-knob. Talk about a dog howling, I never heard such howls in my life; and as I told my husband it would never do, he arose and carried the pup to the garret and put him in an empty flour barrel. Soon grievous cries were heard from that direction. So "that husband" made a second pilgrimage to the garret, where he labored a while with the dog, only to repeat it several times, till finally his patience and strength were exhausted and he slumbered. I was left awake to wonder what the neighbors would think, and at last arose and made my way to the garret. The first thing I saw was an old umbrella staff, which I grasped and made a plunge with into the barrel; of course the music increased, and I kept on churning it in the barrel till all noise ceased, and then I pulled it up to see if I had a dog on the end of the staff, but had not; supposed I had really killed the dog. So I again descended and retired, and strange as it may seem, we heard no more till morning.

The next day there was a convenient barn found, where he could stay nights. Like all sportsmen, my husband likes puppies, and as we now live in the country he has owned seven at once. I am not fond of dogs, but am getting quite used to them, and, if I would allow it, our dog, like Zena's, would sleep under the bed.

I am not gun shy, and often shoot at a mark with either rifle or revolver, so these do not trouble me in the least. My great trial now is this: my husband is one of a club of twenty who camp out for two weeks in the fall for the purpose of hunting and fishing, and as my husband is quartermaster, all their tents and stores are stored in the garret of our house. Well, for about two weeks before, and as many after their return, the house is in complete confusion; first thing is a barrel of hard tack, then jars of pickles, and a jar of butter, and papers of sugar, and rice, and oatmeal, and onions, and potatoes, and everything pertaining to camp life, and when the time comes, all get together and load up; you would surely think we were moving. A big farm wagon is drawn up to the door, and a string of men from the door to the attic; first come down tent poles and big rolls of tents, and pieces of canvas, and camp stoves and chairs, then the jars, etc., etc.; all are packed on the load, and then my trouble commences; it is, where are some bed quilts I can have? and where are some flannel shirts? have you got any bed ticks? we want some cleaning rags and wool socks, and hunting suits, and big boots that come above the knees, and don't forget a lot of handkerchiefs and fishing tackle; and do you know where this thing is, and that thing—till they are gone, and I am alone. I am all tired out, but no matter, the house must be put in order again, swept from the attic, remember. And then the home coming—all to be done again, only tin plates must be scoured, and cups and spoons and knives also; oil emptied from lamps, tents rolled up dry, bedding washed, and in twelve months away they go again; they do nothing, have no cooking to do, just hunt and fish, and lie about camp, and enjoy themselves. I forgot to say that they take a cook, and, of course, do not expect to work. I presume I shall gradually yet used to this, the same as to having dogs and guns. I am sure my husband will know who this is from, as he reads every word in the FOREST AND STREAM, and he never can mistake the facts, but as Zena has said, I am glad to know they are doing no worse. RUTH.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

☞ *We make no charge for answering inquiries in this column.*

C. M., Monson, Me.—Send your furs to C. G. Gunther & Co., Union Square, New York.

ATHLETIC CLUB, New York.—For rules of Hare and Hounds apply to the Harlem Athletic Club.

RUTHERFORD.—The india rubber recoil pads which you inquire for can be bought of Chas. L. Ritzmann, 943 Broadway, city.

H. C. S., Bloomfield, N. J.—You will find duck shooting at Toms River and Point Pleasant, N. J. Quail shooting there in season.

CASTRA, Boston.—Can you inform me where and by whom the Ward-Burton gun is manufactured? Ans. The Ward-Burton rifle is not being manufactured to our knowledge.

J. S., Washington, Pa.—What make of gun did P. J. Lauritzen use in his shooting Oct. 18th, at Washington, D. C., and what calibre? Ans. He used a .44 caliber Remington rifle.

HAMMERLESS, Cazenovia, N. Y.—What is the best map of Florida? and how much does it cost? Ans. Apthorp's map, price $1.50, for sale by Columbus Drew, Jacksonville, Fla.

ED. H., Baraboo, Wis.—The scientific name of the king rail is *Rallus elegans.* The bird is rarely seen or shot by gunners, because of its shyness. It feeds on wild oats and keeps well in cover.

W., Cazenovia, N. Y.—Please give the name and address of the party who manufacture the Paine feather filled ball? Ans. Bohemian Glass Works, Hagerty Bros. & Co., 10 Platt street, New York.

J. McH., Canandaigua, N. Y.—Can you inform me if the Persian Insect Powdor is a preventive of museum pests? Ans. Corosive sublimate is generally used and preferred for museum specimens.

SUBSCRIBER.—I want to get a book on small boat-building. Ans. "Boat-building for Amateurs," for sale by Van Nostrand, New York, and Dixon Kemp's "Manual of Yacht and Boat Building," Field Office, 346 Strand, London.

T. H., Boston.—Boston has the name of claiming much culture. You are a worthy Bostonian, for you are one of the half-dozen men, who of all those we reply to in our answers, in the course of of a year, remember to thank us for the same.

S. A. S., Hammond, N. Y.—Have you a book describing the different varieties of duck? Ans. The "Sportsman's Gazetteer" gives the scientific and common names of fifty varieties of ducks, and describes their habits and methods of capture. Price $3; for sale at this office.

J. R. H., Pennsylvania.—We are not familiar with the dogs named in the pedigree sent, and can give no opinion as to its merits. For the weakness in the hind-quarters, we should give a wine glass full of codliver oil with two or three drops of wine of iron in it twice a day.

J. R., Nelsonville, O.—No man can afford to make an article which costs $10 and sell it for $2. Whether a firm who advertise to do this are reliable or not your own common sense should tell you. We know nothing of the other gun you ask about. Rubber cement can be had of Hodgman, whose advertisement will be found elsewhere.

H. H. G., Painesville, O.—Is there a book published on canoe or small boat building? Ans. The following works relate to canoe construction and canoe sailing: Voyage of Paper Canoe, Lee & Shepard, Boston; Canoe and Flying Proa, and The Perfect Canoe, by Harper & Bros.; Canoeing in Kanuckia, and Canoe Travelling, by Orange Judd & Co., New York.

HOW! Meadeville, Pa.—Allowing a dog to remain in the house by a fire all day and then turning him out of doors in the cold at night, is not the way to keep the him in health, particularly when he is only four months old. From your description we cannot tell what ails your puppy, unless he has taken a violent cold. We should give him a Dover's powder, night and morning for a few days.

R. J. S. W., Williamsport, Pa.—Please refer me to any work containing improved ideas as to ventilation of stables; best form of construction, etc.? Are there any special plans published, or architects who have given particular attention thereto? Ans. McClure's Stable Guide, American Gentleman's Stable Guide, price $1. Bickwell's Stables, Outbuildings, and miscellaneous details, $2.50, Orange Judd Publishing Co., New York.

WILLARD, Utica, N. Y.—Myself and some friends propose a trip through the wilderness next summer, starting from Utica, up the West Canada, across to Jersey Field Lake (by way of Black Creek) thence to Pisco Lake, down the Saugaunk River, into the Hudson, and home by Erie Canal. Would such a trip be practicable? We intend to canoe it. Who will furnish us a reliable map of the region? Ans. Would advise you to buy Wallace's Adirondack Guide, which has an excellent map. The route you suggest would be a pleasant one.

A. P. G., Cleveland, O.—Being on the point of having an extra pair of laminated steel barrels, 10-gauge, fitted to my stock, said barrels to be used exclusively for wild-fowl shooting, I request that you will give me your opinion as to the length of barrel best adapted to that purpose. In other words, which will have the greatest range and consequently the greatest penetration, all other things being equal—a pair of barrels 28, 30 or 32 inches? Ans. We should by all means have 32-inch barrels, as they will burn more powder.

F. K. W. B., Philadelphia.—What can I do for my setter? She is about eighteen months old, has a good appetite, but is getting very thin; her mouth seems feverish, and she scratches the side of her mouth with her paw and rubs her face on the ground. Sometimes when I have her out she will commence to howl and cry, and acts as if she was in great pain, and shivers as if she were cold. Some times will put her tail between her legs and cry and run for home? Ans. From the symptoms as you describe them we should judge that your bitch had worms. Give her areca nut.

W. C. H., Leavenworth, Kan.—I have a pointer dog one year old past, that is out of fix. He has become very thin and poor, although he is well fed. He at times has a stream of saliva or slobbers from the corner of his mouth, and has lost his spirit. I gave him a teaspoonful of areca nut for worms, and in five hours two tablespoonsful of castor oil, but it does not seem to help him. Ans. Probably worms are the cause of the trouble. Try the areca nut again, only see that it is freshly grated and given on an empty stomach. After giving the oil watch the evacuations. If no worms appear, try codliver oil, say a wine-glassful with three drops of wine twice a day.

R. D., New York.—1. I see in your columns that "A. B." box 135, Holyoke, Mass., has a female ferret for sale. What does he mean by a ferret? 2. Where in the city of New York, Newark or vicinity can I buy throughbred beagles? 3. How high do beagles generally stand at the shoulder? and what is the color? Ans. 1. He means the *Mustela furo*, of the family of Mustelidæ, or weasels, an animal with long body and short legs, used, when domesticated, for bolting rabbits from their burrows. 2. Address the Montclair Hunt, Montclair, N. J., who have them for sale. 3. From 9 to 12 inches; color, same as fox hounds.

L. I.—SYRACUSE.—Is there any boat made that does not show on the water to be used in duck shooting, if so, please describe. By taking a boat and covering with rushes, will it make a good blind anchored out in the lake behind the decoys? On our lake there are plenty of ducks, but they have been shot at so much, it is impossible to get near shore to shoot them. Ans. You can buy a Barnegat sneak boat for $30 by sending order to Barnegat Village through the postmaster, or send your order for a gunning skiff to Sam. T. Quitman, South Oyster Bay, Long Island. These boats both sit low in the water, and the combing is arranged for thatching with grass, kelp, or brush. For thirty-two different kinds of boats used for sporting, see Hallock's "Sportsmen's Gazetteer."

S. M. Renovo, Pa.—We have a grayhound here, symptoms of whose disease are as follows: Dull appearance in eyes, hair coming out in spots as large as a three cent piece, running sores behind the ears, sunken flanks, and badly covered with vermin. Can you recommend anything to relieve the poor dog. Ans. Wash the dog thoroughly with castile soap and tepid water. Remove him at once to a new kennel, and rub the sore places, and in fact, his whole skin with crude petroleum. Apply internally Fowler's Solution of arsenic, commencing with six grains twice a day, and gradually increasing it to ten. Continue this medicine for three weeks or until his eyes begin to look red and inflame, when decrease and discontinue. Should the outward application not prove effectual in healing the sores, write and we will send prescription. The dog's diet should consist largely of vegetables.

J. N. C., Newburyport.—1. What is the greatest charge of powder that I can fire with perfect safety in my W. & C. Scott gun, 12-gauge, eight lbs., thirty-inch, fine Damascus barrels? 2. Can No. 4 shot be fired with safety in a choke-bore? 3. With what approval did the "St. Louis Conical Base Paper Shell," meet? Can you inform me the price per hundred? 4. Does a full-blooded setter-dog ever have a split or double nose? Ans. 1 We prefer not to be responsible for the safety of guns, and the charge yours would bear without the barrels bursting would probably be a severe test for your shoulder. A suitable charge for your gun for the heaviest kind of shooting would be four or four and a half drachms powder. 2. Yes. 3. They are well liked for field shooting, but the peculiar base being filled up so much, prevents very large charges being used in them. The price for No. 12's was $1.15 per hundred. We do not know if it has been changed. 4. We do not believe they do, except as a freak of nature.

AMERICAN CANOES, Philadelphia.—Please inform me how far up the Hudson River a party can go in a sail-boat? 2. Also are there any rapids on it? 3. Are there much game up in the Adirondack Mountains? 4. Does a person have to pay to go through the canal from Bordentown to New York with a sailing skiff, and how much? 5. How far do you go out the East River before you come to the Hudson River? 6. What will a 20 ft. boat hold to sail with pleasure? Ans. There is a dam at Troy, and another at Cohoes. The river is adapted for canoes as far as North Creek, on the Adirondack Railroad. You might take a boat on by rail, and sail down. The canal charges would be trifling, if any; pleasure parties are usually passed free by courtesy. The East and Hudson Rivers are confluent at the point of Manhattan peninsula. Your 20 ft. boat ought to carry four persons with their outfit.

W., Savannah, Tenn.—I have a well-bred pointer pup, six months old, that I have taught to fetch a ball and other articles, but cannot induce to touch a bird. I have tried him repeatedly, but have failed in every attempt. Can you suggest any means by which I can enable him to overcome his repugnance? He does not seem to mind the report of a gun usually; but some days ago I took him out with me, and after my shooting several times in rapid succession he became frightened and left me. Is it usual for dogs to become "gun-shy" at so early an age, or is this fault to be charged to his age? Ans. If your puppy has been broken to retrieve under the whip he should bring the bird, particularly if he has seen it killed; with patience he probably will in time. Gun-shyness is sometimes inherited, and is sometimes the result of careless handling. Your shooting so many times in rapid succession was the cause of your dog being frightened, and was rather injudicious, considering his age. As he generally does not fear the gun, if he has a nose and any desire to hunt, he should come out all right.

G. C. P., New York.—Please give me your opinion in the next issue of your paper, whether the quotient arising from dividing the interior diameter of a gun muzzle by the diameter of a single pellet of shot, could in any way assist one in selecting the size of shot that would chamber the most evenly, or be of service in determining the right number of pellets to use at a charge? Ans. We believe that practically it would be of no benefit whatever. Guns seem invested with individual peculiarities, and the only true way to ascertain a proper charge is by patient targeting. Besides, not only will all ordinary sizes shot chamber evenly, but it is necessary to use different sizes for different varieties of game. Again, in guns of the present day, there is a very considerable difference (in most of them) between the diameter of the chamber, or interior of shell, and the muzzle, or that portion of the barrel near it; and a charge of shot which might chamber ever so nicely in shell would be upset and mixed up before it had reached the muzzle, through which it could not pass in the same measure as to diameter in which it left the shell. Of course the above does not refer to buck shot or other large sizes, which must first be chambered at the muzzle before the shells are loaded.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

—AT—

No. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpariel type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*** Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, NOVEMBER 13, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published unless objection be made. ANONYMOUS communications will not be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of mail service if money remited to us is lost.

☞ Trade supplied by American News Company.

AUTUMN FLOWERS.—Our chief editor pirouetted into his sanctum two days ago with his face beaming, and wearing a pretty button-hole sprig of open air flowers which he had plucked from his garden on the 11th day of November. One blossom was a monthly rose, diminutive, it is true, and pinched by the cold, but still fragrant; the other a sprig of cerulean larkspur. Very pretty! but who will accept these as infallible tokens of ethereal mildness for the "'ember" days to come? Shall we not rather mistrust their enchanting odors and captivating colors for siren devices to lure us into wayside paths, certain to be obliterated soon by driving snows? Or shall we prefer to consider them as poor foolish things, which either have the hardihood to brave the rigors of the frost-grip, or who do not know enough to come in out of the cold? Either way, we are not to be humbugged! When we go out into the field, or down by the sea, we shall take our warmest woollens and our most impervious rubbers all the same as if to-morrow were to be Arctic weather, with the Polar light snapping in the frosty air, instead of the lingering, unseasonable, almost summer weather which is now intruding upon the domain and prerogatives of December. Let sportsmen all be careful to wear sufficient clothing and avoid exposure.

SWINDLERS.—We regret exceedingly that the advertisement of a party of land swindlers should have found its way into our columns. But we were only one of some eight hundred papers which inserted the schemes of the Denver Land Company, the originators of which having turned out to be frauds have been promptly caged in jail. We hope this notice may not be too late to prevent, in a measure at least, our readers from replying to the advertisement. It is impossible for editors to always discriminate, and in this particular case, we were deceived by what was speciously represented to be straight.

—The young Ladies Classical and Bible College Binghamton, New York, is making arrangements for the *free* home and education of one hundred more approved candidates for missionary and temperance work, and for the daughters of deceased and disabled pastors, missionaries and evangelists. The curriculum consists of a regular course at the Binghamton College with an added course of theology, medicine and music.

—Fifteen years ago there were only 2,000 miles of submarine cable in existance, and that was of a very imperfect nature. There are at this day about 66,000 miles of submarine cable, representing a capital of $125,000,000 or about two-thirds of the cost of the land line.

POISONED ARROW HEADS.

MOST savage tribes who have used the bow and arrow have used poison upon their arrow heads. These poisons are of the most deadly nature, causing almost immediate death to the human foe or wild beast struck. Such implements were not used for the capture of game to be eaten, but in warfare against man and noxious beasts, the arrow heads being so slightly affixed to the shafts that they were easily detached and remained in the body of the victim; while the heads of the hunting arrows, on the contrary, were securely fastened and could be drawn out with the shaft.

The secret of compounding these poisons has long been a baffling study among chemists. The most skillful expert has as yet failed to analyze them; nor can the composition of their ingredients or their preparation be learned from the rude men who possess the secret. There is something very suggestive in the possession by savage men of methods at which science cannot attain. Whether these poisons were discovered by seeming accident, as so many of the inventions and appliances of civilization have been, or whether they were the fruit of savage sagacity and intimate knowledge of nature's secrets, is at present a matter of conjecture. In either case, a study of the subject of arrow toxicology is interesting and instructive.

Among the best known of these preparations are the Urari, of South America, the Upas poison obtained from a tree, *Antiaris toxicana*, in the East: and the horrible fluid employed by the Narringeris, of the lower Murray District of Australia, which consists of a preparation made from decomposing human bodies.

The Urari poison is prepared from the bark of a woody vine or liana, growing in the Guianas and the valley of the Amazons. This vine, the *Strychnos toxifera*, is closely related to the plants from which are prepared the well-known drugs strychnine, nux vomica and brucia. The arrow poison, though the deadliest of known blood poisons, may be swallowed without serious inconvenience, thus resembling the animal rather than the vegetable poisons. Hence it was for a long time supposed that it derived its propertics from the serpent venom and the stinging ants, used by the Indians in compounding it. Sir Richard Schomburgh prepared it by concentrating an infusion of the bark collected in his presence, thus proving beyond a doubt its true origin; the poison thus prepared, though not sufficiently concentrated, killed a fowl in twenty-seven minutes.

The peculiar properties of the Urari poison are due to the presence of the Alkaloid Urari poison or Curaia, discovered by Boussignault in 1828, but first produced in a pure crystalized state by Dr. Preyer, of Bonn, in 1865. Many eminent physiologists have studied its effects but their experiments have not yet dispelled the mystery which has always attended it. It appears to act upon the muscles, causing death by paralyzing the heart or the muscles of respiration. Animals on receiving it into their blood soon fall in a stupor, the pulse becomes strong and rapid, the breath hard and accelerated, the muscles after a convulsive motion are paralyzed, the body becomes cold and death ensues in five to thirty minutes according to the size of the animal and the strength of the poison. According to the experiments of M. Goudot birds seem most susceptible to its effects, then mammals, then reptiles. The experiments of Prof. Wm. North Rice, made in connection with last summer's work of the United States Fish Commission, show that mollusks are not in the least affected by it.

Urari has been employed in medicine as a specific for epilepsy, but the success of the experiments was not such as to commend its general use. We have frequently seen it used to paralyse a frog, preparatory to placing it under the lecturer's microscope to demonstrate the circulation of the blood.

The Indian arrow poison is known by various names; that prepared on the Orinoco as Urari or Curari, that from the Guianas as Urali, that from the Amazons as Ticunas. The usage of different writers and the interchange of *r* and *l*, practised by the South American Indians have given rise to multitudinous variations, such as Urari, Woorari, Woorara, Oorara, Urali Wourali, Ulari, Curare, Curari, and Voorari. Some fixed orthography seems eminently desirable, and Urari seems to have the sanction of the best authorities.

Below is given an account of the mode of preparation in the words of Charles Waterton, who early in the present century made a long and perilous journey into the interior of Guiana, expressly to collect the poison. Those who are interested in a fuller account of the poison, its use and its effects, should not fail to read that most fascinating of all books of travel, "Waterton's Wanderings in South America:"—

When the Macoushi Indian prepares his poison, he scrapes the Wourali Vine, and a bitter root into their shavings, and puts them into a kind of colander made of leaves; this he holds over an earthen pot, and pours water on the shavings; the liquor which comes through has the appearance of coffee. When a sufficient quantity has been procured the shavings are thrown aside. He then bruises some bulbous stalks which he has gathered, and squeezes a proportionate quantity of their juice through his hands into the pot. Then the pounded fangs of the Labarri and the Counacouchi snakes are added, a quantity of the strongest Indian pepper and of two species of ants are thrown into it. It is then placed on a slow fire, and as it boils more of the juice of the Wourali is added, according as it may be found neccessary, and the scum is taken off with a leaf; it remains on the fire till reduced to a thick syrup of a deep brown color. As soon as it has arrived at this state a few arrows are poisoned with it, to try its strength. If it answers the expectations, it is poured out into a calabash, or little pot of Indian manufacture, which is carefully covered with a couple of leaves, and over them a piece of deer's skin, tied round with a cord. They keep it in the most dry part of the hut; and from time to time suspend it over the fire to counteract the effects of dampness.

It is interesting to know that some of the identical poison collected by Waterton in Guiana in 1813 was in existence in London, in good condition in 1864.

THREE FATAL GUN ACCIDENTS.—We might say thirty, and even more, did we industriously gather all that appear in the newspapers. But we do not publish all that come under our notice. The list would become monotonous. There is a curious similarity between these casualties. Of the three which came to us by one morning's mail last week, no one is novel. Here they are: George Brake, the well-known St. Clair flats hunter and fisherman, was instantly killed. He had loaded two guns and laid them upon the dock, muzzles pointing outward; then jumping into his boat he tried to pull the guns in after him, catching them by the muzzle. The hammer of one gun caught on the dock in a way to raise it just enough to explode the cap and discharge the load, which entered Brake's abdomen, killing him instantly.

This style of pulling a gun into a boat has caused a hundred deaths. One would think that a veteran gunner would know better than to handle his firearms in that way.

The second was a case of "thought it wasn't loaded;" and like all accidents of this particular kind was peculiarly distressing. Joseph Zengerle, of Germania, Pa., tried one barrel of a double-barrelled gun, and without testing the other barrel gave the gun to a little boy to play with. The boy pointed it at Zengerle, snapped the trigger of the empty barrel, then the other one. The charge of fine shot lodged in the victim's abdomen, and in two hours Mr. Zengerle was a dead man. This death was due to a violation of a gunning rule which is imperative and absolute, namely, "Never under any circumstances whatever point a gun at a human being."

The precise nature of the third accident cannot be determined. Upon the opening day in New Jersey scores and scores of men went to the Orange Mountains. That morning reports of the guns were heard every minute, and the farmers were afraid to go into the fields. Mr. A. R. Hubbard, a resident of Montclair, was discovered dead in an orchard some four miles northwest of that town. His dog, a beautiful setter, was stretched across the body, and remained there during the five hours between the discovery and the arrival of the county physician, whining piteously and allowing no one to touch his master's corpse. The deceased had a terrible wound in the breast; one barrel of his gun was discharged; the other was loaded and the hammer at full cock. County Physician Hewlitt inferred that Mr. Hubbard must have been dragging the gun by the muzzle through the underbrush, and that the hammer caught and so exploded it. Others reasoned that the death had been caused by the random discharge of some other gun in the vicinity.

Nothing is more ridiculous than the conduct of the sapient individual who always turns up just after a distressing accident to shrug his shoulders, cock his eye, and exclaim: "He ought 'er 'a been more careful." We shall not follow his example.

ANTLERS FOR CLUB ROOMS.—An old hunter in the Far West has consigned to us a lot of horns which he wishes to dispose of. We do not covet this kind of commission. However, we will do what we can for our friend, and, therefore, state to such game clubs as have meeting rooms, that a no more attractive ornament for their headquarters can be found than a handsome pair of horns. The consignment comprises six pairs of elk horns, one of them extra large, a pair of mountain sheep horns, and a pair of moose antlers, the latter, being from Washington Territory, are a curiosity. We have put a price of $15 per pair upon each set, all around (except the big elk horns, which we appraise at $25,) and will deliver them to order within a reasonable distance, express charges paid. The large horns measure fifty inches from burr to tip, around the outside, and 39½ inches across the widest span.

A MONUMENT TO ADAM.—The Rev. Thomas K. Beecher, of Elmira, N. Y., recently held in a discourse that if Elmira was not the Garden of Eden it at least deserved to have been. Mark Twain, who once wept at Adam's tomb, and whose summer residence is at Elmira, coincided with Dr. Beecher, and the two originated the project of erecting a monument to the great progenitor of the human race. It is to be a marble shaft seventy-five feet high, and is to cost $25,000. Among the subscribers are Frank C. Hall, ex-Mayor Arnot, D. C. Robinson, the Governor's son; the Hon. Seymour Dexter, Mark Twain, Mr.

Beecher, Charles J. Langdon, Mark Twain's brother-in-law; Dr. Updegraff, ex-Speaker Maguire, and other prominent residents, among whom we recognize several subscribers of ours. The inscription will be prepared by Twain. Some people think that Rev. Thomas K. Beecher *et al.* might be in more lucrative business.

THE FLORIDA MUSQUITO CONTROVERSY.

THE discussion of the Florida musquito question having become an issue between the Florida Bureau of Immigration and the Chief Engineers of some of the Florida railroads, we shall not be subject to the implication of straining at gnats when we again recur to the subject. As these high powers that be seem disposed to transform themselves into huge musquitos, and to eat each other up, or at least to sting each other to death, it may be prudent for us to cast ourselves into the bloody chasm, and quell the fray by taking up the discussion ourselves, and we may premise that, like Bret Harte's hero, we've "been thar too."

We have received further testimony, some of which is submitted by men who have cruised in Florida waters during the winter months, and saw only three musquitos and three fleas. But the most of it substantiates also the original statements of "Al. I. Gator," regarding the size and multiplicity of these pests, but as no new facts are adduced, we shall spare our readers a further discussion of the question. It is due to "Al. I. Gator," our very reliable correspondent, to state that the evidence submitted would seem to fully prove that the whole has not yet been told concerning the insect pests of South-west Florida. The torment there inflicted, especially upon new comers, by musquitos and sand flies, is almost unendurable. It is no mercy to a man to allow him to go there unprepared for this factor in existence. Better should the Florida visitor or immigrant understand that he must be prepared to encounter the pests, so that he may be forearmed with his nets and his fumigators, or at all events nerved to endure the suffering until he shall have become poisoned into indifference. For it is a well-known fact that a person's blood may become so thoroughly inoculated with the virus that the insects trouble him comparately little. A stranger always suffers where a native or naturalized inhabitant placidly endures the bleeding.

The man who goes to Florida may make up his mind beforehand to undergo annoyance and discomfort of many kinds and degrees. The people who picture any land as an Utopia, free from all ills, are the people—ten chances to one—who have land to sell or rooms to let, or boats to hire. That is the rule the world over, and land speculation is much like any other kind of business in the long run. The end will be more satisfactory to all concerned if the representations made by agents approximate the truth. The individual Florida landowner and the State Board of Immigration will fare better eventually if these representations held out for the prospective immigrant are truthful and realized when the immigrant appears upon the scene. FOREST AND STREAM claims to have done a very important service to Florida in picturing to its readers the many sporting and other inducements of the State. But we do not belive it to be just to our subscribers to set forth any imaginary excellencies, nor to cover up any really serious annoyances there to be encountered. There are Florida musquitos, millions of them; and Florida sand flies, billions of them; and Florida weevils, trillions of them; and Florida ants, quadrillions of them; and Florida fleas, quintillions of them, and lots of other Florida things, lots of millions of them; and if any man doubts us, let him go and look around for himself. If any man or any board of men can find a way of abolishing these creatures by denying their existence, Florida would be an excellent place to experiment on; and the FOREST AND STREAM is ready at any time to publish such an exorcising denial.

CARRIER PIGEONS AS PHYSICIANS' MESSENGERS.—Mr. F. C. Brown, of Framingham, Mass, writing apropos of our suggestion that carrier pigeons be employed as messengers on the frontier, calls attention to a novel use of the bird as described by an English physician, Dr. H. J. Philpot, in the London *Daily Telegraph*:—

My *modus operandi* is simply this: I take out half a dozen birds, massed together in a small basket, with me on my rounds, and when I have seen my patient, no matter at what distance from home, I write my prescription on a small piece of tissue paper, and having wound it round the shank of the bird's leg I gently throw the carrier up into the air. In a few minutes it reaches home, and having been shut up fasting since the previous evening, without much delay it enters the trap cage connected with its loft, where it is at once caught by my gardener or dispenser, who knows pretty well the time for its arrival, and relieves it of its despatches. The medicine is immediately prepared and sent off by the messenger, who is thus saved several hours of waiting, and I am enabled to complete my morning round of visits. Should any patient be very ill, and I am desirous of having an early report of him or her next morning, I leave a bird to bring me the tidings. A short time since I took out with me six pairs of birds. I sent a pair of them off from each village I had occasion to visit, every other one bearing a prescription. Upon my return I found all the prescriptions arranged on my desk by my dispenser, who had already made up the medicines.

FOREST AND STREAM ABROAD.—It is coincident evidence of the wide-spread popularity of FOREST AND STREAM that we should receive and print on the same week communications from three foreign countries as wide apart as Mexico, England and India. See the columns of our last issue. FOREST AND STREAM is now mailed from this office to 101 foreign post-offices, included in 32 different countries.

WHAT AN OLD EDITOR SAYS.—The following quaint paragraph is from Colonel Alex. Mosceley, the veteran editor of the Richmond *Whig*, a journal started in 1824, and now one of the oldest in the country. The Colonel is not as young as he was fifty or a hundred years ago, but he seems to have the "same old fire" he used to have; and we have no doubt if he were provided with the marvellous outfit which he seems so much to covet, he would give younger sportsmen a racket which would be hard to beat:—

I hope FOREST AND STREAM is flourishing according to its merits. I read your lucubrations and those of your correspondents with delight and edification. I then ponder the advertisements, by no means the least attractive columns. They fill me with wonder and admiration. The genius, taste and skill employed for the comfort of the sportsman are marvellous. I determine within myself: "If I ever get a fortune I'm bound for New York—for Conroy's combination bamboo rod; for Abbey & Imbrie's raist gut and reels, little and big, and the smaller the better, for I have never seen one too small for my taste; for Simmons's suit and corduroy suit; for a waterproof cape not larger than a pocket-handkerchief; for Quebec moccasins up to the knee; for a purse net for minnows; for a pocket hammock and a Haversack boat." No! I never expect to shoot a gun again. I could not be content without a W. & C. Scott's hammerless No. 12 breech-loader and a W. Greener "Gun of the future," and indefinite quantities of rubber goods and one or two steamboats full of setters, pointers, leonines, etc. The imagination is a fruitful source of happiness, and by the aid of your advertisements I fancy myself in possession of these inestimable blessings. A. MOSELEY.

—One evidence of increasing prosperity at the South is the growing circulation of the FOREST AND STREAM in that section. The numerous contributions of Southern writers constitute a valuable addition to sporting literature. Before the war a majority of the most engaging contributors to the *Spirit of the Times*, the only gentleman sportsman's organ of that period, were Southern men. We are glad to see them entering the field again. By a coincidence, all the literary articles in a recent issue of FOREST AND STREAM were from the South. One sketch in this week's issue, it will be remarked, is from the pen of a Southern gentleman who is a prominent contributor to the English sporting journals.

GAME PROTECTION.

STRIPED BASS.—The law of this State provides that no striped bass weighing less than half a pound can be caught, killed or exposed for sale; the act of catching or having in possession being a misdemeanor liable to a penalty of $10 for each fish. This will destroy the sport of hundreds of local anglers who have been wont in time past to haul in the fingerlings.

But there is still a question here; whether after all, the destruction of the small fish is not of minor importance, and whether a statute prohibiting the capture of fish over one-half pound in weight would not further the intent of the law. It is the rule among breeders of live stock to kill the young animals which have not yet arrived at maturity. They do not destroy the stock from which they can breed. The same principle holds good with the fish. These mature individuals are ready to spawn; the fingerlings will not spawn for several years. By the destruction of a full-grown fish great numbers of fry are destroyed as well. Why are the recognized principles which hold good elsewhere not in force here?

MICHIGAN.—The residents of Alpina County complain of the inroads each autumn, of great squads of Indians from the northern part of the State, who slaughter hundreds of deer for their skins, leaving the carcasses to rot. The Alpina Indians are reported to be law abiding, and opposed to their marauding neighbors.

—In some parts of Queens County, L. I., the game law notices are posted so high up that gunners have to climb the tree to read them. We suggest to the game societies and game wardens that the days of giants are past. And no matter how well meaning a man of ordinary stature may be, he cannot be expected either to shin up the trunk of a tree to get at the notice, or to carry a telescope to read it from the ground.

ANOTHER BIRD FOR AMERICA.—*Editor Forest and Stream:*—Mr. Harvie Brown, in a little brochure recently published in Edinburg, gives quite an exhaustive account of the extermination of the capercailzie, one of the greatest of British game birds, and its subsequent reintroduction throughout a portion of its former domain. To the sportsman in Sweden or among the Tyrols the capercailzie is well known and esteemed as one of the gamest of birds, not only on account of its immense size, but for the skill and caution requisite in its pursuit. The owners and leesers of preserves in Scotland are to be congratulated for their perseverance in following up the matter until the bird has become finally domiciled again in the country.

From what I know and can learn of the capercailzie and its habits I am inclined to believe that it would thrive and multiply in our great Maine woods or in the Michigan pineries. Are not some of our wealthy sportsmen's associations enterprising enough to try the experiment? Live birds could no doubt be procured from Sweden through the friendly services of some of our consuls. The capercailzie is a much wilder bird than our wild turkey, and would require no more protection.

G. M. FAIRCHILD, JR.

The success of the migratory quail importation will doubtless lead to experiments with other birds.

MORE ADIRONDACK DEER HOUNDING.—*Brookline, Mass., Nov. 6th.—Editor Forest and Stream:*—In your issue of Oct. 30th an article on Adirondack deer hounding struck my attention, in which mention was made of the fact that thirteen deer were hounded to death a few weeks since by a party of four residents of New York city, with two guides and nine dogs. As cumulative evidence of the wholesale destruction of deer in the Adirondacks may have the effect of inducing more stringent legislation for the prevention of such butchery, let me add another score of thirteen deer driven into the ponds and killed by a small party camping out on the Upper Saranac Lake, with guides and dogs, within a month or so, in a hunt of one week. Four of them were shot by a young man who never hunted before last August. If the extermination of deer in the north woods is what is wanted, the present law seems to afford every facility, and I happen to know that many of the hotels in Franklin County are supplied with fresh venison twelve months in the year. I hope that you will continue to urge upon the Legislature the necessity of devising some way to prevent the wasteful, needless slaughter of deer in such manner as above mentioned. C. T. DUNCKLEE.

The Rifle.

MAYNARD RIFLE SHELLS.—*Le Roy, N. Y., Oct. 27th.*—I have used the rifle on game and at the target for over twenty years, and in that time have fired over 10,000 shots. I at one time owned a breech-loader of the Ballard pattern, cal. .40, using the everlasting shell. The shells would expand and give me trouble in spite of all I could do. After a deal of trouble and fussing I gave up trying to load or use the shells, and sold the gun.

I then procured a Maynard, 26-inch, cal. 35, 7½ pounds weight. The shells that came with this gun did not expand. But I gave them no credit for this, for they held but 30 grains of powder, and this small charge would not be likely to expand them any to speak of.

For fine off-hand practice at from 100 to 300 yards this gun was all that I could ask, and for small game it was good; but if I were to purchase another .35 cal. I would have it chambered for 40 instead of 30 grains of powder, and use a 30-inch barrel instead of 26-inch.

Last fall I had an opportunity to go to the far West and try my hand in that wild section upon such game as might turn up. As I had no desire to face a grizzly with my little .35. I procured from the Massachusetts Arms Company one of their new model extra heavy .50 cal. Maynard rifle, barrel 30-inch, chambered for 100 grains powder, and using an expansion ball of 330 grains and a solid ball of 400 grains. I now expected to have trouble with the shells, for I was sure that 100 grains of Hazard's FC powder would expand them. But after a most thorough trial I came to the conclusion that they fitted the chamber of the gun so nice and even that they could expand. But even this gun was not perfect; it had a mulish disposition to kick, but thanks to the butt-plate, which was in shape like that on a shot-gun, I escaped injury. "C. L. J." will please take notice of the shape of the butt-plate. This gun weighed over 9½ pounds, and I packed over many hundred miles of mountain and plain. It was sure death to even the largest game. Out of twenty-seven chances on deer I bagged twenty-two; thirteen out of the twenty-two were running shots, and but nine of the whole number received a second shot. Fourteen buffaloes and three grizzly bears, with now and then an antelope and two big horns, made up the bag. One of the bears, a huge male, received three shots in all; the others two apiece.

Something like three weeks ago I procured a third rifle barrel for my Maynard; it is a 24-inch, .22 cal. Gallary gun, and I expect to have some fine sport with it the coming season now that I am again settled in Western New York.

Those who wish to use a .40 or .44 cal. will find the Maynard arms, chambered, for 40, 60 or 70 grains of powder, according to the length of barrel. The .50 cal. use 60 to 100 grains, but for large game give me plenty of powder—at least 100 grains. Now I do not believe the Maynard to be the only good gun in this country; but one thing is sure, they do not expand and bother.

SUBSCRIBER.

THE SHELL DIFFICULTY.—I have read the communications of "Bexar" and "C. L. J." in FOREST AND STREAM concerning the everlasting rifle shell, and have looked over this week's FOREST AND STREAM expecting that those interested would have something to say regarding the difficulty complained of, but find nothing. I will, therefore, venture to suggest that probably the expansion complained of was caused by using a too fine and quick powder. The Winchester Arms Co. say in their catalogue:—

"For powder to be used in rifle cartridges containing fifty to eighty-five grains, we recommend the following brands and sizes of grain as giving the best results: American Powder Co.'s 'Dead Shot, F. G.'; Hazard Powder Co.'s 'Sea Shooting, F. G.'; E. I. Dupont & Co's 'Dupont Rifle, F. F. G.'; Oriental Powder Mills' 'Western Sporting, F. G.'; Laflin & Rand Powder Co.'s 'Orange Rifle, F. G.'; Austin Powder Co.'s 'Rifle Powder, F. F. G.' In rifle cartridges containing from twenty-five to fifty grains, use one size smaller of the same brands.

In pistol cartridges twe sizes smaller of the above brands will give the best results. Where the powder is to be compressed in the shell, U. S. Government musket powder is especially recommended for cartridges containing from fifty to eighty-five grains. In such cartridges none of the high grades of powder should be used; we refer to such brands as Hazard's Electric, Dupont's Diamond Grain, etc.; these powders (most excellent for use in shot guns) owe their quick burning properties to their peculiar manufacture; they are not hard pressed powders, and when compressed in a cartridge shell they cake behind the bullet more than the harder pressed brands, and give high initial pressure, without greatly increased velocity and very irregular shooting."

They should have added, "besides frequently causing the shells to expand and burst, making them difficult to extract, etc." I venture the assertion that there is no shell made that will shoot fifty or more grains Orange Lightning, No. 4, or Electric, No. 3, repeatedly without such expansion as will cause trouble. Such charges would probably burst a majority of the rim fire shells at the first fire, and cause decidedly more unpleasantness than that complained of by these gentlemen now.

"C. L. J." has a great deal of advice to offer which is rather amusing. He tells us "not to use bullets patched with paper in breech-loading rifles; they won't do." We are also informed that "this upsetting business of a loose ball is all bosh." Perhaps it is, but our long and short range riflemen manage to run up some pretty fair scores with these same "loose starting bullets."

Most riflemen after reading "C. L. J.'s" communication will agree, I think, that there are several things about rifle shooting for "C. L. J." to learn before he is competent to write on the subject in the dictatorial strain he has seen fit to adopt. RABB.

EVERYBODY'S MATCH.—The Everybody's Match, in which everybody among the riflemen has been interested, closes at Conlin's Gallery Nov. 20th. There are seven prizes, and anybody can enter at any time, and as many times as he pleases.

CONNECTICUT—*Collinsville, Oct. 29th.*—Canton Rod and Gun Club, Riverside Range.—Practice meeting at 200 yards, off hand; 3 pounds pull; 10 shots:—

	Mass.	*Creed.*
Hull	10 10 9 12 10 11 10 11 11 10—104	44
Bidwell	10 11 10 6 11 11 11 12 8 11—101	45
Laubenstein	11 9 9 11 9 9 11 11 11 9—100	45
Marks	11 10 10 10 9 6 8 9 10 11—94	41
Lewis	7 11 9 7 5 8 11 11 12 11—92	44
Fancher	11 8 10 4 9 9 11 8 9 12—91	42
Andrews	8 10 10 10 6 9 11 8 10 9—91	40

NEW YORK VS. SOUTH BROOKLYN.—The New York Rifle Club shot a friendly return match with the South Brooklyn Rifle Club at Brinton Range, Wednesday, Nov. 5th. The day was a favorable one for this time of the year, with the wind pretty steady from 11 o'clock. The following are the scores:—

NEW YORK RIFLE CLUB.

Names	*Tl.*
E. T. Davis	5 5 4 4 5 5 5 5 5 5—48
Dr. Maltby	4 4 4 5 5 5 4 5 4 4—43
Jas. S. Conlin, Captain	4 4 4 3 5 4 4 5 4 4—42
A. McInness	4 4 4 4 4 4 3 5 4 4—40
N. O'Donnell	4 4 4 4 4 4 4 3 4 4—39
J. W. Mangam	3 5 4 3 4 4 4 4 4 4—39
Wm. H. Dunlap	5 4 3 3 4 4 4 4 4 4—39
Total	289

SOUTH BROOKLYN RIFLE CLUB.

Dr. G. W. Welty	4 5 5 4 4 4 4 4 4 5—43
J. B. Hazleton	5 4 4 4 4 5 5 4 4 4—43
Jas. H. Roche, Captain	4 4 4 4 4 4 4 5 4 5—42
A. H. Anderson	4 4 4 4 4 4 3 4 4 4—41
D. Trotter	3 5 4 4 4 4 4 4 4 4—40
A. W. Ford	5 4 5 4 3 4 4 4 4 3—40
J. Dunne	3 4 4 4 2 4 3 3 5 5—37
Total	287

Mr. E. T. Davis' score of 48 is the best on record in a team match, and as he was one of the last to shoot, he saved the match for the New York Club. It was made with a Sharps Borchard rifle, which was made to order for Mr. Conlin. It is a .40 cal. Swiss stock, shooting short shell, 60 grains powder, and 285 grains patched bullet, 28-inch barrel. At the conclusion of the match the two clubs convened about the festal board, where fun, frolic and speech held high carnival. Among the guests and speechmakers was Mayor Bennett, of Elizabethtown.

PENNSYLVANIA—*Meadville, Nov. 8th.*—Mr. Jacob C. Worst won the beautiful gold badge last Saturday evening at the match of the A. E. T. S. Shooting Gallery, making forty-six bull's-eyes out of forty-eight at 500 yards. He is counted one of the best shots in the country.

AN ECHO OF MAUCH CHUNK.—The New York Schuetzen Corps held a regular monthly meeting Thursday, the 6th inst., Major George Acry presiding, in the absence of Capt. D. G. Yuengling. After transacting the business, a committee was appointed and directed to receive and introduce to the meeting Capt. John J. Diehl and some of his boys. This ceremony over, Major Acry presented Capt. Diehl, in an eloquent speech, with a handsome gold medal, the latter having done the best shooting of all the guests at Mauch Chunk. Mr. Diehl answered in a few appropriate remarks, and drank to the welfare of the New York Schuetzen Corps, and the Schuetzens drank several toasts, until they had nothing more left.

COLUMBIA RIFLE ASSOCIATION.—*Washington, D. C.*—The executive committee of the Columbia Rifle Association has determined to continue the shooting on the Bennings' range every Saturday afternoon until January 1st next. A short range and long range contest will be called by the range officer at 1:30 P.M. every Saturday, weather permitting, and if two contestants enter in either match the contest is to go on; the short range match to consist of ten shots at 200 yards and ten at 300 yards, and the long range match to consist of fifteen shots at each distance of 800, 900, and 1,000 yards.

On January 1st, next, the contestant in each match having the highest three scores to be declared the winner of a club badge, to be struck in the new die prepared by Tiffany for the association.

On Saturday afternoon last, the 8th inst., the first contest in this series of matches was shot, resulting as follows:—

SHORT RANGE.

	200 Yds.	*300 Yds.*	*Total*
J. B. Burnside	41	38	79
A. A. Adee	39	35	74
H. Illman	29	28	57

LONG RANGE.

	800 Yds.	*900 Yds.*	*1,000 Yds.*	*Total.*
Col. J. O. P. Burnside	74	72	61	207
P. J. Lauritzen	70	71	65	206

General John Coughlin acted as range officer, and also scored at the long range, while Dr. John Parsons acted as scorer at the short ranges.

The afternoon was fine, and the conditions most excellent for long range work, and the scores would undoubtedly have run high in the aggregates for long range had it not grown so late as to be quite dark while shooting the 1,000 yards range.

COLUMBIA RANGE.—The "Everybody's Match," which was shot at the Columbia Range last week, was, notwithstanding the very unpleasant weather, a great success, there being no less than 450 entries and reëntries. The match was open to everybody; weapon any rifle (military rifles to be allowed two points); distance 200 yards; seven shots; position standing; entrance fee 50 cents. The first prize was a handsome gold champion badge, presented by the Forest and Stream Publishing Company, and was won by Col. Geo. E. P. Howard, of Newark, who made 33 points with a military rifle, which, with his allowance, made a score of 35 out of a possible 35. About eighty other prizes, consisting of miscellaneous articles, ranging in value from $3 to $50, was offered to the competitors.

The following are the names and scores of the winners of prizes in their order:—

Col. E. P. Howard	35	H. O. Donnell	29
F. H. Holton	33	D. L. Banks	29
C. J. Fales	33	W. H. Sandford	29
W. M. Farrow	33	Chas. Barr	29
C. G. Zettler	33	J. S. Caso	29
N. D. Ward	33	B. H. Hutchinson	29
Louis Quanchi	33	A. G. Holcombe	29
C. A. Peake	33	W. O. Weatherbee	28
A. Hubbell	32	F. Faburins	28
Thos. Fitts	32	L. H. Grnf	28
H. Fisher	32	Lieut. C. Cable	28
Col. B. F. Hart	32	W. Clarke	28
E. C. Tayutor	32	S. Simonds	28
W. Cochrane	32	H. T. Farrell	28
Capt. A. Anderson	32	Capt. W. P. Wood	28
I. F. Weschusen	32	H. W. Gourley	27
A. McInness	32	T. P. White	27
I. K. Bailey	32	W. H. Dunlap	27
A. G. Hellwig	31	E. T. Davis	27
Geo. Joliver	31	A. B. Van Husen	27
A. W. Hooper	31	S. Parish	27
I. W. Mangam	31	H. Downey	27
Wm. Robertson	31	P. H. Richardson	27
C. A. Peake	31	C. F. Bennett	26
T. J. Dolan	31	D. A. Davis	26
L. H. Greve	31	Jas. T. Dempster	26
I. L. Paulding	31	J. R. Byrd	26
I. M. Townsend	31	T. May	25
M. H. Kelsey	31	R. D. McLintock	25
R. Simpson	30	J. W. Stewart	25
I. S. Conlan	30	E. Haddenhorst	25
M. M. Fleisig	30	H. Van Schon	25
Jas. H. Symes	30	A. M. Murray	25
J. L. Morse	30	J. J. De Mott	25
Theo. W. Griffith	30	L. Kayser	22
S. Benzing	30	A. T. Clark	21
S. W. Sibley	29	D. J. Winklemann	21
Oscar Terry	29		

The above winners will receive their prizes on the range on Saturday, 15th inst., at 2 P.M.

Game Bag and Gun.

GAME IN SEASON FOR NOVEMBER.

Moose, *Alce Americana.*	Wild turkey, *Meleagris gallopavo.*
Caribou, *Rangifer caribou.*	Pinnated grouse or prairie chickens, *Cupidonia cupido.*
Elk or Wapiti, *Cervus canadiensis.*	Ruffed grouse or pheasant, *Bonasa umbellus.*
Red or Va. deer, *C. virginianus.*	Quail or partridge, *Ortyx virginianus.*
Squirrels, red, black and gray.	
Hares, brown and gray.	
Reed or rice bird, *Dolichonyx oryzivorus.*	

Swans, Brant, Wild Ducks, Geese, &c.

☞This table does not apply to all the States. It is meant to represent the game which is generally in season at this time. State regulations may prohibit the killing of some species of game here mentioned.

THE BORE OF GUNS.—When we were very young a certain good doctor, who was active in the town educational matters, used to tell the boys never to use a word of which they did not know the meaning. Very good in principle, and a safe rule to follow where practicable. But the truth is that we are constantly employing common terms about common things of which we do not know the significance. There is that word "bore," for example. A man says he has a 10-bore gun. Ask him what 10-bore means, and he is at a loss to explain. A correspondent has been investigating this point, and has arrived at the true solution. We doubt not that there was some satisfaction in bringing the derivation to bag: "I have interested myself a good deal trying to find out on what the calibres of shot guns were based, but could find no one (till quite recently) who could tell me anything about it. I finally asked a gunsmith, who told me he had often thought of the same thing, but had never studied it out; so we, I think, have solved it together. The old style of measuring the size of a rifle was based on the number of spherical balls it carried to the pound, and I think the calibres of shot guns is expressed in the same way—that is, a 12-bore gun will carry a ball twelve of which will weigh a pound, a 10-bore ten balls, and so on."

—A number of prominent sportsmen from St. Louis, Kansas City, and St. Charles, Mo., leave St. Louis on the 16th inst. for a month's hunt in Texas. The party go to Atlanta, a small station on the Texas Pacific Railroad; and some twelve miles from this station on the Sulphur River deer, wild turkey, duck, and geese are found in large numbers, as well as quail, snipe, and some black bear and panther. Among the gentlemen that will join the party the FOREST AND STREAM is pleased to mention Mr. L. D. Dozier and Mr. McManus, of St. Louis; Mr. James H. McGee, W. H. McDearman and J. E. Caven, of Kansas City; Capt. Fred. Dozier, and the McDearman brothers, of St. Charles.

"WOOD DUCK'S" LOADING BOARD.—In reply to Frank Forester's inquiry about the loading board, our correspondent, "Wood Duck," of Montreal, obligingly writes as follows:—

In the first place I went to a furniture manufacturer, where I could get the material and where they had the tools, for the holes ought to be made with a boring machine, so as to have them perfectly true, which is almost impossible if done with an ordinary brace and bit. I got out a good, solid piece of black walnut, seventeen inches long, six and a half inches wide, and one and a half inches thick; then another piece, same size, but three-quarters of an inch in thickness. These were fitted together by putting two dowels, or pins, at each end, about four inches apart. I then took the thickest piece, and marked it out, as in the accompanying sketch, so as to give me five rows of holes, with ten in each row, thus giving me space for fifty shells. I then took it to the boring machine, put in a bit exactly the size of the rim of the shell, and set the machine so that it would bore just the depth of the thickness of the rim, or about one-sixteenth and one-thirty-second of an inch.

This will allow the shell to set down flush with the face of the board when the shell is in the hole. After boring these I took out the bit, and inserted another, exactly the size of the shell, and bored completely through the board. I then took the thinner board and bored that to correspond with the other, using a quarter-inch bit, so that when the two boards were fitted together, and the shells put in, preparatory to loading, the small hole in the thin, or under board, was directly under the cap on the shell, thus preventing the possibility of any accident from exploding the cap in loading. After getting the board made I put it into a tank of boiled linseed oil, and let it soak for several days, until the pores were completely filled, then took it out and carefully wiped it as dry as possible; then set it aside for a few days, and after it became completely dry took some fine sand-paper, rubbed it down smooth, and gave it two coats of shellac varnish. The board is as solid and hard as a bone, and will never warp or split.

This is the way I made *my* loading board, but, of course, it is not necessary for everyone to follow out the above directions to the letter, as the oiling and varnishing may be left out. The sketch I send enclosed will speak for itself.

I have been engaged for a few days loading shells and getting my shooting tackle ready for a trip up the Ottawa River and also the upper part of Lake St. Francis after duck, next week.

WHERE THE BIRDS FLY.—The country all through northern Minnesota abounds in lakes and lakelets, from an eighth of a mile to ten and twelve miles in length, and there are said to be ten thousand of them in the State, and a large proportion of them are said to abound with fish and game. Those who have traveled through it tell me it is a perfect paradise for sportsmen, and, indeed, large parties of gentlemen from other States, as well as from Europe and the Provinces, visit this section annually in pursuit of game and sport, and health, as consequent upon such pursuits. The first evening I arrived one of these sportsmen came into the hotel in the evening, followed by two men, carrying strings of ducks, but with a few prairie pheasants, chickens and partridges, and a few woodcock; but the great weight of the game—of which there must have been over two hundred and fifty birds—were of the Mallard duck, with a few redheads and canvasbacks, and here and there sprinkled through the string were a greenwing or a redwing teal or diver. These, as I was informed, were the result of one day's shooting from one gun. The birds are easily reached by those who are experienced in shooting them, and so abundant are they that you can get a brace of splendid Mallards, in prime condition, for thirty cents, or a dozen brace for $2.50.

Such is the report of a Montreal *Herald* correspondent.

MAINE.—*Eustis, Nov. 10th.*—A letter just received from Kennedy Smith, informs me that several parties came to Sim Pond, after ours left, and trouting was excellent till the last of Octboer. Finding that to accommodate his visitors he needed more room he has put up two more log cabins. He now has four in all. Large game is more plenty there than ever before. A man of one of the parties shot a large caribou near the path on his way from the pond to Smith's house; another was shot in the "opening." Bruin is bold, many also, and now and then takes home "good fat mutton."

J. WARREN TUCK.

DOWN THE CONNECTICUT.—*Windsor, Conn., Oct. 27th.*—Have just returned from a nine days' hunting trip down the Connecticut. We left Hartford in two boats, towed by C. M. Spencer's little steamer twelve feet long. There were six of us, with three dogs. Our first night was in camp just below Haddam. Early the next morning squirrel shooting was in order, and several grays were secured, but no birds. After breakfast we loaded up, and started down the river. Ran on to a flock of black ducks, but could get no shot. We ran down to Essex Flats, and hauled up at the lower fish house, which we had permission to occupy. Inside were bunks and tables, and made very comfortable quarters. We pitched our two tents at some distance from the house, so that those who preferred quiet could be accommodated. Several of the party tried the quail shooting, but found the land well posted, and the first discharge of a gun brought out the owners on a race, who ordered us off without ceremony. We tried the ducks and rail on the marsh, but they were not very plenty, the weather being unusually warm. We stayed several days at the fish house, and if we did not have much success it was not our fault.

At last we pulled up stakes, and started up the river again. Made camp just above Chester Landing, just at the ferry. On our trip up we shot a number of rail. Lorillard's yacht passed us and anchored just across from our camp at Chester. A large cove makes in from the river opposite Chester, and affords excellent rail shooting, and judging from the popping of guns, the yachtsmen were having lively times with them. We had the best shooting on the trip at Chester—mostly quail, with a very few woodcock; but the hunting, as a whole, was not a few woodcock; but the hunting, as a whole, was not a success, owing to the hot weather, no doubt. The birds seem scarce on all the river shores. We tramped one day, the thermometer marking 90 deg., and found only two

partridge, which we secured. The land is posted in all directions, and the shooting poor.

We broke camp at Chester, and started for home, making only one more stop—at our first camp below Haddam. Hunted the next forenoon, and found not a bird. Disgusted, we broke camp, and started for Hartford, where we arrived at half-past seven in the evening, having been absent just nine days. Aside from our poor luck at hunting, we had a splendid time, and came back refreshed in body and mind. BALSAM.

NEW JERSEY—*Red Hook, Nov. 11th.*—Arrived home Saturday night; had four days' ducking on one island in Spesurtia Narrows, one mile below the Havre de Grace Flats. F. R. Eyer and self killed 91, and the poorest kind of weather for fowl; six boats on flats killing 100 to 150 per boat. WILD.

West Hoboken, Nov. 5th.—I have just returned from a few day's shoot in Rockland Co., N. Y. Quail are said to be more numerous than for several years, but have been very difficult to find on account of the disagreeable, cold and windy weather, and only small bags have been made so far. Fall woodcock have been more numerous than for several seasons, and fine bags were made. The bulk of the birds left about the 26th of October, and since only stragglers have been shot. Partridges are pretty scarce. Rabbits are quite abundant, but owing to the dry and hard ground only a few have been killed before the hounds. The local hunters have given up hunting for quail and rabbits, and are waiting for a warm, muggy spell.

The Hackensack meadows have yielded a goodly number of snipe and ducks this season. The latter were most numerous in the middle of September, when fine bags were made. Later most ducks kept along the river, where they are hard to approach. Snipe were most plentiful the first half of October, though not in as good condition as in other seasons. Some hang around yet, and three were killed only a day or two ago. If we should have another warm spell a few more birds, in "prime condition," may be looked for. If so, shall report again. JUSTUS.

NEW YORK—*Atlanticville, L. I., Nov. 4th.*—Judge Dailey, Gen. Tracy and Theodore Farrell, Esq., all of Brooklyn, have been at the Halsey House, Atlanticville, L. I., where they had fine sport with the duck and quail. The shooting thus far has been very good, the birds breaking up in small flocks. W. F. H.

Amsterdam, Oct. 31st,—For the past three years there has been a gradual increased interest in an observance of the game laws of the State, and a consequent increase of game through this section, although the Saratoga market, ever ready to purchase game out of season, has a strong influence to tempt some who shoot. Partridges have been quite plenty this fall, much more so than for several years preceding. Woodcock have been, and still are shot in goodly numbers. These two constitute our only game birds, but we hope soon to see something of our newly introduced migratory quail. Thus far we have watched in vain, but hope soon to find them through the whole length of the land. J. H. S.

PENNSYLVANIA.—The deer shooting in Pike County is reported to be better this fall than for a period of twenty-five years before. This is due to the prohibitory law which has been in force for three years.

QUAIL SHOOTING ON THE SWITCH-BACK.—The clearings along the line of the famous Switch-Back Railroad, of the Lehigh Valley, Pa., are favorite resorts of pheasants. Messrs. J. S. Wibirt, T. L. Mumford, Superintendent of the road, J. R. Leisenring and L. E. Wills, all enthusiastic sportsmen, recently made a sporting trip over the road on a truck. They reported birds plenty, scenery grand, and the sport altogether delightful.

Meadville, Nov. 10th.—There is plenty of game in this section, such as rabbits, pheasants, squirrel, ducks, geese, etc. H. D.

GAME AND GOLD.—*Ivy Bluff Gold Mine, Nash Co., N. C., Oct. 3d—Editor Forest and Stream:*—If some of your readers desire quiet, with good gunning and fishing, diversified with prospecting for gold, let them come here. Take Wilmington and Weldon Railroad to Rocky Mount, thence to Webb's Mills, and they are on the ground for deer and wild turkey. Last Saturday I saw a sixteen-year-old boy with one old gobbler, and he was as pretty as a basketful of speckled puppies. A little walk in the "piney woods" would soon convince the skeptical that rabbits are in abundance, while a night spent along the Tar River affords fine sport among the 'coons and 'possums. Deer are so plenty that a short time since two jumped into the Portis gold mine; one broke his neck, the other the dogs got. At the Mann gold mine the miners, it is said, are fed on venison. The farmers complain that they can't raise peas, as the deer eat them up in the night. Ducks are coming up the Tar River, to drop down which, these cool and charming mornings, before the "blushing fingers get into old Sol's hair," in a "dug-out" gives an appetite an epicure might envy. As the close season for quail is just ended, a pretty full bag is the result of a forenoon's jaunt, and after dinner one can sit under the shade of the trees covered with the Muscadine grapes, with shot gun in boat, varying the time shooting fox squirrels with fly fishing for chub, perch, pickerel, jack and gar, or along the banks taking snipe, woodcock, etc. No shooting privileges are required, but gentlemen sportsmen are welcomed; and as they will probably enjoy fox hunting, I may say that red foxes are plenty.

OLD NORTH.

GEORGIA.—*Americus, Nov. 1st.*—I have never seen quail (bob-whites) as plentiful—large, fat, plump fellows, all of them. They are to be found mostly in the cotton fields after caterpillars. We have had no frosts yet and the worms are abundant, and the birds go for them in preference to peas. Last week when hunting through a skirt of open woods my dog winded something, and after going some 100 yards came down on, as I thought, a covey of birds. I hitched my horse and walked up for a double shot, but to my surprise, up bounced a full grown turkey. I recovered, however, in time to stop her at twenty yards with a charge of No. 10. Ducks are arriving in small numbers. The ponds are all full of water, and we hope for a large supply of grouse this winter. SHOT.

MISSISSIPPI—*Corinth, Oct. 28th.*—I start for Red Foot Lake in a few days after ducks, with a party of five or six. Some gentlemen from here went to Chickasaw County last week and killed eight turkeys and one deer. They were in camp three days. It has been too hot to shoot much as yet; had no killing frost, and everything green. GUYON.

FLORIDA—*Titusville, Brevard Co., Oct. 27th.* The raft ducks, or little blue bills (*Fulix affinis*) are flying south down Indian River in an endless succession of flocks. They commenced to pass October 23d, two days before a heavy storm, from the N. E. They fly close to the water. Shooters in small boats, with large flocks of decoys, would doubtless have plenty of shooting if anchored in line across the channel. The southern head of Mosquito Lagoon is reported by Judge Nauman to swarm with widgeons, sprigtails, and teal. Orlando Quarterman, the well-known hunter and guide of Banana River, reports the marshes bordering that river to be full of rails.

A local club, at Orlando, Orange Co., Fla., had a shooting match at twelve quails, twenty-one yards rise, from traps a few days ago. Result: Nary quail. The political significance of this is, that the "Shot Gun Policy" is not very booming in Orlando. AL. I. GATOR.

ILLINOIS.—*Farmington, Fulton Co., Nov. 2d.*—Duck shooting in the Illinois River at the famous hunting grounds, twenty five miles below Peoria, has been rather poor so far, owing to the extreme dry fall and low stage of the waters. But with the cold snap of to-day and one inch of snow and ice, we look for the big ducks and some geese for the next three weeks, with Indian summer weather intervening. The forests are now beautiful with the hues of autumn foliage, but a few days will rob them of their charms. The sportsman feels strong and merrily goes forth to renew his vigor. We cannot deny this fact if we would. It is written in his face and constitution.

At Hartisford, Dodge Co,, Wis., six miles south of the outlet of Lake Horican, on Rock River, small duck shooting on a four mile rice pond has been very good all the fall, and large ducks are next in suit there.

MAJ. H. W. MERRILL.

Graham, Oct. 27th.—Quail and duck shooting good this fall. There is excellent sport here with rod and gun. H. N. G.

INDIANA—*Fairland, Oct. 29th.*—Quail shooting pronounced to be good this fall, but the birds are late and weather dry. C. A. W.

Chambly, P. Q., Oct. 24th.—Our woodcock season is on the wane; nearly over; very few birds now; sorry for it, but suppose they must go. On the whole, have had very fair season; more birds than last year, I think. B. W.

OHIO—*Woodstock, Nov. 3d.*—Owing to the dry weather our shooting here is very poor this fall. I was out one day for woodcock, bagged thirteen and one blue-winged teal, and came very near shooting a young man, who thought he would be very smart by sneaking up on me and catching me in the act of shooting quail. It was in a corn field, the stalks about as high as my head. I flushed a bird and held on him as he made a circle to the left quarter, until I got him where I wanted him, and fired. As I took my gun from my face I saw the young man clawing feathers out of his face. I thought sure I had filled his face full of shot, but thanks to a close-shooting gun not a shot touched him. I verily believe the whole charge passed within six inches of his face. T. M. O.

WISCONSIN.—*Baraboo, Nov. 7th.*—The season for deer hunting in our vicinity is close at hand. About two inches of snow will set the ball rolling. The prospect is good. A number have been seen, and few have reached the market. ED. H.

WASHINGTON TERRITORY—*Dayton, Oct. 20th*—I send you by mail to-day some photographic views of the Spokan River at different points. The Spokan River is the outlet of the Cœur d'Alene Lake, the two making the finest fishing ground in the world. Trout will average from one to ten and fifteen pounds. They are very good biters, taking a fly splendidly. I visited this country last summer, and had the finest fishing I ever heard of, many of them taking out one hundred feet of line. Two rods took two hundred fish in about one hour and a half. In the lake they take the finest fish. The commanding officer of Fort Cœur d'Alene told me that several companies had all the fish they wanted for winter use. The mountains here are full of game—deer, bear, elk and panther, while duck, geese, etc., are very plenty at some seasons of the year. Prairie chickens are plenty along all the valleys. When the Northern Pacific Railroad is completed, which will be in a few years, it will open up one of the finest game countries to the Eastern sportsman that can be found on the continent. Then the Eastern and Western sportsman can meet and vie with each other in friendly rivalry. F. M. P.

The photographic views are certainly very fine. The river tumbles through a deep, broken gorge into a placid lake, which is surrounded by landscape whose features are almost pastoral, presenting a combination of rugged grandeur and calm beauty seldom seen in juxtaposition. We have already published a glowing description of this romantic region from the pen of Colonel Aug. K. Egbert, United States Army.

DEER IN CALIFORNIA.—The grape growers in the vicinity of St. Helena, Cal., are much annoyed by the deer which devour the vines. They build high deer-proof fences out there. Venison is cheap out there.

HOW TO USE DITTMAR POWDER.—*New York, Nov. 5th—Editor Forest and Stream:*—In reply to the remarks about the Dittmar powder of Mr. A. Winter in your last number, it may be replied that Mr. Winter has surely had some powder made by one of the former companies, or that his shells were not loaded right. This summer the mills and dry-houses were totally burnt out, and no powder was manufactured for a period of several months. Consequently the supply of the different dealers and consumers was soon exhausted, and, I believe, different old lots were sold which differed from what the powder should be and now is. Since the 1st of September, of this year, the Dittmar Powder Manufacturing Company have put an article on the market which is superior in every respect to any made heretofore. Mr. Dittmar now is in possession of all necessary testing machines; instruments which will show the exact velocity and strength of the powder, as compared with the best brands of black powder; also machines which will show the exact strain any and all powders have on the gun; and I am pleased to say, that my own experiments, which lasted a whole week, showed that the Dittmar has less strain on the gun than the best of black powder, with better pattern and penetration.

Considering that Mr. Dittmar was formerly without any means of telling the respective strength, quickness, etc., of his powder, save by uncertain practical tests, it is a wonder to me that the old powder was ever made as regular as it was. Moreover, Mr. Dittmar sought to overcome the different complaints and make smaller lots to suit the different consumers and dealers, and so of course the different old lots differed materially from each other. However, now he has succeeded, and only makes the powder as it is now on the market.

For breech-loading shot gun, paper shells, wads one size larger than bore and for brass shells, two sizes larger should be used. The same should be well rammed down; I give it one or two raps with a mallet till it is solidly compressed. By firing a few shots, it is easily found how much pressure the powder wants for each particular gun. If not well confined and pressed, the ignition will be too slow for quartering shots; and, if pounded too much, it is liable to scatter too much. After once knowing how, the Dittmar powder is just as easy to load as any other. Grains C and B are only breech-loading shot gun powders: FFF is the only grain for either muzzle-loading shot gun or rifle. This powder must also be confined in shot guns by large thick wads, and well rammed down. In rifles the balls must be well patched, tight-fitting, and pressed down. For breech-loading rifles there is only one grain made, F. Care should be taken that each shell holds the same quantity of powder, which can easily be done by tapping each shell alike, which will settle the powder down. Pack it evenly. Use large tight-fitting bullets, put on powder without "pressing" the same down. No other grain but F should be used in breech-loading rifles.

A great many fall with the Dittmar powder by not following the rules and directions, and loading either of the different grains in either muzzle or breech-loader, shot gun, or rifle. To this reason I also lay the expansion of rifle shells, of which C. J. L., from Willis, Texas, writes in last FOREST AND STREAM, as I have seen the different common U. M. C. central fire rifle shells reloaded hundreds of times without any noticeable expansion, and then to the contrary, almost looking like new. J. VON LENGERKE.

NEW YORK GUN CLUB.—*Bergen Point, N. J., Nov. 8th.*—Second competition for the challenge cup, ten birds; handicap rise; New York Gun Club rules:—

Name.	*Yards.*										*Killed.*
Dr. Wilson	30	1	1	1	1	1	1	1	1	1	10
W. Murphy	28	1	1	1	1	1	1	1	1	1	10
E. Templeton	30	1	1	1	1	1	1	1	1	1	10
Col. Butler	30	0	1	1	1	1	1	1	1	1	9
Col. Armstrong	30	1	1	1	1	1	1	1	0	1	9
E. Salmon	27	0	1	1	0	1	1	1	1	1	8
J. S. Long	26	1	1	0	1	1	1	1	0	1	8
Dexter	30	1	1	1	0	0	0	1	1	1	7
Knowles	30	0	1	0	1	1	1	1	0	1	7

Furs and Trapping.

☞ The very comprehensive article on the Fur Trade and Furs which was comprised in this Department should have been credited to the *World.*

A TRAPPER'S TRAIL.

A TRAPPER'S trail, or line of traps, consists of a line blazed on the trees through the woods along which, at intermediate distances, depending upon circumstances, character of the country, etc., he builds a deadfall, or sets a trap. These lines are generally eight or ten miles in extent, so that they can be gone over, the traps visited, and a return made to camp the same day; though sometimes they reach the distance of thirty or even forty miles; then the trappers have a camp at each end or oftener, (or a sleeping place at least,) with their main camp either at one end or often a short distance from the centre of the line. Sometimes, if the lay of the country, the lakes, water courses, etc., will allow, the line is laid out in circular form, starting from and coming around to the general or main shanty.

The main shanty is generaly constructed of logs dovetailed or notched in at the ends, is built commodiously, sufficient to accommodate three or four persons, fitted up with bunks for sleeping, a fire-place in the middle, if there is no stone chimney at the end, is well chinked with mud and moss between the logs, and a tight roof made from split cedar slabs, and bark. The other or temporary shanties are easily thrown up by driving in the ground a couple of forked saplings six or eight feet apart, across which is placed a pole two or three inches in diameter, and from this slabs of cedar, or any other tree that splits easy, of twelve or forteen feet in length, are laid to the ground, and these overlaid at the seams with bark. This forms the roof; the sides may be constructed in the same way, or with poles. This makes a comfortable house of two sides and a sloping roof. The fire should be built against a couple of hardwood logs (maple is good) placed one above the other and kept in their position by a couple of strong stakes braced at the back. Hemlock or most any evergreen makes the best andirons, as they burn less easy. A fire place constructed in this way will reflect the heat strongly into the shanty.

When going over the line a trail or drag is drawn by the trapper. This may consist of a deer's head or leg or

paunch, or anything fleshy that will leave a scent, so that animals in their roamings about, on crossing this trail will be attracted by the smell and follow it up to the trap. The trappers manufacture a scent for this purpose by placing small fish in a bottle and letting them decay in the sun until a strong oil is formed that when rubbed on the drag, and a few drops placed on the bait or anywhere in the back part of the fall, will prove an attraction irresistable to a mink. For wolf or fox it is better to mix with the above a little assafœtida and oil of anise. The trappers generaly go two together (rarely more, as two can do the work, and the profits are greater,) sometime in September or early October, and having found a suitable region for trapping, built their shanty or shanties, and got in their supplies, they blaze their line and construct their deadfalls to locate their traps. This takes them until about November, when the fur begins to become good. The trapping season last until about April, though otter skins are good, I believe, somewhat longer. The most favorable time for trapping is in the fall and early spring. The months of November and March are the best. Of course it varies in different seasons.

The best bait for mink is any part of a fish, even the head is good, or a piece of muskrat flesh or a bird. The fisher the same; for marten or sable any part of a fowl, a duck or partridge head or a red squirrel, or a hare's leg, in fact they will take about the same thing.

I have but little faith in deadfalls, and few trappers now-a-days, I believe, rely on them to any extent. They use them sometimes of course on the mountains when they are short of traps, but I would no more think of going on a fur expedition without a set of steel traps of different sizes, than I would of going without my gun or axe. Deadfalls will only operate (and then not always successfully) with mink, marten and sable; neither otter, beaver or fox, and rarely a wolf, will enter them. Fisher and wild cat are sometimes caught in them, but oftener they tear them down and carry off the bait, and also the marten or any smaller animal you may have previously secured. A good steel trap properly set and attached to the right kind of a spring pole, is much neater and surer, as it secures your prize from the devouring propensities of the larger animals.

For otter, the trap should be set on their slides either at the top or, as I prefer, at the bottom, about two or three inches under water. It leaves no scent there and will drown your animal before he has time to perform any act of amputation. As for the other animals you can generally find a hole in a stump or log or in the bank of sufficient depth to place the bait, then set the trap at the opening lightly covered. A first rate place to set a trap for fox, wolf or wild cat is near where you have killed a deer. It should be thoroughly though lightly covered over with earth, rotten wood or leaves. Traps should be thoroughly and often smoked or rubbed with fresh blood to remove the smell of the human hand, and it pays a trapper to always wear a buckskin glove when handling these traps.

Along the watercourses, lakes, etc., the trapper looks for mink, otter and beaver; the fisher, marten and sable are found only in the heavily wooded and hilly regions. Wolves range all over. It is very difficult to catch an otter in a deadfall, as they rarely touch bait.

The life of a trapper is a life of hard work, with a rough time, not a little interspersed, to be sure, with incidents of adventure, often of danger, in their encounters with the larger animals, the bear, the lynx, and more especialy the catamount, or the American panther, but fortunately the latter is not often met with now even in our wilder regions. JACOBSTAFF.

THE SKUNK-SKIN HARVEST IN INDIANA.—While strolling along Pearl street yesterday afternoon, between Meridian and Illinois streets, a *News* reporter, in a dusty cob-webby window, saw a piece of cardboard, four or five inches square, in which was written; "Pure skunk oil and coon oil." A moth-eaten, weather-beaten coon skin hung above the door, which the reporter entered, following his nose, which immediately put itself on the defensive. "What do people buy skunk oil for?" said the proprietor, in his answer repeating the question. "Why they buy it for rheumatism, and, I say it never fails to cure."

The reporter desired to see some pure skunk oil, having heard that there were many worthless imitations abroad, and was shown a pint flask of an oily liquid of the color of linseed oil. He applied his fingers to the cork, and his nose rose in apprehension. The fluid had no more and no worse odor than lard oil, and the alarmed organ came down again. "We sell it to all sorts of people, white, black and yellow, the richest and the poorest," the proprietor continued. "This oil we get from the skins—that's as much of the skunk as I get—and the yield is usualy about four ounces to the skin. Sometimes we get half a pint, and sometimes, though seldom, as much as a pint to a pelt. There's not more than one skin in a thousand that'll yield a pint of skunk oil. The animal is thin in flesh in summer, but very fat in winter. Skunk hides last year, the best quality, were worth from $1.75 to $2 each. They will not be worth more than half as much this year. I handled 20,000 skunk skins last year, nearly all of which were caught in Indiana. The animal abounds in Southern and Central Indiana. There are a few in this country, not many. The skins have been worth as much as $3.50, but they will never see that price again—not very soon at least."

"How are the skins classed?"

"Well, first comes the A No. 1 star skunk, selling at $1.75 last winter. This skunk has a star-shaped white spot on top of the head, and no more white about him. The next quality, $1.35, we call the 'short stripe.' This has a white stripe running from the white star along each side of the head down the neck to the shoulder. The next is the 'narrow stripe.' This has a long, narrow, white streak that runs along each side of the backbone (which has a black stripe) to the root of the tail. This sort of skin brought forty cents. The fourth grade has a broad white stripe on each side, the entire length of the body, three inches or more in width, and is worth only twenty cents."

"Is there any danger of the skunk crop in this State becoming exhausted?"

"Not at all. A skunk will have from three to seven young at a litter—usually about five. I've been a fur buyer for forty-two years, and there are more skunks in this State now than ever there was. There is a prejudice against the animal which makes it necessary to sell the fur to the ladies, who wear it under several pretty *aliases*, among which are 'flitch' and 'American sable.' Besides being made into muffs and trimmings, skunk skins are extensively used in making fine carriage robes."

Mr. Lewark said there hadn't been a skunk in the house for months, the trade only continuing through the winter, but the mephitic odor, like the scent of the roses round the shattered vase, clung lovingly about the place during the entire year.—*Indianapolis News.*

HUNTING ON THE MIRAMICHI.—Having sent out two men about the 6th of August last to explore for beaver and endeavor to secure live ones, and also to prepare for the winter's trapping on Clear Water and other streams, branches of the Southwest Miramichi in the Province of New Brunswick, I learned from them on their return to the City of Fredericton, a few days since, preparatory to commencing actual operations, that they had found fifteen or twenty beaver-dams at present occupied by these animals, each dam holding about two houses. They had set traps with the expectation of securing some small beavers alive, but only succeeded in catching six old animals, which as they were unmanageable they had to kill. Only the young beaver can be tamed with any satisfaction, the older ones being dangerous to tamper with, as their bite produces a fearful wound. The hunters abandoned their trap-setting for the present, as they found that they were in danger of frightening away the beavers from their generally incomplete dams and houses, which are seldom in a thorough state of repair until the last of this month.

The hunters report large quantities of game, such as bear, moose, caribou, otter, mink and sable. When travelling about thirty miles up Clear Water, at a dead water stream near the upper lake, these hunters suddenly came on the dead body of a young moose, which had been killed by some wild beast the day before. It was lying in the woods in sight of the stream; its skin was torn and scratched in many places, and a hole was eaten in one side. The moss and bushes for several yards around where the body lay were torn to pieces and scattered around. There had evidently been a fearful struggle between the parent moose and the bear, which had ended in the discomfiture of the former. About 200 yards below where these persons found the body of the young moose they saw a female of that species of animal feeding on the lily leaves in the dead water. This they supposed to be the mother of the dead calf, which still, with a mother's affection, lingered about the dead body of the slain offspring. HENRY BRAITHWAITE.

Fredericton, Oct. 13th.

Rational Pastimes.

—Capt. Daft and his team of English cricketers arrived safely at Liverpool on Nov. 3d, after a very delightful passage.

DAFT'S ENGLISH CRICKETERS VS. EIGHTEEN BASE-BALL PLAYERS.—We journeyed to Brooklyn on Oct. 15th to see the long-talked of match between the English professionals and eighteen selected base-ball players. As it was a gate-money exhibition, and the meeting had not been properly advertised, there were only about 200 persons to witness the uninteresting *fiasco*. The Union Grounds, the arena of so many famous, genuine, and "put up" ball games, had been chosen for the play, and as it had never been a cricket ground a great deal of time was occupied in trying to select the most even wicket. Many years had passed since we visited these grounds, and the first glance illustrated to us, more plainly than words could speak, the wane in the metropolis of what is called "America's national game." Instead of the trim and neat appearance of the inclosure as we used to remember it, the once beautiful green turf had changed to a roughish field of long, dead grass, rank with weeds. The grand stand was a dismal ruin. The few old benches, prolific with rusty nails, that remained, were only traps on which to tear one's coat and trousers. The sheds had a leaky look, and the heaps of old lumber and scrap stuff piled about reminded one of a junk yard on a gigantic scale. Even the peanuts that an old woman hawked about had a shabby look; and the face of England's greatest bowler, Alfred Shaw, which appeared at the sashless window of the pagoda, had a most lost and woe-begone expression. The scene was actually depressing.

It was somewhat late in the day before Capt. George Wright got his base-ballers together, the eighteen being composed of the following well-known players: George Wright, Gross, Farrell, O'Rourke, Mathews, Ward and Hines, of the champion Providence B. B. Co.; Sam. Wright, Captain New Bedford B. B. C.; Brientnall and Williams, old Eureka B. B. C. of Newark; Hicks, Gedney and Hatfield, old Mutual B. B. C.; Sprague, old Eckford B. B. C.; Booth and Clinton, Jersey City B. B. C.; Letts, old Hoboken B. B. C., and Robinson, old New York B. B. C. More than half of the above-named eighteen are well known as cricketers, especially George Wright, who for years was the professional of the St. George and Philadelphia Clubs; Hicks, S. Wright and Hatfield, of the St. Georges: Sprague, of the Staten Island, and Williams and Brientnall, of the Newark. It was not a *bona fide* match between base-ball players and cricketers, any more than the games played in New England were in 1874.

As the full score is annexed we will not allude to the individual play, but will simply say that although neither Shaw or Morley were put on to bowl, and that Oscroft, who had made 94 in Philadelphia, the two days before, was sent in as last man, with but little exertion the English team not only out-bowled and out-batted the base-ball men, *but out-fielded them.* The cricketers made the hardest and longest hits made in the match, in the face of the really good bowling of George Wright. For the ball players George Wright obtained the only double figures. His 20 included a 4, 3 and four 2s. Gedney made a fine drive over the club-house, Hatfield a quick one-hand catch at point, and Mathews fielded splendidly at long on.

The positions taken by several of the base-ball men at the wicket were rather amusing. They had evidently heard of "leg-hits" in cricket, and this caused them to stand as far away from the guard as possible, with their bats stuck out in front of them like hoes. Now that the match is over we are rather glad that it took place, for it shows the absurdity of such contests, where nothing is to be learned or any conclusion arrived at. One might as well be expected to be interested and instructed in watching Bogardus and Hanlan shooting a pigeon match or rowing a five-mile race. The score will show that the English team won by an inning and 18 runs:—

RICHARD DAFT'S COMPLIMENTARY BENEFIT. NOTTINGHAMSHIRE VS. YORKSHIRE.—This match was tendered by the Philadelphia cricketers to Capt. Daft, on account of the falling through of the English-Irish match. It was played on Oct. 23d and 24th on the Nicetown grounds under the auspices and management of the Germantown Club. The weather was cold, and this in addition to the great many matches that have been played this autumn in the Quaker City, prevented a large number of spectators from being present. The full receipts, however, were presented to Mr. Daft. This match was arranged that the cricket public might see the English players bat their own bowling. The seven Nottinghamshire players were assisted by Lane, the Staten Island Club's professional; and the three brothers, Hargreave, of the Germantown Club. The Yorkshire five, were also aided by Harry and George Wright, of base-ball fame; Pearson, of the Chestnut Hill Club; Braithwaite, professional of the Merion Club, and Sharwood and Smithson, new comers. The annexed score will show that the Notts' men were the easy winners by 10 wickets:—

GENTLEMEN OF IRELAND TWELVE VS. WHITBY SIXTEEN.—The eleventh match of the Irish team series, and the third in their tour through the Dominion, was played at Whitby, Ont., on Oct. 16th and 17th. The match, though drawn, may be considered virtually won by the Gentlemen. The innings of the visitors is probably the largest ever played in Canada. The following is the score in full :—

AMERICANS VS. ENGLISH.—This annual match was played at Hoboken, N. J., on October 28th and 29th, the occasion being the fifth anniversary of George Giles' professional engagement with the St. George's C. C. Rain prevented the play from beginning until late in the day on Tuesday, and on Wednesday the weather continued unpleasant. The attendance was very small, although Rylott, the English umpire of the Gentlemen of Ireland, bowled for the American side, and many of the best cricketers in New York took part in the game. Hereafter, all complimentary benefit matches should be arranged to come off during the height of the season—that is, if the recipients are intended to profit by them. The following score will show that the game resulted in a draw :—

STATEN ISLAND VS. NEW YORK.—This match was played on the Island grounds, on Monday, Oct. 27th, it being the first occasion on which these clubs have met. The bowling of Lane, the Staten Island's professional, was barred in the match. The weather was very fine and warm, and a very pleasant day was had by all parties. The feature of the match was the splendid batting of Miley, for the home club, and the steady play of Lane, for the New Yorker's. Giles, jr's 13 was the only double figure on his side. Satterthwaite got 12 wickets for 27 runs; Sprague, 6 for 22 runs; Cuddihy, 7 for 36; and Giles, jr., 8 for 39. The following is the score; the home club winning by 64 runs :—

GOLF IN CANADA.

SEASON OF 1879.

AS the golfing season is drawing to a close, it will interest you to know how it has fared with the "ancient and royal game" during 1879. In no former year has it flourished more luxuriantly. Match after match has been played; cups and medals and belts have been lost and won. Old golfers, although the colts, steadily gaining ground, have sometimes passed them, still struggle to maintain their prestige, but are prepared, if so decreed, to accept a beating from their pupils as the highest triumph.

Our opening game was played in May, and as usual the men from Montreal arrived to compete for the inter-city trophy, a handsome challenge cup of ebony and silver, played for every May and October in Quebec or Montreal. It was then won by Quebec—eight players a side—a round of eighteen holes. Score in favor of Quebec Club, thirty-two holes up. In October it was played for over the Montreal course, with the same number of players and holes, and the Quebec Club was again the winner with six holes up. As two silver balls, one with the name of the winning club, and the other with the name of the individual winner of that club, are hung on the trophy on each occasion, its original value is yearly increasing; already twelve balls adorn it, eight representing Quebec and four Montreal victories.

The Chalouer Cup, the Banker's Cup, the Silver Handicap Medal, and the Champion Gold Medal, have also been competed for, and many private matches through the season have kept up the glory of the game.

By a friendly arrangement with the Quebec Racket Club, conveniences not before enjoyed have fallen to the Golf Club, formerly confined to limited accommodation. They have had during this season, the use of the handsome dressing rooms and reading room of the Racket Court which adjoins their first teeing place.

The round which consists formerly of twelve holes, is now fourteen, and the improvement of the play may be estimated roughly when I say that the fourteen holes are now done in the number of strokes required for twelve holes in former years.

Saturday is the great field day, but every day unless tempestuous the work goes on. By 3 o'clock cadies creep around the club house, and each player, as he appears, is claimed as special property and carried off. Ten cents a round is the tariff; the usual time required, an hour and a half. Of all sorts and sizes are the cadies—grimy and clean, ragged and respectable—all trying to earn an honest penny. For the most part they are tractable, but not so always. As we emerged on one occasion from the club house, a dogged and unnatural silence had seized each cady. With lips compressed they eyed us as we wondered what was up. No cady stirred or spoke. A strike for fifteen cents a round! We scorned to yield, and played a dismal round without them. Nine balls were lost that day! but we kept our secret and the strike was broken up. We pull together now in amity.

As some of your readers may not understand the game of golf, probably the most fascinating, the most healthful, and the most easily practiced of all out-door games, I shall describe it shortly. Any number may play, as play goes on in couples. Any extent of waste or meadow land covered with short grass, regular or irregular, hilly or flat, will answer for a course, which may be arranged in any direction or of any shape. From 200 to 400 yards apart small circular holes are cut in the turf about three inches in diameter and six inches deep. Each player has a ball of gutta-percha, painted white and very hard, and a variety of clubs artistically made, to strike the ball in different positions. To look after the balls and carry extra clubs, each player employs a cady. The purpose of the player is to drive his ball from the starting point into each successive hole in as few strokes as possible. Every touch or attempt to strike the ball is a stroke, and the lowest number wins the hole. The game may be counted either by the holes won, or by the strokes for the round. For the first stroke from each hole the ball may be teed, that is, placed where the player thinks most favorable for a good hit off. Well hit, it is often sent over 150 yards. Each stroke, therefore, is made at the ball exactly as it lies, in a bush, a bunker, or it may be in a broken bottle! The various clubs then come into requisition. The cleek, the iron, the niblic—all made of iron for strong ground. The spoons of various lengths for softer and hilly ground, and the putter for the nicer work on the green around the holes.

To appreciate the game one must play, and any further attempt to describe it might be tedious. If any of your readers desire to understand it thoroughly and practically to test its fascinations, I shall be glad to furnish him with our printed rules, from which he can learn the game. In Scotland and England it now flourishes wherever the ground can be had suitable for it, and I am glad to say that on the soil of Canada it has taken such healthy root that we hope to test ere long, our power with some of the famous clubs of the old country. There must be golfers in the United States; let them come on. C. F. S.

Quebec, Nov. 5th.

The winners for our various prizes for the year 1879 are :

The Quebec and Montreal Challenge Trophy, won by Quebec in May and individually by C. Faguharson Smith, Capt. Q. G. C.; the Silver Handicap Medal, won by P. Machaughton, Q. G. C.; the Chalouer Handicap Cup, won by W. A. Griffith, Q. G. C.; the Banker's Cup, won by Thomas Scott, Q. G. C.; the Champion Gold Medal, won by Andrew Scott, Q. G. C.; the Quebec and Montreal Challenge Trophy, won by Quebec, in October, and individually by H. Stikeman, Q. G. C.

ARCHERY.

ENGLAND'S BOWMEN TO THE FRONT.

Editor Forest and Stream :—

It having been brought to my notice that in your impression of the 1st September an attack has been most unwarrantably made upon me by two of your correspondents—"Archer" and Mr. John W. Sutton—I beg, in fairness, that you will grant me the favor of a reply.

There is nothing I so much dislike as rushing into print, but when misstatements are printed three thousand miles from me, and it comes to my notice, I think you will agree with me that I ought to reply, which I will now do, as briefly as possible.

First of all, "Archer" says: "Mr. Aldred himself will not even string his most expensive yew bows without being first paid for them." Now, sir, this is entirely untrue, as all the English archers who know me would verify, and I am truly astonished how "Archer" could have made such a statement.

Further, for his information, it is the truth that I have wood five years old ahead, and older, and am obliged to have it.

To his statements that "judging from the way their bows (*i. e.*, the English) have broken this year, I should imagine they are driven to using wood anything but well seasoned," all I can says is, no house of known respectability would do such a thing, as they would be sure to be found out, lose connection, and justly deserve censure.

Really, I hardly know how to express my thanks to your other correspondent (he being a competitor) for such a frank expression of his opinion in my favor; but when he adds: "But to an American mechanic (a wood worker) Mr. Aldred's statement of wood five years in his shop seems rather comical," permit me to say that however "comical" he may think it, it is, nevertheless, true, and also that "a stick of timber" cannot be forced to season artificially for bow making, and, moreover, that the wood must be gradually and naturally seasoned by a current of air constantly passing through the drying or seasoning room, and the bows advanced by sundry stages year by year.

I quite agree with Mr. Sutton that "carpenters do not make fly rods," nor do cabinet makers, as I know, to my cost, and so limited are the *good* bow makers that I can count them on my fingers. That being so, not an extra hand can be got for "love or money;" hence, the manufacture is limited, and most certain it is—strange as it may appear—that it takes years to make a good bow. Let Mr. Sutton set a man to copy one of my yew bows, and when done place the two in the hands of an experienced archer, and let him try them in the field. He might be astonished at the report, and not find it a "very simple affair."

In England the archers, as a body, know as much about the qualities of bows as the makers, and so will the Americans as time progresses, but it is hardly reasonable to suppose that knowledge to be attained in a couple of years. During that time I have corresponded much, and have done my best to impart all the knowledge I could to my many customers in America, and have sent them my best goods, with, I am pleased to say, their great satisfaction.

Mr. Sutton goes on to say: "So far we have made but very few yew bows, but they will be made by our best makers, and as to-day we are making as good self-lance and snake-wood as are made in the world, and better backed bows than are imported, I think it safe to say that when we get yew wood we will make as good, and perhaps better than any English maker, no matter what his name may be."

Would Mr. Sutton be surprised to hear that all snake-wood bows are bad? They are not used in this country, with very rare exceptions, and why not? Because the wood is brittle in its nature, heavy in the hand, and sluggish in the cast; but then they are *so pretty to look at.* I further say, all hard woods are more or less harsh and apt to jar, and that no bows can equal self-yew and yew-backed yew. Personally I prefer the self bow, for all two and three-piece bows are so liable, in some way or other, at some time, to be affected by damp or excessive heat, whereas with a self bow that fear is done away with, and in my humble opinion no description of bow will ever equal the self-yew bow.

"Toxophilite" was, I should think, as astonished to hear as I am that "there is more mechanical skill in the making of one split bamboo bow than in all the bows made by Mr. Aldred in a year." Is there? If so, it must indeed be a wonderful year. Still, so obdurate and old-fashioned am I, that I will venture (after the sixty-six years' experience appertaining to my establishment) to back a self-Spanish yew bow and a yew-backed-yew bow against all bows.

But Mr. Sutton winds up with this elegant peroration: "American mechanics are superior to any others in the world, and having begun the making of bows and arrows, will not stop until they supply the world with a better

article for a less price than anyone else, not excepting Mr. Aldred."

In conclusion, I will not be uncharitable, but hope that both the split bamboo and rawhide-backed bows may be all their makers wish—if the purchasers thereof are satisfied, well and good, it has nothing to do with me—and that the world is large enough for both American and English bowyers to live in, without publishing hard sayings the one of the other. THOMAS ALDRED.

126 *Oxford street, London, England, Oct. 7th.*

HOW SHALL WE HANDICAP.

BOSTON, *Nov. 1st.*

Editor Forest and Stream:—

The laws of Archery, or at least the few rules that are generally accepted, seem to contemplate separate action and competition on the part of the ladies and gentlemen who take an interest in it.

This arrangement does not seem to meet the ideas of the archers in this vicinity as being the proper or most acceptable mode of procedure, and the originators of the Eastern Archery Association, recognizing the desirability of having the ladies interested in its management, provided that each club should be represented at the annual meeting by one gentleman and one lady member. In club contests it is insisted upon that each club should be represented by equal numbers of ladies and gentlemen; one club having twice to my knowledge, declined to shoot with neighboring clubs represented by a team of only one sex when the club which they represented was composed of both sexes. There is also a generous rivalry between the ladies and gentlemen members of the same club, and in our club it was insisted upon that but one medal should be competed for at our weekly meetings by all the members. When the gentlemen were shooting a single round at forty yards, the ladies shot the same at thirty yards. When the gentlemen commenced to shoot the American Round, the ladies shot the same number of arrows at thirty, forty and fifty yards.

I judge from the scores which I have seen in the FOREST AND STREAM, that quite all the clubs where the ladies and gentlemen shoot together have accepted Mr. Thompson's formula and have handicapped the gentlemen by an allowance of twenty-five per cent. in distance to the ladies; but I think very few are aware what a per cent. of increase of score that reduction gives over what would be the probable score at the distance at which the gentlemen shoot.

To test the equity of such an allowance, has led me to make a comparison of many scores at the different distances, and their relative proportion to each other.

The reduction in distance from sixty to fifty yards is 16⅔ per cent.; fifty to forty yards, twenty per cent., and forty to thirty yards, twenty-five per cent.

Taking the American Round score by the teams at Chicago, I find the scores at fifty yards have an average increase of forty-four per cent. over the score at sixty yards, the six highest teams being thirty-nine per cent., and the lowest seven teams fifty-three per cent. At forty yards the average of the whole number was 37½ per cent. greater than that at fifty yards. First six, 31½ per cent.; last seven, forty-four per cent. The averages at the Double Columbia Round were fifty-nine per cent. of increase at forty over the fifty yards score, and eighty-five per cent. at thirty over that at forty yards. At Boston, the ladies' scores averaged twenty-four per cent. more at forty yards than at fifty, and seventy per cent. higher at thirty than at forty yards. The gentlemen scores in the team match were increased sixty-three per cent. at fifty over sixty yards, and forty per cent. at forty over fifty yards.

In the scores at the Double American Round the increase at fifty yards was sixty per cent., and at forty yards, forty-eight per cent. over the scores at the longer distances.

Taking the York Round, the number of arrows being arranged so as to give the fair archer the same average score at all the distances, makes an increase of score at eighty yards of fifty per cent, over the score at 100 yards with the same number of arrows, and at sixty yards the score with the same number of arrows would be increased 100 per cent. over that at eighty yards.

From these figures I make the following deduction:—

That a reduction of distance is equal to an increase in score of from two to three times the per cent. of the reduction in distance; this excess of per cent. of increase in score being the larger with the beginner and decreasing as the archer inproves in his scores.

Now, with this understanding, what is a fair allowance for the ladies who shoot in competition with the gentlemen, and on what shall it be based? Shall the allowance be in distance or on the scores made at equal distances? I am in favor of the latter proposition, at last for ranges up to sixty yards.

At short range I think the ladies should nearly if not quite equal the gentlemeu in shooting the question of strength not having the bearing as in the long ranges; and I would make a suitable allowance by addition to the lady's deduction from the gentleman's score of a certain per cent. I hope that some of the ladies will give their side of this question. A. N. DREW.

NEW YORK ARCHERY CLUB.—The first actual match of the New York Archery Club was shot Saturday afternoon, Nov. 1st, at the range in Eighty-eighth street and Eighth avenue. Two club badges in blue and gold—one for ladies and one for gentlemen—were the prizes. The ladies' badge was won by Miss Norton by a score of 146—48 arrows at 20 and 30 yards. Mr. Auten won the gentleman's badge by a score of 176—20 arrows at 40 yards. On Tuesday last the ladies shot a match for a prize raw-hide backed bow. The conditions were 24 arrows at 20, and 24 at 30 yards, the prize to be awarded to the lady making the highest score. The scores were as follows:—Miss Norton, 144; Mrs. De Luner, 118; Miss Bailey, 108; Miss Burger, 32; Miss Wren, 28. A large number of gentlemen were present, and the prize was presented to the winner by the president of the club.

WALTHAM ARCHERS' CHAMPIONSHIP MATCH.—*Waltham, Mass,, Nov. 1st.*—Ladies' silver medal; won by Mrs. J. Fred. Moore. Ladies' leather medal; won by Miss A. May Keith. Gentlemen's silver medal; won by John Worcester. Gentlemen's leather medal; won by Rev. Paul Stirling.

Saturday, Nov. 8th, the New York Archery Club had a very successful meeting, a large number of members and friends being present. Mr. Geo. D. Pond won the Gentlemen's Badge; Mrs. Dr. De Luna won the Ladies'. Following are the scores: Ladies' Match, at 20, 30 and 40 yards; 24 arrows each; first shooting at 40 yards:—

Mrs. De Luna	126	Miss Howell	75
Miss Morton	107	Miss Wren	54

Gentlemen's Match, at 60, 50 and 40 yards; 30 arrows each:—

Mr. Pond	194	Mr. Sheldon	50
Mr. Auten	184	Mr. Burtis	30
Mr. Sutton	150		

TIMING ATHLETIC SPORTS.—An English civil engineer has devised a mechanical contrivance for timing the racing competitors in athletic meetings. By means of a drum revolving at the rate of one turn in fifteen seconds, and in electrical communication with each end of the course, the time may be determined down to the thousandths of a second. Round this drum would be wound a sheet of paper, marked horizontally for the number of seconds and vertically for the number of men running, and contact would be broken by the rupture of a fine thread stretched across the course immediately in front of the starting place and of the corresponding thread at the finish, the time of starting and finishing being thus instantaneously recorded. This will, if successful, at least do away with much of the disputing now so characteristic of athletic contests. We shall also probably see the time of certain feats reduced.

"HE! HE!"—ARCHERY FOR THE PARLOR.—We have heard of "carrying the war into Africa," and Mr. E. I. Horsman, the celebrated maker of fine archery, has done this by carrying archery into the parlor. "Horsman's parlor archery" (a cut of which will be seen in our advertisement) is destined to become as popular indoors as archery in the field. The great beauty of this invention is that it is a perfect substitute for field archery, the same degree of skill being requisite to hit the target as is required in the field. A match, therefore, will be as much in order in the dining or drawing-room, after dinner, as it has been on the lawn, before luncheon, during the summer. The bows and arrows are so constructed and guarded that injury to the walls, windows, mirrors, furniture and carpets is entirely avoided. The target is composed of a framework of walnut, in which is hung a heavy sheet of canvas, in the centre of which the target appears on a piece of black enamelled leather with gold rings. The bows are made of lemonwood, nicely strung, while the arrows are protected on the end with a soft rubber cap; by *chalking* which the shot is shown upon the target. The box it nicely made, and contains bow and arrows, together with the frame and target, and can be carried easily under the arm. It is made in three grades, $5.00, $7.50 or $10 per set. It is just the thing for a holiday present.

BATTLE CREEK ARCHERY CLUB.—The Battle Creek Archery Club numbers fifty members, and has a hall for winter practice. The club has not been organized very long, but already is making creditable scores.

THE ENGLISH GRAYLING.

ITS HABITS AND CHARACTERISTICS.

WE are proud to credit the following article to the London *Illustrated Sporting and Dramatic News.* It is evidently written by a most careful observer. It is such essays as these that impart solid information to the student of ichthyology. We wish that more of them were written. Even the most competent writers (and they are by no means numerous,) furnish only partial data which serve to mystify rather than inform, and upon which no substantial conclusions can be built, or comparative specifications be established. It is this defective presentation of the subject which renders so many books on angling absolutely worthless.

A comparison of the habitat and natural history of the English and American species discovers a remarkable homogeneity. We find that their range is not only limited, but it is confined to a narrow zone of latitude in both hemispheres. This zone is identical in each. Moreover, only a few streams within this zone contain grayling, and persistent efforts to introduce and establish them in neighboring waters are never more than partially successful, notwithstanding the conditions in all may seem to be such as would satisfy every requirement. Such is notably the case with our Michigan rivers. There are streams flowing through the same tract of country, some of which contain grayling, some both grayling and trout, and some of them without either fish. Scrutinizing the habits of the grayling in England and America, we find them as nearly alike as possible; so is their food, the character of the river beds which they inhabit, the food they live upon, their seasons of spawning, quality of flesh, size, weight, etc. Here, also, as in England, are a variety of species. Besides the grayling of Michigan (*thymallus tricolor,*) we certainly have Back's grayling (*t. signifer,*) which is abundant in Alas British America, and the mountain grayling (*t. montanus*) of the upper Missouri River, and we may possibly add *t. ontariensis,* which exists in certain streams in Vermont and the Province of Quebec. All of these are found within the same belt of latitude.

We are gradually becoming familiar with this delectabl game fish, which was scarcely known to our anglers six years ago, and hundreds annually engage in their capture. It is deplorable that such wanton havoc is indulged by persons who ought to know that the supply is by no means inexhaustible; in consequence of which there is every reason to fear that the few streams we have will be speedily depleted, and grayling fishing come to a summary end. Those who have enjoyed the sport of catching them will be intensely interested in the information given by our contemporary across the Atlantic. We quote:—

It is commonly believed that the grayling—*salmo thymallus, thymallus vulgaris,* or *umbra,* is a naturalised but not indigenous English fish, the earliest colonies of which were imported from the Continent by the monks of old, for the benefit of those monasteries which, in ruined grandeur, or in renovated beauty, may still be admired on the banks of the principal rivers where grayling are to be found. This belief, no doubt, is founded on fact: but we know that the wise monks reared their pleasant homes on the banks of many a fair stream over all parts of the United Kingdom: whereas the grayling is confined to only a few of the smaller streams, and to particular localities, in England alone. The fish is unknown to the North of the Tweed, or in all the rivers and lakes of Ireland, where monastic institutions used to be numerous and powerful. If, as is most probable, our original supply was drawn from abroad, the parent stock may still be found flourishing most abundantly in their native home; for a circle drawn on the map of Europe rom a centre at Berne to a distance at Genoa would enlose within its circumference nearly all the Continental family of grayling, which most closely resemble our Eng lish fish. They are said to be found also in Lapland, Norway, and Sweden, as well as on the borders of the Caspian and Baltic; but these, as Sir Humphrey Davie has pointed out with good reasons, would appear to be a variety of a different species. Similarly also in England, if the proverbial eagle, towering over the heights of the Herefordshire Beacon, were to wing his course to the far slopes of the Derbyshire hills, he would look down upon the principal settlements of our grayling colonies, spread out in panorama beneath his flight. There are, of course, some few grayling rivers outside this area; and Hampshire especially has not only perpetuated its own breed, but also furnished stock for other localities; while Yorkshire also holds some strong outlying detachments in the north. The worthy monks, no doubt, fully appreciated the grayling, as a savory change in their diet of fish during the hard months of the winter, and probably tried to introduce them into various rivers with more or less success; but the delicate fish has tastes and idiosyncracies of his own, and must have refused to populate many a desirable stream, and died out of others where its few but imperative requirements were not satisfied. For even within the present century they have been observed to change the position of their favorite haunts in old-established rivers, always migrating downwards from cold springs to warmer pools, and they have refused to establish their progeny in many new localities selected for them, and notably in the great Thames itself. Their tastes and habits, however, are very well known now, and wherever the stock has been once established, and their river home made suitable for them, they have been found to breed freely and to grow rapidly, requiring little further care beyond protection from the ubiquitous and iniquitous poacher. They love a swift flowing, but not turbulent, river, where the water is generally clear and moderately cool, and where gentle currents alternate with deep and extensive pools. They do not follow the fashion of young troutlets, and make their common playground in the noisy stickles, which go babbling over gravelly shallows, or twist fretfully into little pools and falls among the rocks, though occasionally they may be seen, sporting playfully and rising continuously, on some of the faster currents and rippling shallows, where the small flies are being wafted rapidly down the stream. Their more congenial home lies in stiller waters, and in dark depths, where the river channel is lined with mixed gravel, sand, and loam, from which they may gather particles of mud and smaller shells, to help their digestion of the insect food, which constitutes their favorite sustainance. They lie, therefore, habitually at a lower depth in the water than trout usually do; and darting upwards at their prey, instead of waiting for it to float almost into their mouths, they rarely appear to view at all in the river, except at the moment when they make their sudden rise, and disappear again almost as instantaneously. The fish itself is so delicate in the nature and the flavor of its flesh, needing to be cooked within a few hours after it has been caught, that, although taken in its prime during the cold months of winter, it is rarely sent away to distant friends as a present, and still more rarely exposed for sale in the fish shops of large towns; and consequently it is as rare a sight as a black swan to the general public. The grayling rivers, too, are so limited in number and small in extent that they are apt to be regarded, even by members of the craft, as Corinthian streams, restricted to a few club members, and sacred as the Leintwardine itself; and so many a half-satisfied angler puts away his worn and tangled gear, when September brings an end to the trout fishing, and never thinks of having a cast at the grayling, just at the very time when the delicious fish is coming into season. * * * * The passed graduate in trout fishing may, very probably, find himself diappointed at first for some time, while he meets with no response to his most tempting lines of invitation, sent with careful precision to likely-looking nooks and swirling eddies, where he fondly hoped the hungry grayling might be floating near the surface, ready to snatch the flies that should float over them, or to dart out at them from some sheltered spot, until suddenly from the clear depths of mid-stream he may see a silvery fish shoot upwards like a flash of light, and descend again with equal rapidity. Then he realises the different habits of the grayling, how that fish lies deep down in the water, watching for his food on the surface, and prepared to take it with a sudden upward spring; for though he cannot stem a torrent, surmount a weir, or spring out of

water like a trout, yet, by the aid of his large and beautifully tinted dorsal fin, he can raise himself through the water and dart down again like a flash of lightning. So the judicious angler adapts his allurements to the taste of the fish, and spreading his flies as lightly as possible on the open water, allows them to float naturally on the surface. Again, a glittering streak of silver flashes upwards, and this time the rod bends to a sportive little fish of herring size. There is a very general belief, which perhaps is greatly over estimated, that the mouth of the grayling is very tender, and so the landing net is brought into use even for these small fish, much against the inclination of the angler, who thinks that surely no other fish will rise again for some time on the same spot after such a disturbance. Won't they, your ignorance! They seem rather to like the fun, which now gets exciting, as the large pool is full of fish, which dart up and down like northern lights in the stream, until the feed is over, and then all is still again. These are the yearling fish, or shutt-grayling as they are called, which, having been hatched in great numbers during the early spring, make rapid growth and attain to herring size in the autumn, and to about half-a-pound by Christmas. They grow to a pound weight in their second year, and so on to two, but rarely exceed three pounds. The shutt-grayling may be caught by dozens during August and September, one after another out of the same pool, and often two together, with only here and there some stray full-grown fish among them.

In all grayling rivers some trout are to be found, and the two cousinly fishes thrive well enough together in such streams as are capable of sustaining their united families; but as one is just going out of season when the other is coming in, it is just as well to observe that their habits, their haunts, and their nurseries are different in many essential details, and the favorite food of both, though very similar, is by no means identical. The trout, on the one hand, is an active forager and almost omnivorous. He will chase the lively minnow and devour the smaller tribes of his own race, as well as the spawn and the foetus of the larger; and then he will make a dinner of all sorts of grubs and insects and a supper of flies and moths. The grayling, on the other hand, is far more fastidious in the limited viands of his usual diet. He does not commonly hunt after minnows and small fishes, though there are undoubted instances of his having been caught with a minnow as a bait, and he does not forage in those parts of the river where the spawn of other fish is to be obtained. Feeding almost entirely on larvæ and flies, he seems to prefer such as are enveloped in hard cases of sand and gravel, while all the minute insect life which lurks among the weeds and vegetation of the deep pools serves to furnish his principal sustenance, and so he is easily taken in with the miniature artificial representations of his accustomed food; and he cannot resist the temptation of a choice repast when a good representation of a grub or grasshopper is naturally presented to him. It has been said, indeed, that he eats freely of the water-thyme, which has gained for him his distinguishing appellation of "Thymallus," and even still imparts to him that peculiar aroma of thyme or cucumber which he exhales when first taken out of the water; but this fiction has not stood the test of experience, nor has any such vegetable matter been ever found among the food in his stomach. Neither do the two families interfere with each other during the quarrelsome period of mating and spawning; for while the trout persistently runs upward to the fresh and cool waters of the of mountain streams, or small tributary brooks, to spawn, the grayling will never face the coldness nor stem the torrents of the upper streams, but, if he changes his locality at all, always drops downwards, and seek a warm and peaceful nursery. The female grayling is generally attended by several males, it is said, and their spawn is deposited at the tail of a gently running stream, and there left uncovered, while the parent fishes simply remain on guard, to keep away intruders, during the short period that elapses till the young are hatched out. Then the whole family drop down to some deep and quiet pool, where they all live and grow together till the autumn, when the angler comes to look after them. Then the shutt-grayling, in their youth and ignorance, play merrily with his treacherous flies, and afford an easy sport; but the elder fish are far less numerous, and more difficult to delude.

FISH SWALLOWING FISH.—We declare the lists open. We offer as an inducement to competitors a prize of the biggest fish hook to be had in New York City. This will be awarded to the man, woman, or child who will tell the most capacious story about one fish swallowing another fish, or about a fish swallowing anything else. Conditions: The story must be either of the narrator's personal observations or of the observation of some one known to some one else who has a friend who is known to the narrator. All stories must be in before January 1st, 1880.

STEAM DREDGING OF OYSTERS.—The old manner of oyster dredging is about to undergo a revolution. Instead of dredging with rakes by manual labor, as the custom has been for many years in the Chesapeake Bay and elsewhere, the Connecticut oystermen now dredge the Fair Haven beds by steam machinery. The New Haven *Register* thus describes the process:—

The *William H. Lockwood* is a steamer of forty-nine tons burden, high in the bows, of wide beams, built in a style peculiarly adapted to work of this kind. She is 63 feet long and has a draught of water of 5½ feet. She carries in the stern of the boat an unusually powerful engine for a boat of her size, in addition to which is a double-cylinder engine for the hauling in of the oysters. Housed over, the men and oysters are protected from exposure to storm, sun and cold, and can work in the coldest weather. On either side are two doors, provided with rollers, over which the ropes run smoothly. The dredger proper consists of a piece of apparatus which resembles a carpet bag in its general appearance. It is made of pieces of linked chain, strong and serviceable, and is connected to the rope by three iron bars which proceed from the ends and middle, and which meet in a common centre, forming a ring, to which the rope is attached. There are four of the dredges, and a man to look after the interests of each one. These carpet bags, as one will call them, are connected by a series of ropes which run through a series of pulleys and blocks, and are connected with the engine.

The saving in manual labor is very great. By the old plan the raking taxes the muscular power of the men to the utmost. By the new the steam-engine does the work. Our Chesapeake Bay dredgers would regard a bushel of oysters each time the rakes are run up as a fair haul. The Fair Haven dredges, worked by steam, loosen and gather at a single haul twelve bushels. By the new method time and labor are both saved, and the exposure in wintry weather, which breaks down the constitution of our hardiest oystermen, is almost wholly avoided. A very serious question will probably come up, however, as to the effect upon the oyster beds by this new process.

AN UGLY FISH.—A correspondent of the *London Telegraph* writes from the Seychelle Archipelago of a small, but highly-poisonous fish, called the "laf," the "spines upon whose back are hollow and filled, like the fangs of a cobra, with a dangerous poison, which sometimes produces death and always intense pain." You may draw it unobserved into the boat when you are fishing, and find out its peculiarities before its presence is ascertained. Sharks, too, are more than abundant, and, it seems, hang about the frail boats of the place with such terrible earnestness as to appal sailors and cause them to refrain from tempting the deep; the crentures eat the oars as they are thrust into the water, munch the sides of the canoes, and altogether misconduct themselves so gravely that harpoons have to be used in order to repel them. Happily, in respect to the "laf," nature has provided an antidote, for no sooner has he stung than his body offers a cure to any one who has the presence of mind to seize it, cut it open, and apply it to the wound. Against the teeth of the shark no such protection is offered, yet those who wish to avoid his mouth can do so by keeping ashore. They miss the enjoyment of the loveliest waters in the world, but they also escape a fate compared with which that of Jonah was child's play.

Is not this statement of the so-called antidote provided by nature, only another phaze of the belief current in some parts of our own country that the flesh of the rattlesnake cures the bite? Thus is popular error widespread. But it might be reasoned on the other hand that this shows that there is something in it after all.

Another story of poisonous fish comes from the antipodes. The pardoned communists who have just come back to Paris, tell us of the fish at the Isle of Pines, which, when eaten, gave St. Vitus's dance, and at certain seasons brought on mortal illness.

PENNSYLVANIA—*Watsontown, Nov. 3d.*—Bass fishing is over for the season, and a poor season it has been. The waters have been lower than has ever been known. We are catching a good number of Susquehanna salmon, some as high as nine pounds in weight. Quail and pheasant shooting will be good in this section. J. R. HOUSE.

—A correspondent writes of a curious incident of vitality in a blue fish. When captured, it was in such poor condition that it was opened for the purpose of investigating its food, and the heart was observed to continue beating for more than ten minutes.

—There is a good run of small striped bass in this neighborhood now, and good baskets are made from the Central New Jersey Railroad bridge which crosses Newark Bay. Larger fish are expected daily.

NEW PUBLICATIONS.

THE AMATEUR POACHER, BY THE AUTHOR OF "THE Game-keeper at Home" and "Wild Life in a Southern Country." Boston: Roberts Brothers. 1879. Price, $1.50.

We have already spoken in high praise of the writings of this author. He has the power of learning Nature's secrets, and pleasantly telling them, which is not often exhibited by more ambitious writers. We have seen nothing of recent years so thoroughly readable and instructive in this particular field, as the three books mentioned above. If anyone enjoys reading the FOREST AND STREAM he will surely enjoy these pages also.

THE PRACTICAL PIGEON KEEPER. By LEWIS WRIGHT, New York: Cassell, Petter, Galpin & Co. Price, $1.50.

Mr. Wright, well-known among poultry keepers as the author of the admirable "Illustrated Book of Poultry," and other works upon the subject, has given us in this book a comprehensive and exhaustive guide to the care of pigeons. We call the book comprehensive, because so far as careful examination shows, the whole subject is discussed, and exhaustive, because of the whole subject all is said that there is to say, and the book is moreover, as it professes to be, practical.

The loft, breeding, care, exhibition, etc., etc., are fully treated and the value of the pages are enhanced by numerous illustrations. We commend it to all pigeon keepers, and we commend pigeon keeping as a very pleasant as well as profitable recreation.

THE "AMERICAN ANTIQUARIAN." An illustrated quarterly journal devoted to Early American History, Ethnology and Archæology; edited by Rev. S. D. Peet, Clinton, Wis. Published by Jameson & Morse, 164 Clark street, Chicago, Ill. Price $3.00 per annum.

This magazine is devoted to a very interesting subject. It is well known that there are many evidences of an ancient occupation of this continent by a people whose history has always been enveloped in mystery. New facts, are, however, constantly coming to light which, though strange and sometimes mysterious, are calculated to reveal something of the prehistoric condition of America. Travelers and explorers go to distant regions of the East to examine the ruins of Nineveh and Babylon, and in these buried cities find many interesting confirmations of history. Others, also, traverse the frozen regions of the Arctic Sea to discover the northwest passage; but at our very doors there are tokens of a buried past which deserve attention more than these. It is the object of the *American Antiquarian* to so collect facts and direct inquiry that this obscure history of our country shall be made known, and the problem of man be ultimately solved. The editor, Rev. S. D. Peet, has devoted many years to this subject, and the contributors are all gentlemen who have high rank in the scientific world. It is one of the most readable magazines published, and we are happy to commend it as worthy of support.

—Munn & Co., of this city, publish a convenient little manual entitled "The Scientific American Hand-Book," which gives, in compact form, a great deal of information about patents, caveats, designs, trade-marks, etc. It is sent free upon application. The *Scientific American* has long been the recognized authority in its field, and it grows better every year.

—THE "AMERICAN NATURALIST" opens with an instructive article on "How Our Ancestors in the Stone Age Made Their Implements." The writer is Mr. B. B. Redding, and he details some personal experience with Indian manufacturers of arrows, which help to make this a valuable contribution to echnology.

THE "NUTTALL BULLETIN." The October number of the *Bulletin*, opens with a brief notice of the Black Capped Greenlet by Dr. Coues, accompanied by a beautiful lithographic plate of the male and female birds, and the nest. This is followed by the concluding part of Mr. Mearn's list of Oregon Birds collected by Lieut. Wittich. The breeding habits of the American Brown Creeper (*Certhia familiaris Americana*) are charmingly set forth by Mr. Brewster, in one of those delightful articles which he knows so well how to write, and Mr. Leverett M. Loomis, who is introduced to the readers of the *Bulletin* by Dr. Brewer, contributes a List of Birds of South Carolian, enumerating one hundred and forty species. Under the name *P. Illinoensis*, Mr. Ridgway describes a new species of *Peucæa* from specimens obtained from Southern Illinois and Texas, and gives some valuable though brief notes with regard to its habits. The number is concluded by an interesting article by Mr. Scott on the Birds observed at Long Beach, New Jersey. He mentions seventy-five species, of which, as might be expected, a large proportion are shore haunting birds.

In Recent Literature, we notice two reviews by Mr. Allen, of much interest. General Notes contain a great amount and variety of bird news, and the whole number is, we think, more than usually interesting.

THE TRIBULATIONS OF A CHINAMAN IN CHINA, has been translated from the French of Jules Verne, by Virgina Champlin, and is published by Lee & Shepard, Boston. The author has introduced the most progressive inventions of the day in the heart of China, and seeks to picture the peculiar experiences of a Chinaman surrounded by such bewilderments.

ANECDOTE OF KOSSUTH.—*Editor Forest and Stream:*—The following anecdote was related to me by an intimate friend of the celebrated Louis Kossuth:—

"Kossuth and several friends were hunting in upper Hungary. While at lunch, one facetious gentleman wishing to play a practical joke, drew the shot from Kossuth's gun. Hunting being resumed, the party scattered, though the wag remained near his victim to await the result of his trick. In Hungary, owing to the prevalence of large game as well as small, sportsmen prepare themselves for either by loading one barrel with buck-shot, the other with a smaller kind. Kossuth soon fired two shots in rapid succession, and his friend called to him: 'What is it?' Kossuth answered: 'A bear, and I have killed him!' 'Impossible!' replied the other, incredulously; 'there was no shot in your gun.' 'There he lies; come and see for yourself.' Sure enough, the monster lay stretched in death, and when examined it was found a single shot had entered beneath the fore arm, penetrating the breast. It happened in this wise:—The bear appearing suddenly from a thicket Kossuth fired, this shot not taking effect, the animal advanced until within a short distance, when, raising himself on his hind legs for a final embrace, he was given the other barrel with the effect above mentioned. Kossuth owes his life to one small shot having remained in the barrel when the charge was drawn."

VICTOR M. HALDEMAN.

—The *Christian Union* has a funny story of a post-master's pet cat, which one morning was prying into the open mail bag after something which smelt good and got locked up with the letters and papers, and was duly dispatched thirty miles away to another post-office. The telegraph was brought into requisition, and the accommodating postmaster at the other end of the line broke the rules of the Post-Office Department about sending living objects through the mail and dispatched the straying feline back again. According to our knowledge of cats he would have done better had he turned her out to get home herself. Cats can travel faster than the mail trains.

FROM REV. J. E. RANKIN, D. D.—June 19th, 1879, the Rev. J. E. Rankin, D. D., of Washington, D. C., certified as follows: "I have known of several persons who regarded themselves as greatly benefitted and some of them as permanently cured of diseases of the kidneys and urinary organs by the medicine prepared by Charles Craig, of Charlotte, N. Y. I have known, too, of its use in similar cases by physicians of the highest character and standing. I do not doubt that it has great virtue." In a previous communication to the *Congregationalist* Dr. Rankin referred at length to the beneficial treatment of a case in his own family, pronounced Bright's Disease by six physicians, with the Safe Kidney and Liver Cure, and said: "This treatment I want, in the interest of humanity, to describe and commend."—*Adv.*

GUNS AND SHIRTS.—We saw in Mr. Squire's store the other day about as fine a gun as ever came to our notice. It was a $300 Greener hammerless, of exquisite finish. With it upon the counter was a $300 Scott hammerless, which had two sets of barrels. These fine guns were imported for Mr. Keep, the shirt manufacturer of Broadway, this city, who is not only a good judge of what a gun ought to be, but able to handle one as well. Mr. Keep claims to make the best shirts in the market, and there are thousands of men and boys clothed and in their right minds who are ready to substantiate this claim.

—Nervous people should avoid the temporary relief of tea and coffee. A cup of pure cocoa will be found nutritive as well as sedative. Insist upon your grocer's furnishing Walter Baker & Co.'s preparation.

—For duck, geese or deer, take a few Schleber long-range shot cartridges.

New Advertisements.

Natural History Store.

ESTABLISHED IN 1859.

(The only one of that date).

Is now located at **304 Washington street, Boston, Mass.** Birds, Skins, Shells, Minerals and Naturalists' Supplies.

Importer of Eyes, which, in orders of $3 and upwards, are sold at wholesale rates.

Charles G. Brewster.

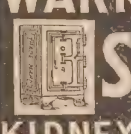
Fine Breech-loading GUNS AT AUCTION.

HAVING determined to withdraw from the gun business, I shall offer my whole stock at public sale on **Wednesday, 19th November, 1879,** through Messrs. BARKER & Co., Auctioneers, 47 and 49 Liberty street. Sale positive and without reserve, to the highest bidder. These guns have all been made to my order by Scott, Hollis and Westley Richards. All perfect and new, none second-hand. No other guns will be admitted in this sale. Also, a **Very Fine Hammerless Gun,** made by Westley Richards; cost $225.

FRANCIS TOMES,
No. 6 Maiden Lane.

Guns will be on exhibition and catalogues ready on Monday, Nov. 17th, two days before the sale.

WARNER'S SAFE KIDNEY & LIVER CURE



(Formerly Dr. Craig's Kidney Cure.)

A vegetable preparation and the **only sure remedy** in the world for **Bright's Disease, Diabetes, and ALL Kidney, Liver, and Urinary Diseases.**

☞ Testimonials of the highest order in proof of these statements.

☞ For the cure of **Diabetes,** call for **Warner's Safe Diabetes Cure.**

☞ For the cure of **Bright's** and the other diseases, call for **Warner's Safe Kidney and Liver Cure.**

☞ WARNER'S Safe Remedies are sold by Druggists and Dealers in Medicine everywhere.

H. H. Warner & Co.
Proprietors,
ROCHESTER, N. Y.

☞ Send for Pamphlet and Testimonials.

THE PRACTICAL PIGEON KEEPER.

BY LEWIS WRIGHT.

CROWN 8VO. CLOTH. $1.50.

Author of "The Illustrated Book of Poultry," "The Practical Poultry Keeper," &c.

WITH NUMEROUS ILLUSTRATIONS.

*** In this work the same plain and practical character has been preserved which obtained for

THE PRACTICAL POULTRY KEEPER

such a wide popularity. The object has been to get the greatest amount of practical information on practical points into the smallest space.

CASSELL, PETTER, GALPIN & CO.,
London, Paris, & 596 Broadway,
NEW YORK.

KEEP'S SHIRTS

ARE THE VERY BEST.

Boys' and Youths' Shirts, all complete, best quality, $1 each.

KEEP'S PATENT PARTLY-MADE SHIRTS, only plain seams to finish, 6 for $7.

KEEP'S CUSTOM SHIRTS, very best, MADE TO MEASURE, 6 for $9. Fit guaranteed.

NIGHT SHIRTS, all styles, extra length, $1 each.

POINTS FOR JUDGING DOGS.

A PAMPHLET compiled from "Stonehenge's" new edition of "Dogs of the British Islands," and containing the "points" by which every breed of dogs is judged in this country and England, together with a description of the same. For sale at this office. Price 50 cents.

The Kennel.

THE FOLLOWING PRICES will show I mean sell out. In order to close out the balance of one of the most valuable kennels of pure blood, this is a rare chance to get some of the best blood at a great bargain. I am bound to sell. Irish setter Gipsey, red, and some white, black nose; a perfect beauty; hunted some on quail; very obedient; sire Rodman's Dash, who was the best Irish setter on game in the United States. She is a good brood bitch; price only $30.

France, a field trial bitch; a beautiful head; ears hung low; a good brood bitch; never hunted her; bought her in June; will guarantee her to stand a pigeon in yard for twenty minutes, and from her movements I think would be good in field. Price $25. Litter of pups worth four times that amount.

Pure-blooded Gordon setter dog, Max, color, black and tan; very handsome; broken to charge and hunt by motion of hand; retrieves; hunted some; will make a first-class dog in one or two more trips; good as most of dogs now; will make a bench winner. Price $30.

Laura, a red Irish setter bitch, a perfect beauty; good nose, and very staunch and fast; she was sired by champion imported Irish setter, York, prize winner in Ireland and this country. This is a rare chance to get such a bitch for price of pup, $35. H. B. VONDERSMITH, Lancaster, Pa.
Nov. 13-2t.

ASA L. SHERWOOD,
Skaneateles, N. Y.

Sportsmen's Routes.

"THE FISHING LINE."

TAKE THE
Grand Rapids & Indiana R.R.
Mackinaw, Grand Rapids and Cincinnati Short Line
FOR THE
Trout, Grayling, and Black Bass Fisheries,
AND THE
FAMOUR SUMMER RESORTS AND LAKES
OF
NORTHERN MICHIGAN.
The waters of the
Grand Traverse Region

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in those waters.

The TROUT season begins May 1 and ends Sept. 1. The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory.

The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections.

The hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing.

During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide (an attractive illustrated book of 80 pages), containing full information and accurate maps of the Fishing Grounds and Time Cards, address A. B. LEET, Gen'l Pass. Agent, Grand Rapids, Mich.

Sportsmen's Routes.

St. Louis, Minneapolis
AND
ST. PAUL SHORT LINE.

Through Pullman Palace Sleeping Cars between St. Louis, Minneapolis and St. Paul.

Burlington, C. Rapids & Northern Railway.

QUICKEST, CHEAPEST AND BEST!

GUNPOWDER.

DUPONT'S

RIFLE, SPORTING and BLASTING POWDER.

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1801, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN,

Nos. 1 (coarse) to 4 (fine), unequaled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING,

Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.

DUPONT'S EAGLE RIFLE,

A quick, strong, and clean Powder, of very fine grain for pistol shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING," FFG and FFFG. The FG for long range rifle shooting, the FFG and FFFG for general use, burning strong and moist.

SPORTING, MINING, SHIPPING, and BLASTING POWDERS of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar, and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

F. L. KNEELAND, 70 Wall Street, N. Y.

N. B.—Use none but DUPONT'S FG or FFG Powder for long range rifle shooting.

THE HAZARD POWDER COMPANY

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only.*

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration.* For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG in kegs of 25, 12½, and 6½ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist.* The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* Powder of the country.

ENGLAND AND AMERICA.

COLT WEBLEY.

The two GIANTS in gun-making at the present time, are P. WEBLEY & SONS, Birmingham, England, and the COLT FIRE ARMS CO., Hartford, Conn. Both owe their marvelous success to the same two causes: First, that they learned just what constituted PERFECT GUNS. Second, that they applied labor-saving machinery to their production. The result is, THE BEST GUNS IN THE WORLD, AT VERY SMALL COST. You can now buy a COLT or a WEBLEY gun, which it is a pleasure to use, for no more than is commonly paid for guns bearing unknown or fictitious names.

Of WEBLEY'S GUNS we have the TREBLE WEDGE GUNS—every gun having beautiful Damascus or laminated steel Barrels, Rebounding Bar Locks, Pistol Grip, Lever For part, Double Bolt, and Extended Rib.

DOUBLE BOLT GUNS (Top and Side Lever). | WEBLEY-LANG SELF-COCKERS.
SINGLE BOLT GUNS (Top and Side Lever). | EXPOSITION GUNS (various styles).

The last four styles named above constitute a JOB LOT, which we are selling off at about half their real value. These guns are in NO WAY inferior to the Treble Wedge guns as regards quality of material or EXCELLENCE in shooting, and are the CHEAPEST lot of guns we have ever seen.

Of COLT GUNS, we have all the regular grades, and, in addition, THE CLUB GUN. This gun is made for US, with selected barrels and the very finest materials, and is designed especially for Glass Ball and Pigeon Trap Shooting. Gentlemen who indulge in these contests will be obliged to either shoot the COLT CLUB GUN, or lose the prizes.

Every one of these guns has an elegant heel plate, with the Rampant Colt in a circle, and the words "The Club Gun," beautifully embossed upon it. *Any* Colt gun not answering to the above description is *not* the Club Gun.

Besides the Webley and Colt DOUBLE guns, FOREHAND & WADSWORTH, of Worcester, Mass., make for us a SINGLE barrel breech-loader with Scott pattern Top Lever. These guns are very light and handy, and just the thing for BOYS or men who cannot afford to buy Double Guns. They cost but a mere trifle. We are happy to announce that we are the principal distributing agents at New York city for all three of the above-named manufacturers.

NEW YORK, THURSDAY, NOVEMBER 20, 1879.

Volume 13—No. 16. No. 111 Fulton Street, New York.

A HUNTING SCENE OF THE OLDEN TIME.

A correspondent of the Williamsport *Gazette and Bulletin*, writing under date of Sept. 6, 1879, says:—The Sinnemahoning creek, one of the principal tributaries of the West Branch of the Susquehanna, runs through a very wild and broken portion of the Alleghenies, and four miles along its banks the scenery is of the grandest description. The valley is exceedingly narrow at many points, and for severel miles below Driftwood, its average width will scarcely exceed 3,000 feet, bounded by mountains on either side that rise from 1,200 to 1,400 feet in height. Owing to the large number of small streams that empty into the creek from both sides, the mountains are broken by deep ravines, down which the rivulets flow, and the conical peaks which rise at the points which jut into the creek, give them a bold and rugged appearance. As this was almost an impenetrable wilderness settlers came here slowly. The only roads were narrow Indian paths which ran along the banks of the stream, or climbed over some bold mountain promontory. This narrow valley was a favorite hunting ground of the Indians, and here they came in large numbers to fish and hunt, when they held the country. When the valley below began to fill up with hardy pioneers, those of a more adventurous disposition pushed up into the mountains and settled at intervals along the stream, built rude cabins and seemed to enjoy thhmselves in these almost inpenetrable wilds. Years rolled away and quite a numerous settlement was found along the vale of the Sinnemahoning.

To illustrate the condition of the first settlers, the following poem, writen and published nearly sixty years ago, in a paper down country, is quoted:—

There is a place called Sinnemhoean,
Of which but little good is known;
For sinning, ill must be its fame,
Since Sin begins its very name.
So well indeed, its fame is known,
That people think they should begin
To drop the useless word Mahone,
And call the country simply Sin!

But to my tale—Some years agone
The Presbytery—having heard
Of the sad state of sin—resolved
To send some one to preach the word,
And Mr. Thompson was bid to see then
To the conversion of the heathen.
I shall not linger long to tell
Of all that on the way befell;
How he was lost among the bushes,
And floundered through the reeds and rushes;
Or, how, when hungry, down he sat
To corncobs fried in 'possum fat!
How his black coat's unusual hue,
Caused a grim hunter to pursue
And cock his gun to blow him through,
Believing, as I've heard him swear,
Our missionary was a bear.
"'Tis true," he said, "I never counted
On seeing such thing as a bear
Upon a good stout pony mounted;
But yet I can with safety swear
That such a very wondrous sight
We might expect by day or night,
Rather than, in our hills, to note
A parson with a rale black coat!"

The news soon spread around the land,
That Parson Thomson, on next Sunday,
Would in the school-house take his stand,
And preach to them at least for one day.

The Sunday came, and with it came
All of the ragged population;
Men, women, children, dogs to hear
The tidings of salvation.

The women came in linsey-woolsey,
And tall wool hats increased their stature;
The men in shirts and leather leggins;
The brats and dogs in dress of nature!

The men who seldom stop at trifles,
Brought tomahawks and knives and rifles.
Service began—the parson wondered
To hear the singing that they made—
Some Yankee Doodle—some Old Hundred—
The hounds astonished, howled and thundered
Until the forest shook with dread.
The singing o'er—the prayer was said,
But scarcely had the text been read,
When, panting with fatigue and fear
Rushed past the door a hunted deer.
Prayer, hymn and text, were all forgot—
And for the sermon mattered not—
Forth dashed the dogs—not one was mute—
Men, women, children, followed suit.

The men prepared the deer to slaughter—
The girls to head it to the water,
None staid but lame old Billy French,
Who sat unwilling on his bench,
Not for the sake of hymn or prayer,
Did Billy keep his station there;
But, as he said, with rueful phiz—
"For a darn spell of roomatiz!"

The parson groaned with inward pain,
And lifting up his hands amain,
Cried dolefully, "'Tis all in vain!"
Up starting nimbly from his bench,
"'Tis not in vain," cried Billy French,
"When my good hound, old Never-fail,
Once gets his nose upon the trail,
Ther's not a spike buck any where,
Can get away from him, I'll swear!"

Many of the old settlers say that the real name of the young minister was Rev. Daniel M. Barber, whilst others claim that the incident occured before his day. All agree however, that the meeting was held in a log cabin not far from where Driftwood now stands. It is disclaimed that "Old Billy French" was the only one who remained behind. There were several others—among them Captain Overturf, a sturdy old German, who kept intently looking out of the window, and when the preacher exclaimed, "tis all in vain," he promptly replied. "I tinks dey vill catch him yet!" Capt. Jordan was also present and as his boys were remarkable for swiftness and daring, it was his delight to call them his "hell hounds," and as they were in the chase, he informed the young parson that the deer could not escape from them. And it was caught, but tradition fails to record whether the parson resumed his discourse where he left off so suddenly.

A Winter in East Florida.

(NINTH PAPER.)

BISCAYNE BAY—THE EVERGLADES—L'ENVOI.

We remained on the charming shores of Lake Worth two weeks, hunting, fishing, and visiting the settlers. The boys had now become quite stout, hearty, and rugged, and proposed to walk to Biscayne Bay, instead of sailing, as we found that tramping the beach was a mode of travelling quite common between the two places; and we were assured that the journey would be quite interesting, and that many rare shells and valuable marine curiosities could be picked up on the beach. The distance is about sixty miles from Lake Worth, with three life-saving stations between where we could sleep and procure the necessary provisions. Only Frank, Ben, and myself decided to make the trip, as the others were so well satisfied with Lake Worth that they concluded to remain there until our return.

Accordingly about 4 o'clock on the afternoon of February 22d we set out, lightly equipped for the journey, carrying only a poncho and a pair of blankets each, with a small camping axe, some fishing lines, and our hunting knives and pistols; in the use of the latter the boys were quite expert, as alas, most Kentuckians are. We were accompanied by Walter L——, a young farmer from Ohio who had arrived at Lake Worth a few days previous on his way to Biscayne Bay. He was a well-informed young man with rather a romantic turn of mind, and was looking for a location where he could realize his dreams of a life in a tropical clime.

Two miles below Lake Worth, just over the beach bluff, we found a small lake of good water near the edge of a little hammock; and under the bluff, near the lake, was a roomy, rocky cave, suggestive of pirates and buccaneers to Walter, who searched it thoroughly for doubloons and Spanish milled dollars; he found nothing, however, but an owl and a colony of bats. Three miles further on is U. S. Life-Saving Station No. 3, kept by Mr. Stephen Andrews, where we put up for the night. These stations, of which there are five on the east coast of Florida, are all built upon the same plan. They are constructed of wood, with a broad verandah runnning entirely around the building formed by the projecting roof which slopes upward from the four sides in true tropical style. There are four rooms below, with a large airy loft room above; in the latter are some twenty iron cots with mattresses, bedding, and a supply of clothing, and such provisions as salt pork and beef, hard tack, coffee, sugar, etc., all in sealed packages and only to be used in cases of the direst necessity for the relief of shipwrecked mariners. Each station is provided with two life-boats, a large one and a small one, and other appliances for rendering assistance to wrecked vessels.

This was the first night we had slept under a roof for two months, and though the large windows in each end were open, with a fresh breeze blowing through, it seemed "cabin'd, cribb'd, and confin'd." After breakfast we took a look around the premises, and admired Mr. Andrew's garden, hogs, and poultry, in which he takes great delight.

The Florida hog is put up on much the same model as some of our fishes; semi-elliptical in outline, an elongated head, and a body much compressed and keeled on both edges; add to this four long legs, a corksurew tail, and a liberal supply of black bristles, and we have an animal especially designed for navigating the palmetto scrub. The meat, however, is very sweet, with a wild or gamy flavor, quite unlike our Northern pork with its unctuous, pig-stye savor. In a hammock near the station is a wild orange grove where we procured some bitter-sweets to quench our thirst during the day. We resumed our tramp at 10 o'clock, on the grass above the beach, where were acres of pink and white verbenas, and yet some people tell us there are no flowers in Florida, simply because they have made the astounding discovery of that threadbare historical fact, that Florida does not mean "Land of Flowers," but that it was so named because Ponce de Leon discovered the peninsula on Palm Sunday, which is called in Spanish *Pascua Florida*.

We soon came to the wreck of a fine Spanish brig upon the beach, which had been stripped of her copper, cordage and chains by the wreckers. Her figure-head was a beautiful woman in flowing white robes, with a scroll in her left hand, while her right hand pointed seaward. A short distance further on we found a large iron buoy of the shape and size of an ordinary æronaut's balloon, which had parted from its moorings on some reef, and had been washed ashore. Walter clambered to the top, and by right of discovery planted on its summit a flag of old sail cloth, on which, with a pigment of iron-rust and charcoal, Frank inscribed in glowing capitals, "Bully Buoy." Having walked quite slowly, gathering shells, corals, seabeans, etc., and having made frequent rambles through the scrub, it was 4 o'clock before we reached Boca Ratone, ten miles from the station.

At "Buggery Tone," as it is called by the settlers, there is a bold escarpment of rocks running out into the sea, and over the ridge is a stream of fresh water, probably a branch of the Hillsboro' River. There was at one time an inlet at this point, but it is now closed. As the clouds had an appearance of rain, we decided to camp for the night. We soon built a palmetto hut, and began making provision for supper. Ben struck out down the stream, and in less than an hour returned with a yearling doe, which he had shot with a Colt's navy pistol. He spied her feeding towards him on a small open space near the water, and concealed himself in the brush until she approached within twenty yards of him. With some "fiddlers" from the beach for bait, I caught a mess of black bass and bream from the creek. The venison was broiled upon the coals, and the fish were wrapped in pieces of wet sail-cloth, picked up on the beach, and cooked on the hot ashes. As we had brought a supply of biscuits from the station, we made a good supper and breakfast, though we missed our coffee. Palmetto leaves did service as table cloth, plates and platters; and we roasted the "cabbage," or terminal bud of a young palmetto, in the ashes, but it was not good; boiled, it is quite palatable. We had picked up some fresh cocoanuts on the beach, and after supper Walter said he was going to have a tropical dish for his breakfast—a boiled cocoanut. Accordingly, after cutting a hole through one of the eyes of the nut, he filled it with the juice of a wild orange and some water, and set it hot ashes, where he said it would be cooked by morning. In a short time, however, it "boiled over," when, after moving it to a cooler place in the ashes, he turned in. Frank then whittled out a stout plug and drove it through the eye of the cocaonut, which he then removed to a hot place in the fire, and shortly afterwards the balance of us turned in. It was not long before there was a loud pop, with a scattering of fire-brands, while Queen began barking vigorously.

"What is that?" exclaimed Walter.

"Scrambled cocoanut!" answered Frank; "a favorite dish among the South Sea Islanders."

"Eat it while it's hot, Walter," chimed in Ben, "or it will soon be desiccated cocoanut."

We left Boca Ratone early the next morning, and scattered along the beach we saw many huge squared logs of pine, some of them nearly a hundred feet long; one mahogany log was four feet square and twenty feet in length, and some logs of Spanish cedar were nearly as large. This timber had floated away from vessels wrecked along the coast. We reached Hillsboro' River Inlet, five miles frem Boca Ratone, which we crossed in a boat belonging to Mr. Adrews, who had directed us where to find it. On the small bay inside the inlet is a deserted palmetto shanty and a well of good water. Between Hillsboro' and New Rivers, some eighteen miles, the beach is broad and level, and at low tide the walking on the wet sand is excellent. We found a number of "sun-shells," a beautiful little oblong bivalve, with alternate rays of pink and white; and some fine and perfect specimens of the nautilus, or argonaut. Many beautiful varities of algæ are washed up on this smooth beach with each tide. We also found skate's eggs, trunk fishes, seahorses (*hippocampus*), sea-urchins, star-fishes, sea-crawfish, conch, spawn or sea-necklaces, etc., with many varieties of conch and other shells.

We arrived at Station No. 4, nine miles from Hillsboro'

River, at 2 o'clock. Mr. Jenkins has charge of this station, which is on a strip of beach separating New River from the sea. The river landing is but a few hundred yards back of the Station, and is eight miles from the inlet or mouth of the river. Two miles below is the site of old Fort Lauderdale, where there is a flourishing grove of cocoa palms. New River is a fine stream, which divides into several branches opposite to the station; at its mouth crevallé are taken with grains to the weight of forty or fifty pounds each, which are smoked and dried, and are superior in flavor to smoked halibut. We found an Indian at the landing, on his way up stream in his canoe after plumes of egrets, pink curlews, etc. Frank seemed much interested in him, and examined his rifle, powder-horn, and knife very minutely, and tried to trade him out of his buckskin moccasins and leggins.

Mr. Jenkins sailed us in his canoe a few miles up the main branch of the river, to the crossing of the old military trail from Fort Capron to Fort Dallas on Biscayne Bay, where we landed and walked a few miles to some fine hammocks between New River and Snake Creek, where he endeavored to induce Walter to locate. On our return I shot a number of ducks with Jenkins' gun, and had a shot at a bear on shore, but he got away.

Next morning Mr. Jenkins sailed us down to the mouth of the river and put us ashore south of the inlet to continue our tramp; Frank offering to bet that he could walk a thousand yards in a thousand seconds, with no takers. At 6 o'clock in the afternoon we reached Station No. 5, twenty-two miles from Mr. Jenkins'. This Station is in charge of Mr. Barnott, and is on a tongue of land separating Biscayne Bay from the ocean. Ten miles below is the light-house on Cape Florida, at the entrance to the bay. On the following morning we proceeded to the landing, a quarter of a mile from the station, and Mr. Barnott sailed us eight miles across the bay to Fort Dallas at the mouth of Miami River.

Bisayne Bay is a most beautiful sheet of water some thirty miles in length, and from three to ten miles wide; it is continuous with Card's Sound and Barnes' Sound on the south-west, and like them is inclosed by the chain of Keys running from Cape Florida to Key West. The bay is entered through channels running between the Keys, the principal ones being Bear Cut and Narrows Cut, opposite Miami, through which vessels drawing not to exceed ten feet can enter. There is a route inside the Keys to Key West, the distance being a hundred and fifty miles, and the smallest boats can make the sail in safety. Biscayne Bay abounds in fish of many varieties, including the barracuda (*Sphyræna*) and the tarpum, the latter often weighing two or three hundred pounds. There are oysters of excellent flavor and the green turtle is at home in these waters. The rocks along the Keys are covered with sponges, which are gathered at certain seasons and form quite an important article of commerce. A number of streams empty into the bay, the largest being Miami River; at the north end are Arch and Snake Creeks, and in the lower portion are Hall's and Snapper Creeks.

The Southern portion of Florida, unlike all other peninsulas, has no central elevation or back-bone sloping to the edges; but on the contrary, the elevations are on the borders or shore boundaries, while the interior is a vast, shallow basin containing Lake Okechobee and the Everglades; the formation being somewhat similar to certain coral islands, though the dip or angle of the rocks along the shore strip indicates an uplift or upheaval, probably the result of volcanic action. Along Biscayne Bay the elevated strip of land between the bay and the Everglades is from two to twelve miles in width, and consists of very rocky pine land with occasional hammocks of the usual varieties of timber, including magnolia, gum-limbo, iron-wood, mastic, etc. The rock is a soft coralline limestone which can be sawn into blocks for building purposes, and which rapidly hardens upon exposure to the atmosphere. While the soil is too rocky to admit of general cultivation, certain tropical products seem to thrive wonderfully well, especially pine-apples, limes, and cocoanuts. It seems to be the natural home of the lime, for there are some wild groves that are exceedingly productive; while the pine-apple, being somewhat of an air-plant in its nature, will grow vigorously when planted in a hole in the rock; indeed, on Key Largo, which is in a manner all rock, a Mr. Baker has some twenty acres in pine-apples which yield him a large income yearly. This soft rock is rather an advantage than otherwise, for as it becomes disintegrated and pulverized it mixes with the sand and vegetable matter, forming a soil peculiarly adapted to the growth of semi-tropical plants. On the pine land is an undergrowth of sago palm or Indian arrow-root called, "coontie" and "komptie," from which, by a very simple process, is manufacted a commercial starch or farina, which resembles very closely that of the Bermuda arrow-root. Sisal hemp also grows abundantly, while the castor oil plant here becomes perrenial. In the hammocks, oranges, lemons, dates, guavas, plantains, bananas, sapadillas, maumee and sugar apples, etc., are cultivated with success.

But the most desirable feature of Biscayne Bay is its wonderfully equable and pleasant climate. Its situation, between the 25th and 26th degs. of latitude, about the same as Nassau, N. P.; its close proximity to the Gulf Stream; its insular character; the constant influence of the trade winds; the absence of malaria—render it the most genial and delightful climate for invalids in America, and perhaps in the world. The thermometer throughout the year shows an average temperature of 75 deg., with a mimimum of 51 deg., and a maximum of 92 deg. It is cooler in summer than any other portion of Florida, and in fact the thermometer does not range so high as in New York City. It is peculiarly adapted for, and at no distant day will become a popular health resort or sanitarium for those afflicted with bronchial or pulmonary affections, rheumatism, neuralgia, dyspepsia, nervous exhaustion, etc. The best route, especially for invalids, is by steamer via Key West.

But it is not for the invalid alone that this region has attractions and advantages, but for the tourist, the sportsman, the love of adventure, and the settler as well. The country from Miami to Cape Sable is known as the Indian Hunting Grounds, and abounds in game of all kinds common to the climate, and where it roams almost undisturbed. The Everglades will always retain its present state of wildness, and thus furnish a safe retreat for game animals, where they will multiply and increase in spite of the advance of civilization.

The singular and wonderful region known as the Everglades is not, as is popularly supposed, an impenetrable swamp exhaling an atmosphere of poisonous gases and deadly miasm, but a charming, shallow lake of great extent, with pure and limpid waters from a few inches to several feet in depth, in which grow curious water-grasses and beautiful aquatic plants; while thousands of small islands, from a few rods to a hundred acres in extent, rise from the clear waters, clothed with never-ending verdure and flowers; while cypress and crab-wood, sweet-bay and palmetto, cocoa-plum, and cocoa-palm, water and live oaks grow in tropical profusion and rear aloft their emerald banners, from which depend garlands and festoons of innumerable vines and air-plants, gorgeous with bloom of every hue, and exhaling the sweetest fragrance. Between the Everglades and the elevated shore ridge, is a strip of very rich prairie or savannah, averaging a half mile in width, but which is dry during a portion of the year only, when it affords good pasturage for cattle.

There are some twenty-five residences scattered along Biscayne Bay, within a distance of twenty-five miles. Old Fort Dallas, at the mouth of Miami River, is now called Miami, where there is a store and a post-office kept by J. W. Ewan and Chas. Peacock; they occupy the officers quarters, and offices of the old garrison, which are yet in good condition, being built of stone. There are some fine groves of cocoanuts, oranges, lemons, limes, and guavas. On the opposite or south bank of the river are the store and residence of W. B. Brickell, and the winter home of Mrs. Gilbert. Eight miles up the bay is the post-office called Biscayne, the residence of W. H. Hunt, Superintendent of the life-saving station. Between the two places named are the homes of Dr. Potter, Judge Falkner, Messrs. Clark, Sturdevant, and others, while below the river are the settlements of Messrs. Rhodes, Jenkins, Jack Peacock, Pentz, Hubell, Seibald, and many others, and twenty miles below, on the Perrine Grant, in the Hunting Grounds, is the well cultivated hammock of Mr. Addison. The settlers follow the various employments, at times, of planting, hunting, fishing, starch-making, turtling, sponging, and wrecking.

The Indians, a remnant of the once powerful Seminoles, are few in number and are very peaceable, seldom coming into the settlements. Those that we saw were splendid specimens of the race; tall, symmetrical, and very straight, with clean, sinewy limbs, and good features. They shave their heads as high as the tops of the ears, and braid the top lock into a long plait which they coil around the crown. The head-dress is composed of a number of bright colored shawls wound around the head in the manner of a turban, looking for all the world like a gaily painted cheese with a hole in the centre to fit the head. Old Tiger Tail is said to be still living in their village in the Cypress Swamp near the Everglades.

As these papers have already outgrown the limits originally intended, I must rapidly and abruptly draw them to a close, though feeling that the half has not been told. We spent our time very agreeably on Biscayne Bay and in the vicinity, hunting, fishing, exploring, and sailing among the Keys. We returned to Lake Worth, embarked on the *Blue Wing*, and sailed back to Titusville, camping by the way, which place we reached on April 27th, just four months after our departure from that post. I sold the *Blue Wing* for the same price I had paid for her, and we took passage on the steamer *Volusia* at Lake Harney for Jacksonville, where we arrived on the first of May, on the third of May we arrived in "Old Kaintuck."

The boys recovered their health completely, and up to this time have retained the twenty or thirty pounds avoirdupois which they each gained in Florida. They are all more than satisfied with their trip and experience, and some of them probably return to that sunny land for a permanent home. Ben brought home quite a varied collection of walking canes, of which he is quite proud. Frank, who took a great fancy to sailing, will never be satisfied away from salt water; he was my "main-stay" aboard the *Blue Wing*, and I can say of him, as was said of Prince Hal, he is "a Corinthian, a lad of mettle, a good boy." J. A. Henshall.

TROUTING IN THE BLUE RIDGE.

SECOND PAPER.

In a former paper in these columns I mentioned an intention I then had of testing the capabilities of some rivers whose names had long been to me familiar sounds, but on whose waters I had never given myself the opportunity of casting an eye, much less a line. After a long and weary watching for the continuously gathering rain clouds to burst, I gave the weather up in despair, and found myself one morning late in May, in company with C——, riding northwards in a languid and depressed manner, rather with a view of satisfying the sporting department of my conscience than with any hopes of success, or much anticipation of pleasure.

Our horses' heads pointed northward, and the Blue Ridge towered upon our left. Fifty miles of road lay before us, as we jogged along, with bulging, flapping saddle-bags, amid clouds of dust. And the mountain streams, that in happier times splashed over our boots at the village fords, now trickled feebly scarce over our horses' hoofs.

But why dwell on the particulars of such a tedious day? Despondency reigned throughout the angling, as well as the agricultural world. The army of devotees that every stream-washed Virginia village pours forth were there in rows upon the banks—a melancholy band—unambitious individuals—black and white—anglers emphatically of the plebeian stamp—who know not the joys of the dancing fly or the gleam of the rising trout.

Here is a rude pier thrown out into the stream for the special use of the store-keeper—the aristocrat of the little collection of tumble-down shanties that old people say was a village before the Revolutionary War. Here, with one eye upon his store door and the other upon his float, his commercial highness swings his legs throughout the spring and summer days, and chews and ruminates in silence upon the glorious days of yore. There, too, are the '*oi polloi* seated upon hollow stumps or squatting on the rocks. The same answer is returned by one and all, a brief, sad negative, that tells of blighted hopes, of "horny heads" that refuse to be cajoled, of silver chub that are evidently of an opinion that a hook half the size of an anchor, fastened to a bean pole by a rope, though too thick in one sense of the word, is very much too thin in the other.

The remark rises to one's lips as the shanties and the sportsmen are left behind in the dusty distance, that if such assiduous attention is paid to the finny race during the present conditions of water and weather, what a lively time the horny heads and the chub must have in damper seasons.

It were vain to relate the cruel fabrications as to mileage of which we were the victims, and as I look calmly back with the eye of experience I can even forgive the astounding statements with which the bucolic mind there, as in all old time countries, loves to torture the inquiring stranger.

I am an old hand at road travelling, and am usually not at all surprised when an excellent blacksmith of otherwise irreproachable character tells me my destination is five miles off, and I find it fifteen. I have long since ceased to exhibit astonishment on hearing the existence of a considerable village denied almost within sound of its church bells, if it had any; and I believe I can now ride calmly along, and patiently watch, so to speak, the wished-for haven vanishing further and further away at the mouths of my roadside informants, like phantom islands in a tropic sea. I am ready for all emergencies, even when a very high-toned store-keeper counts out the miles to me upon his fingers, amid the silent plaudits of his customers, with an exactitude that would be deceptive and highly dangerous to greener hands. But—while granting that all goodwill was intended—the dwellers by this Virginia highway cast into the shade any former experiences that have fallen to my lot. And while fancy had allowed us to picture ourselves riding in with the last rays of day to a comfortable supper, a stern reality had long rung the chimes of midnight. Even our journey bid fair to come to an end. The lights had long since vanished from farm house and cabin windows. The blackest of night had for hours thrown an uncertainty and miserable doubt over the rugged mountain paths over which our tired steeds floundered, and the tardy moon rose just in time to throw her light upon the broad roofs and the rustling shade trees that marked the end of our troubles. The mocking bird poured forth its song from neighbouring groves. Poplars and willows in the valley whitened beneath the moonbeam's light, the fragrant scent of clover fields filled the air, and the sound of a distant stream with its accompanying chorus of frogs and whippoorwills rose and fell upon the soft night wind.

To say that the "sleep of the just" was ours, is perhaps needless, and when we threw back the shutters of our window in the morning the sun had risen over a landscape that for freshness and quiet beauty could not easily be surpassed. Immediately below us the dew-drops still glittened on a large and well kept lawn surrounded by trimmed hedges of osage oranges.

The morning breezes rustled among the leaves of acacias and mimosas, and humming birds danced through the sunlight from tree to tree. Beyond stretched a level and fertile valley, green with wide fields of wheat and clover, down the centre of which rows of willows and alders marked the winding course of a stream. Behind all and some miles away, yet seeming to tower immediately above us, the main chain of the Blue Ridge threw its clear cut summits into the sky. Each rock and crag glinted in the morning light; the stunted and wind-swept trees which bristled on their great razor edges, three thousand feet above us, could be singly marked as if close at hand, and the ear could almost fancy the plash of the many streamlets leaping down those fairy glens on which the black shadows of early morning were still resting.

Such an aspect of the elements, from an angler's point of view, was not conducive towards infusing energy into our movements, and it was some time after breakfast before we started, in company with our host, and laden with the good things of this life, for our fishing grounds. After a ride of seven miles up the course of the little river before alluded to, in whose shallows we could see innumerable chub basking, we arrived at the foot of the mountains proper.

Here, at that line of demarcation which exists in all Virginia streams, where the original forests and cultivated land meet—where the domain of chub and other coarse fish ceases, and the reign of the trout begins, our river divided into two forks, both much about the same size, and equally good in their trouting capacities.

In the angle formed by them a neat log house confronted us, of a decidedly pretentious stamp, and surrounded by evidences of taste that are rare in such latitudes. Here dwelt, fished, and hunted Zachariah Fitzgerald, whom, it is scarcely necessary to add, was known as "Old Zach," and who combined the rare qualifications uncommon in his kind, of being a thorough sportsman without a touch of the pot-hunter about him. He had once been the great trout slayer of these mountains, but since the rise of fly fishing in his neighborhood had, at the sacrifice of his reputation, discarded the wriggling worm and manfully taken, despite rough tackle and other obstacles, to the use of the fly alone, and no one is now more contemptuous than that rough and worthy being, of that method of angling by which his reputation was made. It is the only instance among that class of men that I ever saw, and deserves infinite credit, more especially as poor Zack's proceedings are not infrequently made the subject of jest among the better-armed sportsmen from a distance that make his house their headquarters. He takes it, however, in excellent part, and flogs and thrashes away at his favorite pool at the Forks every evening, seldom returning without a three-quarter pounder and a broken cast, on which usually hangs a tremendous yarn of a "whaler" who had got the better of him.

Zack as a rule prefers solitude on his fishing expeditions nowadays, but those favored ones who have seen him with his hickory sapling and short line fast in a fish, say it is a great sight, and that his treatment of his struggling victim is of anything but a yielding nature.

It would be as well, while we unsaddle our horses and rig up our tackle, to say a few words on what I called just now the rise of fly-fishing on this river, as it is by far the best trouting stream, to my knowledge on the Eastern side of the range, and probably affords a parallel to the history of many others. I refrain from entering into geographical situations, as no stranger contemplating a fish ing trip to the old Dominion would be so foolish as to

choose for preference the Piedmont section when such a much wider field lies before him in the valley and western counties.

Six, nay five years ago, such a thing as a jointed rod, much less a cast of flies, had never been seen by the mountaineers that dwelt and fished and poached in happy innocence of legalities in those remote glens. It was about the spring of 1874 that their weak minds were first astonished by the sight of two gentlemen from a neighboring town, wading up the centre of their stream in strange and fantastic garb, resplendent in wading stockings, creels, landing nets, and jointed fly rods. Zack reigned in Israel in those days.

"What," said that worthy, as he laid upon his horny palm a small sized black gnat, "catch a fish with that 'ar thing?" But catch them they did, and so did many others who now and again came from a distance and continued to astonish the aboriginees with the same strange tackle and the same extraordinary success. Fish laws followed, bed-tickings and seine nets were abolished, and close times enacted—the means to enfore these laws which might at first appear scanty, were the privileges of preserving forcibly presented to the minds of the numerous and uneducated riparian proprietors. From the plains below to the sources of the streams, high up among the mountain, the squatter revelled in his new dignity, and many famous stories are told among the woods of the great difficulties that ensued and still exist under this very excellent system. Tom dare not for his life slip a bed-tick into a pool, lest Dick, who lives just below, and to whom he refused leave to fish the week before, should spot him and report according. Combination between them is difficult, as the family higher up, again has an old standing feud and would jump at the chance of exposing them. A total stranger would, I actually believe, have more chance of committing illegal acts if he felt so inclined—he certainly has very little difficulty in fishing where he pleases—and if the slightest hitch is suspected from any quarter, a present of one fly will square everything for life, so great is the infallibility now supposed to be in the once sneered at feathery charm.

(To be Continued.)

GREEN GILL OYSTERS.

Editor Forest and Stream:—

I had been down to North Carolina on a gunning trip and was returning in company with several "Tar heels," who were on their way North to buy goods. Two weeks shooting had given me a sharpened appetite, and that longing for the oyster that was shared by my companions who each had a countryman's love of fish and bivalves—on the principle, I presume, that we all want what we can't get. Our train stopped at Petersburg for supper, but it was unanimously resolved to wait until our arrival at Richmond, where we could probably get better oysters. Our's was a gay party, and I cannot avoid giving you one of the anecdotes with which we whiled away the time. Major Williams, a lively old cock, was telling us that in old times it was the fashion to haul cotton to Petersburg from North Carolina in wagons. The roads were bad, and it, at times, took the hardest kind of swearing to "move the crops." The Major's father was an adept at starting a stalled team, and was often reproved by the minister for his profanity. On one occasion, it so happened that the preacher concluded to go to Petersburg with the elder Williams, and on the road, as usual the wagon got stuck, nor could it be moved, as out of deference to his reverence the ordinary incentives were not resorted to. All efforts proving fruitless, the parson, with the slightest perceptible twinkle in his eye, said that he would walk ahead for exercise, which he did, and soon got out of hearing, when the well known language being applied to the mules they awoke from their lethargy, and speedily got out of the mud. After that the preacher never revived the subject of swearing at a stalled team. The Major wound up by saying that perhaps the reason he could not abandon profanity was, that he had too many wagons in the mud.

Arrived at Richmond, we sought the best oyster saloon and ordered oysters as each preferred. They were speedily forthcoming, and we sat down to our feast, when the peculiar appearance of my oysters caused me to examine them. "Gentlemen," said I, "I hope you don't object to green gill oysters; these are green gills. I have been told they are harmless, though some persons refuse to eat them, on the ground that they acquire the green gill from feeding on copperous banks, and during the war it was supposed to be the result of living on dead soldiers." Each man dropped his fork or spoon at my remark, with an exclamation of disgust. The Major had already eaten some of his oysters, and the expression of alarm and horror that overspread his countenance, was ludicrous in the extreme. I cannot repeat his remarks, in full, but it was evident that he did not limit his swearing to starting a stalled team. "Boy," cried he, as the waiter entered the room, "What's the matter with these oysters? What makes 'em look so green?"

"Dem's de green gill oyster, Boss; dey's be best oyster comes here. Dey gets green from eatin' seaweed."

"Seaweed be blowed. Take them away from me!"

Amid mingled expressions of sorrow and disgust we left those oysters, and to this day some of the party invariably refuse oysters, as the Major feelingly remarks, "Can't help thinking of them green gills, at Richmond." Who can throw more light on the green gill? The restaurant men say it's a diseased oyster. Down on the York River the oyster men eat them, though they are tasteless and watery. The oystermen say they are perfectly wholesome, but will not sell on account of prejudice against their color.

AN APIARIAN INVASION.—It is reported that recently at Rouen swarms of bees invaded several houses in the town. It seemed impossible to drive them out; and at a confectioner's the insects put the workmen to flight, stinging every one about the place. Attempts to rid the house of them by burning sulphur were unavailing, for the bees retired to the upper chambers, descending again when the smoke ceased to be annoying.

SINGULAR.—A pot-hunter never gets tired of shooting until you give him ar-rest.

—See Vandersmith's kennel advertisement this week.

Fish Culture.

THE BIRTH OF FISH CULTURE IN AMERICA.

[Read before the Central Fisheultural Society.]

BY THEODATUS GARLICK, M. D.

MR. PRESIDENT AND GENTLEMEN OF THIS CONVENTION:—I have been invited to write a paper to be read before you, but it is hardly necessary for me to say that I am quite unfit for such a task, lying as I am on a sick bed, and have been many years; besides this, I carry the weight of nearly seventy-five years. But enough by way of excuses.

The discovery of artificial fecundation of fishes, was first announced in the *National Intelligencer* in 1853. I do not know of any modern discovery that struck me with such force as this did. I saw, or thought I saw, the most important discovery of the age, especially in such a country as ours; having such a vast extent of inland water of all kinds adapted to fish farming. I was so pleased with the discovery that I acted upon it at once, and selected brook trout (*Salmo fontinalis*) for my first experiments, obtaining my parent fishes from the Sault Ste Marie, in the month of August of the same year. I also obtained about forty trout from Port Stanley. On the 21st of November, I made my first attempt at artificial spawning and fertilizing the ova so procured. During the incubation of these eggs, I repeatedly exhibited them before the Cleveland Academy of Natural Sciences, in a glass cell that I had prepared, containing water, using a fine microscope (Smith & Beck's). These exhibitions were repeated at every meeting of the Academy until I finally showed the members the young trout—a queer thing to be called a trout.

I was so delighted with the birth of this tiny little thing, that I ran my horse to town, some two miles, to tell my partner in surgery, Prof. Ackly, on whose farm I made my experiments. We both rushed back to the farm to see this baby trout, which was born on the 22d of February, 1854. This trout has a history, a history such as no other fish can boast of, being undoubtedly the first fish produced by artificial fecundation on the American continent.

When I look back, I confess I am astonished at the magnitude to which this discovery has grown, and yet I had an inkling of it at the very start.

I forgot to mention that I procured one or two thousand eggs from trout in Venango County, Pa., sometime in October of that year, the Hon. E. D. Potter assisting me. Quite a number of these perished, owing, I think, to their being transported some distance in wet sand.

I exhibited trout, old and young, at two of our State Fairs, at Cleveland and at Cincinnati. This constitutes about all of my experiments in artificial fish culture.

The immense improvements made since my experiments, need no comment from me; but I think and expect farther and perhaps even greater improvements will be made in this branch of our industries. This Convention shows clearly that you do not consider your work completed. Permit me, gentlemen, to make some extracts from Scotland's greatest man, Hugh Miller, not for the purpose of enlightening, but to encourage you; and, I may add, to lighten the tax on myself in preparing this paper:

"Man, in this great department of industry, is what none of his predecessors upon earth ever were—'a fellow worker' with the Creator. He is a mighty improver of creation. We recognize that as improvement which adapts nature more thoroughly to man's own necessities and wants, and renders it more pleasing both to his sense of the æsthetic, and to his more material senses also. He adds to the beauty of the flowers which he takes under his charge, to the delicacy and fertility of the fruits; the seeds of wild grasses become corn beneath his care; the green herbs grow great of root or bulb, or bulky and succulent of top and leaf; the wild produce of nature sports under his hand; the rose and lily broaden their disks and multiply their petals; the harsh crab swells out into a delicious golden rinded apple, streaked with crimson; the productions of his kitchen garden, metamorphosed to serve the uses of his table, bear forms unknown to nature; an occult law of change and development inherent to these organisms meets in him with the developing instinct and ability, and they are regenerated under his surveillance. Nor is his influence over many of the animals less marked. The habits which he imparts to the parents become *nature*, in his behalf, in their offspring. The dog acquires, under his tutelage, the virtues of fidelity to a master and affection to a friend. The ox and horse learn to assist him in the labors of the fields. The udders of the cow and goat distend beneath his care far beyond the size necessary in the wild state, and supply him with rich milk, and the various other products of the dairy. The fleece of the sheep becomes fine of texture and longer of fibre in his pens and folds; and even the indocile silk worm spins in his sheltered conservatories, and among the mulberry trees which he has planted, a larger and brighter and more glistening cocoon. Man is the great creature-worker of the world—its one created being that, taking up the work of the adorable Creatar, carries it on to higher results and nobler developments, and finds a field for his persevering ingenuity and skill in every province in which his Maker had expatiated before him. He is evidently—to adopt and modify the remark of Oken—God's image manifest in the flesh.

"The ability of accomplishing the same ends by the same means—in other words, of thinking and acting in the same practical tract—indicates a similarity, if not identity, of intellectual nature. As a geometrician, as an arithmetician, as a chemist, as an astronomer—in short, in all the departments of what are known as the strict sciences—man differs from his Maker, not in kind, but in degree. The deputed lord of creation, availing himself of God's natural laws, does what no mere animal of the old geologic ages ever did, or ever could have done—he adorns and beautifies the earth, and adds ten fold to its original fertility and productiveness."

The above extracts from Hugh Miller are undoubtedly true. We cannot look out of doors nor in-doors without seeing the proof of his statements. It applies to fish culture as well as to hundreds of thousands of other things that man has accomplished. You will make further improvements in fish culture; among them will be hybridizing. It is now accomplished without man's interference. The *Salmo amethystus* and the *Salmo siscowet* in Lake Superior—I have seen and eaten of them all, parents and hybrids. The parent fishes spawn at the same time, and together on the same spawing beds; but the result is, there are many hybrids. The hybrid is much the best fish. It is not necessary for me to say, that in order to breed hybrids the parent fishes must be of the same genus and should spawn at the same time of the year. It is not long since a prominent fish culturist announced in a sporting journal that he had bred hybrids from the *Salmo fontinalis* and another species of trout (I forget its name) found in California or among the Rocky Mountains. I do not remember which place. Now, the *Salmo fontinalis* spawns in the fall of the year, October and November, and this California trout spawns in the month of March, so said this person who accomplished this wonderful feat in fish culture, there being five or six months difference in their time of spawning.

How he accomplished this feat, I do not know, unless he adopted Rev. Dr. John Bachman's plan, that of drying the eggs of the perch for ten days, from which he obtained a considerable number of young perch. I have not the least doubt that eggs that have dried for ten days would be as sure to hatch in five or six months, or even five or six years. Such statements are pernicious, as they tend to lead beginners astray.

Mr. President and gentlemen of the Convention, you have this to encourage you; the Creator has endowed you with faculties that fit you for this work, which enables you to be co-workers with Him; you avail yourselves of His laws.

I most heartily wish you success, and a safe return to your homes.

Bedford, O., Sept. 22d.

THE FRENCH FISH CULTURE INQUIRY.

THE French Senate appointed last July a Commission of Inquiry to investigate the condition of the fisheries of the inland and coast waters, and the progress of fish culture. This Commission has proceeded to the securing of the information by sending out the following series of questions, the answers to which are intended to serve as a nucleus for the information to be obtained hereafter. The form of the inquiry is such as might be be followed with success by our own State Commissions. We have thought these questions of sufficient interest to be printed entire:

FRESH WATERS.

I. STATISTICS.—1. What is the present condition of the streams, rivers, and lakes, considered in reference to the production of fish? 2. What are the species of fish occurring in the waters of your neighborhood? 3. Are these ponds in the region? and what is the mode of culture? What is their product? 4. What is the quantity of fish on sale in the markets of your district? What species of fish are represented? What is the entire amount, and the price per kilo.? What species of fish, formerly existing, have disappeared or diminished? 6. Are the streams and rivers frequented by andromous fish, lampreys, salmon, shad, eels, etc.? What watercourses are more particularly stocked with crawfish? 7. Are the dams provided with fish-ways? and do these allow free passage for the ascent of the fish? 8. What is the tenure of the non-navigable streams? Are they leased? 9. Are the regulations, in reference to close time and the restocking of waters, carried out by the lessees? Are the close times believed to be long enough? and what are the results? 10. Are there in the department fish cultural establishments, the inauguration of which is either due to the State or private individuals? 11. Have there been in the region attempts to restock the waters? What were the results. II. CAUSES OF DESTRUCTION.—12. What are, generally speaking, the causes to which the depopulation of the waters in your vicinity are attributed? Do special causes exist in certain localities? In what streams has a mortality among the crawfish been noticed, and to what cause as it been attributed? alterations of the waters; parasites affixed to the branchia, etc. 13. In what streams have the the variations, in the height of the water, caused by opening and closing the shuiceways and floodgates of dams, been considered a cause of destruction of the fry. 14. What is the effect of steamboat navigation, in depopulating the waters, and destruction of spawning fish. Can any fishes be mentioned as destroyers of spawn or young fish. 15. What are the places where the waste products are complained of? And what is th nature of this refuse? In what water-course, lakes, and ponds, is depopulation by the effect of flax steeping and other industrial pursuits complained of? 16. What are the drawbacks resulting from the dredging of streams, the raising of banks, and the removal of grass? What observations have been made upon the function of vegetation in maintaining fertility of the waters? 17. Is there any complaint made of the destruction of fish and crawfish, by the agency of factories and the temporary drying of mill-races? What are the precautions taken for the preservation of fish where irrigating canals exist? 18. Are the waters sufficiently guarded from a fishery point of view? What are the agents charged with this duty? What is the surface extent in the lakes, rivers, streams, and brooks? Is any complaint made of the lack of supervision? 19. What are the most frequent modes of poaching practised in your region (changing the current, employment of chalk, *cocculus indicus*, or other hurtful substances, dynamite, etc.)? What are the fishing implements considered the most hurtful? Are drag-nets used? Do dams and fixed nets exist? III. RESTOCKING.—20. What are the means indicated and asked in the region to remedy the depopulation of the waters? 21. Indicate the places in the streams, canals, ponds, etc., which seem the most favorable for the establishment of hatching stations or reservations for restocking? In the different water-courses, where dams exist, what are the points where it appears necessary to establish fish ladders? 22. Indicate the periods of reproduction of each

species of fish and crawfish, during which it is thought fishing should be prohibited? 23. Do the fishery laws excite complaints? Are any changes asked for? 23. What measures must be taken to prevent irrigating canals, and other artificial ditches, from being a cause of the destruction of fish?

SALT WATER.

1. What is the condition of the fishery products in the sea adjacent to your district? Have they diminished, or do they hold their own? To what cause is their diminution attributed? 2. What are the species that have more particularly disappeared or become rare? Which are sedentary and which migratory? Is it as abundant as formerly in the immediate vicinity of the coast? 3. What observations have you been able to make tending to prove that the periodicity of appearance of certain species is due to their rising towards the surface or approaching the shore, rather than to any migrations? 4. Are there any modifications to the existing regulations asked by the lessees of the seashore, owners of oyster parks, mussel parks, reservoirs of fish, etc., and what are these modifications? Do the fishermen ask any modifications? 5. What are the inconveniences caused by carting off seaweed, rock, eel-grass, etc., with reference to the reproduction of fish? 6. What are the fishing implements particularly destructive to fish and their fry? 7. Is the supervision sufficient? Are there complaints about it? 8. Indicate especially favorable places for establishing parks, reservoirs, and fish-cultural basins, places for penning up fish, crustaceans and mollusks? What species of fish are best adapted to being raised in this way? 9. What are the means which seem proper and are demanded in the region to remedy the exhaustion of the sea water, and to favor the preservation and production of fish? 10. What would be the probable effect on repopulation of temporary interdictions of all fishing upon certain lengths of the coast? Upon what portions of the coast could these interdictions be most advantageously carried out? What reclamations would be made?

SPAWNING OF THE SPECKLED TROUT OF LAKE SUPERIOR.—All along the rocky shores of Lake Superior speckled trout of large size afford excellent sport to the angler during the month of June, and sometimes later. These trout are caught chiefly with minnows, although they will frequently take the artificial fly with avidity. Angling for these trout is technically known as "rock fishing," in distinction from the ordinary stream fishing, of which there is an abundance, as many streams of varying size empty into Lake Superior all along the coast from Marquette westward. While the trout of the brooks and rivers are numerous, and some of them large, their average size is much less than of those caught along the rocks on the precipitous shores of the lake. The two classes of fish are undoubtedly identical, although their habits and food are quite different, the stream fish subsisting on the grubs, larvæ, flies and whatever finds its way into the running water, while the rock fish feed on the minnows and fry which seek the shallows along the main shore of the lake. Hence, minnows being the customary and habitual food of the latter, afford the best bait, although, as we have said, artificial flies are not wholly rejected, as we have ourselves proved by repeated experiments.

It has been a matter of speculation to most persons as to where the fish go when they disappear in July; but the fact is apparent that they not only seek the cooler water of the deeper lake, but that they follow the small fish, which are chiefly the young of the herrings and white fish. They do not go into the rivers to spawn, but select the sandy bays close to shore, wherever found, for their deposits, which are made in October. It is probable that the water of the streams is too cold for proper incubation, as the ova mature and hatch more quickly in water of a certain temperature than in that which is warmer or colder, and that the fish, therefore, resort to the warmer water of the shallow sand-bars. This supposition is sustained by the fact that very few, if any, trout are caught at any time in the gelid waters of the several rivers and streams which empty into the Great Nepigon Lake, which lies fifty miles north of Lake Superior, with which it is connected by the Nepigon River—those streams being largely fed all summer long by melting snow and ice. Nepigon Lake is shallow and warm, while Nepigon River is cold and deep; but the latter has many sandy bays and shoals along its course, as well as several connecting lakes, and these afford spawning beds for the trout, just as the sandy bays of Lake Superior do.

HYBRID SHAD.—Seth Green calls attention to the close resemblance between the young hybrid shad (the hatch of the shad spawn impregnated with the melt of the striped bass), and the young shad proper. The culture of this hybrid has been pursued at the Hudson River Hatchery for the past four years. If any of these fish are captured, Mr. Green requests that they be forwarded to himself at Rochester, or to the Hon. R. B. Roosevelt, No. 76 Chambers street, New York.

SUCCESS IN TENNESSEE.—*Nashville, Nov. 12th.*—The accounts from the few counties in our State where fish protection laws were passed, are so wonderful, that I do not hesitate to say that by the time the next Legislature meets, such laws will be passed for the whole State. The increase in South Harpeth in particular, is almost incredible. This, too, without any protection, except as against seines, traps, dams, and harpoons. Legitimate angling being permitted all the while, our fishmongers are receiving their full supply of Northern Lake fish, but there is great prejudice here against eating them, on account of the long time since they are taken from the water, though kept perfectly fresh on ice. Col. Akens will shortly be off on a fishing excursion. J. D. H.

Sea and River Fishing.

FISH IN SEASON IN NOVEMBER.

FRESH WATER.

Black Bass, *Micropterus salmoides; M. nigricans.*
Muskalonge, *Esox nobilior.*
Pike or Pickerel, *Esox lucius.*
Yellow Perch, *Perca flavescens*

SALT WATER.

Sea Bass, *Sciænops ocellatus.*
Striped Bass, *Roccus lineatus.*
Weakfish, *Cynoscion regalis.*
Bluefish, *Pomatomus saltatrix.*
Cero, *Cybium regale.*
Bonito, *Sarda pelamys.*
Kingfish, *Menticirrus nebulosus.*

—To send fish long distances, clean carefully, and dust the interior well with strong pepper; then pack them in fresh grass or nettles, and send them off as soon as possible. Treated thus they will keep their color and freshness for a considerable time.

RHODE ISLAND—*Newport, Nov. 13th.*—The fishermen have had fine luck of late. Codfish have again come on to their winter feeding-grounds, and are in fine condition. Blackfish are caught nearly all the year round. COOT.

NEW YORK—*Shelter Island, L. I., Nov. 9th.*—The fishing season generally ended yesterday, and the several steamers and yachts came in during the day with their colors flying to mark the final trip. I cannot at present give you the gross amount of fish caught, but it reaches to many millions; and as oil is rising and scraps for manure in great demand, this business must pay well this year. McL.

TENNESSEE—*Nashville, Nov. 12th.*—Our anglers had less amusement during the last season than for many summers past. The drought and great heat unfitted the many streams for the sport, and the disposition to run away to the Northern lakes did the balance. One gentleman assures me that though he caught mountain trout, muscalonge and the famous grayling, for sport he had yet to find more desirable spots than he knows on the rivers in our State. Of course, he admits the gameness of the grayling and the great abundance of other kinds of game fish, but he says the hard work to get at them counterbalances, in a great measure, the pleasure. I have heard of some few parties lately who have taken handsome creels in Buffalo and Harpeth; and now is the season for jackfish in the Cumberland. A gentleman caught a shad a few days ago, with a fly while fishing for bass. From Reelfoot Lake fabulous accounts always come, but I cannot appreciate the sportsmen who revel in that class of fishing. J. D. H.

FISH AS FOOD FOR ANIMALS.—"The cattle at Provincetown feed upon fish with apparently as good relish as upon the best kinds of fodder. We have seen the cows at that place boldly enter the surf in pursuit of the offal thrown from the fish-boats on the shore, and masticate and swallow every part but the hardest bones. A Provincetown cow will dissect the head of a cod with wonderful celerity. She places one foot upon a part of it, and with her teeth tears off the skin and gristly parts, and in a few moments nothing is left but the bones. It is said that some cows there will, when grain and fish are placed before them, eat the whole of the fish before they will touch the grain."—[*Barnstable* (Mass.) *Journal, Feb. 7th*, 1833. We have accounts of the feeding of fish to stock in the East, centuries ago. It is a regular practice in Northern Norway, where dried codfish are used to piece out the stock of hay that does not suffice for the long winter. In 1856 Prof. Stoeckhardt, of Saxony, received a sample of Norwegian fish-guano, which he fed to a half-year old pig "which did exceptionally well on this northern food."—[*American Agriculturist.*

SOME FISHES OF OREGON.

We are indebted to Fish Commissioner Webber, of New Hampshire, for the following interesting letter:—

ASTORIA, *Oregon, Sept. 21st.*

MR. WEBBER: Your letter of a few weeks ago, containing a request from Prof. Baird that I would send him a specimen of the "queer fish" taken in the Columbia, and mistaken for shad, was duly received and will be acted upon next summer. I wish now to ask if, in your opinion, it would be possible to so pack impregnated spawn of Eastern brook trout that they could be sent from your State to Oregon with a fair chance of arriving in good condition. Mr. Livingstone Stone, in his book on "Domesticated Trout," says (page 146): "They—trout eggs—have been sent to England and California without loss;" but I have corresponded with persons who are interested in the business, as well as thoroughly informed, and they assure me that there are none in California. I will say that this attempt is not to stock a private pond, but a stream in this vicinity, and for the public benefit.

This morning at daylight I started out to catch the first salmon of the season. The summer varieties, the canning fish, bite neither fly-spoon nor bait. We catch the fall salmon, of which the silverside is the most numerous and best quality. It is too early yet, so I caught only one—a small one, about three pounds. My spoon—a No. 20 Mann's Perfect Revolving—was taken by a large one—I judge about twenty pounds; but he was not well hooked, and tore away. I also caught, in two hours' trolling, twenty chubbs, a fish that resembles a coarse and overgrown dace, except that his head is larger in proportion, being nearly one-third his length, which is a full-grown fish is over two feet; weight from one to five pounds. Their flesh is said to be white and of good flavor, and notwithstanding the numerous bones they are highly prized—by Chinamen. I think, one of these days, I will have one cooked and give them a trial, on the sly of course, for it would ruin the reputation of a "white" man if it was known of him. While I was fishing, a sturgeon—a little fellow, 150 pounds or so—leaped out of the water, a hundred yards away. I have seen them larger than that. I remember one that was brought into the cannery at Brookfield that weighed 250 pounds on the scales (Fairbanks, not his own—a sturgeon has no scales).

Here is a new sensation for you. You are standing on the wharf, with one end of a half-inch Manilla line in your hand, and at the other end, fifty yards away, a 150 or 200 pounds sturgeon has anchored himself. You are trying to pull him out of the water, and he is trying to pull you into the water. How long do you think you would keep up the contest? Old sturgeon fishers never throw their line overboard till they have taken a couple of half hitches around some convenient spile. The story is told of a fisherman who fished for sturgeon in a small skiff; he had fastened the line to the painter, and sat back in the stern waiting patiently for a bite. It came—the bite did—and the sturgeon that came with it was one of the strongest, if not the largest, of his kind; he pulled so hard as nearly to draw the skiff's bow under water. After dashing wildly in various directions for a few minutes, the fish seemed to have made up his mind what was best to do, for he started in a bee-line for the bar, a dozen miles away, at a rapid rate. The matter was growing serious; the fisherman could not go forward, as his weight, added to the strain upon the painter, would surely have swamped the skiff. He could only sit in the stern and wave his handkerchief as a signal of distress. Fortunately this was seen from another boat, which approached and rescued the skiff by cutting loose the painter. This story was told me for the truth; but whether true or not, there is nothing impossible about it.

There is another queer fish caught here—the "porgie." In appearance it is like a flat fish, such as are caught in Eastern ponds, but larger, weight two or three pounds. Its body is nearly circular, but it swims upright, not flat, like a flounder. The strange thing is, it brings forth its young alive. They come in from the sea at flood tide, and are found wherever the water is brackish. I have caught them in front of the city, fifteen miles from the ocean. When taken in the hand and pressed on the abdomen the young, about the size of a copper cent, can be spawned to the number of forty or fifty, still partly enveloped in the membrane in which they are formed.

Tomcod fishing, too, is now in order. They, like the porgie, are found wherever the water is slightly salt. They are a perfect little codfish, ten inches to a foot long.

At the risk of making myself tiresome, I must relate an event that occurred last fall. I was out for salmon, in company with Mr. A. J. Megler, and when off Smith's Point, a mile from town, a salmon fastened on his spoon. While he was playing him, a seal came up and fastened on the salmon, raised him out of the water, and kept shaking him as a terrier does a rat. We shouted to him, beat the water with our oars, and soon frightened him away and secured our salmon. Soon Capt. Munson, of the little steamer *Magnet*, came down in his skiff, with his rod and spoons of his own make, to join in the sport. We told him of the circumstance. He laughed and said it was a very good fish story. In a few minutes he hooked one, and Mr. Seal was promptly on hand and repeated his performance; and so he continued to do, whenever a salmon was hooked, for the rest of the day. There are but few seal in the river now. I saw one to-day. In spring they come by thousands, with once in a while a sea-lion for variety. A seal will sometimes play round a salmon-net all night, eating off the heads of the fish as they are caught. I have seen boat-loads of fish where fully one-fourth had been served in that way. The under side of the head is the choice part, though when hungry he will eat the whole of it, and perhaps more than one of them. If you want to hear swearing in a dozen different languages, be around when the seal himself gets entangled in the net. He will wind it round and round him, until the fishermen reach the scene of his labors and dispatch him by repeated blows of the salmon club, or shoot him with the revolver, which is a part of every fisherman's outfit. I once saw a sea-lion that was caught in a net. He had entangled the whole net—250 fathoms, and worth when new twice as many dollars—into a hopeless snarl, with himself nearly helpless in the center. In this condition he was towed ashore and killed with a Henry rifle, the revolver of the fisherman proving nearly useless. The net had to be cut into many pieces. He was as large as a small ox.

Capt. Munson has just been in, and says he was after the salmon this morning. He caught a fifteen-pound one and a boat load of chubbs. C. J. SMITH.

THE TROUT OF UTAH.—To correct a prevalent impression that the trout of Utah do not generally take a fly, the Captain of the Fourteenth Infantry, stationed at Fort Douglass, writes, saying:—

I have taken quantities in all the streams within a radius of seventy-five miles, with flies, and I know to have been taken from the Provo River at least 1,000 pounds with no other lure. All my acquaintances in the city, and all our officers here, used flies exclusively the entire season. I have not fished in the lakes; consequently can't vouch for the action of the fish in those places.

C. B. WESTERN, Captain Fourteenth Infantry.

Natural History.

THE DISEASES OF WILD ANIMALS.

BY PROFESSOR JEAN VILAIN.

[*Translated from the Revue Zoölogique.*]

SOME naturalists have asserted that wild animals, when in a state of liberty, are almost entirely free from disease, and that the latter afflicts them only when in captivity. I know that this is entirely erroneous, and it can be proved that captive wild animals are more exempt from ailments than those roaming at large.

While First Surgeon of the Thirty-first Regiment of the Line, then stationed at Alabera, in Algeria, I dissected the carcasses of about fifty lions. The lungs of twenty of them were affected; one-half of them were almost gone, showing that consumption is prevalent among the lions of the Sahara and the Sahel.

At the Jardin des Plantes, here in Paris, seven lions have died since 1869. All of them were born here. I dissected them, and found that their lungs were entirely healthy. To what was the difference due? They received their food regularly, and were carefully protected from inclement weather, while the lions in Africa had to

go without food for days, had to inhale the sandy air of the desert, and were frequently drenched by terrible rains.

There is at the Jardin des Plantes a wolf from the Ardennes. He was caught when about six years old. He was suffering from cough, and at one time we thought he was dying. He hawked and spat, and was always sullen and morose. Often he abstained from food for several days. At last we chloroformed him and examined his throat. He was found to be suffering from nasal catarrh in its most aggravated form. Under proper medical treatment he recovered rapidly. Nine wolves born at the Jardin never showed the slightest sign of disease.

M. Jacquemart, the famous Indian hunter, often told me that he had seen tigers spitting blood, which exhausted them so that they could be approached within a few feet with impunity.

All monkeys are very delicate animals. They are not gluttonous; and having so much exercise, they are rarely afflicted with diseases of the bowels. But they have weak lungs, and the reason why so many of the most interesting among them die when brought to Europe is the too sudden change of air, diet, and water. There is no more intelligent monkey than the chimpanzee, a truly wonderful animal. While in Berlin I dined at the Zoölogical Gardens by the side of a pet chimpanzee. He partook of every dish like a human being, put sugar into his teacup, stirred it with the spoon, and drank the beverage with evident relish. But his eyes looked supernaturally bright. I felt his pulse. It was 125. "He will not live long," I said to his keeper.

"Why not?" he asked with a sorrowful mien.

"He is consumptive," I replied.

"Indeed! He often coughs."

The chimpanzee died a month later. His left lung was entirely gone.

Carnivorous animals suffer from digestive disorders only when fed upon poor meat. I dissected three hyenas: two in Paris, one in London. Their bowels presented an entirely healthy appearance, and so did their stomachs. But the reverse was the case of an old Abyssinian hyena belonging to a Greek menagerie-keeper, who had caught the animal himself in Africa. He managed to keep it alive for two years, but told me: "The beast always vomited, and often lay on the ground, moaning piteously. What was the cause?" I dissected the hyena. The stomach was in a terrible condition. It was dotted with the scars of boils.

Dogs are gluttons. Wild dogs are worse. We have at the Jardin one of these able to devour meat enough to gorge a tiger or a lion; but the animal has to pay dearly for its voracity; it is always suffering from aggravated constipation, and will not live long.

Foxes are shrewd about everything, and so they are about their food. What hunter has ever found a fox that died from disease? Zoölogists admire the dissected body of a fox because there is never anything unhealthy to be found in its organs. Hence, foxes are long-lived.

Six months ago we received at the Jardin four buffaloes from the North American plains. Two of them died three days after their arrival. They were found to be suffering from a multiplicity of diseases—dyspepsia, imperfect action of the kidneys, and fatty degeneration of the heart. The other two have been ailing ever since, and yet the young buffalo born at the Zoölogical Gardens of Cologne is the embodiment of health.

The elephant is one of the most temperate and abstemious of animals. He eats for his size so little food that it is a wonder how he is able to exist upon it. True, he dies in captivity before his time, but not from physical causes. There is no doubt that he is one of the most sensitive of animals. A slight or a disappointment mortifies him deeply. The elephants of South Africa, which are rough animals when compared with those raised in captivity, die from diarrhœa or constipation, as Le Vaillant has stated. Their tamer brethren are free from disease; and, if they die before their time, they generally do so from the above-mentioned causes. Sultan, the pride of the Jardin, the most amiable elephant I ever knew, was unable to survive the death of his companion, the pet dog Jean.

DRUMMING OF THE CANADA GROUSE.

I SAW in a back number of the FOREST AND STREAM, I think about three weeks ago, some discussion about the drumming of the Canada or spruce grouse. Having had a fine opportunity of observing the act in one of these birds, if your space will admit I will explain it as nearly as I can. Some time ago a male specimen of this handsome bird came to the house of a friend of mine not far from here, and took up his quarters along with the domestic fowl. He was a pugnacious little fellow, and it was not long before he waged war upon the large barn-yard cock that accompanied the hens about the place. The battle was long and hot, but it ended in the discomfiture of the old cock, as he was no match for his small rival in activity and spirit. After gaining his point, he used to make up to the hens much after the fashion of a turkey cock, by spreading his tail and lowering his wings until their outer edges touched the ground, at the same time making a noise like the sound of compressed air escaping by a small vent, or rather like the word "pit," expressed forcibly with the teeth closed. This he would keep up at intervals all day, jealously guarding his charge from all intruders in the fowl line. The hens used to eye him suspiciously, and fight rather shy at first, but they soon became accustomed to his antics, and then took no notice of them whatever. He would come up with the hens close to the back kitchen door without showing any fear, unless some one opened the door to go in or out, and then he would fly to the branches of a large spruce near by, and watch until the coast was clear again, when he would fly swiftly down with a circular flight, drumming strongly during the passage. He would at times start from the ground, and drum strongly while mounting upwards, with distinct and regular booms like the ruffed grouse. His usual flight was rapid and noiseless, so that the booming must not be attributed to the flight, like the whirr of the ruffed grouse, as he seemed to produce it at pleasure. Frequently he started without any noise whatever, and only commenced to drum during the latter part of the flight; or occasionally when he started off with it to commence with, he stopped it before the flight was over. He was a very handsome bird in full plumage, and it was a sight worth watching for half an hour, to sit and observe all his antics and gestures. At night, when the hens went to roost, he would betake himself to his spruce, and there stay until the following morning, when he would immediately join them on their appearance. He staid about the house for some days, but one morning turned up missing, having, I suppose, returned to his native haunts. I have frequently seen them, but never before or since have I had as good an opportunity of studying their habits, and I must say that I never expect to get another chance like this one. J. W. D.

Cap Rouge, Canada.

RAIL IN WISCONSIN.—I have always supposed the rail (*Ortolan*) to be mostly a Southern bird, and nowhere to be found in great abundance except at the South, among the wild rice fields and marshes pertaining to the coast, bays and inlets of New Jersey, Delaware, Maryland, Virginia, and thence southerly along the coast.

But, greatly to my surprise, I find the rail quite as numerous at Mud Lake (an enlargement of Fox River, twenty-five miles southwest of Milwaukie) as at the best hunting of Delaware Bay. The rail found here is identically the same bird I found there. It is of a dark brown color, short bill, long body, short tail and long, greenish legs, which in flying stretch back, and act as a very long rudder to a clumsy and rather slow flyer. The gizzard is disproportionately large, sets far in the chest, and seems to serve as ballast when on the wing. They usually fly straight and but a few yards, then drop down into the thick grass, and either hide away or run off like frightened rats in a hay-field. Being stupid of action and slow to rise, the boatmen not infrequently knock them down with their oars while pushing their boats through the marsh for the hunter. No one can mistake them.

The sportsmen of Delaware Bay with whom I conversed about this bird could give me no definite information as to where it breeds or comes from, but that they always found it in abundance in the marshes after about Sept. 1st, and that it remains there until frost and coldish weather set in, when it suddenly leaves, as is presumed, for the South; that they never see it come or go, or in flocks, and believe it migrates at night.

How such a clumsy and apparently weak flyer can travel such long distances as it must, seems quite astonishing. I am inclined to believe it breeds all along the coast and wherever it is found in the fall, though I could get no assurance of this from the bay hunters.

Be this as it may, I am fully satisfied that the rail of Mud Lake, and other places at hand, breed here, and hence are eminently a Northern bird. Many of them I find to be quite young here in September, and are evidently late from their nests. The valley of Fox River, above the lake, is thickly covered with tall marsh grass, which the farmers cut for hay in July and August. They tell me the grass is "full of these birds" when they are mowing it, and that they breed in it by thousands, but no one molests or cares anything about them. They do not even know their names, but always see them.

While they could be killed by the sportsman by hundreds per day, no one enters into this kind of sport. The bird is looked upon as too small for general shooting, though the duck-hunters sometimes kill them for want of something larger to fire at. They disappear at the approach of cold weather.

What is strange, I have never seen a rail on the large wild rice and marshy bottom lands and lakes which lie on the Illinois River about 150 miles south of here. From this fact I infer the rail migrates southeasterly to the coast, instead of south, else it should be very abundant in the fall on these similar grounds twenty-five miles below Peoria. I have never visited these until Oct. 10th, at which time I find them here, and numerous.

Among the rail I find the king rail, as on the Delaware River, and in about the same proportion—say as one to a hundred, perhaps more. The names of either of these birds are not generally known here. The king rail looks very much like the one mentioned, but is about four times as large, and neck quite long.

To find this rail so numerous—not scattering—and so far north, is new to me, and hence I note the fact, which may be of interest to your readers, if deemed worthy of record in your columns.

Most unfortunately, this hasty article is written without the aid of your "Sportsman's Gazetteer" as a reference, else I could render it more interesting and far more instructive. Please pardon my limited knowledge on this subject.

The fall has been hot and dry up to date. Game is generally abundant here, except that the large ducks have not yet come south. A change of weather has now set in, and they are expected daily. For variety of small game Wisconsin is hard to excel, and I find no difficulty in bringing in a full bag in a few hours' hunt, with game near at hand.

I add a list of the game animals found here:—

Ducks—Many varieties; quite plenty.	Rabbits—Abundant.
Grouse—Some.	Squirrels (large, fox)—Abundant.
Grouse (ruffed)—Quite plenty.	Squirrels (large, gray)—Abundant.
Snipe—Quite plenty.	Squirrels (small, gray)—Abundant.
Woodcock—Quite plenty.	Squirrels (small, red)—A few.
Rail—Abundant.	Squirrels (black)—Rare.
Rail-king—Some.	
Quail—Frozen out; very scarce.	
Pigeons (wild)—Some.	

All to be found in their proper places, and of such is the fill of the game-bag. H. W. MERRILL.

Waukesha, Wis., Oct. 20th.

The bird to which Major Merrill refers as being so common in Wisconsin is undoubtedly the Carolina rail (*Porzana Carolina*), and the king rail, so-called, is probably the Florida gallinule (*Gallinula galeata*), and not the true king rail (*Rallus elegans*). The Carolina rail is distributed over the whole of temperate North America. We have killed them in considerable numbers in the Rocky Mountains.

THE CAPERCAILLIE IN SCOTLAND.—Something over a century ago this superb grouse became extinct in the United Kingdom; but it has happily been successfully reintroduced into Scotland, where it is now doing well. Mr. J. A. Harvie-Brown has recently given the history of this bird's extermination careful investigation, and has also put on record the facts connected with its reintroduction by the Marquis of Breadalbane. The capercaillie, as it seems the name is now to be spelt, unites to the wildness and strength of wing of our ruffed grouse the size of the turkey, and we can well fancy that the sight of one of these great birds darting down out of a tree-top would try the steadiness of the coolest sportsman. Unfortunately this species, during the nesting season, while at his "play" or *lek*, is easily approached, and those who pursue him take advantage of this circumstance to pot him as he sits on his perch.

According to the best evidence the capercaillie became finally extinct in Scotland between 1745 and 1760, although occasional instances of its capture were recorded as late as the year 1800. In 1837 and 1838, however, the Marquis of Breadalbane, after several unavailing attempts succeeded, through the aid of Sir Thomas Powell Buxton, and Mr. Lloyd of Sweden, in obtaining a number of living birds which were delivered at Taymouth in good condition. Of the forty-eight thus obtained, some were turned out to shift for themselves; while others were retained in captivity for breeding purposes. The eggs of the latter were either hatched under domestic hens, or introduced into the nests of the black game. So successful were these efforts that the number of birds on the estate in 1863 was estimated at from one to two thousand. From Taymouth as a starting point, the birds have spread over a considerable district of Central Scotland, and with reasonable protection in the future they promise to do well, and may be considered as firmly established. As suggested in these columns when writing on this subject three years since, the practice of planting large districts of the Highlands with firs, will doubtless prove an efficient aid to the establishment of this grouse in Scotland.

SLIGHTLY ENLARGED.—A correspondent sends us the following description, taken from Temple's "Travels in Peru," as an instance of travellers' imagination:—

In the course of the day I had an opportunity of shooting a condor; it was so satiated with its repast on the carcass of a dead horse as to suffer me to approach within pistol shot before it extended its wings to take flight, which to me was the signal to fire; and having loaded with an ample charge of pellets, my aim proved effectual and fatal. What a formidable monster did I behold in the ravine beneath me, screaming and flapping in the last convulsive struggles of life! It may be difficult to believe that the most gigantic animal that inhabits the earth or the ocean can be equaled by a tenant of air; and those persons who have never seen a larger bird than our mountain eagle will probably read with astonishment of a species of that same bird in the southern hemisphere, being so large and strong as to seize an ox with its talons and to lift it into the air, whence it lets it fall to the ground in order to kill and prey upon the carcass. But this astonishment must in a great measure subside when the dimensions of the bird are taken into consideration, and which, incredible as they may appear, I now insert verbatim from a note taken down with my own hand: "When the wings were spread they measured sixteen paces (forty feet) in extent, from point to point; the feathers are eight paces (twenty feet) in length; and the quill part two palms (eight inches) in circumference. It is said to have power sufficient to carry off a live rhinoceros.

This bird has always been a favorite theme for the pen of adventurers, possibly because it really is a mammoth among the feathered members of creation. True measurements of the expanse of a condor's wings rarely exceed eleven feet, and the average is from eight to nine feet. But why should not a man who has the enterprise to shoot a condor on his native heights be allowed the privilege of magnifying his feat? Does any one suppose that when Othello told Desdemona's father of the autres vast, and anthropophagi, he made a tame story of it?

A SENSIBLE STEP.—As is well known to most of our readers, there has been much grumbling of late years among British sportsmen over the scarcity of grouse on the Scottish moors, a scarcity which Dr. Cabbold, the eminent English helminthologist, attributes to a worm allied to that which causes the "gapes" in the common fowl.

From the advertising columns of the London *Nature*, we learn that the Council of the Entomological Society, of London, has been authorized by Lord Walsingham and others interested in the preservation of British game birds, to offer the following prizes, which are open to all naturalists of whatever nations: A prize of £50 for the best and most complete life history of *Sclerostoma syngamus*—Dies—which is supposed to cause the "gapes" in poultry, game, etc., and one of the same amount for the best and most complete life history of *Strongilus pergracilis*—Cob—supposed to cause the grouse disease. Essays may be in English, French or German, and must be handed in before Oct. 15th, 1882, to the secretary of the Society, 11 Chandos street, Cavendish Square, W., London.

THE POTATO BUG BIRD.—*Coralville, Iowa.*—When the Colorado beetle created such sad havoc among the potato vines here in the West, the potatoes were uninjured in this vicinity for several seasons, owing to the kind offices of some beautiful birds, familiarly termed as above. Though they had previously visited and "bugged" the potatoes on some farms located in the timber five miles distant, for four or five successive seasons, it was not until the summer of 1877 that they turned their attention to this place. In the summer referred to, the bugs appeared as usual in great numbers and began working on the vines, and would, if unmolested, have destroyed them in a little while. One morning my attention was drawn to some strange, handsome birds that were sitting on the garden fence, surveying our potato grounds. I watched them closely for some time. There appeared to be but a single family of them; the two parent birds, and some half a dozen young ones. The latter were arranged in a row on the topmost board, awaiting their turns to be fed; and it kept the old ones very busy to attend to them. They would flit down in among the vines and seize an unlucky bug, and carry it to a little open mouth, again, and again, till I wearied of watching them. I knew at once that this must be the

potato bug bird, of which I had so often heard. This was repeated day after day, till our garden was cleared of the bugs. They then helped themselves to a few—a very few—peas (for dessert, I suppose), and then commenced work on the potatoes in an adjoining field. In size and shape this bird resembles the orchard oriole; is black and white in color, with a handsome red spot on its breast—reminding one of the prevailing hue of the potato beetle—and black and white bands across the wings. W.

Perhaps the bird which does this good service is the ow'hee bunting (*Pipilo erythrophthalmus*). We should like to hear more about it.

SIMPLE CURE FOR SNAKE BITES.—My father, who is something of an animal doctor, uses a very simple but effectual remedy when anything is bitten by a rattlesnake. And as I do not think it is very widely known, I will give it to the readers of FOREST AND STREAM. It is this:—Apply a poultice of common wood ashes to the wound and give a little weak lye internally.

Years ago one of my brothers was bitten by a rattlesnake. The poison penetrated his system, and it was thought he could survive but a little while. (The value of whiskey in such cases was then unknown.) My father at last resorted to this treatment, and to the surprise of all he speedily recovered.

Jack, our highly valued farm dog, in an encounter with a rattle-snake one day, received a bite on the nose. My father was absent, and by the time he returned poor Jack's head had swollen to about twice its natural dimensions, and he seemed to suffer greatly. My father treated him as above, and in a short time he was all right again.

This information may sometime be of value to sportsmen "camping out." W.

A SNAKE STORY.—*New Castle, Pa., Nov. 3d.*—One day last week a Mr. Rummell, of this city, while out gunning about twelve miles west of here killed an unusually large pheasant. The bird was brought home, and while being cleaned a snake measuring two feet three inches in length crawled out of it. The snake was striped, of a grayish color. That part of the bird's intestines lying next to the snake's head seemed to be entirely empty. The snake must have had its nutriment from them.

The Kennel.

FOOD FOR DOGS.

A DISCUSSION is going on in the columns of the London *Field* regarding the relative merits of different varieties of dog biscuits, and in a country where there are such large kennels of dogs as in England the matter is one of considerable importance. Some weeks since the Rev. J. Cumming Macdona, actuated no doubt by a desire to confer a benefit on dog owners and breeders, wrote a letter to the *Field*, in which he gave the formula for preparing what are known as the "Braunfels biscuit," being a prescription of Professor Metzdorf, the great food analyist of Germany. These biscuits are made and used at the kennels of Prince Albert Solms, at Schloss Braunfels, where they appear to give satisfaction. The recipe is as follows:—12 ounces of phosphate of lime, six ounces of common salt, six pounds of prepared flesh meal (sold by Liebig's Extract of Meat Company), ten pounds of wheat-meal bran, and twenty pounds of rye meal, well kneaded, and with some yeast and water added, and allowed to rise, and to be well baked, as with ordinary bread. Mr. Macdona claims that in this way a wholesome food is to be obtained at the rate of about 10 shillings ($2.50) per hundred weight. In his letter he also stated that in giving this recipe he would bring down upon himself the wrath of the manufacturers of dog biscuits.

In this he was right, as the following week a letter appeared in the *Field* from "Spratt's Patent," in which they say that Mr. Macdona was correct in surmising that they could not allow to pass his remarks with regard to the price at which wholesome dog biscuits could be made on the German professor's receipt. They then quote the prices at which the various ingredients can be purchased in England, to show that it would be impossible to manufacture it at the prices named by Mr. Macdona, and conclude with the following paragraph:—

On the whole, we think that our many customers will agree with us that if a fair manufacturer's profit be put on the cost price and a fair retailer's profit, even such small one as is put on by the coöperative societies, they can get our biscuits as cheap as they can make them for themselves from the receipt the reverend gentleman gives, and in addition to which they have from us a food which is in every way more nutritious, and which will keep sound and good for months, and which has stood the test for years.

"Spratt's Patent" having also stated that it was the subject of general remark at the Hanover Dog Show that Prince Solm's and Mr. Macdona's dogs were the worst conditioned ones in the show, the others all being fed on Spratt's biscuits, of course Mr. Macdona replies, and the correspondence is continued in rather acrimonious terms through several issues of the *Field*. In the last number of the paper at hand Professor Metzdorf enters the fight, and his letter enters so in detail into the question of dog food that we deem it worthy of reproduction in full. It is as follows:—

SIR:—A communication from Mr. Macdona appears in the *Field* of Sept. 20th (page 384) in reference to my meat biscuits, which are now used as food in the celebrated kennels of His Serene Highness Prince Albrecht, of Selms Braunfels. Mr. Macdona testifies to the excellent condition of the dogs fed thereon, and publishes the recipe for the preparation of the biscuits. In the next number of the *Field* the biscuits are criticised by an interested party in a most disparaging manner. I was much surprised at that, for the history of science teaches that the English mind least allows itself to be narrowed in judgment by prejudice, but maintains more than other nations the ground of practical experience. Why, then, are these biscuits judged before they are tried?

Into some of the objections and exceptions that are made, I take the liberty specially to enter.

The ill-natured remark that the dogs from Braunfels were in very bad condition at the Hanover Exhibition is damaging only to the cakes of Messrs. Spratt. Those dogs were fed upon Spratt's cakes up to the time of the Hanover Exhibition. Since the exhibition (*i. e.*, since July) the Braunfels kennel has been fed upon my meat biscuits. If such an eminent authority on dogs as Mr. Macdona—a man of at least European celebrity—finds the Braunfels dogs in rare good condition, it speaks well for the goodness and utility of my biscuits.

The remark that meat meal does not possess any nutritive value, and is merely fit for manure, because it only consists of the exhausted residue of the meat, is calculated to mislead that part of the public which does not possess chemical and physiological knowledge.

Fresh meat consists of muscular fibre, fat, water, salts and certain extractives—the latter giving the meat its agreeable flavour. Into the "extract of meat" are transferred only the extractives and the salts, while the residue contains the fat and muscular fibre. Now, it is a scientifically proved fact that the "extract of meat" (*bouillon*) possesses little nutritive value; it is a pleasant relish, but not a means of nourishment. The actual nutritive value is contained in the albuminous matter and fat.

In making the extract, the salts removed from the flesh are immediately replaced artificially at the place of manufacture by adding to the albuminous and fatty residue 1-20 per cent. of calcium chloride and 1-44 per cent. of anhydrous phosphate of soda. The flesh meal thus becomes an alimentary substance of the first rank. The unpleasant smell alone prevents men from using it for themselves; but animals accept it gladly. A great number of chemists and physiologists have examined and prepared flesh meat. For instance, Professor Lehmann (see Wolff, "Die Ernährung landwirthschaftlicher Nutzthiere," Berlin, 1876) found that on the average thirty-nine kilos of flesh meal would equal in nutritive value 850 kilos of potatoes. Feeding experiments on pigs in Munich, Dresden, Hohenheim, Poppelsdorf, and Kuschen, demonstrated that one kilo of flesh meal is capable of producing on the average about one kilo of live weight. With cattle, sheep, and horses also, favorable feeding results were obtained; and I have obtained corresponding results with the dog.

In the laboratory of Dr. Friedlander here I have had the dog cakes of Messrs. Spratt and Messrs. Clarke analyzed by Dr. Schmoeger. Every hundred parts of the original substance contained:—

	Spratt's Patent.	*Clarke's Anchor Mark.*
Solids	89.90 per cent.	88.96 per cent.
Nitrogenous matter	18.56 per cent.	19.63 per cent.
Fat	3.42 per cent.	2.84 per cent.
Ash (salts)	2.45 per cent.	27.2 per cent.

For 100 parts of solids are computed:—

	Spratt's Patent.	*Clarke's Anchor Mark.*
Nitrogenous matter	20.64 per cent.	22.06 per cent.
Fat	3.80 per cent.	3.19 per cent.
Ash	2.72 per cent.	3.06 per cent.
Non-nitrogenous	72.84 per cent.	71.69 per cent.

Therefore, the proportion of nourishing matter, viz., of nitrogenous as against substance free of nitrogen, is in Spratt's patent, 1 to 3.7; in Clarke's anchor mark, 1 to 3.4.

This analysis I published in the German publication *Der Hund* (vol. iv., No. 16), whereupon parties interested in Spratt's patent replied that in manufacturing the cake the mixture was not so precise as to make one single cake decisive for the analysis; also that they manufactured summer and winter cakes with more or less nourishing value, and that hence arose the different results of analysts; and the gentlemen appealed also to previous analytical researches, which showed a greater nutritive value.

Undoubtedly the biscuits may be manufactured of different nourishing quality; and for that very reason is an analysis valuable, for which the material has not been directly furnished by the manufacturer, but for which the biscuit has been taken by chance, and submitted to analysis without the maker's knowledge.

In feeding experiments with dogs, the new meat biscuit has stood the test of proof. Four pointers of German breed, and of the same litter, were taken when thirty-eight days old, and therefore very young. Each dog could eat as much as he liked of his food. For the first fortnight each had one and three-quarter pints of milk, Nos. 1 and 2 receiving my biscuits, and Nos. 3 and 4 boiled and mashed potatoes. In a fortnight's time No. 1 had increased by two pounds fifteen ounces, and No. 2 by three pounds one-half ounce; No. 3 by fifteen and one-half ounces, and No. 4 by one pound ten ounces. After this No. 1 was fed with my biscuit, and No. 4 with English cake, for six weeks. The dog fed with the new biscuit now increased by two pounds fourteen ounces, and the dog fed with the English cake only by one pound one-quarter ounce. Therefore the new biscuit is not quite as bad as has been made out. The trial was an extreme one; for milk is in the first months of the life of animals indispensable.

In reference to the price, that would vary very much with place and opportunities. Here in my rural circumstances the price is much cheaper, under personal management, than it would be in town.

In conclusion, I take the liberty of making the following remark:—The published recipe is chiefly intended for home use, and for the feeding of bitches in whelp and of growing puppies. For that purpose it answers well. Whether it will keep and answer for mercantile purposes I am myself doubtful, though it has been proved to keep for months. For feeding of greyhounds—which among dogs take an exceptional position in reference to their keep and maintenance—I would apply the recipe only with caution.

The idea for a good dog cake is a correct proportion of nourishing substance, nitrogenous and non-nitrogenous, a reasonable proportion of fat, and also the salts requisite both in quantity and quality. This can only be composed according to scientific principles, and confirmed by experience.

Such a feeding material should be handy and keep well to make it fit for mercantile use. Through a series of circumstantial and searching experiments I believe that by a new recipe, which supersedes the old published one, I have discovered a new preparation for such a biscuit, and I am just on the point of subjecting it to the severe test of experience.

For home use for bitches in whelp and growing puppies I maintain that the recipe already published will be found thoroughly efficient. PROFESSOR DR. METZDORF,

Royal Academy, Proskau, Upper Silesia.

EASTERN FIELD TRIALS CLUB.—At a meeting of gentlemen interested in kennel matters held in this city last week, an organization was formed under the title of the "Eastern Field Trials Club," with Mr. G. L. Lorillard, for President; C. Dubois Wagstaff, H. A. Gildersleeve, P. H. Morris, and Dr. W. H. Aten, Vice-Presidents; C. H. Raymond, Treasurer; and Jacob Pentz, Secretary. This is a strong body of energetic men, who will see that the objects of the club are carried out, and that kennel interests at the East do not suffer by comparison with those of the West; the latter section having naturally taken the lead in Field Trials and dog business generally, by reason of the character of the country, and the greater abundance and variety of the feathered game found there. An executive committee of active gentlemen was also chosen to select a suitable ground for the forthcoming trials, (which we presume will soon take place,) to provide birds, and to arrange all necessary preliminaries.

A year ago or more Capt. J. M. Taylor, formerly Kennel Editor of this paper, and its correspondent now, endeavored to inaugurate a series of eastern field trials (he was the original promoter of Field Trials in America) by a run in Delaware or Maryland, but he either failed to interest men of proper activity and influence, or was not sufficiently persistent in his efforts, so that the project fell through for the time being. We are gratified to see that it has been taken up again by others, and passed to success. New Jersey and Long Island both offer excellent ground for the competition, which is likely to be held on one of these two territories. A schedule of the prizes has been already secured for the All Ages, Puppy, and Brace Stakes. An Executive Committee is announced as follows:—

John Fottler, Jr., of Boston; Luther Adams, of Cambridge, Mass.; William Jarvis, of Claremont, N. H.. J. C. Higgins, of Delaware City, Del.; N. Rowe, of Chicago, Ill.; L. C. Bruce, of New York City, and W. Wynne and Benjamin West, of Brooklyn, N. Y.

THE CZAR'S DOG.—The author of the following story neglects to inform us whether or not the Czar saw his son alive, but the picture of idiotic royalty is an useful one perhaps:—

The Czar takes the most extraordinary likes and dislikes for persons and for animals. His favorite for the time being, be it man, woman, dog or bird, is petted to an extent that is at once ludicrous and melancholy to observe. Once he concentrated his affections upon a spaniel dog, for which he conceived a violent and uncontrollable passion. The Czar and his pet dog were for a while inseparable, and his majesty, at the most inconvenient moments would demand that the animal should be brought to him. It was at this time that a dispatch was received announcing that a son of the Czar was on his death bed, and that if the father wished to see him the greatest haste was necessary. A special train for the Emperor was immediately ordered; everything was arranged, but as his majesty was about to enter the cars he discovered that the dog was absent. The animal had taken an exceptional freak; he had escaped from the grounds of the palace and had gone off to amuse himself elsewhere. The Czar, notwithstanding that he knew his favorite son was at the point of death, and that every moment of delay might prevent his seeing him before he expired, refused to stir from the palace until the dog was found. The palace was in uproar, servants, soldiers, civil officers and volunteers were sent in hot haste for the missing beast; but four hours elapsed ere he was found, captured and returned to the embrace of his imperial master.

A BOSTON DOG.—The Newmarket, N. H. *Advertiser*, tells a story of a valuable setter dog named Jake Skinner, belonging to Alvah A Skinner, of Boston. The dog has been boarding for some time past at the house of Lieut. Thomas H. Walker, of Durham, N. H. Recently, Lieut. Walker was confined to his bed by sickness for three days, and during this time the dog evinced great solicitude for his friend, remaining at the head of the bed the entire time, not even leaving for his meals. One day during her husband's illness Mrs Walker was bringing in wood from the shed, and noticing the dog watching closely, she said to him, "Why don't you bring in some wood, Jake?" The dog immediately arose, went to the shed, and taking a stick of wood in his mouth, brought it into the house, and deposited it in the wood-box. This he repeated six times, when, probably thinking he had done his share, he returned to his post at the head of his master's bed. On the day that Lieut. Walker recovered sufficiently to be able to sit up in bed, the dog seemed highly delighted, and proceeded at once to bring his master's stockings to him, and then followed with his boots.

—On Oct. 15th, Mr. S. Turner's (London, Ont) Gordon setter bitch, Belle, was bred to Dr. J. S. Niven's Blossom, (No. 5090, E. K. C. G. B.,) and on Oct. 22d, Dr. Niven's Mall (7250) to owner's Blossom.

GOOD LITTER.—*Easton, Pa., Nov. 10th.*—We the undersigned, residents of Easton, Pa., are personally acquainted with Mr. Lewis Uhler, who is now the owner of a litter of six male pups, one month old, the largest and smallest one of the litter being weighed in our presence, and weighed each six pounds:—

Owen Fraunfelder, John Sandt, M. D.; Jonas Walter, Simon Sandt, Uriah Martin, Theodore Schug, Geo. H. Nute, Wm. H. Abel.

The foregoing litter of pups was whelped on Oct. 10th by Lewis Uhler's Mag, she out of Northrop's Dell (Newton, N. J.), out of Morris' Pete, lined by Charles H. Raymond's and Col. E. M. Quimby's (Morris Plains, N. J.) Young Laverack; he by M. E. Laverack's (England) Blue Prince, out of Raymond's Fairy, imported.

LOST DOG.—J. Von Lengerke's dog Dash disappeared from home last Sunday night, through a window in the basement of his master's house in West Hoboken, N. J. Dash is white and dark orange; a tall, upstanding dog; tail, cut a little; light nose, hazel eyes: about eight years old, and is easily recognized by a small dark wart on one of his eyelids. When at liberty he always turns from right to left, except on game. When uncomfortable he gives either two or three sharp barks, and continues the same at even intervals. Any information will be gladly received by J. Von Lengerke.

STUD RED IRISH SETTER.—The imported red Irish setter Red Grouse, is advertised at the stud in another column. This dog has only been in the country about four weeks. He is from the kennel of Thos. Erwin, Esq., of Ballymena, Ireland, and is by Druid out of Peggy, there being no better blood in Ireland. Druid is half brother to Palmerston. In color he is a deep red.

—On Nov. 11th E. H. Lathrop's Luna (Springfield, Mass.) whelped six pups to his Dick—four dogs, two bitches—all marked after Dick but one.

—The orange and white setter bitch Fay, owned by Samuel Huntington, Esq., of Plainfield, N. J., whelped Nov. 10th, 1879, ten puppies, sired by Percy Ohl's (formerly W. E. Leavitt's) Sir Lancelot—six dogs and four bitches—all orange and white.

A NORTH CAROLINA FOX HUNT.

Editor Forest and Stream:—

My friend, W. E. Brodnax, of Virginia, after exercising his pack after grey foxes a few mornings, on the 20th of September notified me of his readiness to join me in a race after my kenneled red fox, and if agreeable would be up early on Monday morning (22d). I replied that every needful arrangement for the race had been made, and as the weather was warm and the ground exceedingly dry, to be up "early" in reality. The morning was a still one, the dew heavy, and Brodnax up to time. Just as the sun made his morning salutation the fox was turned loose, and thirty minutes given him to make good his retreat. Too long confinement had gentled him, and he did not avail himself of the time. He leisurely moved off, and in some few hundred yards lay down in a thick cluster of weeds. We moved gently to the place of his manumission; not a word of encouragement to the dogs. As soon as the track was reached, several dogs gave mouth and all gathered in close, nosing to ascertain the game. In an instant the weeds were alive with motions, the dew flying like spray. The fox let the pack trail by him—a thing unprecedented with a red—and then ran back behind it. The pack soon, however, had the proper direction, and after a short and spirited race of only a few minutes he was caught. The field in which we turned him loose was a very large one, full of weeds, and geographically suited to display hounds and huntsmanship to best advantage. A succession of hills and vales, over and across which the fox gracefully moved, hid, however, by the weeds, but his course none the less marked by their agitation; and ever and anon the flight of a full covey of partridges, afforded the huntsmen, who occupied the crest of each hill, a beautiful view of the chase. The hounds, some forty in number, and as varied in color almost as in number, could be actually seen as they frantically leaped over weeds and brambles. The fox did not have the speed necessary to prolong the sport, and turning into a small path was seen by Brodnax's Lava and my Fanny, the body of the pack close up, and for fifty yards no one ever witnessed a better contested race. But Lava caught the fox, maintaining her position to the end. All this occurred in full view of the huntsmen as well as the foot spectators—the negroes—who, by the by, darkened the field by their numbers. This being ended, I proposed to try my reds, which, with almost paternal care, I had preserved for just such an occasion. Brodnax and all quickly agreed, and off we moved up the Roanoke, and within the same enclosure, some miles away, we started two reds at the same time. The pack was of course divided. Brodnax's Lance was after one, the pack after another. Brodnax, by a judicious move, cut off a part of the pack—the greater part, in fact, and got it up to Lance. That left only three dogs after the others. We soon ran the Lance fox into a hole, and hurried back to where we last heard the three dogs. We stood still for several minutes on a high hill to listen, but could hear nothing of them. Looking up the Roanoke we discovered a man on horseback, moving rapidly in the low grounds. Pea Hill Creek was between us, and it could only be crossed at two fords, each a mile above and below us. I dismounted, fastened my horse, crossed on foot at the fish-trap dam (the water not overrunning it), and hurried up a high hill, which commanded a full view of my island (Pugh's) and low grounds below. I soon discovered the cause of the rider's rapid movements. It was Moses Wells, an appreciative servant, who had been with us all the morning following the three dogs. In a second I signalled the huntsmen, who yet remained still on the east side of the creek, and, understanding me, pressed for the lower ford with a full re-enforcement of hounds. Some of my own crossed with me on the fish-trap dam and rushed eagerly to the three dogs. The fox crossed to the island, which is some two miles long, and accessible by three rocky fords of uncertain safety. I pressed for the lower ford. It is tortuous and uneven, and no one unacquainted with it, in the absence of apilot, can cross without a plunge. Broadnax had never been on the island, and, supposing that I would wait and act as guide for the party, followed in my wake. I did not know that my movements were observed by him, consequently did not tarry, but, with whip and spur, pressed onward for the three dogs. I carried into the island every hound that was out, and on a fortunate turn of the fox right to me, got all off even and right upon the heels of the red fox. The island is very thick with weeds and shrubs, not having been cultivated, except in patches, "since freedom"—a freedom which it has enjoyed in common with the negro, with a luxuriant growth of all that is worthless. Through this thickness the progress was slow, but the music was soul-stirring. I had some weeks before, and in anticipation of this fun, cut and marked out crossings from one end to the other of the island, and my pathway to each crossing could be rode in full speed and in time to see fox and dogs. Not a huntsman knew this, and all got terribly muddled. I got to two of the crossings in advance of the pack, and saw well the leading dogs. Brodnax's Rake, Lildrew and my Fanny were at each point in advance, but not over ten paces. The fox run up to the extreme end of the island and turned back on its north bank, going up in its centre. Here I had the bad luck to break my girth, which threw me out, the chase terminating near the lower ford, where we entered, the fox taking to earth.

We sent off for spades and hoes, and soon dug her out, but failed to do so alive, as Red Bird, in her encounter in the hole with her, brought her so near the entrance that other dogs seized and drew her out. Thus ended the life of my old, highly-prized, female red fox, who, since "Pious Jeems'" visit in '74, had annually raised for me a litter in my island, and who, apart from that, had furnished eight suitors for my sport. I really felt sorry that her life had ended.

By the by, what has become of my old friend "Pious Jeems" (Col. James Gordon, of Mississippi), and what has occurred to still his ever-ready pen? Do let him know how much pleasure his contributions afforded huntsmen of his tastes; he should certainly continue them.

The next morning the old male red was the object of our pursuit. In strong and full force we, at early dawn, moved up the Roanoke from my residence, and soon had him up and moving. The pack now consisted of some fifty hounds, and well up to such work as was likely to occur. But the get-off was too close to allow my old friend to display his usual powers, and in thirty minutes he was put to earth not far from my residence. We soon dug him out, and he is now in chain ready for another race. He is still in confinement (Nov. 12th), and so beautiful, large and well-furred that I determined to save his life and present him to a lady who will take him to Kettrell's, N. C., as a pet. T. G. T., of Gaston, N. C.

BEAGLES.—To many enquires for beagles made to us lately we would say that Mr. Geo. W. Pownall, of Christiana, Pa., has given much attention to procuring the best stock, and having bred largely has always some for sale.

Women's Column.

A MITE OF GOLD QUARTZ.—*Boston, Oct. 28th.—Editor Forest and Stream:*—May I add my mite of quartz to the rich vein you have struck, and tell how I changed from a dissatisfied and apparently neglected wife to one who now enters heart and soul in her husband's sports? And to those who feel as I have felt, this letter is addressed, hoping they will profit by my experience, do likewise, and find benefit in a thousand ways, direct and indirect. How many times have I been rebellious, when on a pleasure trip to the White Mountains, my "overgrown boy" would say, "Four o'clock breakfast for me to-morrow morning," and to me that meant his absence till supper time; his return, tired but so good natured; while moping around all day had put me in anything but a pleasant frame of mind. Even for yourself, sir, time and again have I longed to twine my fingers in your scalp lock, for did you not every week publish a paper devoted to nothing but the encouragement of his nonsensical tendencies, every word of which was eagerly devoured and inwardly digested to the confusion of his studies as head of the household. But all is changed now, and briefly by this method.

While passing the summer at Compton, N. H., I determined to unravel the mystery which so puzzled me, and told my "boy" I had made up my mind to accompany him on his next trouting excursion. We concluded to start the next morning, and my actions on that day would have driven an ordinary mortal frantic with impatience, but he bore with me in all becoming humility, for he knew he was laying up a store of pleasant smiles. In vain did he advise me to take his perch pole, and try at first with worms. Had I not made up my mind? and nothing would answer my purpose but his "eight ounce" and flies. We started, but I am unequal to the task of further description. The spirit in which the fly persisted in sticking in bushes, my dress, or anything within five yards of me, was worthy of emulation in a better cause: but after many trials I succeeded in dropping it in the water and at once hooked a fish. (Remark from behind a tree out of the reach of my line, "Well, that fish must have been insane, or you never could have fooled him in that way.") More surprised than the trout, with a jerk that ought to have broken the rod, I sent him flying through the air; the line caught on a projecting limb, and there hung my first trout within two feet of my head. Don't ask me to describe my sensations. I could not. So the day wore on, and I landed two more—small ones, to be sure, but then I am a little woman—and we turned homeward, my mind topsy-turvy in the endeavor to determine if I had enjoyed myself. Each succeeding trip, however, brought increased interest, till now I know of no greater pleasure than to start with my "boy" on the tramp, as I used to call it. Every summer we have our week in camp with *our* rods, and remembrances of that week serve to make happy many a long day and bring anticipation of its return.

Should this letter reach any lady, and find her complaining that those attentions which she deems belong to her alone, are bestowed upon a dog, a gun, or a rod, I beg of her to try my method; go with her husband, join him in his sports, don't do exactly as he tells her not to, and see, if in her case, as in mine, it does not drive away shadows and bring enjoyments of which she now knows nothing. FANNIE.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

☞ *We make no charge for answering inquiries in this column.*

F. A. W. Foxboro', Mass.—There is no provision in the Massachusetts game law against the use of ferrets in rabbit hunting.

G. R. W. Dryden.—Will you please, if you can, give me the business addresses of J. D. Dougall, jr., and —— Holland, the English gunmakers? Ans. J. D. Dougall, 59 St James street, London; Holland & Holland, 98 New Bond street, London.

J. W. S., Roseboom.—Would it be advisable to take my setter from New York State to Wadsworth, Nevada, for hunting? If so, what is the rate of transportation? Ans. Depends upon what you expect to shoot. If you take him, fee the baggage masters as you go along; in this way $10 ought to cover the expense.

A. M. G., Washington.—The trouble with your dog's eyes is probably constitutional and will be difficult to cure. Bathing them occasionally with cold spring water or a wash composed of nitrate of silver, one grain to the ounce of water, might prove beneficial. A seton on the poll has sometimes effected a cure.

J. F. H., Mifflin.—I have a setter pup six months old, his face has become dry and scabby. You would oblige me by answering through your columns the cause of it, and what I should do for it? Ans. Not knowing how the dog has been fed or cared for, could not say what was the cause. Rub his face with crude petroleum.

BLUE POINT.—Are the fish which abound in the ponds, lakes and streams of Central New York, and called bull-heads, properly bull-heads or catfish? and to what family do they belong? Ans. The common bull-head, common from the great lakes to Maine and South Carolina, belong to the family of catfish, Siluridæ. His scientific name is *Atarrius-catus*.

BACK-ACTION, New York.—Will you kindly let me know how to take the leading out of my gun? Ans. The scratch brush, kerosene oil and plenty of elbow grease will generally do it. Pour the oil in over night. A little very fine emery powder mixed with the oil will help, but we should not advise its use, as in any but the hands of an expert it might ruin the polish of the barrels.

J. B. F., Catskill.—1. I have a bitch puppy, they call her blue belton. I bought her from a gentleman who advertised in your paper, bred from an English setter bitch and a Gordon setter dog. What class can she enter in a dog show? 2. What is the meaning of blue belton? 3. Name the best book that treats wholly on dogs with illustrations of different breeds? Ans. 1. If your puppy is a blue belton she goes in the English setter class. 2. It signifies simply a color, white ticked with black. 3. Stonehenge's last edition of "Dogs of the British Islands."

C. J. G.—1. After cleaning my breech-loading shot gun (with a dry or wet cloth) there remains a residue near the breech. How can this be most easily removed? 2. Are conical base shells considered more economical than the common shells? 3. Does the Ballard rifle use the ordinary center-fire shell, or those peculiar to itself? 4. Is there any rifle that uses both rim and center-fire cartridges? Ans. 1. With kerosene oil and the scratch brush. 2. Not necessarily; the idea of the conical base was that equal penetration with less powder would be obtained. 3. It takes the ordinary central-fire cartridge. 4. No.

W. C. C., Boston.—The symptoms you describe are peculiar and we imagine arise either from worms, possibly a tape worm, or from some injury your dog has received unknown to you and which has affected his brain. If you suspect worms give him the usual dose of areca nut, say two grains to each pound he weighs; to be given fasting, and followed in three or four hours by an ounce of castor oil. To be effective the areca nut should be recently ground. Should the symptoms continue we can only suggest for you to watch him carefully, letting his diet be as light and cooling as possible.

S. D. D., Philadelphia.—1. Will you kindly inform me whether you know anything of a bitch (setter), name Bonnet Carre, said to be out of Dick Connolly-Dimity, if so what stock were they? 2. A dog named Dash, out of Robinson's Jack-Frisk (setters), if so what stock are they? Ans. 1. There was such a bitch bred and owned by Chas. H. Raymond, Esq. The pedigree is correct. 2. Dash was a red Irish setter and bred as described. He belonged to the late Nicholas Saltus and was whelped April, 1871. Robinson's Jack was by Putnam's Don out of Belle. Frisk also belonged to Mr. Saltus and was by Swartz's dog out of Saltus' Duck.

E. H., La Grange, Mo.—I heard a Nashville gentleman say that Mr. Rowe, the editor of the Chicago *Field*, is an Englishman. Is this correct? I always thought that paper a strictly representative American journal. How long has he been in this country? Ans. Mr. Rowe was born in St. Vincent, one of the English West India Islands, and is, therefore, an English subject, though not actually born in England. He has been in this country about fourteen years, we believe. "Representative Americans," as you term them, are made up of all nationalities in these days, and if any man be a good citizen we do not stop to inquire about his birth-place.

T. T. & S. Z. P., Parisburg, Giles Co., Va.—1. I have heard it said that a bitch would get in heat even after being spayed. Is there any truth in the assertion? 2. What is meant by a drachm of powder? Is it 1-16 of an ounce, or is it 1 of an ounce? 3. What occurs when a gun leads, and how can one tell when they lead? 4. Out of an ounce of of No. 7 shot how many should a gun that shoots well put in a five-inch circle at a distance of forty yards? 5. Is Charles J. Godfrey, New York, gun dealer, considered reliable? Ans. 1. No, not if the spaying had been properly done and the ovaries removed. 2. It is 27½ grains. 3. It is an accumulation of lead in the barrel and can easily be seen with the naked eye. 4. We have never experimented with that size of target. 5. We do not know him.

COCKROACHES VS. BEDBUGS.—It is said (and proven we believe), that cockroaches are sure death to bedbugs which they assiduously hunt for food. If cockroaches are found in chambers above the dining room and kitchen, it is sure evidence that there is something going on of interest to sleepers. So far cockroaches are a valuable insect.

AUSTRALIAN NEWS AGENCY.—The FOREST AND STREAM is supplied in Melbourne, Australia, by Smith & Co., American news agents.

—In the great billiard war now going on the Sexton takes a hand. He is sure to be in at the death.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

—AT—

No. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpariel type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

☞Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, NOVEMBER 20, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of mail service if money remited to us is lost.

☞ Trade supplied by American News Company.

NEWFOUNDLAND'S HOSPITALITY.—The passengers of the steamship *Arizona*, who were detained at St. John, Newfoundland, the other day, after the collision of that steamer with an iceberg, found the people of that queer town decidedly hospitable. Among the names of those who ministered to their comfort and helped to relieve the vexation of delay, we notice that of our correspondent, Mr. M. M. Harvey. Several shooting parties were organized, but the *ferœ naturæ* had not enough patriotism to present themselves for slaughter, and so the bags were not extraordinary. But several men may now relate personal reminiscences of sport in Newfoundland who never had any expectation of a hunting trip there. Among the passengers thus entertained were Dr. E. A. Crane and wife, whose departure from New York we had previously announced. Dr. Crane is at present the publisher of the American *Register* at Paris, where he has resided for fifteen years. Old schoolday memories are associated with his name.

AMERICAN INSTITUTE FAIR.—The fair is wonderfully complete and interesting. The vast building is literally jammed with new and beautiful goods of all kinds and descriptions. There is something to interest everybody. There are very many beautiful and useful household goods, for the kitchen, the parlor, the library, the bed-chamber, and the ladies, boudoir; the display of fine American china, fully equal to the best of foreign make, is very large and much admired; sewing machines and their attachments are also numerous; but to mention all the attractions is simply impossible.

Machinery Hall, always a point of attraction, is this year particularly full of large and small interesting engines, all in full running order. Here a well-boring company are sinking an artesian well which is to supply water for the entire vast Institute building. It has already reached a depth of nearly ninety feet, over seventy of it through solid rock, and is steadily going deeper at the rate of about twelve to fifteen feet per day.

The Art Gallery is handsomely arranged and has an excellent display of beautiful photographs, and fine specimens of free hand crayon drawing. A grand concert is given by Downing's celebrated 9th Regiment band, who perform selections from Wagner, Strauss, Gounod, Mozart, Flotow, and other well known composers.

The fair closes on the 29th inst., and we cordially advise our readers to pay at least one visit to what is just now one of the most attractive spots in New York, the American Institute Fair.

LONG DISTANCE WALKING.

REFERRING to the most conspicuous of the recent pedestrian competitions, it is a remarkable fact, already noted, that champion walkers, so designated, who had previously earned high scores by prodigious efforts, signally failed to repeat their performances, or to accomplish anything like what the public were led to expect from their earlier records. Evidently their capability had become impaired by their having previously taxed their physical powers to their utmost limit. Repeated drains inevitably exhaust the system and place it beyond the ability of the strongest constitution to entirely recuperate. Those who overtax nature must pay the penalty, and the same fate which overtook Weston, Brown and O'Leary, is undoubtedly in store for other victors, should their powers of endurance be repeatedly overstrained.

It is noteworthy also, that the professional walkers, so styled, are not *habitual* walkers, like infantry soldiers, plainsmen, and some Indian tribes, and that in the Rowell contest they easily defeated the "wheelbarrow man," who had journeyed on foot across the continent; the California scout and hunter, the letter-carrier who makes his daily rounds year in and year out; and other sentering the lists of competitors whose avocations keep them continually on their feet and their muscles in constant, healthy play. Professional walkers qualify themselves for special efforts by a system of training and a proper regimen continued throughout a prescribed period, but no qualification will enable them to sustain the wear and tear of continued physical abuse. They must break down soon and be incapacitated forever thereafter, while the soldier, the Indian runner, and the nomadic trapper will endure to a good athletic old age. Their sinews and muscles are kept hard and flexible by constant usage, so that they can sustain a given amount of prolonged journeying without excessive fatigue or detriment. Perhaps the maximum distance would be fifty miles per day.

Gen. Grant, in one of his characteristic little speeches, remarked that we have no "*standing*" army, because our soldiers are constantly on the move. Certainly no body of troops are kept in more constant active service than our forces on the frontier and in the Indian country. What they can accomplish when necessity requires is illustrated by Gen. Merritt's recent march into the Indian country, when the soldiers tramped from seventy to eighty miles a day over rough broken ground, encumbered with the heavy weight of guns and accoutrements, while the best of our go-as-you-please pedestrians, with the finest of tracks, the most careful attention, the choicest food and the airiest costumes, accomplished a little more than a hundred miles in their best single day's walk.

In days past hundreds of emigrant and traders' trains have crossed the plains to the Rocky Mountains, the journey occupying several weeks, and sometimes months. The average rate of speed was about two and a half miles per hour. At this gait thirty miles can be comfortably overcome in twelve walking hours. The approved practice was to break camp at daylight, which in midsummer occurs before 4 o'clock, start out on a cup of coffee and a biscuit, travel until 7 o'clock (seven and a half miles), then take a hearty breakfast for an hour, then travel until 12 o'clock (ten miles); halt for two hours during the heat of the day, and complete the remaining twelve and a half miles in time to make camp again before sundown, thus allowing at least eight full hours for rest and sleep. By this system a journey can be indefinitely prolonged; and by some such division of time the wheelbarrow man was enabled to accomplish his 3,000 mile journey with comparative ease in the short time he did.

Three miles an hour is as fast as a man can comfortably walk for prolonged distances. Four miles an hour is very fast walking, and we doubt if such a gait would accomplish as much in the long run as a less rate of speed. Should any of our sportsmen undertake long pedestrian journeys, as they sometimes incline to do, we advise them to try the plan suggested. We have tried it ourselves for three months at a time, and know how it works. It is quite likely that sportsmen in quest of prairie fowl often walk fully thirty miles a day without being aware of the distance, and they do this day after day without conscious fatigue. We would recommend in this connection for study, a little book recently published by the Harper Brothers, entitled "A Manual for Muscular Development," by William Blakie, a gentleman who has devoted years of thought and work to the problem of physical education.

—The new village barber, instead of setting up the regulation striped pole for a sign, placed a plump barn-yard fowl—a hen—over his door. When asked what his idea was in doing so, he replied: "Why, don't you see? Cut-cut-cut—hair, cut!" We did'nt take that into our cackleation.

—While in New Jersey the other day, we chanced to meet four hunters with guns coming along the road, but we were not credulous enough to make it a four-gun conclusion that they would kill anything.

THE SNAKE-STONES OF INDIA.—The snake-stone is credited with extraordinary power as an antidote for the bite of the dreaded cobra, and it is believed is generally used by the notorious snake-charmers. A Bombay correspondent of the New York *Sun* (a journal, by the way, which enjoys a sort of monopoly in snake stories and the natural history of snakes) states that he saw a chicken die in a few seconds from the bite of a cobra, which at the same time had bitten the hand of a snake-charmer who was giving exhibitions. The juggler showed no alarm, but quietly applied to the wound "a dark, hard substance about the size of a vest-button," which resembled a shell cameo and felt more like a fine-grained bone than anything else." This was one of the famous "mad-stones of India." No injury resulted from the bite. The effective and marvellous properties of this antidote are more singularly illustrated by the following incident given by the narrator. He writes:

The Rajpoot, taking the stone between his thumb and finger, held it out towards the serpent, whose rage seemed not to have at all subsided. As though some electric current had suddenly struck it, the reptile drew back its head as far as it could, and, without attempting to strike, hissed less and less violently, swayed from one side to the other, folded its hood, loosened its coil, and sank lower and lower until it lay, silent and relaxed, on the floor, the charmer constantly pushing the mad-stone nearer and nearer towards its head until he touched the skin, and held it there.

Then, next, the writer, who shows himself to be possessed of extraordinary nerve, "took the stone in my own hands, and, first arousing the snake by teasing it until it had risen in rage at me, and was hissing as venomously as before, I moved it towards him. The result was as before, the snake coming rapidly under the power of the stone, uncoiling itself, staggering, and falling limp in a heap."

These are certainly extraordinary statements, which seem to establish in the most incredulous a belief in the efficacy of the snake-stones. The writer declines to explain the seeming mystery; but he remarks incidentally, and with candor, that Dr. Fayrer, in his splendidly illustrated work on the Indian "Thanatophidia," expresses his entire disbelief in the virtue of these mad-stones, and describes his ineffectual attempts to save with them the lives of dogs which had been bitten by cobras; also that he had been told that a standing reward of some thousands of rupees is offered by the British Government for a stone or any other antidote to this deadly poison.

So it would seem that the apparent immunity of the snake-charmer may be only a juggling trick after all.

The origin of these snake-stones is described to be in the roof of the mouth of about one cobra in a hundred. It is not attached to the bone of the skull, but may be separated by simply cutting the skin which covers it. The mouth will bleed profusely after the operation, and the snake will survive only four or five days.

NEWSPAPER ZOÖLOGY.—The animals did not all go into the Ark. Not that the Ark could not have held them. Not that Noah, the first great Barnum of his race, failed to obtain specimens through any lack of enterprise. Had that venerable sailor and menagerie man sent his trusty agents into the uttermost wildernesses of Africa and South America he could not have procured one of these creatures, much less two. They were omitted in the original scheme of creation. The world was not big enough for them in those days. It has only been since the development of this g-r-e-a-t and glorious country that these creatures have been created—or manufactured—to fill it.

There is for example the great fiery serpent, half a mile long and as big around as a meeting-house, which rolls in convoluting folds over the boundless prairies, only to lose itself at length in the mighty flood of the Mississippi. As a general thing the whole State—men, women, children, militia, dogs, railroad trains and old Revolutionary muskets—pursue the monster through the fields and forests and the newspaper columns. Save a few small boys and one or two infant girls this creature rarely destroys human life. Of an entirely different species is the peripatetic rooster, which flops headlessly o'er the land, usually starting somewhere at the West and making his way toward the Orient. Martin Ryan or Daniel Jones or Thomas Parsons, an agent, telegraph operator, or at least a switch-tender on the A. B. C. D. E. F. W. X. Y. Z. Railroad, captures a rooster, and with the assistance of his brother succeeds in chopping the beast's head off. In about half an hour the decapitated object arises, flops its wings, and crows. Then Martin Ryan turns showman, takes the rooster—carefully preserving the head in a glass jar—and proceeds to gather in the golden eggs. (N. B.—Roosters don't generally lay eggs, but headless roosters do lay the kind aforesaid).

These are but two specimens of a vast number of zoölogical monstrosities, which we read of almost every day in the newspapers. Does any one know where they really come from? From the eye of the reporter. A pretty big eye that is, too. Does any one know what becomes of them? Some of them we have taken pains to follow. They are lost in the Mississippi; they run down huge caverns in the earth, or they are garnered into the dead

chambers of the editor's drawer in *Harper's Magazine*, there to moulder with decayed jokes and fossilized anecdotes.

THE PIGEON ROOST MASSACRE.—The pigeon roost in Scott County, Ind., is historical ground. It was the scene of a terrible Indian outrage in 1812. In September of that year a band of Potawottomie Indians attacked a settlement there of thirty white people, killing and scalping twenty-four of them, mostly women and children, and then burning the bodies and the cabins together. A Mrs. Beadle and her two children, with three members of a family named Collins, escaped to tell the tale, and a party started in unsuccessful pursuit of the savages. One of the Beadle children thus rescued afterwards grew up to publish a series of dime novels, in which Indian massacres and hair-breath escapes of frontier adventure were the characteristic pabulum. The roost is still covered each fall with wild pigeons.

THE SEVENTH REGIMENT FAIR.—This is one of the notable events of the incoming season. It is held at the new Armory, which of course is the chief object of attraction. The articles on exhibition are of the most interesting character, and the sales to be made will most probably yield the requisite funds to place the great undertaking out of debt.

One of the attractions of the exhibition, of especial interest to anglers, is the series of superb salmon portraits (life size), executed by that inimitable artist, Walter Brackett, Esq., of Boston, whose productions have found ready purchasers at high figures in both Europe and America. The set numbers four paintings, the price of which is $18.

CAMPS IN THE CARRIBEES.—Lee & Shepard, of Boston, announce Mr. Frederick A. Ober's new book with the above title. While deferring any extended notice of it until we have the opportunity of personal examination, we may safely premise that the author has prepared a book of intense interest.

Mr. Ober, who had such a splendid reception when he lectured before the Long Island Historical Society last winter, and before other audiences in New England, now proposes to give the lecture entitled "Two Years in the Tropics," illustrated with the stereopticon. Natural history societies, lyceums, etc., will find an evening spent in this way with Mr. Ober, both pleasurable and full of profit. Mr. Ober is open for engagements. The agents are Messrs. Lee & Shepard.

GAME PROTECTION.

THE GAME LAW PROBLEM SOLVED.—Virginia has solved the game law problem. By a recent statute passed by the legislature, all land in that State is posted, and trespassing upon any private estate thereby prohibited. This makes every proprietor responsible, morally at least, for the observance of the close season. No man can shoot, trap, or fish on the land of another man without the latter's consent. By simply witholding his consent, the proprietor may prevent shooting and fishing out of season on his estate. We said Virginia had solved the problem. It would be more correct to say that she had given her citizens an opportunity of solving it. Public opinion must be educated. The Virginia Fish and Game Protective Association is doing this by constantly and persistently keeping the subject before the minds of the people. Just so soon as the individual land owner shall have been educated in game protective principles to that point where he becomes the protector of the game on his own estate, efficient game protection in Virginia will be an accomplished thing. We are convinced that the only way in which the laws now enacted (but not enforced) for the protection of game and fish can ever accomplish what they are designed to accomplish, is by inducing individual land owners to second the work of game societies. The society is almost powerless without such aid. We must put into practice here the same principles which apply elsewhere. To protect the game of a State we must enforce protection in each township of the county, in each village of the township, and on each estate of the village. Only where the individual proprietor of this smallest division is made the guardian of his own domain, can we hope to have a guardianship of the whole. Game and fish will be destroyed only in certain fixed times prescribed by law, just so soon as individuals are awakened to the advisability of protecting the game and fish, and are given power to do so by such a general trespass statute as Virginia has enacted.

THE LAW ENFORCED.—That the Virginians are on the right track may be inferred from this complaint, which is by a Philadelphia lawyer—a being who figures in the proverbial saying as an expert in chirography, a man who can read even the most wretchedly scrawled legends on the trespass sign-boards. "Register" writes:—

I have shot a good deal in Virginia with advantages afforded me by relatives and friends; but I am inclined to differ with you about strangers being allowed to shoot. It is almost as bad (East of the Blue Ridge,) to a stranger, as in Jersey, the whole country being posted and *the law enforced at that.*

Of course a lawyer is vexed on principle to see the law enforced. That means that his occupation is gone. But our friend ought to swallow his chagrin at finding Virginia a game-law-abiding State. His sportsman instinct would lead him to that. And if he has found good sport through the courtesy of his friends and acquaintances, other people will undoubtedly find the same opportunities through their friends and acquaintances. So all are now in a fair way to be provided for. There is something to provide for them. It were a sorry act of courtesy for the Virginia land owner to hospitably receive his guests and send them out to shoot over fields pot-hunted into barrenness, and to fish in streams where all the fish had been snagged out by Tom, Dick, and Harry. If any man who possesses a gun or a trout rod wishes to go to Virginia and has no acquaintance there to whom to apply, let him state his wants in the FOREST AND STREAM, and our word for it, he will find a score of such friends.

CANADIAN SALMON IN ENGLISH MARKETS.—We learn from the English papers, with some surprise, that large consignments of fresh salmon from Canada have arrived at Liverpool as late as October 27th, a season when all Canadian rivers are legally closed. These fish were wholly unfit to eat, and were very properly immediately condemned by the officers of the Fishmongers' Company. These shipments of salmon are in clear violation and defiance of the protective laws, and should receive the prompt attention of the Canadian authorities, notwithstanding it may be made to appear that they were caught in lawful season and preserved in ice. It is against the law to expose salmon for sale in the English markets between the 1st of September and 1st of February.

CINCINNATI AUDUBON CLUB.—The new Audubon Club of Cincinnati, O., has the following officers:—President, W. H. Mackoy; Vice-Presidents, Hon. W. L. Grant, Henry Turner, and J. Taylor Williams; Corresponding Secretary, Taylor Thornton, jr., of Newport; Recording Secretary, George Perkins; Treasurer, Geo. H. Davison; Executive Committee, W. H. Mackoy, Hon. W. L. Grant, Taylor Thornton, jr., George H. Davison, T. Jeff. Phelps and W. B. Wilson.

The club is made up of influential citizens who have set about the protection of game in earnest, and with every prospect of breaking up the game-law violation in that section.

MICHIGAN—*Escanaba, Nov. 10th.—Editor Forest and Stream:*—Why should we blame poor men for killing deer out of season, when the City Marshal will buy a saddle of vension in the office of a Justice of the Peace, and borrow the money of the Justice to pay for it, and when the Deputy Sheriff and another Justice will go out in July, and watch a deer lick? In the first case they may say it was bought of an Indian. I object to the plea, on the grounds of said Indian being a voter and subject to the law the same as a white man. I could give plenty of names of parties who buy and sell or ship deer and trout out of season, if it would do any good. I object to hounding deer, but killing them in the summer months in the water with jack light does more harm here than hounds. The same men who kill deer out of season would kill a hound in season. GUYON, JR.

The way to remedy this is to put in a J. P. who will not buy venison out of season.

DUCK SHOOTING IN STRATFORD HARBOR.—An unsatisfactory law on duck-shooting was passed two years ago for the Harbor of Stratford, Conn. As the law stands no ducks, geese or brant can be shot in the harbor limits at any season of the year, and as black ducks, widgeon, teal and grey ducks can only be shot in the harbor, there being no islands, bars or reefs outside the beach on which to shoot them, it is an impossibility to kill any. Many hundred ducks can be seen daily in the harbor, but as the law stands, none of them can be shot. I have talked with all the duckers, and with one accord they denounce the law as it now stands; but all are in favor of a law that will permit shooting two days in a week. This would give the birds five days' rest in a week, and would give good sport to shooters the days it was off. The Harbor of Stratford is divided; part belongs to Milford, and part to Stratford. The present law was passed without the knowledge or consent of any Stratford parties, and was gotten up by a few selfish men in Milford, one of whom keeps a hotel on the beach. His object no doubt was to encourage shooters to come to his house, as it is in full view of the bay, and lay on the beach, and endeavor to kill the birds as they flew in and out across the beach, but he slipped up on his calculation, as after a few shots were made the ducks learned the dodge, and passed over the beach two or three gun shots high; and it is safe to say, not more than a dozen ducks have been killed in this way. As the law now stands it is clear to any man that the ducks that come to this harbor are of no account to any man here, as they leave for other parts when the harbor is frozen up, and it is only saving them to swell the bags of shooters in other parts. It is true, that before this law was passed duck shooting was nearly destroyed at Stratford. Shooters would go at sundown and remain on the feeding ground nearly all night when there was moon to see by, and others would lay all day long and shoot over decoys, and as the harbor is not a large one it soon drove nearly all the birds off. I will give you my idea of a law which I think would answer and suit all right minded shooters. That is, two days in a week to shoot, and allow no night shooting, which is the worst method of driving off the ducks. Then, when the days for shooting came round, good sport would be had, and plenty of ducks the entire season. Many others as well myself would like to hear your opinion on this matter. BLACK DUCK.

If it was the custom of Stratford gunners to indulge in the nefarious practice, mentioned by our correspondent, and kill the ducks on their feeding grounds at night, it was quite proper that duck shooting should be taken away from them; and sportsmen in that section should have long since seen that a clause prohibiting night shooting was included in the State game laws. As the case now stands, we do not see as it makes much difference to sportsmen whether the birds are killed off in one season, or driven away, or whether shooting is entirely prohibited. The suggestion of our correspondent is a good one, providing night shooting is prohibited, but the only recourse is an appeal to the next Legislature.—ED.

SHOOTING GROUNDS AROUND THE CAPITOL.

WASHINGTON, *November 6th.*

THE National Capitol is a dull place for visitors just now. In another month Congress will have assembled, the politicians and lobbyists will be present in force, and a series of social entertainments will be begun and continued until Lent arrives. The boarding-house keepers are papering and repainting their houses in anticipation of a busy season, and the Halls of Congress are being renovated to withstand another siege of the people's lawmakers.

If the visitor to Washington at this season of the year will fill his gun case instead of a Saratoga trunk, and put a shooting-coat in his valise instead of a dress suit of clothes, he can certainly find plenty of enjoyment in this vicinity. The air is sharp and bracing, several severe frosts having destroyed the germs of malaria which hover over the city in early fall, and the bare faces of the Maryland and Virginia bluffs on each side of the Potomac invite the sportsman to unloose his dogs and shoulder his gun.

The Eastern sportsman can find no better rendezvous for good shooting during the fall, winter, and spring months than Washington. Lines of railroads and steamboats centre here, over which the hunter can be taken in a few hours' time to the finest quail, ruffed grouse, wild turkey, deer, and duck shooting grounds east of the Alleghanies. The Potomac River and Chesapeake Bay are the duck-hunters' Paradise in cold weather. Every morning the crack of heavy ten-gauge ducking guns is wafted back from the river to the city, and flocks of teal, shufflers, crow, and red-neck ducks may be seen flying over the river between this city and Alexandria, or far back over the smooth waters of the Eastern Branch. Along the edges of the immense marshes which fringe the Virginia shore, small narrow skiffs containing the gunner and his pusher may be seen gliding along at break of day, and the crow, duck and widgeon fall easy victims to him who disturbs them in their search after early breakfasts. In the middle of the river flocks of teal and shufflers swim about obtaining food from the long grasses which cover the water at low tide, and keeping a bright lookout for the approach of strangers. The ducks are naturally much tamer earlier in the season than late in the winter. It is possible now to secure a good bag without the use of either decoy or blinds. Stretched at full length in the boat, with the muzzle of his gun projecting a few inches over the bow, is the gunner, as motionless and silent as death. Lying upon his stomach in the stern, with hands grasping the creeping paddles, is the oarsman. The boat moves through the water really propelled by (to the duck) an invisible agency, the quick motions of the paddler's wrists being hardly percepitible. The ducks perceive the approach of the boat and huddle more closely together. Perceiving no motion of life about the craft, they watch its approach with more curiosity than fear. With heads held high in the air, and necks curved beautifully over their backs, they seem to be deliberating whether to fly or remain until the unusual object passes. Now is the time for the sportsman to fire; and if he does not bag three or four of the flock, his aim or judgment will be at fault. One barrel at them in the water, and a second at them as they rise, at first taking care to cover as many heads as are in line, and, secondly, selecting a single bird as a target, will secure the greatest results.

It is useless to attempt to describe the different methods of duck-hunting. Every sportsman who has dwelt in the vicinity of a feeding-ground or roosting-place is familiar with the stratagems resorted to to capture the fowl. As an evidence of the popularity of the sport on the Potomac, there is scarcely a mile of the river between Washington and Point Lookout where, in the season, there are not built from one to a dozen blinds. Every river-bottom farmer that owns a gun has a bunch of decoys; and a baked or roast canvass-back or red-head is a frequent and pleasing addition to the regular fare of pork and cornbread which generally graces the farmer's table during the winter. Duck-hunting is glorious sport, too. Nothing tests the mettle of a sportsman like a day's experience at it in December. I have risen before daylight from a warm bed before the fireplace of a farm-house on the rocky heights in Pike County, Pa.; shouldered gun, and stood for four hours upon a run-way, waiting vainly for the hounds to start a deer, while icicles formed upon my moustache and whiskers; my stiffened fingers almost re-

fused to hold the gun, and frosted toes made me fairly dance with pain. I have tramped the open "runs" in the Shenandoah Valley in early August, at the beginning of the woodcock season, when the rays of the sun beat down upon me with 40-pound caloric power, and my clothing was wet with perspiration; yet neither of these experiences can begin to compare with the feelings a man endures while lying upon his back in a box on a January day, when the thermometer is below zero, and a northeast wind, travelling at the rate of thirty miles an hour, cuts the spray from the tops of the waves and throws the freezing mass upon your body, and the ducks decline to be attracted within your shot by the decoys. This experience is one which happily seldom falls to the lot of a gunner on the Potomac. The fowl always make for shelter when the cold gales are blowing, and the cheerful cry of "mark down" from your companion on shore always makes the warm blood course freely through your veins in anticipation of the prey which falls a speedy victim to your aim as the flock settles down among the decoys.

Mattaoman Creek, about twenty-five miles from Washington on the Maryland side of the Potomac, is a good ground for duck-hunting. The creek, which at its mouth is very nearly as wide as the river, terminates about ten miles from its mouth in an immense marsh, divided into innumerable islands by broad "guts," as the channels are termed. To these marshes the ducks come at night to roost, and in heavy weather to secure shelter. It is a fair feeding-ground, too, as the wild celery plant upon which the canvass-back, red-head and mallard feed is found there in abundance. I visited Mattaoman Creek last week in company with three gentlemen, who had gone down the river from Washington after quail. It was determined to obtain a few mallards to grace the table aboard our yacht, and vary the monotony of broiled quail and fried rabbit. Taking two skiffs, with two men in each boat, we left the yacht about 4 P.M. and paddled five miles up the creek to the marsh. We arrived there just as the sun was going down and twilight was settling over the land. A cold wind from the north ruffled the surface of the water in the "guts," and penetrated the thick ulsters in which we were wrapped.

Far above gun shot on all sides of the horizon could be seen flocks of ducks approaching the marshes. The killdeers piped freely from the beds of matted weeds over which they ran; occasionally the whistle of a solitary plover accompanying a flock of ducks in their flight could be heard, and the temptation to shoot the crow ducks which were often scared from the edges of the marsh by our approach, was almost irresistible. Muskrat dove into the water with a plunge that involuntarily caused one to start. No attempt to kill the smaller game was made for fear of disturbing the larger fowl.

The boats were shoved into the high grass at different points on the marsh, and as many flocks of duck as we could see alight were marked down. By the time our arrangements were completed and we were comfortably ensconced in the grass the sun had gone down, and the face of the big, white, cold-looking moon peeped above the horizon. Not a cloud was visible in the sky, and the night was as perfect for our sport as possible. Hardly ten minutes had elapsed after the moon rose before a musical "quack," "quack," was heard at a distance, and from the sound of the ducks' call it was evident that they were approaching our boat. "Take one to the right," whispered the bow gunner, an old duck hunter, to me, and hardly were the words uttered before the ducks, flying about ten yards above the marsh, came in view. They were moving slower than ducks usually fly during the day, probably because they were nearing the roosting ground and searching for companions. As they came abreast of the boat between us and the moon we fired, almost simultaneously, and had the satisfaction of hearing both ducks fall heavily into the water. Our ten gauge choke bores had literally paralyzed them. We retrieved the birds, both mallards, one a very large green head, and put back again to the edge of the marsh. Scarcely had we reached our hiding place before we saw the flashes and heard the reports of the guns of our companions further up the marsh. The ducks were plentiful, many of them flew past us just out of gun range, others kept in the shadow over the marsh where it was useless to fire at them, because if killed they could not be found in the heavy grass. Several of the ducks shot at in good range and fair sight were missed. We found that the brightest moonlight is not as satisfactory to shoot in as the glare of the sun. At 10 o'clock the signal to return home was given, and upon reaching the yacht the result of the evening sport was found to be nine fat mallards.

The sport, *par excellence*, in the neighborhood of Washington now, is quail shooting. Why, the Southern people will persist in calling the *Ortix virginianus* a partridge, is not easily understood. The Northern man will be continually misled by hearing quail called partridges, and partridges or ruffed grouse called pheasants. At almost any place along the river bottoms of Maryland, and Virginia fine quail shooting can be obtained. The birds are fat and plentiful. Woodcock are very scarce, although a few good bags are reported from some localities in Maryland. Rabbits are also numerous. O.

The Rifle.

RIFLE TESTS.—In the following letter P. J. Rabbeth, of Providence, R. I., details a series of experiments made by him in quest of a rifle for hunting. They are interesting, and bring certain conclusions by the best of all proof—actual test. If each would-be hunter would make the same careful tests there would be less need of pointless questioning, and there would be fewer disappointments in actual field work. Each should, in a great measure, experiment for himself, for while general conclusions may be reached by any careful examiner, there are scores of minor points which operate powerfully in individual cases:—

TESTING A HUNTING RIFLE.—*Editor Forest and Stream:*—I am an amateur rifleman, and have had for some time a sort of vague notion that some day I might go-a-hunting, and I have experimented occasionally, as leisure would permit, with such rifles as I had, to ascertain which rifle and cartridge combined the most advantages for killing game.

I am not one of those Herculean fellows who delight in carrying about a two inch bar of steel with a hole in it the size of a pea. I think, on the contrary, I should prefer the lightest possible rifle compatible with safety and proper killing powers. Should prefer to take an occasional bounce rather than diminish recoil by toting around any otherwise unnecessary metal.

Thinking some of my experiments might be of interest to my fellow riflemen, I will detail a few of them.

In all cases except where factory ammunition was used, the powder and bullet were carefully weighed, rifles always shot from dead rest, temporary vernier peep rear and ring front sights were applied to the rifles, and all strings shot without cleaning throughout. From seven to ten consecutive shots were fired in each experiment, and in measuring for drop of bullet, between one and two hundred yards, also for divergence, circles were struck, covering the whole group of shots fired, and in estimating the drop, the distance from centre to centre is given. In estimating divergence, diameter of circles is given. Large paper targets with eight inch bull's-eye for 200, and four inch for 100 yards were used. No pains were taken to hit the bull, but to hold as near as possible the same every shot.

My first experiments were with a Peabody-Martini rifle, 40 calibre, 26 inch barrel, factory ammunition, 70 grains powder, 300 grain bullet, 10 shots at 100 yards; group measured 7¼ inches.

2d. Same distance and number of shots, same bullets, reloaded shells, which bullet fitted loosely, 60 grains Hazard FG, same lubricant (hard); group 5⅝ inches.

3d. All conditions same as No. 2, except a tallow lubricant was substituted; group 3¼ inches.

4th. Same as No. 3, except no lubricant; group 3 inches, placed four inches higher on target than No. 3; sights the same.

5th. Ten shots at 200 yards, factory ammunition same as first test; group 15½ inches. This decided me to use no more factory cartridges or lubricants in this rifle.

6th. Seven shots, 100 yards, 60 grains FG Hazard powder, 295 grain bullet; group 2½ inches.

7th. Same cartridges fired at 200 yards; group 7½ inches, placed 23 inches lower on target.

8th. Seven shots, 100 yards, 65 grains same powder, 330 grain bullet. Bullet fitted shell but not very tightly; group 3¼ inches.

9th. Same at 200 yards; group 7 inches, placed 17 inches lower on target.

10th. Same number shots, same distance, same cartridge, except shell was reamed to fit bullet loosely; group 4 inches, same elevation on target.

11th. Two hundred yards, 65 grains Hazard No. 4 Duck, same shell and bullet as No. 8; group 6¾ inches, placed 1½ inches higher on target.

12th. Two hundred yards, 65 grains Hazard Electric No. 6, same shell and bullet as No. 8; group 6⅜ inches, placed 3 inches higher on target than No. 8.

This completed my experiments with the 40 calibre, and proved several things which subsequent experiments with other rifles has invariably confirmed.

First, that when bullets are seated one-quarter inch or more in shell, as they should be for hunting purposes, it is essential to accurate shooting that the mouth of the shell should be the same calibre as bottom of rifling in the barrel, so the bullet may upset properly to fill the grooves, as the upset of the bullet takes place before the bullet leaves the shell. I have found bullets that were fired from shells which fitted them tightly, on the butt of which for one-quarter inch, there was little sign of the rifling, while on a portion of the bullet which did not enter the shell the impression of the grooves was perfect.

Second, that a lubricant behind a bullet is detrimental to accurate shooting and quite unnecessary.

Third, there is no advantage in using high grade, expensive powder. The common FG brands strain the shells much less, cost less, and shoot quite as well.

Experiments 6, 7, 8, and 9, showed results quite surprising. About the same proportion of powder to bullet was used in these four tests. At 100 yards the 295 grain bullet struck the target about one inch higher than the 330 grains, while at 200 yards the 295 grain struck the target five inches lower. These tests were all made the same day, and indicate a greater loss of force by the short bullet in the second 200 yards than I had any idea of.

Should these experiments prove of interest to the readers of the FOREST AND STREAM, I may give a further account of my investigations after "best hunting rifle."

F. J. RABBETH.

BOGARDUS' RIFLE RULES.—Capt. Bogardus has drawn up a set of rules for glass ball shooting with the rifle, and they seem to cover all the points necessary. They provide as follows:—

1. All matches or sweepstakes shall be shot at five yards rise, and in case of ties the distance shall be increased one yard, and in case of second tie one yard more, and there be decided to shoot at ten balls on each tie.

2. There shall be two poles set in the ground ten feet apart, twelve to fifteen feet high, and the ball thrower must throw the balls outside of the poles from the shooter. If a ball is broken between the shooter and the poles he shall have another ball to shoot at.

3. Each party can have his own trap puller or ball thrower, and when he is ordered by the shooter to throw the ball and throws it, and the parties shooting do not fire, it shall be called a lost ball.

4. And in all matches there shall be a referee appointed, and his decision shall be final. It shall be his duty to stand in range of the two poles so as to see if all balls are thrown according to rules, and if shot from a trap to see they all shoot alike.

5. Position at the score: after a shooter has taken his place at the score he shall not level his rifle or raise the butt above the elbow until he calls pull or go; should he infringe on these rules, the ball shall be scored lost.

6. All miss-fires on account of cartidges not going off when snapped, shall entitle the shooter to a new ball; but if he should go to the score and not have his gun loaded or cocked, it shall be scored a lost ball.

7. Calibers of rifles to be used as a standard up to 32, and all larger calibers to be handicapped one foot back in distance, and the party going to the score first to shoot at ten balls, and the next at ten, and so on through the match, and all parties shooting shall shoot from the same glass balls, Bogardus' patent; rough, standard size. No one but a contestant has a right to challenge.

—Capt. E. A. Perry is about to publish another edition of his "green book" for use by riflemen in keeping a record of their work on the range. Two years of practical test has showed the book to be just the best thing of its kind ever devised, and the new edition, in which will be included the conclusions drawn from the recent long-range tournament, will be more than ever the pocket manual of the men who seek the ranges for fine work, healthy sport, and a rational pastime.

—Jas. S. Conlin, will celebrate the 15th anniversary of the establishment of his business on Monday evening next. There will be a great gathering of riflemen who will each and everyone of them proceed to show that he may smile and smile and be a marksman still. The prizes in the all-comers match will be distributed on that occasion, and a big panjandrum generally is to be held.

—The Jersey Schuetzen Corps, Capt. Horsman, will hold a prize and poultry shooting match on Thanksgiving Day, at the Union Hill Park; $100 worth of poultry will be distributed on the honor target. There will be prize and bull's-eyes targets open all day, and a big time is expected for the off-hand shooters.

MASSACHUSETTS—*Boston—Mammoth Rifle Gallery.*—The regular monthly prize shoot is progressing finely. Some excellent shooting was done last week, although no clean scores have been made. Remarkable shooting has been done, as the summary will show; 150 feet; rounds 8; possible 40:—

U. A. Pollard	5	5	5	5	5	5	4	5	39
H. A. Pickering	5	5	5	5	5	5	4	5	39
E. Whittier	4	4	5	5	5	5	5	5	38
Wm. H. Harrison	5	4	4	5	5	5	5	5	37
H. F. Low	4	4	4	5	5	5	5	5	37
Frank S. Harrison	5	4	4	4	5	5	5	5	37
F. W. Sharon	5	4	4	4	5	5	5	5	37
A. Law	5	5	4	4	4	5	5	5	37
G. A. Seabury	5	5	4	5	4	4	5	5	37

Hopkinton, Nov. 4th.—The Rifle Club held a match at their two hundred yard range. The weather conditions were bad, the wind blowing a gale during the whole match, and the bright light and dark shadows that flitted before the target made it almost impossible to make a decent score, and yet it was done. The following is the summary:—

O. C. Wood	4	5	5	5	4	5	5	5	5-48
Owen Wood	4	5	4	5	5	5	5	4	4-46
G. P. Wood	4	5	5	5	5	5	4	4	4-45
W. B Claflin	4	5	4	4	4	5	4	5	4-43
O. H. Smith	4	4	4	4	4	4	5	4	3-41
J. S. Wadsworth	5	4	4	4	4	5	4	4	0-38
F. S. Phipps	4	4	2	4	3	4	3	4	4-35

CONNECTICUT—*Berlin.*—The annual contest for the Steele Cup on the Willow Brook Range on the 25th ult., was a walk over for the Middletown team, who with four men firing ten shots at 500, 600, and 1,000 yards, scored 524 in the possible 600. The weather was very bad. In the afternoon of the same day, in the Sharps Rifle Co. Match, Wessels won with 195 in the possible 225. The Steele Cup was first placed in competition in 1876, where it was taken by the Middletown team with 480 points. In 1877 Hartford took it with 504. Last year New Britain was the winner with 531.

CARVER BALL SHOOTING.—John E. Graham the young rifle expert of Erie, Pa., celebrated his twentieth birthday on the 10th by a test of a new 32 calibre rifle presented to him, on one thousand Carver target balls. Promptly at 2 o'clock Mr. Graham took his position with the assistant, Mr. John Loomis, at seven yards, and Mr. Page Croswell as referee. At the beginning of the shoot a strong north-west wind was sending puffs of the fish-tail-order, which rifle shots found it so difficult to overcome. However, the scores stood as follows, the balls being thrown straight up:—

	Missed.	*Broken.*		*Missed.*	*Broken.*
1—100	1	99	7—100	0	100
2—100	2	98	8—100	0	100
3—100	2	98	9—100	0	100
4—100	5	95	10—100	0	100
5—100	4	100			
6—100	0	100	1000	14	986

It will be seen that notwithstanding the winds which were as frisky as a colt in fly time, and the embarrassment of ill luck in the first part of the shoot, Mr. Graham made the remarkable closing run of 533 straight. This beats the prodigious rifle shot of Cooperstown, Pa., Mr. Otto C. Wilkins, who at but five yards made 985 out of a 1,000, with a straight run of only 373. The targets used were the Carver target balls, made at Greenville, Pa. The feat was attended throughout with great interest, and especially during Mr. Graham's wonderful run of 533. During this trial his friends stood in almost breathless suspense, and when the last ball was shivered a general shout of exultation went up. The balls in this shoot were thrown straight up by Mr. John B. Ruth.

ILLINOIS—*Chicago, Nov. 3d.*—The fifth contest for the splendid silver cup presented by Gen. William E. Strong to the Illinois National Guard, open to competition by teams of ten men from any company in that organization, came off at Anthony, ten miles south of Chicago, on Saturday last. In the first and second competitions for the trophy Company B, Twelfth Battalion, were the winners. The third resulted in favor of an Ottawa com-

pany. In the fourth, Company A, First Regiment, took it with a score of 261 out of a possible 350, which was pretty good for Springfields. The contest on Saturday resulted in favor of the Joliet boys, and as that was the third time of winning, they are now the owners of it. The score was as follows :—

B COMPANY, TWELFTH BATTALION, JOLIET.

Private G. H. Hamill	3	4	4	3	3	3	3	3—23
Private John Thieler, jr	0	3	5	4	4	3	3	4—19

The day was bright and beautiful, but a little too cold for comfort—the coldest of the season thus far—and this fact operated seriously against A Company, the members of which, with one exception, fired from a hip rest, while their opponents, with one exception, took the graceful and certainly firmer position, with the left hand well out on the barrel. The hip rest may do well enough in gallery shooting, with a warm temperature and no wind, but when a vigorous young man faces a breeze chilled to the point of freezing, and holds his rifle at the hip rest, he will find a disturbing element under it, pumping away for all it is worth, at the rate of about ninety thumps a minute, and his front sight wobbling all around the target, placing the making of bull's eyes among the class of lucky accidents.

A Company's man who discarded the hip rest made one of the two highest scores on his side, while the man of B Company who adopted it was one of the two lowest on that side. The sooner the fine disciplinarian and really competent captain of A Company's team discards the position, referred to the sooner he can place the splendid material he has in hand at the right of the line among the riflemen of the I. N. G. LU. H. DRURY.

OHIO—*Cincinnati, Nov. 3d.*—The Cincinnati Shooting and Fishing Club opened the winter's campaign at Trimpe's Range to-day, the contest being the first match for the Baker medal. This medal is to be shot for every other week, and to be won five times by the lucky owner. Distance, 200 yards; position, off-hand; number of shots, 15; at Massachusetts target :—

LOUISIANA—*New Orleans.*—The eighth contest for the Mobile Trophy drew a large company of riflemen to the Frogmoor Range. The sky was without a cloud, permitting old Sol to shine in all his glory. There was a light breeze, which did not much bother the marksmen, and the atmosphere was so clear that the targets seemed almost to rest upon the eye.

The contest of the day was that for the Inter-State or Mobily Trophy, eighth competition between the teams represented at the initial contest in Mobile last year. It was thought that the possession of the trophy would be definitely settled by this match, inasmuch as the Louisiana Field team had already won four competitions, and stood a very fair chance of winning a fifth, and, therefore, the last. From the start the Washington Artillery team seemed determined to make another effort for the prize, and the scores put up at 200 yards were the most remarkable yet exhibited in an inter-State trophy match. At the 500 yards distance there was a great falling-off all around, and what promised to be the highest total score dwindled down to 390 points. Individuals did well; notably Mr. Gschwind, who made 62 points out of 70, and scoring 30 points at the 500 yards distance. Appended is the summary and score :—

Inter-State or Mobile Trophy; eighth competition under the new rules, which require five innings to entitle to possession; 200 and 500 yards; teams of eight, with seven shots at each range, and two sighting shots; military rules, military rifles and military uniform. The prize was won the first, second, third and seventh times by the Louisiana Field Artillery team, the scores being 365, 396, 345 and 399; and the fourth, fifth and sixth times by the Washington Artillery team, the scores being 345, 363 and 403 :—

CALIFORNIA.—The fall meeting of the California Rifle Association opened at the McMahon Range, San Bruno, under the direction of Lieutenant C. P. Le Breton, Executive Officer, Oct. 26. The weather was extremely pleasant. The scores show a marked improvement on previous ones. The Kellogg Challenge Cup, one of the trophies offered for competition at the first tournament of the California Rifle Association, has finally passed out of the list of trophies, Sergeant John P. Warren, of the Gatling Battery, having succeeded in winning it for the third time on the very handsome score of 24 out of the possible 25 at 600 yards. The possession of the trophy was stubbornly contested by Major A. F. Klose, who also made the same kind of a 24, and in shooting off the tie Sergeant Warren won by only one point. Colonel Kellogg won the first prize in the long-range competition, 44 out of the possible 50. Major Klose having the best 23 possible in the Subscription Match, took the first prize. In the military team matches for the Centennial and Association trophies, the second day, six representatives from each company of infantry, artillery, and cavalry enrolled in the National Guard of California and artillery of the United States Army took part. The distances were 200 and 500 yards for fnfantry and artillery teams, and 200 and 400 yards for cavalry; standing at short range and without artificial rest at long range, if recumbent, with head towards the target; weapons, United States Springfield rifles and carbines. The prize was a silver challenge trophy, valued at $350, and had been won two consecutive years by the National Guard. Three years are necessary for permanent possession. The Centennial Trophy was carried off by the first team from the Oakland Cavalry. The match was open to ten representatives from any regiment, battalion, or any company of infantry, artillery, and cavalry in the National Guard of California and artillery of the United States Army. The distances and positions were the same as the Association Match. The trophy is a present of the city of San Francisco, valued at $500, and is to be competed for annually until 1976, in which year the award shall be final. The cavalry trophy was won by the Oakland Light Cavalry by a score of 229 out of a possible 300. The seven highest in the subscription on the second day are given below, and also the four highest contestants for the Pacific Life Cup, on the first day. Major R. H. Orton was the executive officer on the second day, and everything passed off pleasantly. The scores were as follows :—

First Day—Competition No. 1; long range; 1,000 yards; 10 shots :—

S. I. Kellogg	44	Captain Burns	34
R. C. Hanson	43	J. L. Hull	34
R. McKillican	41	D. B. Bankhead	32
T. E. Carson	39		

Competition No. 2; short range; 200 yards; 10 shots :

M. Laufenburg	45	J. W. Guthrie	40
W. C. Erben	43	F. Kuhnle	40
J. W. Maher	43	H. Hook	40
J. Ruth	43	T. E. Carson	40
Captain Burns	42	J. L. Hull	40
N. Wilams	42	J. Lohmeyer	40
Colonel Kellogg	41	J. E. Klein	39
J. P. Warren	41	D. B. Bankhead	38
J. Robertson	41	C. P. Le Breton	38
E. N. Snook	40	J. Kattleman	37
H. T. Sime	40	R. McKillican	36
Colonel Gilmore	40		

Competition No. 3; Kellogg Cup; 300 yards; 5 shots:—

R. McKillican	23	J. P. Warren	18
J. Robertson	20	E. N. Snook	18
A. F. Klose	20	T. E. Carson	18
Captain Guthrie	19		

Competition No. 4; Kellogg Cup; 600 yards; 5 shots:—

J. P. Warren	24	T. E. Carson	19
A. F. Klose	24	E. N. Snook	16
J. Robertson	19	J. W. Guthrie	13

In shooting off the tie between Sergeant J. P. Warren and Major A. F. Klose, Sergeant Warren was the winner.

Competition No. 5; military mid-range; 500 yards; 10 shots :—

M. Laufenburg	44	E. N. Snook	39
J. P. Warren	44	W. C. Erben	39
J. W. Guthrie	44	O. Wayne	38
G. H. Strong	43	H. Hook	38

GAME IN SEASON FOR NOVEMBER.

Moose, *Alce Americana.*
Caribou, *Rangifer caribou.*
Elk or wapiti, *Cervus canadensis.*
Red or Va. deer, *C. virginianus.*
Squirrels, red, black and gray.
Hares, brown and gray.
Reed or rice bird, *Dolichonyx oryzivorus.*
Wild turkey, *Meleagris gallopavo.*
Pinnated grouse or prairie chickens, *Cupidonia cupido.*
Ruffed grouse or pheasant, *Bonasa umbellus.*
Quail or partridge, *Ortyx virginianus.*
Swans, Brant, Wild Ducks, Geese, &c.

☞ This table does not apply to all the States. It is meant to represent the game which is generally in season at this time. State regulations may prohibit the killing of some species of game here mentioned.

MOOSE HUNTING IN FALL.

NOW is the time for moose hunting, when the nutting season (the season for "calling"), being not fairly over, light falls of snow cover the ground, and not only enable the hunter to track the moose, but prevent the untimely snapping of dry twigs and rattling of dead leaves. Since last year the law relative to their destruction in Nova Scotia has been amended, though questionably improved. Last year, "no one person, or number of persons forming a hunting party, were allowed, during any one year or season, to kill or take more than three moose." Now, by the existing law, "no one person shall, during any one year or season, kill or take more than two moose;" thus it will be seen that whereas a hunting party consisting of no matter what number, could collectively last year only kill three moose, they are now allowed to kill two to each gun. A correspondent in London *Field* writes :

Though complications often arose when the old law was in force (I will not say enforced), which now to a certain extent disappear, the amended law has only accomplished this end by sanctioning a greater destruction of this noble game, when from its increasing scarcity one would imagine that steps in an opposite direction would be taken. Advocates of the new law may say that the moose obtains equal protection under the new as under the old law, from the fact that where a hunter could last year kill three moose, he may now only kill two. This would be so if a hunting party consisted of but one individual, instead of, as is generally the case, two or three individuals. It is not, however, against the hand of the genuine sportsmen that the moose requires protection, for the animals killed by them are, numerically speaking, insignificant, compared to the numbers slain by dollar hunters, who respect the law as little as they do the noble game after which they are in quest. A hide to these gentry means five dollars, and a carcass means ten or fifteen cents a pound; and as long as a market exists, so long will they continue to drive their slaughtering trade.

There are two legitimate means of hunting the moose, termed respectively, "calling" and "creeping;" the former sport commences (by the new law) on the 15th of September, and may be considered to end about the middle of October; "creeping" commences after the first fall of

snow subsequent to this date. It is on this latter sport that I propose saying a few words. The home of the moose is in the depths of the forest, in the solitude of which they roam undisturbed by sounds and encroachments of civilization. Though numbers occasionally depend on their own skill and experience in hunting moose, it is customary to avail oneself of the services of an Indian of the Micmac tribe, whose established character as hunters is well known beyond the shores of Nova Scotia. His presence, too, gives the Englishman a feeling of security when in the midst of the dense woods, and affords a comforting assurance that his chance of return to camp is not so hopeless as if left to his own resources. Much has been written on the extraordinary powers (instinctive some would declare) displayed by Indians in finding their way through the woods; but when it is remembered that their lives have been spent in the midst of the forest, where keen observation of the features and peculiarities of the country is imperative, the fact of their knowledge in this respect is not surprising. How many men will walk by the banks of a stream, and if asked a few hours afterwards the direction of the current, would be able to answer correctly? Not so with a man if he felt his very existence depended on whether he followed its banks up or down stream. But here I must plead guilty to being off the track of my subject, and hasten to retrace my steps to the point of divergence.

The home of the moose hunter consists of a pyramidal hut, in size generally 14ft. by 12ft., composed of a framework of spruce poles, thatched with birch or spruce bark; moss stuffed into the crevices existing in the sides of the hut suffice to keep out the biting winds. In the centre of the hut the fire is made, the smoke therefrom escaping through the apex of the roof. Around the walls of the interior tender boughs of hemlock are placed, and it is on this fragrant arrangement that the moose hunter holds his at-homes by day, and sleeps the sleep of the weary by night. The chiploquorgan hangs from a cross-pole in the roof, and on this depends the hunter's repast. The "chip" consists of a hooked stick, on which the camp kettle is suspended. Thus it will be seen that bountiful nature lays all the material for building at the feet of the woodsman, the trees themselves affording all that is requisite for raising a home in the wood—the timber supplies the poles for the framework, the bark the thatch, the moss that grows around the trunk the plaster, and, with the boughs to form a bed, I ask what more do you want? Merely an axe. With this implement alone your materials are collected, shaped, and your hut constructed.

With the moose it is not "the southerly wind and the cloudy sky" which "proclaim a hunting morning;" the elements must assert themselves more strongly for the hunter to be satisfied with the day. Sufficient snow must have fallen during the night to cover the old tracks; the wind must be blowing strong through the woods, bringing down in its force masses of accumulated snow from the splaying branches of the fir trees, or in its fury uprooting trees, which fall crashing through the midst of their agitated brethren. Such is a moose-hunter's morning, when his game, through the noise of breaking boughs and falling snow, fails to detect the fall of the moccasin as the hunter stealthily follows up the track. It is on such a day that the cautious hunter is able to creep within forty or fifty yards of the moose (sixty yards being put as the greatest limit at which it is possible to see through the woods). In this position armed with a good No. 12 smoothbore, loaded with ball, the moose is yours. A rifle is recommended only when tracking a wounded animal, as he will then often make for and lie down in open swamps, rising as you approach, but out of the range of the smoothbore. Indeed, tracking a wounded moose may be put down as the most arduous employment on which a hunter can be engaged, as often the animal will travel for days before he succumbs to his wound, or before the hunter gets up to him to deliver the mortal shot. It is on an occasion such as this that he will find himself obliged to halt on the tracks for the night, and this often when the thermometer stands at ten or fifteen degrees below zero; but he need have no fear of succumbing to the effects of frost if provided with an axe and matches, nor is his situation hopeless if he finds himself without these two commodities, as it is always possible to collect sufficient dead wood to form a fire, which a charge of powder suffices to ignite.

A few concluding words on the subject of tracks may be acceptable, on account of the variety of information they impart, and the skill and care necessary to follow them up with success. On first striking a track, the size and shape thereof is noted, then the class of animal which made it. The size, and often the sex can be determined (with the moose the bull's track is more pointed than that of the cow). Whether the track is fresh is the matter next in importance. This question may often be answered by ascertaining whether or no the imprint is frozen to the extremity; if not, the game has passed the spot recently. At what pace, walking or trotting? This may be determined by the distances of the tracks. Following them up, we see where the animals have been nipping off the shoots of the moose wood (*Acer pennsylvanicum*), to which browse they are particularly partial. The freshness in color of the moisture on the part where the plants have been bitten, the thickness of the film of ice on the stream at which the moose has paused to drink by breaking through the ice, would likewise bear evidence as to the proximity of the game to the hunter; and these, with many others, come under the head of signs, all of which have to be understood ere the sportsman can follow the trail of a moose with success.

PREPARING GAME FOR MARKET.—Poultry should be fat, and kept for twenty-four hours from food before killing, to have the crop empty. Food in the crop sours, blackens the skin, injures the sale of poultry, and buyers will not pay for this useless weight. Opening the vein in the neck, or bleeding in the mouth, is the proper mode of killing. If bled inside the throat the bill should be pried open with a piece of chip, and the poultry hung up by the feet on a line. This makes bleeding free and prevents bruising. The head and feet should be left on, and the entrails in. The flesh should not be mutilated in any manner. Turkeys and chickens dry picked keep much longer and sell higher than the scalded. If the picking is done by scalding, the water should be heated just to the boiling point, and the poultry held by the feet, dipped in and out the water four or five times, counting three each time in or out. The work should be done neatly, quickly, and thoroughly. After picking, hang up the poultry by the feet in a cool, dry place till the animal heat is out, and the poultry thoroughly cold and dry. Avoid freezing, as poultry will not keep long after thawing. Wrap in thin, light, strong paper. Brown and dark, heavy paper, having too much acid in it, injures the poultry. The head should be wrapped separately. Always pack head downward. This throws the soft entrails on the breast bone, the poultry keeping longer in this position. Pack in clean, dry, tight flour barrels.

Geese and ducks, after being killed, should have all the feathers picked off, then rubbed all over with fine resin, after which dip them in boiling hot water in and out seven or eight times, then rub off the pin feathers, after which wash off the fowl with warm water, using soap and a hard brush. Immediately after rinse them well in cold water, then hang them up by the feet in a cool, dry place till they are thoroughly dry, when they can be wrapped and packed as before suggested. Poultry thus dressed and packed will, in moderately cold weather, keep sweet and fresh for fifteen to twenty days, and can be shipped from the extreme West with safety by freight. Never pack poultry in straw, as in damp or warm weather it causes it to sweat and heat.

Game, deer, rabbits, coons, opossums, and squirrels should be opened and all the entrails taken out, leaving only the kidney fat; then the insides should be wiped perfectly dry with a soft, clean cloth, after which wrap the small game in paper, packing back downward.

Wild turkeys, ducks, geese, grouse, pheasants, quail, pigeons, and birds of all kinds should always have the entrails left in them, and the head and feet on. They should never be mutilated in any manner. Drawn birds sour in a short time and sell for less than the undrawn, even if sweet. Wrap the head separately in paper, then the body. Pack head downward in tight, clean barrels, the same as poultry.

Shippers should remember well that all game and poultry should be thoroughly cold before being packed, otherwise it will soon sweat and heat. Barrels are the best packages that shippers can ship in. JESSE GILMORE.

CARELESS GUNNERS.—The Raleigh *Observer* has the following:—

Mr. N. P. Jones had his hand badly torn to pieces yesterday by the explosion of a shell cartridge. He had loaded it and was recapping it when it exploded with the above result. He will not lose his hand, however.

Apropos, a correspondent writes us from Fort Johnson, N. C., as follows:—

The enclosed slip shows that all persons who handle breech-loaders and their ammunition, not only do not follow the oft-repeated advice and instructions *never to cap, or re-cap a loaded shell*, but do not even seem to have the necessary common sense to teach them the danger of such a foolhardy proceeding. I have used the Remington brass shells a great deal, and have exploded quite a number of primers in re-capping them, and on two occasions, when de-capping shells that for some reason or other had missed fire, when the spur was forced into the primer to remove it, it exploded. Of course, had the charge been suffered to remain in the shell, it would have exploded. When a primer misses fire, the chances are that the fulminate is still there, but has been in some manner displaced, and is likely to be ignited, even by slight causes. Of course it may have been destroyed, and there be no danger, but no chances are ever to be taken.

A. D. SCHENCK, U. S. A.

For our part, with shells as cheap as they are now, it seems folly, except of course in the case of metallic shells, to take the risk of re-loading them. Even where they are re-capped before loading there is danger of the cap or primer not being below the level of the head of the shell, and when the wads are rammed in there is danger of an explosion. It was in this manner that poor Dr. Thebaud lost his life a year or two since. A shell exploded while he was re-loading it, and a portion of the brass base entered his heart, causing death.—ED.

THE LONG RANGE CARTRIDGE CASES.—The newly introduced device for securing long range shots with ordinary shot guns is meeting with much favor among sportsmen, The following is a letter in corroboration of this:—

THE DITTMAR POWDER MANUFACTURING CO.,
NEW YORK, October 27th, 1879.

Messrs. H. H. Schleber & Co.:—

GENTS:—I have now experimented with your long range cartridge cases, and must say that they are a success beyond my fondest expectations. They at first looked too much like fancy play-things, but I admit I have never tried anything like them. I fired them out of a 12 bore cylinder gun, shells loaded with 3½ drams by measure of Dittmar C powder, 2 pink-edge wads, No 11, well rammed down, and fired at 80, 80 and 100 yards. The pattern was in each instance about as good as I could make with loose shot at from 30 to 40 yards. A meadow lark came and lit in a tree about 70 yards off. My brother put in a yellow cartridge loaded with No. 4 shot and put about four pellets in the bird. I shall in future always carry a few of your cartidges in my vest, and I know they will often come handy at ducks, etc., out of reach of loose shot. The penetration also was excellent.

Respectfully Yours,
J. VON LENGERKE.

THE THREAD-WOUND CARTRIDGES.—*Twin Lakes, Fla., Nov. 1st.—Editor Forest and Stream:*—I have tried a few of the thread-wound long-range shot cartridge cases, which you mentioned in your issue of Oct. 23d, and give you the result. I wanted a long range case for deer in fire hunting, for there are a few old bucks around here which have had their eyes "skinned" too often, and are off in a hurry if one attempts to walk up on them; but the cases are not made for buckshot, so of what use are they in deer hunting? At least, I suppose they are not, for I wrote for buck cases and got none that would take No. 1 buck. I tried one case with No. 6, seven pases with No. 4 shot, and two with BB. First shot, 84 yards, No. 6: Shot all inside a space two feet square; penetration fine. Second shot with BB: All two feet to the left of target; badly scattered; this was with left barrel. Third shot, BB, right barrel: All to the right about three feet; badly scattered. Fourth shot, No. 4 shot, an even 90 yards: The case (unwound) struck end on and buried itself half its length in a four years' seasoned pitch pine plank. Fifth and sixth shots, No. 4 shot, right and left barrels, 90 yards: All badly to the left of target; badly scattered. Seventh and eighth shots, No. 4, 100 yards, cases unwound close to the target: Badly to the left; not much scattered. Ninth and tenth shots, No. 4, 100 yards: Ninth shot two feet to the left, distribution tolerable; tenth, case unwound about two feet to the left just before it struck, the shot being in a space that could be covered by the hand; the marks of both pieces of the tin deep; penetration in every case excellent.

But my experience proves that the cases unwind irregularly, and why all should have gone to the left I am at a loss to know. There was only a light air stirring at part of the shots, absolute calm the rest of the time. I used three drachms of powder, orange ducking No. 4, gun, Parker, 12, an excellent shooter. Used a No. 10 pink-edge wad over power in a 12 brass shell.

I found one objection to the cases, if not more. The tape that goes over the end of case makes the brass shell entirely too tight for the chamber. I had to ram some of the shells out with wiping rod. That wouldn't do, you know, among game; and if you use paper shells a tight wad so bulges the shell that it would not enter the chamber; and a very tight wad is necessary to prevent gas escaping and burning the thread of the case—so the directions state. It seems to me these cases would work better in muzzle-loaders, for there they could be confined by tight wad, and dispense with tape. The cases must fit muzzle of breech-loader (choke bore), and so are too loose in the shell.

I would like to ask if these cases could not be adapted to buckshot in some way. [I neglected to state that I cut the outside wrapper where directed, and put proper end forward; also plugged as directed. S.

QUEBEC—*Three Rivers, Nov. 13th.*—Owing to the low waters the birds have not been in their usual haunts this autumn, but I have had some magnificent days after snipe. Cock have not been plentiful. Duck in the lake have been plentiful, but owing to the very low water on the marshes have kept well out in the lake, and consequently have been hard to get at.

My friend, W. H. Parker, owns a large portion of the county of St. Elie, has a large succession of magnificent lakes at the head waters of the Riviere du Loup and Yamachiche Rivers. He has built a fine house on a magnificent site overlooking several lakes. He is a thorough and true sportsman, and always enjoys seeing his friends, does all he can to encourage true sport and stop pot-hunting (which is doing us so much harm here). In several of his lakes he has planted wild rice, which he and his friends are reaping the benefit of. His lakes are well stocked with trout, so we vary our sport with the seasons. Our shooting for this fall is now over. The season has been too open and fine. The birds have been strong and in splendid condition. My opinion is that this district is destined to be the sporting district of the north. F. G. W.

RHODE ISLAND—*Newport, Nov, 12th.*—Very little shooting done here now, but soon as we have the snow to lay two days the swamps will be hunted by a few ardent sportsmen known as pot-hunters. COOT.

CONNECTICUT—*Clinton, Nov. 15th.*—Burt Kelsey, of this place, yesterday, started twenty-five woodcock, shot thirty times, killed twenty-two; killed twelve hand-running. O. F. R.

NEW YORK—*Shelter Island, Nov. 9th.*—Sea fowl have been tolerably plenty along this shore, and good numbers have been killed. I have had some fair sport in battery, but the coots have nearly all gone, and yesterday morning I got but five of them in five shots. The fowl have had no rest here for the soles of their web-feet, and have been so hurried by rowboats and sailboats that they have taken up their feather-beds and flown away. Thousands of them have gone south, but doubtless multitudes of them have temporarily gone to the western parts of Peconic Bay, and when that shallow water freezes up, they may return here, where the deep waters do not readily freeze. The geese do not seem to fly here yet, and very few flocks have been seen. A rough northeaster will probably start them along the coast. They do not make any stop here, but drop down into Shinnecock and Great South Bays, and into the waters of Barnegat. The quail are very scarce in this region, and make but little shooting. ISAAC.

Moria, Franklin Co., Nov. 11th.—Deer have been more plenty this season in this part of the Adirondacks than in many years. A great number have been killed on the St. Regis River and the ponds in the vicinity of Blue Mountain. A party of three went from here the latter part of October, and killed three in a week's time. Two large bucks were brought through here one day last week, and every few days deer are brought to Brushton to sell or ship on the railroad. There is a party now from Vermont at Blue Mountain with ten or twelve hounds I am afraid the hunting of deer with dogs will ruin the sport in this vicinity. I think the cause of the deer being so plenty this season is that they were not hounded much last year. Ruffed grouse are quite plenty, but no squirrels, although there is plenty of beech-nuts.

ADRION ONDACK.

NEW JERSEY—*Forked River, Nov, 15th.*—The gunning for the past week has not been as good as it should be, owing to the mild weather. A party of gentlemen came in from the gunning grounds last night with forty-six ducks, mostly broadbill. There are plenty of ducks in the bay, but they are in large flocks, and will not stool till we get some rough weather to break them up. Messrs. Kirkland, Scrymser and John Logan, of the New York and Long Branch Gun Clubs, who spent a few days with us last week, had some sport with the ducks. We are looking for colder weather and good shooting. A.

PENNSYLVANIA.—Wild turkey hunting is attended with fair returns among the mountains of Perry County. The score of a party who went out there recently comprised eight turkeys, forty-two pheasants, and 208 squirrels. A few deer are still to be found there.

Notwithstanding the illegal trapping in the vicinity of

Brownsburgh and New Hope, Bucks County, the shooting there is excellent, partridges and woodcock being in numbers sufficient to repay an expedition to that part of the State.

VIRGINIA—*Petersburg, Nov. 10th.*—Game of all kinds is in great abundance hereabouts. Quail especially plentiful, but weather too warm and dry to hunt with any comfort to man or beast. No rain for six weeks or more. Can walk dryshod across the James River at Richmond on the rocks at the bottom. The Weather Bureau evidently needs "readjustment." NEW JERSEY.

Petersburg, Nov. 15th.—Deer, turkey, partridge and hare in great abundance hereabouts, but the heat has been so intense and the drought so excessive, that hunting has been attended with great discomfort to man and beast. The first rain, however, will make glorious sport, and then you will hear again from NEW JERSEY.

—Those travellers to the South who appreciate the importance of Weldon, North Carolina, as a way station, so far as it involves their personal comfort, will be pleased to learn that Col. J. R. Davis, formerly of the Scriven House in Savannah, and more recently of the Purcell House in Wilmington and at Norfolk, Va., has become its proprietor. See his advertisement elsewhere. Besides being a dining station at a great railroad centre, it is in the midst of a great game country. There are deer and turkeys within easy distance, as well as some of the best quail shooting in the Old North State. Geese, upland plover, and willett also abound. Those of our subscribers who have been asking us where to go for game, will please make a note of this.

Millbury, Nov. 3d.—Mr. John M. White shot a large fox this morning on Brigham Hill, Grafton, that weighed ten pounds, and is one of the largest seen in this vicinity in a long time.

OHIO—*Cincinnati, Nov. 12th.*—I have never seen game so scarce in Boone and Kenton counties as it is this season. CINT.

INDIANA—*Indianapolis, Nov. 10th.*—Since my last I have been after quail, but find that the dry weather has driven them to the fields near the water courses. Many persons even believe that some have migrated, as they are not now as numerous as they were earlier in the season. INGRAM.

ILLINOIS.—*Rockford, Nov. 10th.*—The ardent sportsmen of this city have been disappointed in wild-fowl shooting this fall. Several parties have camped out from a week to a month at our best known resorts, but have returned disgusted. The reason assigned is on account of the long continued drought. Some of the resorts about Grass Lake and Sugar River where ducks are generally found in great plenty at this season of the year, are as barren of birds as the desert of Sahara.

Dr. Mills, of Freeport, in company with Mr. Bidwall of the same city, returned from Koshkonong Lake after an absence of six days, having bagged during their stay about 140 ducks. Many of our hunters think they need not hope for sport this fall, while others say the flight has scarcely began, and that later when the ponds and lakes farther North are frozen we shall see ducks "till we can't rest." NIM ROD.

IOWA—GROUSE SHOOTING.—*Creston, Nov. 15th.*—I find the corn-fields and prairies full of grouse. They are now in flocks, sometimes reaching four hundred birds, and do not lie well to the dog. Have seen over one hundred this forenoon, and killed but a few. They have been but little hunted the past summer, and next season must produce good shooting. Most of the prairie is yet in a state of nature, and southwestern Iowa will have plenty of good shooting for many years. The country is very swelling, and resembles a broken sea. H. W. MERRILL.

OREGON—*Portland, Nov. 3d.*—We left Portland at three o'clock A. M. on the steamer *Traveller*, Capt. Love. I was let off at Greene's Landing, and at six o'clock Mr. W. started out in the forest with the hounds, and my friend and self proceeded to the slough, and after taking stands, waited patiently, in vain, from seven A. M. to three P. M., and then gave up in disgust. I was ready to start home with two ducks as the reward of a patient day's waiting. The remainder of the party had very good luck, Bob B. heading the list with thirty-six ducks, mostly mallard and widgeon. MULTNOMAH.

Cincinnati, Nov. 8th.—But two of the members of the Cincinnati Shooting and Fishing Club put in an appearance to decide the third competition for the club prizes—Bates and Baum's; rubber bound trap, with screen; rise, 18 yards:—

—The Pooler & Jones patent brass cartridge holders and belts are simple, and for the purpose very satisfactory. The cartridge belt is as necessary a part of an outfit as the gun itself.

A SURE METHOD.—The defeat of a great many athletes has been traced to the difficulty of toning the muscular and nervous systems to the requisite power of resistance. Reputable physicians say that Weston-Rowellene will do it. No. 381 Sixth avenue, New York.—*Adv.*

—Use Walter Baker & Co.'s Chocolate if you desire the *best* in the market. The verdict of experts, both in Europe and America, has for many years testified to its great excellence.—[*Adv.*

THE NEXT PRESIDENT.—The politicians are anxious on this subject, but a much more important thing for all who have poor appetite, or skin diseases, or an enfeebled constitution generally, is to know that Warner's Safe Bitters will cure them. $1,000 will be paid to any one who will prove that there is a better medicine of its kind.—[*Adv.*

—Very few men live to write their own obituary.

Furs and Trapping.

THE MOOSE ("CERVUS ALCES.")

THE HUNTERS' WAY OF FOLLOWING UP "SIGNS."

THE young of the moose generally follows its mother one year, and sometimes longer; so the young are called calves when one year old, or more, if following the dam.

A good moose hunter can tell, while following up the signs of moose, how many and nearly of what age, sex, etc., he has ahead of him.

The young, or calves, by their sucking teeth-marks on the bark of trees, always crosswise of the tree. The year old has two wide teeth in front, having lost two sucking teeth, and so on from year to year until five years old their front teeth mark their age. The bulls have wider teeth than the cows, and peel the bark or gnaw it higher up the tree, being longer-limbed.

The color of the animal is discovered by the hair left on small knobs while passing between the trees.

The above logic applies to summer and fall, or while the ground is yet bare; but when the snow covers the ground, and we are following moose by their foot-marks, or tracks, there are other ways of telling age, sex, the number of the herd, etc,

But, first of all, let me here say it is no boy's play to strike off into the woods and find moose, even when they are plentiful; for it would be luck and chance to strike their tracks in winter, and useless to hunt them in summer, as they would smell you further than you could hear them, and in our thick woods in Maine you could not see as far as you could shoot.

They usually yard on the mountains, commencing at the first heavy snows, and working up as the winter advances and the snows deepen; and when the snows are very deep they beat back and forth in the same track, until they consume all the eatible material within their reach—not attempting a new road until forced to it by hunger; and then the large moose breaks ahead and the younger moose follows after.

When first starting out after moose the hunter keeps his eye peeled for signs—first, on the low lands for buddings and breakings. These are considered early summer signs, and are made by the tender buds of maples, willows and many other shrubs, and the way the moose is travelling is told by the manner the end of the bush is bitten off—thus, having no upper front teeth he has to break the twig over his under teeth, and so the bark is stripped up a little on the side toward him, which indicates the way he is travelling; and as the hunter becomes accustomed to seeing quick, he can usually follow signs of this sort through the woods quite fast.

Sometimes there is a lapse in the signs, and for half a mile or more no signs are made. Then the experienced hunter follows on in the same direction the signs were heading when last seen—generally toward some mountain or high land in the distance; and presently, when the signs are again discovered, they appear fresher, and may by-and-bye be told near the time when made. Occasionally a tree will be peeled, and in the summer months the bark will strip up very high, but in the fall months very short, and later, at first snows, it has to be gnawed off. Then by the freshness or oldness of its appearance the time it was done is judged.

The bulls often rub their horns against small evergreens, and trim off all their boughs.

A moose yard is a grand sight—trees peeled of their bark to the height of six to ten feet, looking in the bright sun for all the world like a clean room furnished with newly wood-varnished furniture—as far as the eye can reach, even, perhaps, half the side or top of a mountain, with roads or pathways in every direction; and when the signs are new and fresh the beds of the moose may be seen in the snow.

It is then easy to count your moose, for they are sure to make two beds during the night for each moose. I recollect one old Andover hunter, when he came upon the beds in the snow, put his hand into one, and said:

"The moose has just gone, for the snow is warm where he lay!" J. G. R.

Bethel, Me., October, 1879.

TRAPPING A BEAR.—An old hunter correspondent of ours, who lives in New Brunswick, Canada, sends us the following rough notes:—

On the 24th of July last I left Fredericton, N. B., with the intention, if possible at that time, of securing some live beaver of the spring growth. I reached Slate Island on the Southwest Miramichi on the evening of the 25th. When I was there some ten days previously to this, I had set a steel trap at an old camp about one and a quarter miles east of the Miramichi, where I had noticed traces of bears. Going back, therefore, to where I had set this trap, I found it gone. I had a junk of wood attached to it which weighed about forty pounds; the trap itself weighed twenty-six pounds.

I noticed the weeds and grass along the old lumber road broken down, evidently by the clog and trap. I followed these marks for about 100 yards, when I found that Bruin had left the road. His route was easily traceable by holes in the ground, broken bushes, moss torn off the logs, etc. I found that he had several times got the clog fast between two trees, but cleared himself after great exertions by turning it around till he got it out.

After following his track, in all its windings, a distance of not more than half a mile, from where the trap had been set, I came to a side hill, pretty steep, covered by hard wood, where was a pile of blown-down trees. Among these I caught a glimpse of Bruin's black coat, and, approaching nearer, saw a very large bear, with my trap fast to his nose; one tooth of it had passed directly through his nostrils. As soon as he saw me he made violent efforts to get the trap and clog free from the trees among which they were entangled. While attempting this he lifted the trap and clog to clear them from the trees. Seeing this, and fearing lest he should tear the trap from his nose and make off, I put a ball into him almost immediately. This animal would weigh about 350 pounds, was very poor, and had been in the trap, from appearances, about four days. H. B.

MORE TRAPPING LORE.—*Weld, Me., Nov. 6th.—Editor Forest and Stream:*—A recent issue of your paper gives some curious incidents of trapping. I offer the following:—A trapper in a logging camp, York Co., N. B., caught two bears at the same time in one trap. A friend of mine caught two foxes in like manner. In both instances, although fast in, yet they had a falling out, and the weaker of its kind fell a victim to the rage of its mate in misery. Another trapper known to the writer left a bear trap setting through the winter, and on visiting it to reset and bait up in the spring, found a fine bear recently caught, the trap remaining open for business all winter.

Mention is made, too, of skunks getting into fox traps. It is the only drawback to the pleasure of trapping sly Reynard, but it can't be helped. Skunk are not in the least wary, and being grass feeders they go at once into a trap as soon as set, not caring in the least for any human scent there may be around. They begin feeding early in the evening, while the fox seldom takes bait till the latter part of the night—generally about daylight. Of course, any and all other birds and animals are liable to put their foot in it, though not meant for them.

NEW YACHTS.—Piepgras is at work on an ocean steam yacht for a Newark gentleman. Smith, of Islip, has under way a sloop for Philadelphia parties, and expects soon to lay down a schooner. Mr. A. Carey Smith is getting out the lines of a sloop, and Kirby is busy on a model of a fifty-foot schooner. Elsworth is also at work on a model for a forty-five foot sloop for Dr. Voudy, and Thomas Clapham has laid the keel of a fifty-four foot schooner-rigged sharpie, with more work in prospect.

EXPERIENCES IN A SLOOP.—A gentleman writes from Buffalo:—

I have recently returned from another cruise in a thirty-foot New York model sloop, and I sold her immediately upon my return with the intention of building or buying a deeper boat.

And this is what the author says in a charming little book entitled "A Yachtsman's Holidays," which bears upon the same subject, and which, coming from a practical ship-builder and engineer of high repute, ought to do much to disabuse the minds of many in regard to the supposed qualities of the modern cutter:—

The first part of our *partí carre* was in a little hooker of only five tons, one of the earliest to appear of the "narrow, deep type" now so much in vogue, and therefore considered by some knowing hands to be probably unsafe and certainly uncomfortable. In truth *she was neither*, being as reliable a little vessel as ever floated—buoyant as a cork and stiff as a church. Indeed, the very divergencies from accepted models which she exhibited have since been exaggerated to such a degree that our old *Ilma* is now actually thought rather a round, beamy craft than otherwise, and her present owner has serious thoughts of *lengthening* her, to make her accord with the notions of the day. I have been often much amused by discussions, verbal and printed, on the question of the proportions of yachts, and by the extraordinary amount of prejudice that seems still to exist in some minds against vessels of considerable relative length and depth. It might have been expected that the issue of an authoritative work like that of Dr. Dixon Kemp on "Yacht Designing," could have acted like an extinguisher on the worshippers of broad beams, but in spite of all attempts to diffuse sound principles, one meets now and then with the most vigorous brandishing of the old fetish.

The argument is generally conducted in a manner which implies that the builder or advocate of broad vessels is a meritorious kind of person, with good moral principles, a supporter of constituted authority and the Church Establishment, while the fellow who would say a word for narrow boats may justly be suspected of infidel proclivities, and is probably only restrained by the strong arm of the law from larceny and homicide. Nice distinctions are drawn between what is called "natural stability" and "artificial" ditto, which is obtained in a mean, sneaking sort of way by lead keels, metal floors and such iniquitous devices. Is it the case that the yachts of the period—even racing yachts of the advanced types—are inferior to their predecessors in seaworthiness or comfort, to say nothing of speed? I think not; in fact very much the reverse appears to be the case. At any rate, coasting trips by the smaller classes are now more frequent and more extended than ever, and now-a-days ten and fifteen-ton yachts frisk around the Land's End every season, in search of worthy antagonists, carrying their crews safely and speedily, with no more discomfort than is inseparable from their small dimensions. May the yachtsman take thought and amend, if he be still seeking after false gods like "natural stability."

Though the author quoted above had reference more especially to English yachts, his language is even more applicable to the condition of affairs in America, where but few scientific men have yet taken hold of yacht designing, and where we are floundering in a sort of primæval ignorance of the principles of naval architecture, and where a cute eye and smart guessing have taken the place of an exact science. Likewise does the author's sly hit at the worshippers of beam and "moral sta-

bility" strike home among us, where the pens of sundry *sans-collottes* are busy heaping anathemas upon those who have dared toss their golden calf aside for the purer, unerring formuln of mechanics and physics.

NOTHING NEW UNDER THE SUN.—Catamarans, even in their most improved form, such as built under the Herreshoff patent, are, after all, nothing new. Moreover, others have gone ahead, even of the present day, though their experiments were carried on many years ago. This is what Mr. David Kirby and a brother did many years back in 1840. They built catamarans of all kinds, two hulls and three. They were pivoted on "axles" or rods running athwartships, giving free play to each hull—the very point which Herreshoff dwells upon most prominently in his patent. The third hull was placed a little abaft the two outside leaders, half its length projecting beyond their sterns. They were fast, but wet. Then again, Mr. Kirby tried jib and mainsail all in one (a good deal after the plan of ex-Commodore Platt. of the Newport Yacht Club), but abandoned it as not equal to the regular style of sloop rig. He had a mast of two spars meeting at the head, someting like a derrick, and housed up the yard of the triangular sail by a tackle hanging from their head, and secured the boom forward with a tack lashing. In 1840 he sailed one of his catamarans around the Battery, and there ran across the *Onvahie*, a curious craft of Stevens' invention. Stevens allowed no one on board, but when he saw Kirby's curious affair sail by him like lightning, it was too much for him, and he hailed the catamaran, saying: "You have got about as nondescript a thing as I have, so come aboard." Mr. Kirby learned practically to appreciate the truth of the great amount of resistance offered by friction, for he found that unless perfectly clean his catamaran lost very much in speed. The hulls were about 20 feet long, 2½ feet beam, with like depth.

SOUND LOGIC ABOUT RIGS.

Editor Forest and Stream:—

Having felt for a long time the importance of some modification in the rig of our small cruising yachts, I have watched the discussion of the most desirable rig for craft of that description in FOREST AND STREAM with much interest, and feel inclined to add my quota to the general fund on that subject. While the modern sloop and cut rigs are unquestionably the best that experience has yet given us for the attainment of that high speed and weatherly qualities in boats designed exclusively for racing purposes in ordinary weather, such as we are apt to have in nine cases out of ten in our summer regattas, for cruising yachts, liable to heavy weather in the open sea, these rigs are found to be cumbersome and at times unsafe, owing principally to the enormous length and position of the mast in the cat-rig, and the overhanging boom and long, stationary bowsprit in the case of the sloop. The schooner rig is an improvement as regards ease in shortening sail, but the mainmast in schooners of small tonnage is much in the way, and the cutter and yawl, or a modified rig similar to them, and adapted to our style of model, seems to be the best for us to adopt. The very interesting letters of your correspondents "Frisco" and "Saucelito," gave considerable light on this matter, and we should be glad to hear further from them.

It would be difficult to convince an old hand, without practical demonstration, that the speed of the sloop can be increased, or even made equal, by changing her rig to the yawl, as it has become almost an axiom that with a given area of canvass made into one sail greater speed and power can be obtained than when cut into two. This is shown in the two jibs, or more technically, the foresail and jib of the cutter, as compared with the large single jib of the sloop, and the modern double topsail of the square rigger with the old-fashioned single topsail.

An old sailor will say that the double topsail is much more easily handled, but that the single topsail will give greater power, and, other things being equal, greater speed. There can be no doubt that the yawl rig is far more serviceable on the cruising yacht than the sloop rig, but it seems to me that the "Frisco" rig has only remedied the evil at one end, as it still leaves the long, overhanging bowsprit and the stationary jib, which can only be reduced or furled in a gale at considerable risk and great discomfort, by laying out on the bowsprit when that spar is plunging under at every third sea that strikes the vessel.

To my mind, this constitutes an objection to the sloop rig for cruising yachts quite as serious as the reefing of the large mainsail, while the cutter, or yawl, on the English plan, in shortening sail has only to run the bowsprit partly in and set a small storm jib, or use the forestaysail alone as headsail. The smaller mainsail of the cutter makes it proportionately less difficult to reef than the sloop's, and she will not fall off under the foresail during the operation, as will the sloop under her jib. The question of housing topmasts is also well worth considering, and the ease with which the topmast of the cutter can be housed is a valuable feature of that rig.

I have seen this applied to racing sloops with good results. It is wonderful what relief it gives to a vessel laboring in a heavy gale to get the long bowsprit in board and the topmast housed. Having occasion some years ago to rig a small yacht, and being dissatisfied with the sloop, as unsuited to the purpose in view, I decided upon the cutter rig at a time when I think no American yachtsman had yet adopted it, and being so much pleased with the result, I felt confident that it would ultimately come into vogue on this side the Atlantic. The difference in speed is so small as not to be worth considering in yachts intended for cruising, and for racing there will soon be enough cutter rigged yachts to form a class by themselves.

To sum up, we must admit that for smooth water and light winds the sloop is somewhat faster and more weatherly, and that she has much less complication of gear than the cutter or the English yawl; but the cruising yachtsman who has experienced the comfort and security of the latter rigs outside in rough weather, will never return to the sloop rig, such as we commonly see in our rs, except for inland waters or racing. KROSSANES.

Our correspondent's logic is so clear in every particular that we need add nothing to his letter, except that we are glad to find an increasing class thinking as we do ourselves. On yachts over thirty feet the loss in speed due to two headsails is purely chimerical; on the contrary, in practice better results as to pointing and trimming are obtained from two jibs than from one. Witness *Regina's* performances, and the well-known fact that cutters will lay higher than the sloops. Readers will find scale drawings of the San Francisco yawl in our issue of March 18th, '79.

We hear of several sloops to come out with double headsail next season, and even some smacks are setting up a fore-stay. All reforms are necessarily slow, even in progressive America. It took us about four years' writing to convince pilots that a single jib was a nuisance. Now there is hardly a single pilot-boat sailing out of New York which has not a fore-staysail and jib. We feel confident that yachtsmen will readily take to this rig at first, and the next step, that of introducing sliding bowsprits, along with housing topmasts and setting jibs flying on their luff from the forecastle, will follow as a natural consequence of the increasing taste for distant cruising. Already the "cutter men" have increased from a mere handful to many hundreds, and a fine fleet of cutters will be the result ere long. Once in fashion, their advantages will be readily conceded, and the only wonder will be that it took us so long to appreciate them.

TOLEDO (OHIO) YACHT CLUB.—At the annual election of the Toledo Yacht Club, held Nov. 12th, the following officers were elected for the coming year: A. S. Smith, Commodore; A. W. Bunce, Vice-Commodore; H. E. Rouse, Rear-Commodore; Chas. Doolittle, Secretary; N. W. Dyer, Treasurer; O. M. Hepburn, Measurer; Executive Committee to consist of A. S. Smith, A. W. Bunce, H. E. Rouse, A. W. Williams, O. M. Hepburn, E. P. Day and P. Hassenzahl.

The report of the Treasurer shows all debts paid and a balance of $102 in the treasury. At their club-house on Guard Island, a pleasant sail of ten miles from the city, the register shows the numbers of yachts that have visited there during the season to amount to 81; number of yacht club bays registered at 488.

HANLAN AND COURTNEY.—Another set of "articles" (definite or indefinite?) has been duly drawn up and subscribed to by Courtney and Hanlan. They agree to row on the Potomac, Dec. 9th, five miles—two miles and one-half out and return. More row and less blow would be greatly to their credit.

Later, N. B.—Courtney refuses to sign the articles.
Later.—Courtney has signed the articles.
Special.—The articles have not been signed.
Final.—The Courtney and Hanlan race.

We call attention to the schooner yacht *Sunshine*, of Philadelphia, offered for sale in another column. She is a fine, roomy, able little craft of about sixteen tons, N.M., and was built in a thorough manner by the well-known firm of Birely, Hillman & Streaker, of Kensington. She is to be sold cheap, including full outfit, sail, gear and furniture, new last season. She is a fine sea boat, of fair speed, and handsome to look at, and will make an excellent all-round yacht. Application should be made soon.

National Pastimes.

THE GAME OF CRICKET.

DAFT'S ENGLISH TEAM VS. ELEVEN OF YOUNG AMERICA.—Capt. Daft had an invitation from the Young America Club to play its eleven on even terms, and he accepted. At the time we thought it was very plucky of the old Notts Captain "to go and to do so," but after the match, when the professionals had defeated the amateurs by an innings and plenty of runs to spare, we recollected having seen a peculiar expression in the captain's left eyelid when he said "Yes" to the challenge of the Stenton gentlemen, and we began to think that the "pluck" had not been altogether on the English side.

The game began in weather that was beautiful, and at 12.30 P. M. the toss was won by Capt. George Newhall, who sent Large and Bussier to the wickets. Shaw opened from the pavilion end, and Large helped him to a maiden. Morley followed the attack on Bussier, who after driving him for a single, snicked him to Shaw, at slip—2—1—1. R. Newhall followed and cut Morly for a double, and drove him to the on for a single. Shaw's first six overs were maidens, and then Large spoiled the seventh by placing the last ball to the off for 1. When the score stood 13, Large, in scraping out at a short pitch from Shaw, gave Pinder an easy chance to stump him, but Pinder failed to connect with the ball. In Morley's eleventh over Large cocked one up to Lock wood at point—17—2—5. C. Newhall joined his brother, and the pair were twenty-five minutes at the wickets before Shaw found his way to C. Newhall's middle stick—24—3—3. Dixon joined R. Newhall, and the latter in playing back to Shaw lost his off stump—25—4—12. G. Newhall followed and cut Morley for 3; and Dixon drove Shaw for same amount to long off. Shaw's next ball got in on G. Newhall's middle stump—33—5—4. D. Newhall joined Dixon, and after getting the slow bowler to leg for a single, succumbed to a bailer from Morley—36—6—1. Brown was Dixon's fourth partner, and he drove Shaw nicely to the off for a single. Dixon then put the fast bowler up to Daft at short leg—37—7—4. After an intermission of an hour for luncheon Clark joined Brown, and the first ball from Shaw passed the latter's bat—37—8—1. Van Rensellaer succeeded, and seven runs were scored off Morley's twenty-first over, the new batsman getting a three to leg, Clark a straight drive for same amount, and Van Rensellaer a single to the on. In Shaw's next over both batsmen were given a life, Clark with 4, by Lockwood at point, and Van Rensselaer with 4 on a skyed ball to mid on by Morley. These misses were somewhat expensive, for before a separation was effected the tins showed 64, Van Rensellaer surprising every one by having his stumps lowered by a full pitch from Morley. His 11 was made up by two 3s, two 2s, and a single—64—9—11. Wright, the last man was at once bowled by Morley, leaving Clark to carry his bat for a well made 14, the innings closing for a total of 64. At 4 P. M. the Englishmen commenced their innings in a decidedly bad light, Lockwood and Ulyett facing the bowling of C. Newhall and Clark. The former got C. Newhall to leg splendidly for 3. In C. Newhall's second over Ulyett lost his wicket to a shooter—9—1—1. Selby joined Lockwood, and after getting three singles by sharp running was beautifully bowled by C. Newhall—13—2—3. Shrewsbury followed and began by elegantly cutting each bowler for two doubles. His late cutting being the finest exhibition ever seen in Philadelphia, it was always clean hit and well placed. After contributing 14 he was sharply caught by Van Rensselaer behind the wicket off the fast bowler—39—3—14. Barnes joined Lockwood. Up to this time C. Newhall had been bowling superbly, his analysis standing 12 overs, 8 maidens, 10 runs, and 3 wickets. With the score at 40 Clark handed the ball to D. Newhall, and when time was called at 5 P. M. the score stood 49. At noon on Saturday the game was resumed in the presence of about 1,500 spectators. Lockwood with 13 and Barnes with 8 faced the bowling of Clark and C. Newhall; the former opened from the lower end, and Lockwood placed him to leg for a single. The score rapidly increased. Clark at last got in on Barnes' stumps with a shooter—74—4—24. Daft was Lockwood's fifth partner. With the score at 80 Clark and C. Newhall changed ends. In the next over the latter nearly captured Daft off his own bowling; it was a high and very hard hit, and he did well to even stop it. When the telegraph showed 105 D. Newhall relieved his brother. At 118 Daft was much applauded for a magnificent off hit for 4. After seven runs had been added to the score Clark handed the ball to C. Newhall, who in his neat over got Lockwood's leg stump on a shooter—130—5—60. Lockwood's innings was a perfect exhibition of all-round cricket. His stay at the wicket, actual time, was over two hours and a half, and his score was made up of one 4s, eight 3s, twelve 2s, and singles. Bates joined Daft and was caught by Van Rensselaer on the next ball—130—6—0. Emmett followed, and was caught by Van Rensselaer off C. Newhall, who was bowling very fast—136—7—3. Shaw joined Daft, and at 2 P. M. there was an intermission for lunch. Play was resumed forty-five minutes later, and when Shaw had made three singles Large missed him at point. Daft, who had been playing nicely, continued to build up the score. Shaw was the first to break the partnership, being caught by Van Rensselaer off the fast bowler—153—8—5. Pinder joined Daft, but the latter was obliged to retire after a fine innings of 37, made up of one 4, six 3s, five 2s, and singles on a wonderful one-hand catch by Dixon off C. Newhall—166—9—37. Morley, the last man, carried his bat without scoring, as Finder was almost at once bowled by a bailer from Clark. The innings closed for a total of 171. At 4 P. M. Large and D. Newhall faced the bowling of Emmett and Bates. Large was the first to go, as he missed one from Bates in scraping out to it—4—1—0. R. Newhall, with his brother, increased the score to 23 by fast running, when D. Newhall was sharply caught by Shaw off Bates—23—2—13. Bussier added nothing to the score—27—3—0. Dixon joined R. Newhall, and the latter was splendidly stumped by Pinder off Emmett—27—4—11. With the fall of this wicket stumps were drawn for the day. On Monday, at noon, the game was continued, but the score will show that the remaining batsmen fell for 20 runs, making a total of 47 for the innings. This left the Englishmen the winners by an innings and 60 runs:—

Umpires—Young America, Mr. Gaskill; English, Oscroft.
* Bowled one wide.

The above match ended the list of the English fixtures in America, and it was in all probability the most uninteresting one of the series, for the professionals from first

to last, toyed with the amateurs as a cat would with a mouse. The match was painfully absurd, and to an American humiliating. That eleven amateurs who have never had the slightest professional tuition should pit themselves on even terms against the very best recognized experts in the world, particularly after fifteen of Philadelphia's selected players had been woefully defeated by them, shows that there is something else besides cricket that the Young America gentlemen have to learn. Of the many reasons given for this Quixotic performance the chief one we are told is that the Young Americas considered it not an exhibition, but a tuition game, and that they expected to "learn something" and to be defeated! If this is the case, gate money should not have been asked nor the public deluded. We, however, do not place any faith in this story, because if instructions had been the object it would have been very unjust of an immense organization like the Young America not to have placed a twenty-two of its members in the field and thus give double the number a chance to profit by the match. We therefore fall back on the theory that the Stentonians, with Rory O'More, believe in the "luck of odd numbers" rather than in playing Mr. Daft on terms that might possibly win.

PATERSON VS. NEW YORK—BREWSTER'S BENEFIT.—The closing match of the season of 1879 was played at Haliden, near Paterson, N. J., on Nov. 5th, the occasion being the yearly benefit of the well-known professional, Wm. Brewster. The New Yorkers were the first to go to the bat, and with only nine men contributed the good score of 74. The ten Patersonians followed and topped the visitors' innings by 9 runs, making a total of 83. Only two innings were played, as the day was cold and disagreeable. The following is the score:—

ARCHERY.

NEW YORK ARCHERY CLUB.—On Saturday last the club held its regular weekly meeting for practice at Eighty-eighth street and Eighth avenue. Miss E. T. Morton won the ladies' badge, and Mr. George D. Pond the gentlemen's badge.

It is anticipated that the Park Commissioners will grant the privilege of the archery clubs in the city shooting on the western lawn in Mount Morris Square, One Hundred and Twenty-fourth street and Fifth avenue, and the members of the New York Archery Club extend an invitation to their friends to meet them at the above grounds Thanksgiving Day, from 10 A. M to 3 P. M., when it is expected, if the weather proves favorable, a grand archery shoot will take place.

HUNTING WITH THE BOW.

HAVING been for several years a careful and much interested reader of the contributions of Mr. Van Dyke, upon the theory and practice of hunting with the rifle, it was no small gratification to me to read his article in the FOREST AND STREAM of October 16th, upon "Archery Marksmanship." For many years my brother, Maurice Thompson, and myself hunted with the bow, when we two were the only archers in the United States, and before either of us had ever seen an archer's target. We did not, of course, adopt the bow as a weapon superior, or equal in destructive powers, to the cheapest and poorest guns, but solely for the greater pleasure of its use in pursuit of game. To me it has always seemed a greater feat to stalk a fox to his ruin, as I once knew Captain H. H. Talbot to do, killing him at the *seventh* shot, two miles from the point where we first found him, following him through the heavy woods of the Wabash bottoms, than to have killed fifty quails without a miss as they whirred up in the weed fields, by pouring an ounce and a quarter of No. 9 shot out of a big No. 10 gun which destroyed the peace of the world, and racked the brain with its intolerable thunder. Now, Captain Talbot could easily have killed the fox the first shot, at the moment we started it from its bed in the bushes, had he been armed with a good shot gun loaded with a charge of BB shot, and thus have saved the two miles of cunning and toilsome trailing through the thick woods; but the dead fox was not valuable, and we were out for the pleasure of the chase, and not for the purpose of obtaining a supply of meat for use or pelts for sale. What gentleman will admit that he abandons his business for a week, dons the rough garb of the hunt, toils over hills, wades through foul sloughs, defies the clinging tortures of thorns and burrs, bears the expense of a three hundred dollar breech-loader and its expensive ammunition, for the reason that he must have a few quail, or a dozen ducks, upon which to regale himself? Of course, all will admit that the tyro, who only kills one quail out of ten shots, sees the same beauties of field and wood as his more skilled friend who brings down the hurrying grouse with almost unerring certainty. What then is the chief pleasure of the hunt? Is it the joy of securing a huge bag of dead birds? Surely not. If that were the principle moving the hunter, he would seek his cowering and huddled flocks on the ground and pour the volleyed murder from both barrels into their midst. But it is not the mass of dead birds he seeks, but the exciting pleasures of the chase. This being admitted, how easy it is to understand the feeling of the true sportman like Mr. Van Dyke, when he passes by the little spotted fawn that tamely stares at him from the open glade, and sends his bullet far flying after the great antlered fellow who goes smashing through the tangle of the mountain side! This is the true spirit of the hunter; and though such may be the exception to the rule, yet such are growing in number; and the time will come when the men who boast of one hundred ducks killed in a single day, will be scorned of all good sportsmen and true. For such reasons I have loved the bow as a weapon of the chase more than any other. I have spent many a long day in pursuit of game with bow and arrow, and returned without "fur, fin, or feather" as a trophy, and yet have intensely enjoyed the day's sport, for many a close shot at long range had thrilled me with that indescribable flush of exaltation that intoxicates like rich old wine. There is something about the shooting of game with a bow that produces a feeling of personal pride in the performance, which does not come with the same result when the killing is done with a gun. I can only account for this by attributing it to the fact that a gun is more of a machine than a bow. When the gun is loaded, all that is necessary to do to send its deadly messenger forth, is to simply press the trigger. There is no great muscular effort, no strong arraying of the forces of the man against the game, but only the mechanical training of the long tube upon the game, and the loosening of the imprisoned energy within the shell. With the bow you do not say, "Now that duck is swimming this way, and if it reaches yon clump of sedge it will be within fifty yards, and my gun is sure of it;" but the excitement of the shot is wonderfully enhanced from the fact that you cannot surely depend upon killing it at any given distance. One great feature in hunting with the bow is denied the votary of the gun, which to me has been productive of more intense excitement than any other event of hunting experience, and that is in the habit of birds and rabbits squatting close to the ground at the sound of the first passing arrow, and there remaining until a dozen arrows have hissed about them, and cut up the turf and weeds so close as to almost dislodge them forcibly. These are moments of exhilaration to the archer. I remember one instance, when I found a woodcock near my house, and went to the house for my bow and arrows. Returning, I found him by careful search squatted by a tuft of sedge, and from a distance of thirty yards I discharged seven arrows at him—the wildest shot not missing him five inches. He sat perfectly still, with the arrows ringed round him deeply driven into the soft earth. Having no more arrows, I could do nothing, except walk up and flush him, which I did. He flew a short distance and alighted, and I procured my arrows and followed. After a half hour's search I found him again, and the same exciting piece of sport was repeated, till at the fifth shot I knocked him over. It is safe to say, that I obtained more real hunter's joy out of the bout after that one woodcock than does the sportsman who kills a dozen as fine birds in an afternoon with his shot gun. I do not deny the pleasure of wing-shooting with the shot gun, and I have myself taken a selfish pride in some fine bags of birds killed over a fine old setter, but I do maintain that the greater pleasure is to be obtained by the less noisy and less destructive bow. So far as the question of losing arrows is concerned, the expense of keeping a supply is not nearly so great as that of satisfying the ravenous maw of a breech-loader. One does not loose so many arrows as might be expected. I remember one notable instance, when, in the spring of the year 1877, Captain H. H. Talbot and the writer went upon a ten days' hunt down the Rock River armed only with bows and arrows, and during the expedition neither lost a single arrow. Of course, this was better fortune than generally befalls; but the loss of arrows is never a serious matter. Another advantage the archer possesses, is in the fact that everything is game for him. He follows the rabbit with the same joy that the gunner pursues the deer; to him the meadow lark is as fine game as the grouse to the man with the Greener, and the little wood duck as big game as the canvasback or wild goose to the fellow with the Carrituck cannon. Now that the love of target archery is possessing the American lovers of out-door pastimes, it will not be long before there will be many archers with bows in hand haunting the sedge fields beloved of the rabbit, and following the ways of the little streams where the thick grasses, the overshadowing willows, and the ripple of the hidden water allure to the domain of the heron. There is no thrill of joy which the chase provokes so subtly fine and intense, as the tip-toe approach, the soft parting of the impeding willows, the eager peering for the wary game, the startled flocking of the blood from the heart as it is discovered close—so close as almost to shock the sight—and then the gently raising of the bow hand, the strong drawing of the taut cord, the sudden settling of the nerves and muscles into utter rigidity, the ringing of the loosed string, and the low whisper of the flying arrow, and the dull thud of the bow. No tiger hunter in the jungle ever glared with more excitement into the eyes of his fierce game, than thus the archer upon his less dangerous prey. WILL H. THOMPSON.

AMERICAN VS. ENGLISH BOWS.

Editor Forest and Stream:—

I confess to a large share of confidence in Yankee ingenuity and skill in mechanical constructions, and could not and can not accept the opinion so often and so confidently expressed by agents of English manufacturers that our people could not possibly compete with the English in the manufacture of fine bows and arrows.

There is no more practical difficulty in the construction of a good bow than in the making of a good rod, and I think that your readers will readily concede that our rod makers, to say the least, hold their own against our British cousins. There is no such subtle nicety in the lines of a bow as to require many years of practical experience in order to make a good one. If it were so, modern bow-makers ought to have greatly improved over their ancestors; yet, as a matter of fact, if history is to be believed, the modern bow is neither as enduring or powerful as those of olden times. The difference lies, I take it, not so much in the make as in the material. In ancient times, owing to the constant demand for bows for war and the chase, bow material was carefully cultivated and preserved. Since the bow gave way to gunpowder, comparatively little effort has been made to get or preserve the best material.

When the present interest in archery first began to manifest itself in this country (may it never grow less!) the best bow materials were but little known here, and less used. The lover of the bow was forced to look to England for his supplies. But the prevalent and increasing interest now felt in this most delightful of recreations has set our Yankee manufacturers to work with their characteristic energy and enterprise, and to-day it may be safely said, that, taking the same materials, they make as good bows as are made in "merry old England." No better chance can be found for comparing different makers than is offered at the meetings of the large archery associations. The tournament of the Eastern Archery Association just held in Boston, where upwards of seventy-five archers, ladies and gentlemen, entered into friendly competition, afforded just such an opportunity. Nearly every kind of bow, and from about every known maker, was to be be seen on the field, of weight ranging from twenty-four to sixty pounds. From our English friends, Aldred's, Highfield's and Feltham's makes were their yews, snake and lancewood; while the American makers were principally represented by the split bamboo, snake and lancewood.

In this competition the American bows not only held their own, but noticeably surpassed their rivals in many important respects.

Conspicious for its smooth action and tremendous driving power was the split-bamboo-50-lb.-bow shot by Mr. R. Lawrence, of Flushing, L. I. Although there were several bows of greater weight in the field (among others a Highfield 60-lb. snake), yet no bow there sent its arrows so swiftly and with so flat a trajectory. Its superiority in these respects was very marked at sixty and still more noticeable at eighty yards, when in spite of a very trying cross wind it sent its arrow far below the line of flight of its competitors, and yet at times overshot the target. Mr. Lawrence won the first prize at eighty yards against all comers.

Two other bamboo bows were used at this tournament—a 42lb., shot by Mr. W. Holberton, of New York, and a 55lb., shot by Mr. W. Beecher, of Brooklyn. This latter bow has the reputation of having shot nearly 8,000 80-inch arrows during the past summer, and is, in spite of so much hard work, still a very hard-hitting bow, having the smooth pull and great driving power which characterizes these bows, in common with the Spanish yew.

The snake and lancewood bows manufactured by Mr. Horsman, of New York, shot fully as well in every respect as the same woods of English make, and rendered a good account of themselves in prizes taken.

The tournament lasted two days, at all distances from thirty to eighty yards, in addition to part of another day devoted to independent sweepstake shooting at an outside range. Yet so far as I could learn not a bow was broken.

At the national tournament held last August in Chicago quite a number of fine English-made yew bows went to pieces in their owners' hands. As they are imported to this country, range in price from $25 to $150, and yet not infrequently break in a few weeks' shooting, it is difficult to see of what the English superiority consists—unless it be the price. The unconvinced advocate of English superiority is respectfully recommended to inquire of Messrs. Will and Maurice Thompson as to how many English-made bows they have broken during the last two seasons. Judging from the unqualified recommendation given by the Thompsons and other expert archers respecting the arrows made by Conroy or by Horsman, our manufacturers are competing with the English as successfully in the making of fine arrows as in fine bows. The smooth and even flight of those makers' arrows used in Boston fully warrants the recommendations they have received.

Facts are more convincing than arguments, and after the fine performance of the American bows and arrows which I have witnessed during the past summer, when in competition with those of foreign make, it will take something stronger than argument to shake my confidence in our own makers. AMERICA.

A REMARKABLE RELIC.—A very remarkable double battle-axe of copper has recently been found by a fisherman near the ancient lake dwelling of Locras in the Lake of Brienz. It is forty-two centimetres long, weighs three kilogrammes, and the copper of which it is made is *pure*. Each cutting edge is twelve centimetres in width and very thin; but the middle is massive and heavy. Similar weapons have heretofore been discovered in Denmark, but this is, so far as known, the first of the kind found in Switzerland.

—The ring crab is what Mr. B. F. Smith, of Frankford, Pa., calls a device somewhat similar to the eagle claw-trap. According to the inventor it has been thoroughly tested by scientific men of the highest standing, and pronounced by them to be the most ingenious, convenient, safest, strongest, and most compact device known to the history of inventions, for catching fish, eels, turtles, fowls, rats and animals of every description.

—Reed and Pell, the British Commissioners to examine American agriculture, are highly pleased with the Northwestern States and Territories. They say that Minnesota's climate is a luxury and her soil unsurpassed, her only need being people and trees, which will come in good time. They are now on a tour through Nebraska, Kansas and Texas.

—The French Forestry Department is satisfied that forests directly increase the supply of water in their neighborhood. From careful observations at Senlis and Nancy, they have decided that it rains abundantly in wooded tracts, and that while the leaves and branches give back the water quickly to the air, they prevent rapid evaporation from the ground, and are thus favorable to the formation of springs.

—The highest inhabited house in North America is believed to be the one erected for the miners employed on Mount Lincoln, in the main range of the Rocky Mountains, Park Co., Col. It is 14,157 feet above sea level. However, there is in South America, on the Callao, Lima and Oroya Railroad, Peru, 94 miles from Lima, on the summit of the Andes, a small town called Galera, 15,645 feet above the level of the sea about 600 feet above the line of perpetual snow. It was founded in 1872 by an engineering corps of the Oroya Railroad, represented by Martin Van Brocklin, now Superintendent of the Metropolitan Elevated Railroad, New York; his brother, Herman Van Brocklin, and H. J. Tobias, Illinois.

MAYNARD RIFLES AND SHOT GUNS.

Our New Off-Hand Rifle.

For Hunting and Target Practice at all ranges the "Maynard" more completely supplies the wants of hunters and sportsmen generally, than any other rifle in the world, as many barrels can be used on one stock, and for ACCURACY, CONVENIENCE and Durability is not excelled. The following are some of the scores recently made at Walnut Hill by members of the Mass. Rifle Asso.:—J. N. Frye, President, in all-comers match; 15 shots; 200 yards; without cleaning: 5 4 5 4 5 5 5 5 5 5 4 4 5 5—71. L. L. Hubbard, Executive Officer, 200 yards; off hand: 4 5 5 5 5 5 5 5 5—49. O. M. Jewell, 300 yards; off hand: 5 4 5 5 5 5—34. O. M. Jewell, 300 yds.: off hand: 5 5 5 5 5 5—33.

For illustrated price list address MASS. ARMS CO., Chicopee Falls, Mass.

Thread-Wound, Long-Range Shot Cartridge Cases.

For Muzzle-Loading and Breech-Loading Cylindrical and Choke-Bore Shot Guns.

Any desired closeness of pattern made at 50, 70 and 90 yards, with penetration superior to that made by the best choke-bores at 40 yards.

INDISPENSIBLE TO HUNTERS OF ALMOST EVERY KIND OF GAME.

Ten and Twelve Gauge now ready.

This Cartridge consists of two semi-cylindrical cases, wound with thread, containing one ounce of shot, heavy in front and light in rear, to keep it from turning. When the thread is all unwound by the friction of the air, the cases fly apart, and the shot scatters. The cases are sold empty, to be filled by the purchaser with any size of shot.

Price, 85 00 per Hundred. 20 sent post-paid for $1 00. Address

Sportsmen's Routes.

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R.R.

Mackinaw, Grand Rapids and Cincinnati Short Line

FOR THE

Trout, Grayling, and Black Bass Fisheries,

AND THE

FAMOUR SUMMER RESORTS AND LAKES

OF

NORTHERN MICHIGAN.

The waters of the

Grand Traverse Region

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in those waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory.

The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections.

The hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing.

During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide (an attractive illustrated book of 80 pages), containing full information and accurate maps of the Fishing Grounds and Time Cards, address A. B. LEET, Gen'l Pass. Agent, Grand Rapids, Mich.

GUNPOWDER.

DUPONT'S

RIFLE, SPORTING and BLASTING POWDER.

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1801, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN,

Nos. 1 (coarse) to 4 (fine), unequaled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING,

Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.

DUPONT'S EAGLE RIFLE,

A quick, strong, and clean Powder, of very fine grain for pistol shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING," FFG and FFFG. The FG for long range rifle shooting; the FFG and FFFG for general use, burning strong and quick.

SPORTING, MINING, SHIFFING, and BLASTING POWDERS of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar, and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

F. L. KNEELAND, 70 Wall Street, N. Y.

N. B.—Use none but DUPONT'S FG or FFG Powder for long range rifle shooting.

THE HAZARD POWDER COMPANY

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only.*

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for up-land prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration.* For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG in kegs of 25, 12½, and 6¼ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist.* The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* Powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

Miscellaneous Advertisements.

ENGLAND AND AMERICA.

COLT AND WEBLEY.

The two GIANTS in gun-making at the present time, are P. WEBLEY & SONS, Birmingham, England, and the COLT FIRE ARMS Co., Hartford, Conn. Both owe their marvelous success to the same two causes. First, that they learned just what constituted PERFECT GUNS. Second, that they applied labor-saving machinery to their production. The result is, THE BEST GUNS IN THE WORLD, AT VERY SMALL COST. You can now buy a COLT or a WEBLEY gun, which it is a pleasure to use, for no more than is commonly paid for guns bearing unknown or fictitious names.

Of WEBLEY'S GUNS we have the TREBLE WEDGE GUNS—every gun having beautiful Damascus or laminated steel Barrels, Rebounding Bar Locks, Pistol Grip, Lever For part, Double Bolt, and Extended Rib.

DOUBLE BOLT GUNS (Top and Side Lever). | WEBLEY-LANG SELF-COCKERS.
SINGLE BOLT GUNS (Top and Side Lever). | EXPOSITION GUNS (various styles).

The last four styles named above constitute a JOB LOT, which we are selling off at about half their real value. These guns are in NO WAY inferior to the Treble Wedge guns as regards quality of material or EXCELLENCE in shooting, and are the CHEAPEST lot of guns we have ever seen.

Of COLT GUNS, we have all the regular grades, and, in addition, THE CLUB GUN. This gun is made for US, with selected barrels and the very finest materials, and is designed especially for Glass Ball and Pigeon Trap Shooting. Gentlemen who indulge in these contests will be obliged to either shoot the COLT CLUB GUN, or lose the prizes.

Every one of these guns has an elegant heel plate, with the Rampant Colt in a circle, and the words "The Club Gun," beautifully embossed upon it. *Any* Colt gun not answering to the above description is *not* the Club Gun.

Besides the Webley and Colt DOUBLE guns, FOREHAND & WADSWORTH, of Worcester, Mass., make for us a SINGLE barrel breech-loader with Scott pattern Top Lever. These guns are very light and handy, and just the thing for BOYS or men who cannot afford to buy Double Guns. They cost but a mere trifle. We are happy to announce that we are the principal distributing agents at New York city for all three of the above-named manufacturers.

P. O. Box 4,309. H. & D. FOLSOM, 30 Warren street, New York.

Shot-Gun and Rifle-Powders Revolutionized.

DITTMAR POWDER.

Champion Shot Gun and Rifle

POWDER OF THE WORLD!

IS UNEQUALLED BY GUNPOWDER

for strength, accuracy, cleanliness, and gives little smoke, recoil, or noise. It is absolutely safer than gunpowder, as it cannot explode when not confined, and does not strain the gun or heat the barrels as much in rapid firing. Captain Bogardus, champion wing-shot of the world; Dr. Carver, champion rifle-shot of the world; Ira A. Payne, and all the leading shots, use DITTMAR POWDER in their matches. Our challenge to shoot a long range rifle match, as published in our circulars, was never accepted, and is yet open to the world. Address

UNPRECEDENTED ATTRACTION!

Over Half a Million Distributed.

Louisiana State Lottery Company.

This Institution was regularly incorporated by the Legislature of the State for Educational and Charitable purposes, in 1868, for the term of Twenty-five Years, to which contract the inviolable faith of the State is pledged, with a Capital of $1,000,000, to which it has since added a reserve fund of $350,000. Its Grand Single Number Drawings will take place monthly. *It never scales nor postpones.* Look at the following Distribution:

GRAND PROMENADE CONCERT,

during which will take place the

115th GRAND MONTHLY

AND THE

EXTRAORDINARY SEMI-ANNUAL DRAWING,

At New Orleans, Tuesday, December 16, 1879, under the personal supervision and management of Gen. G. T. BEAUREGARD, of Louisiana, and Gen. JUBAL A. EARLY, of Virginia.

Capital Prize, $1,000,000.

☞ *Notice.—Tickets are Ten Dollars only. Halves, $5. Fifths, $2. Tenths, $1.*

LIST OF PRIZES.

1	CAPITAL PRIZE OF	$100,000.	$100,000
1	GRAND PRIZE OF	50,000	50,000
1	GRAND PRIZE OF	20,000	20,000
2	LARGE PRIZES OF	10,000	20,000

FOREST AND STREAM
ROD AND GUN
THE AMERICAN SPORTSMAN'S JOURNAL.

[Entered According to Act of Congress, in the year 1879, by the Forest and Stream Publishing Company, in the Office of the Librarian of Congress, at Washington.]

Terms, $4 a Year. 10 Cts. a Copy. Six Mo's, $2, Three Mo's, $1.

NEW YORK, THURSDAY, NOVEMBER 27, 1879.

Volume 13—No. 17. No. 111 Fulton Street, New York.

Original.

A WAYSIDE MEMORY.

A COTTAGE standing under ancient elms,
Low-roofed and covered o'er with trailing vines;
A door half-open'd, out of which the light
Upon the dusty roadway softly shines.

A cheerful voice humming an old, old tune,
With a babe, that to her bosom lies,
A wee, white thing, with dimpled, rosy face
And pursed-up mouth and very wondering eyes.

A shelf of books upon the papered wall,
A picture here and there, and wreaths of leaves;
A quaint old vase of flowers and mosses rare,
And golden grasses gathered from the sheaves.

A quiet, home-like look on all around;
An air of comfort and of sweet content,
That makes one feel to be an hour away
Would of itself be woeful banishment.

The moon, just rising up behind the hill,
Sheds silver lustre on the dark, green trees,
And on the sward the trembling shadows fall,
When the leaves move beneath the gentle breeze.

Out in the field the gathered stalks of maize,
Like Indian wigwams seem in order ranged,
Over which sleep hath waved her magic wand,
And with her wierd enchantment all things changed.

No sound of human foot, no voice of man—
Asleep in moonlight all the landscape lies,
Save when some noisy cricket shrilly calls,
And the droll katydid to him replies;

Or the faint trickle of the bubbling brook
Behind the orchard, prattling on its way,
With ceaseless gossip, to the water-weeds
That nod their heads to what it has to say.

A transient glimpse of heaven there seemed to be;
An Eden where no Tempter yet has come;
Wherein might angels walk, as once of yore,
Talking with men, when earth was Virtue's home.

A sacred stillness and a dove-like peace
Come as the dew through all the evening hours—
The heart, as does the sod, full drinks it in,
Until we see it in the morning's flowers.

Such be my lot, if God shall will it so,
With virtuous peace to sit my hearth beside.
Like some sweet river may life's current flow
Out to the ocean with unruffled tide.

FRANKLIN W. FISH.

Mountaineering in Alaska.

GOLD MINES AND PTARMIGAN HUNTING.

[FROM OUR CORRESPONDENT ON BOARD THE JAMESTOWN.]

STORIES brought in daily by hardy miners in regard to the multitude of quartz ledges which pierced the mountains of Baronhoff and which they had in accordance with mining laws, claimed, staked, monumented, and now wished to record; their evident faith that these quartz ledges, now their property, held locked within them that precious metal which would enable them to cast the slough of poverty and get clear of the trammels of daily labor for subsistence; their descriptions of the grand scenery among the mountains, where crags and rocky peaks were alternated with deep cañons in which were located many beautiful lakes, fed by everlasting brooks which found their origin in great glaciers and immense banks of perpetual snow; of lofty barren plateaus, where on the bare rocks ptarmigan were in profusion, and the counter statements, made by those who could be supposed to be posted, that such stories were but "fairy tales," awoke in my mind the determination to look and see for myself, and if the gold and birds were there in such abundance, to, if possible, humor my fondness for both by securing my share. So a few days since, accompanied by a friend who is an enthusiastic sportsman, I started for the debated ground and for the shares aforesaid. Whether I obtained them or not, I felt sure that the climb up the mountains, the drinking in of the scenery, the inhaling of the mountain air, and the temporary freedom from vexatious cares, would restore a waning appetite and check a growing restlessness.

So, taking advantage of a short spell of freedom from rain, we started, equipped with plenty of provisions, our oldest clothes, and an outside casing of rubber from head to foot—for such are the needs for a trip to Alaska.

At 10 A.M. we left our boat, and at the foot of the trail, from Silver Bay up to the mining regions, saw our "Siwashes" (Indian packers) fairly burdened, and then began our ascent.

Three quarters of an hour carried us up a height of one thousand feet and a distance of three quarters of a mile. We thought we had made slow time, and had had hard work, when at last we reached the "Stewart Tunnel" and settled panting into the chair provided; but we found before the trip was finished, that three quarters of an hour, was in some cases, a very moderate amount of time in which to advance a quarter of the distance. When at each step the perpendicular gain is twenty, and the horizontal about three inches, a mile is a long journey.

The trail to the Stewart wound its way through a dense forest of great hemlocks and spruce trees with a few yellow cedar. Many of the former were of such dimensions that a spot in the Adirondacks, so well covered, would for its "bark," or "counts," prove very valuable. Alongside of the trail ran a tramway, on which a rude car is drawn by a windlass to the mine, with freight, and did return with ore before the mill was put into operation. Our Siwashes, bending over to all fours, preferred the tramway, and went along at a lively gait, grasping ties and rails alternately, and came in ahead of us and were apparently unfatigued. These Siwashes deserve a little space. They are native "Indians," and resemble Indians of all other types about as much as they do native Africans. They are quiet, docile, hard-working men, of a type inferior to the Anglo-Saxon, but far superior to our red men of the plains; they are not pilferers or thieves, or blood thirsty; they have no liking for fighting, and can be controlled by suasion; are ambitious to earn praise, and dollars, and are not mere eye servants.

They are very powerful; the ordinary pack load is seventy-five pounds, and with this on their backs they will keep ahead of the most experienced mountain climbers. One Indian in our service, when at a very steep place I relinquished to him my gun, as I needed both hands to use as fore paws, laughingly answered my query as to whether he could take it, by the assurance that he could, and me too, if I wished. I guess he over-estimated his strength or under-estimated my weight, but I know of the man's packing up a very steep and new trail, hardly more than blazed, a load of 125 pounds, viz.: two sacks of flour, a shovel, some drills, a ten pound salmon, and his clothes and blankets.

To feed them we carry hard tack, coffee, sugar, and flour, and they will do tremendous tasks upon very short commons, but when they do get hold of a full kettle, there's nothing left when they leave it. I never saw them stop eating while there was a mouthful left. In camp they are excellent servants, drying our clothes, cleaning our guns, cooking, and handy at building and all chores.

From the Stewart (where I myself saw broken from a face of the tunnel a piece of quartz, speckled with free gold), we had a weary tramp to the "Witch;" distance not great, horizontally, but as Wanka (my Siwash) described it, "Way up." When we reached Bald Mountain, we had travelled three miles, and had ascended over three thousand feet above the Stewart.

After the first sharp rise from the latter of about a thousand feet, we had but little ascent for a long distance, the trail leading along a sharp ridge or "hog back," which on each side was flanked by deep ravines, way down in whose depths we could hear the rushing of waterfalls and occasionally the click of the miners' picks, for they are prospecting in all directions; but we could see nothing, for a dense fog filled the ravine and hid from us the grand mountain scenery which at this part of our journey we knew still towered above us. An occasional momentary clearing away of a small bit of the curtain gave us provoking and tantalizing peeps, but for an instant. Once a glacier not far from us cast loose from its moorings and went crashing down with a thunderous noise. We were far above the timber; our trail was no trail, for we trod on the primitive rock; but there was no danger of our getting off from it, for it we could see, and nothing else. Before we had got out of the timber my Siwash gave a low whistle and stopped. As I joined him he pointed to "chicken," and then not forty feet away I saw my first ptarmigan. There were four, and they ran behind a bush of low hemlock or ground pine. I advanced slowly, ready to take them as they rose; but they wouldn't rise, and dodged in and around that clump like a woodpecker around a tree. So at last, satisfying the sportsman part of my conscience by resolving to aim only at their heads, I let go at a couple who were in line and killed them, the other falling to my friend's shot, as he rose at last. The birds were simply beautiful; their backs and tail feathers were like those of our ruffed grouse; their wings and breast pure white. I might as well finish up the descriptive and natural history part of my letter here, although I shall have to inject some knowledge gained later on.

There seems to be two varieties of this bird. Those found at this level are as I have described; higher up they are nearly snow white, with black tail feathers, bordered with white, and the dark feathers of the back, instead of as with those found lower down, being brown grouse-colored and predominating, are nearly black, and simply amount to spots, for each dark feather is surrounded with white. They may be the same bird, at different stages of transformation.

I have read that the ptarmigan has a sort of special providence looking out for it; that in summer and fall its plumage is dark, and the bird is hard to distinguish from the ground, and that in winter its snow-white plumage hides it amid the snow. This rule don't work, for the Alaska bird when sitting on the dark stones, their white, and when on the snow, their dark spots betray them, and their chance of successfully hiding is less than that of even the fabled *phillalloo* bird. They weigh about a pound each (six averaged 15½ ounces, the heaviest weighing 18), and are very delicious, especially at this season, when their food is almost altogether huckleberries; later they feed on spruce and other bitter food, and their flavor suffers.

They are very tender. No. 7 shot were very killing, and it was impossible to preserve a good specimen. The feathers came out in handsful, as they were gathered, and our dog's mouth looked as though he had the hydrophobia, so thoroughly blood-and-feathered was it. In skinning, the skin tore like wet blotting-paper, and an attempt to carry one by the leg involved a fracture of the same if held at any angle. They are full-blooded, bleed a great deal, and, I should judge, very hot-blooded, for they spread themselves in great flocks on the surface of the snow patches, with wings extended, as hens when dusting themselves. They have a peculiar call, a grating sound, which often betrayed to us their vicinity when the fog was too dense for us to see them.

As we got above the snow we would get a view of a portion of the banks nearest to us, and saw on it many birds, but we soon learned that it was mere slaughter to shoot them, or any flying over, for they would go sliding and plunging into the abyss below, and our Siwashes could not be persuaded to trust themselves on to the snow, for they feared the starting of the glacier. At first I interpreted their reluctance to their being bare-footed; but when later, higher up and in clearer weather, we struck basins filled with snow they did not hesitate to select it for their tramp in preference to grass or moss which were adjacent.

We arrived at the summit of this part of the mountains at about 4.30, and it was clear enough for us to obtain a splendid view of Bald Mountain Peak, a few hundred feet above us, and at our feet, a thousand feet below, two beautiful lakes on terraces, connected by a stream, near which we saw the cabins of the Witch miners, their arastra and their mine some hundred feet up the opposite wall of the cañon. Our delight at a little down-hill play overbalanced our repugnance to the prospect of having to climb this same steep on our return, and we went down hilarious; and we would have been even more so had we anticipated the hospitable welcome we received from the miners. A good supper, to which we did ample justice—so ample that Kashaveroff, the purveyor, took us at once into his good graces; a gossip over our pipes, and the best beds in the cabin at our service, and a solid ten hours of unbroken rest (except to listen occasionally to the music of a small yellow dog), prepared us for our still harder and longer tramp on the following day. We brought in to the Witch about forty birds, having lost perhaps as many more down among the fog banks; but it was only by urging that the hospitable foreman, Mr. Gibbons, a Maine man, would consent to our contributing even the birds to our breakfast. Our venison sandwiches, private coffee, etc., were tabooed vigorously, and we were guests in every respect; finding though that we really wanted to try them, Kashaveroff added a few to the breakfast.

This second day the fog had turned into rain, but we were as determined as the youth who "bore, mid snow and ice," etc., and determined to go on and up, for beyond and above us were ledges and birds well worth going for.

Before starting, I will describe an "arastra," for I don't believe many of your readers will know what I mean by the word. It is a cheap and tolerably effective substitute for a stamp mill for treating ore, which can be used to great advantage, when as at the "Witch" the quartz is decomposed and soft. To begin at the bottom, it consists of a tub about 20 ft. in diameter, 4 ft. high, which has a hard stone floor; a perpendicular shaft from the centre carries four arms at right angles, to which are attached by chains several heavy flat blocks of stone; above these arms and on the same shaft is a very simple water wheel, by which the stones are dragged around in the tub crushing and pulverizing the quartz which is fed in with a due proportion of quicksilver, and such chemicals as the nature of the ore may require. A sluice a few inches above the floor, lets off the waste water, the precious

metal uniting with the quicksilver, and resting on the floor. Some sulpurets escape with the tailings, which are collected in pits below and retreated. An arastra will work a small mine to good advantage.

The Witch Ledge was discovered, as were a dozen others, by Nicholas Haley, a practical miner, who has been about the best slandered man in this vicinity. He had uphill work to obtain credence to his tales as to the richness of Alaska in gold. It was, I remember, fully explained to me in San Francisco, that Haley was a fraud, that ore from other regions was brought up here and mines salted so as to make a rush which would benefit the ring of which Haley was ringleader, and with a fortune at his control. The man has struggled on in poverty, persevering, and at last his upward turn has come. Within a month, he has sold to San Francisco parties, who at last came up to examine, over seventy thousand dollars worth of ledges, and still owns enough to keep him rich. If, as I believe they will, the mineralogical resources of Alaska bring her into prosperity again, its citizens should always do honor to this miner to whom they will owe it.

From the "Witch" to the "Last Chance," the trail again led along the summit of a steadily rising ridge; it was a dreary climb: rain and fog shut out all scenery, and the rocks were devoid of life. Ptarmigan had disappeared; occasionally we could hear their skir-r-r on one side or the other, as we passed snow banks, the edges of which reached into our limited field of vision.

As I stumbled along way above the clouds, with a good guide and gun and trail, and certainty as to my whereabouts, and the probable termination of my journey, I contrasted mentally my condition with that of Haley, when he, the first white man, searching for wealth plod also along this ridge scanning eagerly the surrounding country in hopes of seeing quartz, and when at last he arrived at the peak from which the glistening body of quartz was visible, I could feel just how he felt when he named it the "Last Chance." Had not fortune befriended him then and there, I could forgive him for giving up in despair. But he found it, and on it as his last chance took his chances. He has been rewarded; that vein of quartz has, if reports are true, and I believe them, brought him twenty thousand dollars. But little work is going on here; two men were blasting and picking, and a pile of ten or twelve tons of broken ore had been accumulated.

A half hour's pause for a smoke and chat, and then on again and upward, for our final destination, the remotest, highest and greatest of all the discovered ledges —the "Great Eastern." Again a ridge, which, ascending for a mile steadily, rose suddenly five hundred feet in a precipitous peak, on top of which stood two monuments of stone. Magnified by the fog, they seemed of grand proportions and a mile distant, but we gained them easier than we thought to, for we were becoming accustomed to such exertion. Our muscles had hardened and our lungs so expanded that long, deep breaths were possible, and that great rester, perspiration, was flowing freely. How many such peaks were between us and the summit? But our task of scaling them was still more lightened by the abundance of birds, which had all sought these high and desolate places. I do not know how many we shot—we ceased to count—but I do know that when we reached the southeastern side of the last peak, and could look down into the great valley below us, and discern the belt of timber two thousand feet below, where we should camp for the night, we were all well loaded.

A few hundred feet down, and the character of the country changed. The slopes faced southerly and soil took the place of brown rocks, and soon—for we traveled rapidly—blue-bells and blue-berries appeared, and the ground was networked with the burrows of moles, or field mice. Then came ground pines and cedars, then a brawling brook, which we crossed, and soon rested beneath some giant pines, when, with wood and good sweet water, we found our camping ground.

Four trees, forming a parallelogram ten feet by six, furnished uprights on which to pin our cross beams, and soon we had two canvas-roofed shanties, with bedding of boughs face to face, with a huge camp-fire in the space between them. The tree limbs furnished clothes-pegs on which to dry our wet clothes, and disrobing ourselves to the skin, wrapped ourselves in our blankets, native style, which greatly amused the Siwashes, who busied themselves in drying our garments before the camp-fire, and in preparing a ptarmigan stew by the following receipt: Skin and dismember one bird for each member of the party, then one for a chance comer—"for Jack," as we used to say; then a couple more for good measure; then pork, salt, flour, beans, potatoes, onions and hard tack—all, if you have them, any, if not; boil all together for three-quarters of an hour, and serve in very large pansful, and eat with spoon, for it is something like pigeon pot-pie, which is not perfect until the birds themselves, which are left flavorless, are thrown away. By the time the stew was ready and the coffee—Siwashes make splendid, clear coffee, with no settler—we had built up garment by garment, and were attired quite respectably for a night dinner in the mountains, and we did justice to it.

'Twas the old, old story. Eat to what would be repletion elsewhere; our pipes, conversation, and then an early straightening out on the cedar boughs. The Siwashes on the other side of the fire were happy and comfortable, for they had their food receptacles, not full perhaps, for that is an apparent impossibility, but so near to it that they were content. They are fearful gormandizers, yet can subsist and work hard on a bit of smoked salmon. They, too, amused themselves with stories, and were mightily tickled at our attempts to pronounce, in their guttural dialect, the names of various articles.

My comrades soon slept soundly, but I was wakeful, though pleasantly so, and spent two or three hours in revery. Reminiscences of Piseco life came home to me; but I missed one of the luxuries of Adirondack camping. There were no mosquitos to make music, nor flies for company. All was silent, except for the steady "patter chuck," as the Indians term rain; the rushing of waterfalls, and the occasional roar of a tumbing glacier. I thought of Haley, in his lonesome wanderings; contrasted my comforts with his discomforts, and was happy. I thought of home, and remembered that it was the monthly anniversary of my last night there; and becoming unhappy, went to sleep and got over it.

The next morning, fresher than when I started on the trip, (for I had danced with the Russian girls at the wedding of a pretty Kamschatkan five hours, and had drank Russian tea to such extent that sleep was wooed in vain, when in the wee small hours I sought it), I was ready after my stew, hard tack and coffee, for a day among the ptarmagin.

The fact that it was raining hard did not deter us, for we had soaked our guns in coal oil the night before, and they were in fair condition. A straightaway climb of, I am afraid to say how many feet, or at what angle, but it lasted for over an hour, brought us to the back bone of the mountain, and among the birds.

We headed on to the southeast, for we had yet to visit the greatest of all the as yet discovered ledges, not inappropriately named the "Great Eastern;" this we reached in another hour, and found it all that had been represented; imagine a mile or more of the backbone of a mountain, glistening here and there with quartz. I will not use your columns as an advertising medium, but will simply say that I became fully convinced that I had for once done a wise thing when I put what I could spare into its stock.

Visions of bonanzas floated around me in the mist, and I thought with Mrs. Haley, "I'll ride in my carriage yet." She can, now, for her husband a few weeks ago a poor man, is now a rich one.

The day cleared as we returned, and we had a glorious time; birds plentiful, no bears, and such magnificent scenery, towering peaks, deep chasms, waterfalls, glaciers, snow banks. The journey had been a hard one, but as the Shaugraun says, "Bedad 'twas worth it." I will not undertake to describe—Clarence King alone could do it. Read his most fascinating description of mountain scenery and you will have it. I can't do it. When we got back to camp we counted up sixty-four we had distributed freely to the miners, and had lost great numbers by their falling into ravines or on the faces of glaciers, where our Siwashes dared not go. I tried hard to save a skin, but could not; they were too tender. I had promised Orvis some of the snow white feathers for his flies, but the damp and blood so soiled them that I knew he could do better with a white pigeon. A repetition of the experience of the night before, except that I slept soundly, and in the morning we started for home—I, with but three cartridges left. I did not fire one of them; the day was rainy and we did not see a bird after leaving the extreme summit. We had to back some of our game; the sixty or seventy pounds was a little more addition than the Siwashes, already well burdened with our camp equipage, and specimens of rock from the different mines, could stand, and I found to my delight that, while in coming up, my Parker 12-bore was a burden, in going down I carried some thirty pounds without fatigue; and when safely on board, in my stateroom, and rubbed down after a cold bath, I noticed with delight, that the muscles of my calves had perceptibly enlarged and hardened, and I had gained four pounds in weight. Our trip was just in time; four days after the mountains were covered with snow and presented by moonlight one of the most beautiful sights I ever witnessed. But for the snow, I should repeat my trip.

PISECO.

IN THE HIGHLANDS OF VIRGINIA.

I HAVE never been in this section before. I believe, though, I have written up all the rest of the Old Dominion for the FOREST AND STREAM; have carried your readers over the stubble where the partridges lay thickest in Piedmont, Virginia; have gone with them over across the Main to Cobb's Island, and had royal sport with the willet and curlew on the blinds at that lone isle. We have travelled together through the "Great Dismal" and fought the mosquitos and listened to the croaking of thousands of frogs and the hooting of the great horned owls, and we have floated side by side on the mystical haunted Lake Drummond, where the spectral ship sailed noiselessly along like the *Flying Dutchman* with the ancient old Captain Vanderdecken at the helm. We have seen there, too, the weird Indian maid and lover so true—

> "That oft at the midnight damp
> Would cross by the light of a firefly lamp,
> And paddle their white canoe."

We have witnessed together the great steeple-chases between the black horse cracks and the Englishman who, like Mark Meddle, that dashing gentleman in the "London Assurance," must have been born on horseback. We have sailed over summer seas and rough ridden over the Fairfax Hills behind Captain Fitzhugh's hounds on that memorable occasion when the pack chased old Mrs. Herbert's pet fox right through the yard clean into the house, and when Douglass, of the "Capital," was pitched headforemost into the old lady's bee-hives by his stumbling horse that he had bought at a horse sale at a great bargain a few days before. We have almost frozen together as we sat by our decoys off the coast on a freezing day, with a keen nor'west wind that cut like a knife, making fancy shots at the mallard and brant as they flashed by, borne on the pinions of the wind. And we have held high wassail with the fair Hog Islanders and drank that Christmas Eve many a bumper to their buxom charms. But we have never been in the mountains together, your readers and I, so we will take advantage of this bright, clear, bracing weather and turn our steps mountainward to hunt deer, turkeys, and squirrels, and try the bass on the south branch of the Potomac.

Our objective point was Staunton, where we rendezvoused. When the hunting party assembled it consisted of three, a good trinity, for according to Mr. Rory O'More, "there's luck in odd numbers." We were a long time starting. Each member had as much baggage as an ox team could pull, and there was only one buggy and a horse for the entire outfit. We crammed in our traps somehow and started.

There was Mr. Smith, a rotund, good-natured fellow, who was the best forager I ever saw, and could carry more different articles in his saddle bags than Wyman, the wizard, could pull out of his magic bag. Mr. Smith was fond of sporting and ready at all times for anything. He was one of that kind of men always getting ready, but rarely on time; he was always going to kill something, but somehow didn't. Mr. Smith reminds one of Voltaire's sarcasms on La Harpe, whom he called an oven that was always heating up, but never cooked anything.

Mr. Jones completed the group; a fine sportsman, who enjoyed everything with a keen, vivid zest. I came to Staunton via Chesapeake and Ohio Railroad, and I cannot speak in terms of too high praise of General Wickam, the President of the road; not because he commanded my brigade during the war and gave me a furlough to go to the rear one Christmas to a certain old baronial hall, but because of the great changes he has made in the management of the road, and especially for his kindness to sportsmen. Some years ago this road was the worst to travel on in America, and a man with a dog and a gun was fair game for all the employees; a being who was made to pay roundly for his pleasure. General Wickam has stopped all that. Every sportsman is allowed to carry one dog free. If he has over one he is charged but a very moderate, reasonable price, and orders are given to conductors to take the very best care of the pointers and setters, and the owner can visit them as often as he likes. I know of no other railroad that exercises such liberality toward that much-abused, over-charged class known as sportsmen, and General Wickam deserves their thanks and will receive them from every hunter who travels over the Chesapeake and Ohio.

After leaving Staunton we stopped at a small frame house on the side of the road with a little tin sign, on which was written "Hotil." We put up our team and soon supper was ready. We were savagely hungry and felicitated ourselves upon dining off stewed squirrel, broiled venison and roast wild turkey. Deluded mortals that we were! All we got was some rye coffee and fried bacon. Our host made up for his bill of fare by offering to carry us deer hunting early the next morning; so we went to bed to dream of knocking every deer in Augusta County cold and dead as a door nail. It seemed that hardly had we got to sleep when we were awakened by a head thrust in the opened door and a voice shouting: "Get up! get up! day's a breaking!" "Well let it break and be broken!" said my comrade as he sullenly sat up in bed; "for it don't owe me anything." A solitary tallow dip spluttered alone in silence, making the room more dismal looking, but we made a rush and dressed and then went out in the porch. It was still dark; the morning star shone with a steady brilliancy. Lord! how cold it was! We sat and shivered as we waited for our ancient Nimrod to appear. He came at last, with his pack of hounds that consisted—as I am an honest man—of one old toothless dog, with half of his hair rubbed off his hide.

"Say, old man, is that all your pack?" said my comrade.

"That air dog is a plenty to strike up a trail," said the mountaineer.

"But," we said, "he can't run fast enough."

"Well," was the reply; "he don't look none too skittish, I allow, but he can hang to a trail, anyhow."

We started and reached the road and were placed upon our respective stands. I stood shivering for about two hours, looking anxiously for that deer, but it never came —which made about fifty times I've been on deer stands in my life, and never have seen a buck or doe yet. I've done with deer hunting now. It's very good shooting when you are out of meat, but as sport I can't see any fun in it. Even if the deer did come along your way, I for one can't throw enough ecstatic pleasure in one shot to pay me for three or four miserable hours spent in perfect solitude meditating upon the sins of a misspent youth.

We returned bootless from the chase, and struck for our meals; and just here we made a discovery—it was this: In this rustic Hotel de Ville, we found that there is no variation between the meals. The bill of fare was this: Breakfast: coffee, bread and fried pork; dinner: coffee, bread, and pork fried; supper: fried pork, coffee and bread; entrees: water, salt, and pepper. But for the consolation of Bumgardner's best, we would have mutinied—but we managed to stand it.

By the way, this kind of liquor known as the Bumgardner Whiskey, is the finest, purest brand ever manufactured in Virginia. It is absolutely pure, strong, and has no headache in it. To tourists, travellers, and sportsmen it is the very best stimulant they can get, and it is worth more than all their fancy, bright-colored, but adulterated liquors put together, that people will insist on poisoning themselves with. If Jove ever got drunk, as Homer in his Iliad said he did, then it must have been on Bumgardner's liquor.

I never saw or heard the like of the birds this season. From all parts of the State I hear the same accounts of the plentitude of the partridges. This is owing partly to the dry season we have had in the past summer, and partly and greatly to the strict enforcement of the game laws. There will be splendid sport this fall. The close season expires in Upper Virginia on the 15th of October, and in Tidewater, Virginia, on November 1st. For the information of those gentlemen sportsmen who desire to board, and who wish to have fine sport, I refer them to the following persons in different portions of the State, who can either take boarders with priviledges to shoot over their grounds, or will refer them to those who will. For shooting in the Uplands, write to Captain Wm. H. Fowler, Staunton, Va. To those desiring to shoot near the coast, where wild fowl can be had as well as partridges, write to Hon. O. Finney, Accomac Court House, Va. To those who want to explore the Great Dismal Swamp, and shoot around its borders, address Captain S. S. Shriver, Suffolk, Va. To those desiring splendid duck, goose, and brandt shooting, with furnished decoys, guides, and boats, let them write to Kenneth McKown, Cobb's Islands, Va., *via* Cherrystone. I have no axe to grind in writing this. I simply do it for the benefit of your readers.

It is pleasant to leave the city at this time of the year; the time when nature dresses herself in her most brilliant robes, queens it royally in the sovereignty of her radiant beauty. It is a never ending delight to travel in these mountains with the ever varying scenery, and the forest of every imaginable hue, from the pale yellow of the sugar maple, the vivid green of the mountain larch, the deep crimson of the dogwood, the rusty brown of the chestnut, the sea green of the pine, the deep red of the beach, and the Bismarck color of the elm, all combined, form scenery grand, beautiful, and indescribable.

But as fair as nature looks by sunlight, it is far more pure and lovely by moonlight; the clear pure air gets clearer and purer with that magical light which has a deeper charm than the sunshine, and as one travels along the mountain roads it acts like a stimulant. Here you wind along the brink of a mountain; below is a sheer

precipice of a thousand feet or so, with the stream at the bottom checkered and sparkling in the moon's rays; then going onward, you strike some grim rock-bound cavity or basin that looks like a fit spot for the unhallowed rites of the Walpurgis Night that Dr. Faustus witnessed by the light of the stars, in the dim recesses of the Hartz Mountains. Ride on a hundred yards or so, and you will enter a level spot, carpeted with the greenest of swards, with the moonlight playing fantastic shadows, and the rock-bound wall rises sternly up as if to hide such a tender, fair spot from all human scrutiny. To just such a ground as this Queen Mab, his elfish majesty, Oberon, and all her fairy court, hold their nightly revels; and if you wait long enough you will see Puck with his tricksiness handing out the dainty, delicate Ntani, followed by her maids of honor and lords of her diminutive court; and while the sovereign of all the fairies holds her court, you will find the sentinels swinging by spider webs from the boughs of the trees, keeping watch and ward over the bachannalian jollity. Still ride on; and you will pass a narrow defile, just such a place as that where Fra Diavolo stopped the coach of the English milord and relieved him of all his money, after paying court to Lady Alcash in the disguise of the "Marquis au Clâire de la Lune," and trying to take her bridal diamonds but yet a month old. Then you begin to descend the winding road, and at last reach the very bottom of the gorge. In a small clearing there is a house, dark, grim, and forbidding, solitary and alone; a house that your imagination peoples with crime-stained people; a private mad-house where men and women are buried into a worse place than the grave, where the sound of the lash, the screams of the inmates, the sullen curses of the keepers, break the midnight silence. You knock; the watchdog answers by a deep bay; a light flashes in the window; a door opens, and a mountaineer's hearty welcome greets you, and your tired horses whinny out their satisfaction. Falling to sleep in a huge bed, we forget our moonlight reveries in the more vivid fancies of dreamland.

The next day we spent in aimless saunterings; our horses were in tip top condition, and we in a most appreciative humor. Leaving the main road we struck, haphazard, a blind patch, as they call them here, running in a zig-zag manner; but that bore steadily upwards to the very top of the mountains. It was a long distance, and the fiery beams of the sun beat with fearful force on our heads. We toiled and struggled on, the sun getting more intense every moment, and the path became so rocky and steep that we had to dismount and lead our horses. They stumbled laboriously after us, and sent a perfect shower of stones clattering downward. We hugged the hill and climbed as best we could, for it was impossible to rest on the steep cliff. Ever and anon we would pause long enough to wipe the perspiration off our faces, and if we were not so profuse in curses as the celebrated army of Flanders, that doubtless marched up a similar hill, it was because of our good training in youth. "Patience," saith Solomon, or some other wise man, "will accomplish anything;" and adding to it a little perserverance we mounted that mountain at last. It was a steep hill; so steep indeed, that the old women who lived at the foot of it always looked up the chimney in the evening to see whether her cows were coming home.

"The Israelites were never more glad to reach the promised land than I am to get on the top of the world," Mr. Smith pantingly observed.

"I'll be hanged," said Mr. Jones, "if anybody but a bow-legged man ought to attempt to climb these heights."

Mr. Robinson demurred at this, and said a mountaineer ought to have one limb longer than the other. Both agreed, however, that lowland legs of the average symmetry and length, were never intended by nature to make their way skyward by way of manual labor.

But I will hurry on with my story. As I said before, we arrived on the top of the mountain, and, like Hopeful in the Pilgrim's Progress, we were breathless and weak. And what was our surprise to find on the very summit, a comfortable log-house and out-buildings, built in the primative style that the genuine mountaineer most affects. To our hail the proprietor came to the door, and we were as much startled by his appearance as ever was the Thane of Glanies by the apparition of Banquo's ghost. Yes, the door swung slowly open and a face showed itself, a face more marked than the masked countenance of the veiled Prophet of Kohrassan; a huge face, as red as blood, a flaming beard, shining, and as bright as the ever-burning fire of the Ghebers; a wheelbarrow full of hair on his head, as deeply, darkly, desperately red as a city belle's promenade stockings; his eyes shone like carbuncles. His form was clad in—but no matter about his dress; no glance ever struck beneath his face. Once there, in startled amaze, your eyes rested, stayed, lingered, and remained. Yet he was a good-souled, sad-hearted man, who believes in Lavater nowadays; honest and humble in spite of his glowing, fire like cast of features, which, to tell the truth, did look as though it could set the world on fire. We were hungry, tired, and wearied. He took us in and fed and feasted us in his homely way, and after our generous repast, and when his spirits were raised from imbibing some of the mountain dew—that made his countenance more crimson and suffused, if possible—he became very communicative. His life was a burden to him, he said, and all because of his appearance. "My neighbors send word to me," he pathetically remarked, "not to get up before day, for my face is mistaken for the sun rising over the top of the mountain, and then the cocks crow, the hens cackle, the dogs bark, the cattle low, and the good wife starts the fire often hours before the time. Yes," he continued sadly, "if I walk in the hamlet after sunset the villagers hallow to me that I am trying to discount the moon. If I go there in the daytime, the girls begin to fan themselves, and the young men shuck off their jackets, just to devil me and nothing else, and things has arrove at such a pitch now that I can't even go to preaching."

"Why not?" we asked.

"Because last year, one Sunday, I was a little late, and had to sit among the boys at the back of the church. In a little while the sermon commenced, and a short spell after I saw the minister stop, look my way, and cough. He kept on, and then stopped and looked my way and coughed agin. Bimeby the folks turned around and commenced snickering; I thought it strange, but did'nt look around, but when the grins changed into hoarse laughs, I looked backward out of the corner of my eye, and as I am a living man I saw them boys—a whole parcel of 'em—all behind me. One little chap would poke his finger in my hair, turn it around and around as a blacksmith beats a bar of iron, place it on a Bible he held in his lap, and then keeping his finger revolving, a dozen fists would hammer it; then they would all stop, and the little devil would put his finger in my hair again, while the other boys would wait, and puff and blow like they were roasting to death."

"I don't care much to live," said the sad-faced man, wiping a tear out of his eye and elevating, in his absence of mind, the bottle to his lips; "the children cry when they see me, and the dogs howl and run with their tails stuck between their legs, and I das'nt look in the water."

"Why in the world don't you cut your hair and beard off," I asked.

"Stranger," he replied, solemnly, "my wife won't let me; she's jealous, and keeps me at home to keep me from fooling around the gala, as she says, and a married man has got to obey orders or leave his rauche."

The dusk of evening was stealing over the scene when he left, and as I turned for a parting look I saw his flaming face through the gathering gloom, looking all the world like a pumpkin hollowed out, with a candle inside to illuminate it, such as bad little boys used to make on the plantations to frighten ignorant negroes with.

Along these roads we travel there is not a spot, a valley, a defile, that has not some bloody history, for here have occurred skirmishes, forays and private feuds which have made these regions famous. Some Walter Scott will yet arise who will immortalize them in history. Along this road have often marched the dusty legions of Jackson; on that bridge was fought a contest between his rear guard and Fremont's advance; on that broad plateau is where Ashby made a stand to mask Jackson's movement; and by the bend of the river in that mountain gorge Harry Gilmer held his ground until nightfall, with twenty-five troopers against Banks' advance guard. The whole land is one of memories.

Sitting by a fire of blazing hickory logs were Jones, who is an ardent lowlander, and our host, who was born, raised and bred under the shadow of the loftiest cliff in the Alleghanies, and, of course, an enthusiastic highlander.

Said Jones: "Well, we live better than you. Where can you find such fish as the sheepshead, hog-fish and soft crab?"

"You may think so, but I don't," returned the Highlander, giving the fire a vigorous poke with the tongs. "I wouldn't give our speckled mountain trout and our bass for all the salt water fish in the world; it's sweet, white and delicate, and the daintiest tasting fish that swims."

"But where can you match our green turtle?" said Jones triumphantly.

"If there is anything that can beat a haunch of our venison I have never seen it," responded the host. "I make no exception of turtle, terrapin, or nothing."

"But where can you show such game as we have in canvass-back duck, the mallard and the brant?"

"I admit they are good eating," said the Highlander earnestly, "but they can't discount our mountain pheasants, that are considered the greatest delicacy by all epicures."

"I have reserved my strongest argument for my last—where can you match our oysters?" and Jones looked as though he had driven the nail of his argument up to the head, and clinched it on the other side.

"I will set our mountain mutton against your oysters any day, and stand by the verdict," answered the Highlander. "Besides, look at the difference in living, look at the health of the two sections. You people down in the lowlands shake your boots off before breakfast, with the chills, and can't enjoy your good things. You have the ague fever half the year round, while we up here never know what a malarial fever is, and keep our health until we die of old age, while you fight stomach aches and dyspepsia all your life long."

Jones wouldn't agree to this, and when we returned we left both of them in a heated argument that lasted, as I was informed later, way into midnight, neither party convincing the other.

Hearing there was plenty of bass in the South Branch of the Potomac, some few miles below Franklin, a little town in West Virginia, we made our way down there, and opened the campaign. We had a plentiful supply of flies, grasshoppers, minnows, helgramites, and every kind of bug. In the deep pools along a granite cliff we could see the bass in dozens. The water was so clear and pure that ever little object was distinctly visible. For two days we tried them; offered to their insatiable appetites flies, bugs and all; but they would smell them, and then give a contemptuous flirt of their tail and make off. Next we tried live bait, and would drop a wriggling, lively minnow in the midst of a crowd of a dozen or so. They would float leisurely up, see what it was, and then paddle off perfectly indifferent to all the trouble we had gone through for their benefit. I have enough of bass-fishing to satisfy me.

While we stood patiently for hours and whipped the stream for bass, and never received a bite, a couple of country fishermen stood on the rocks with a long pole, to which was attached a noose made of wire, and, clapping it over the unsuspecting fish, they would get splendid strings of bass of several pounds weight. It don't seem fair, but it's true.

Washington Irving tells of a couple of city sportsmen who fished in a stream for trout. They had fancy rods, silk lines, reels, artificial flies, bugs, minnows, helgramites, frogs and grasshoppers, and after an hour's hard work did not have even one bite. While they were resting after their desparing labors a freckled-faced farmer's lad came along, his breeches held up by one suspender. He came fishing also. His outfit consisted of an old cedar pole, common cotton line, a pin hook and a few earth worms. In a few moments he caught a bucketful of prime perch. Well, that story can point a moral and adorn a tale, for that was just our luck. A long pole with a loop of wire did more execution in one hour than our complete outfit did in a week.

I like sporting, not waiting and watching, as in deer and turkey shooting, for I love to hear the crack of my gun; it is sweet music to me, and I don't care for the size of the game so much as the quantity—that, is unless I could make such a shot and do as much execution as old Captain Van Pelt did—but I will tell you that story, which is a tradition down in the lowlands of old Virginia, where I came from.

Old Captain Van Pelt, as his name indicated, was a Dutchman, and a sharp, shrewd, money-making man. The Captain commanded a schooner, and his crew consisted of an old darkey named Manuel. The business of the *Fraulien* (for that was the name of his craft) was to sail along the Potomac and its tributaries and buy up fowls, eggs, fruits, vegetables, and all such articles, and then bear them back to the markets of Baltimore and Washington, when the Captain would dispose of his cargo at a heavy advance, and placing a balance in bank start down the river again, with Manuel at the helm and the meditating Van Pelt at the bow, smoking his long pipe.

One December day years ago, when you and I and the printer, who sets this up, were but boys or babies, the *Fraulien* dropped anchor in the tributary stream of Occaquan. It was a bright day, but there was a frost in the air which boded a freeze, and the Captain sent Manuel on shore to see an old woman who made the raising of fowls a specialty, and had more chickens, ducks, and geese than could be found anywhere else for miles around. Manuel came back and said that the old lady refused to give him her price and would only bargain with his master.

"I'll go and see her and buy her up to morrow," says Capt. Van Pelt. That night there came on a bitter freeze, and as the sun rose it was reflected back by ice that was fully ten inches thick.

"Mein Gott! Donner and Blitzen!" swore the Captain; "Vot shall I do? Christmas a-coming, and here I am stuck in the mud!"

All day the Captain watched for a thaw. Instead it grew colder and colder, and the next night it was so bitter that but for a jug of Holland gin and a roaring fire, the crew and the Captain would have been frozen, too. One, two, three, four days passed on, and as the frost came down heavier the Captain swore harder and puffed his pipe more savagely than did his countryman, the redoubtable Wouter Van Twiller, of Nieuf Amsterdam, at the British ship sailing up the Hudson. Adding to his woes, famine threatened, and at the end of the week the Captain went ashore to see the old lady and buy some fowls. Now this old lady, like Shelley's wicked old woman of Berkley, would do anything mean for money, and seeing the *Fraulien* frozen fast, she raised the price on her fowls just double what she asked before. The Captain tried argument, blandishments, cajolery, all to no purpose. The old woman had him where she termed his hair was short, and was as firm as a mule, or a woman, can only be. Capt. Van Pelt finally lost his temper, and retired on board the *Fraulien*, and paced his deck and declared that he would starve before he would be cheated so. Then ensued a battle between his will and his stomach, and those who have ever felt the pangs of hunger can't doubt which would be victor. The next day the Captain went back conquered and paid the price of a half-dozen fowls—one bright silver shilling for each, when the full price was only a sixpence. As he picked them out from the vast flock he asked the old woman what she would let him shoot into the whole bunch for. The owner, always ready for a bargain in any shape, studied for a while, and then said: "If you will let me load the gun I'll let you shoot into the flock for a dollar."

"All right," said the Captain, "I'll go to the *Fraulien* and get him mine gun." So he went on board the craft, dove down into his cabin, and brought out an old brass bull-mouth fowling piece that his father had made nearly a hundred years ago. It had a bore as large as a blunderbus, and a touch-hole big enough to run your fingers in. Into the gaping muzzle he poured a fistfull of powder, rammed in a handfull of tow, and a double handfull of shot; then he sawed off four fingers of the ramrod, and picked the flint carefully, and started shoreward accompanied by Manuel. The old lady was ready for him; she carefully measured the gun with the ramrod and found it (as she thought) unloaded, and put about a thimblefull of powder, and about the same quantity of shot. Van Pelt remonstrating with her on the smallness of the load. "A contract is a contract," said she, "you shall have all you kill, but I shall load the piece." She then brought a basket of corn which the Captain sprinkled out in a straight line, and then lying down flat within a short distance, and resting his gun on a log, he told the ancient damsel to let the fowls out. The door of the fowl house was opened, and the clamorous brood, hearing the well known sound, flew cluttering, clucking, and quacking to their meal. I wish this was an illustrated paper, so that I could draw the picture just here, the fowls strung out in a long line, bolting their food; the Captain lying flat down, his fingers on the trigger, saying a brief prayer—for the load he put in would strain if it did not burst the old weapon; the ancient dame with a satisfied chuckle looking over her horn rimmed spectacles, and Manuel a good distance away, with his hands over both his ears, and his eyes rolling fearfully. With his heart standing still, the Captain sighted his piece and pulled trigger. A roar like that of thunder was heard, reverberating across the ice and echoing in a sullen roar from the woods far away, and there lay the Captain stunned, the fire-arm torn feet off. The old woman as she witnessed the fearful slaughter, raised her arms and her eyes to Heaven and shrieked, "My Lord, I am ruined, I am undone!" while Manuel counted the spoils. Seventeen chickens, eighteen guinea keets, nine turkeys, five geese, seven ducks, an old rooster, two tame pigeous, a pet house pig of the old lady's, and her tabby cat, that had stole up in the crowd.

"Golly!" says old Manuel, as he piled up the spoils, and then helped up Captain Van Pelt, "dis am de greatest shot on record!"

CLASSICUS.

—The most entertaining sight to be witnessed in New York City to-day is the Thanksgiving Day dinner of the children at the Five Points House of Industry, 155 Worth street. The annual appeal of the institution states that it is $8,000 behindhand. Contributions of food, money or clothing will be well disposed of, and we invite our readers' attention to this field of charity. All remittances and contributions should be sent to Hugh N. Camp, treasurer, 155 Worth street, New York.

Fish Culture.

CARP AS AN ADDITION TO OUR SUPPLY OF FISH FOOD.—At Blackford's, in Fulton Market, may now be seen a tank containing several hundred German carp of two to five inches in length, which growth has been attained in the short space of five months. They were hatched at Washington, D. C., where hatching facilities were provided two years since, and a very interesting description thereof was furnished to this journal at the time by our stated Washington correspondent. It is said that carp of this variety will attain a weight of seven pounds in three years; and as they are also prolific and very toothsome, it is certain that a very desirable addition has been made to our list of food fishes as well as a profitable one to fish-growers. In Germany the carp is esteemed as highly as the trout and sells for the same price in the market. The first successful introduction of these fish into the United States took place about five years ago. The experiment of breeding and raising them in the pond where they were then placed has been perfectly successful, the fecundity and rapid growth of the fish having been quite remarkable. Specimens hatched this year have already attained a length of seven inches. The carp lives on vegetable food, and thrives best in warm water; facts which make it peculiarly suitable for the South, and its qualities as a food fish will give it a high value in that section, where as many will be distributed as can be furnished. Some 15,000 in all are now ready to be planted in various waters of Kentucky, Missouri and other States. Those assigned to Long Island go to the farm of S. L. M. Barlow, at Glen Cove; to Mr. A. W. Benson, of Montauk Point; to Mr. W. R. T. Jones, of South Oyster Bay, and to Mr. H. D. McGovern, of Bushwick.

The carp in Mr. Blackford's tank very much resemble the silvery dace, which are sometimes found in company with trout in our New England streams, but are readily identified by the two barbels pendant under the throat like those of a codfish. As the carp mature these barbels attain a considerable size and become a distinctive characteristic. Carp belong to the family of cyprinoids, of which goldfish and suckers are varieties. A certain variety of carp are very common now in Virginia, where they were introduced in 1832 by the captain of a Havre packet.

THE FARMER'S FISH.—This is what Prof. Spencer F. Baird terms the carp, which he predicts will within ten years take a very important place among the food supplies of the country. Writing to Senator Beck, of Kentucky, relative to carp culture in that State the commissioner says:—

"Its special merit lies in the fact of its sluggishness, and the ease with which it is kept in very limited enclosures, its being a vegetable feeder, and its general inoffensiveness.

Its rate of growth, too, is something marvelous; and, as observed so far in the specimens introduced into the United States, being even more remarkable here than in Europe. Among the original fish imported by us from Europe, and which are now only about three-and-a-half years old, are some from twenty-five to thirty inches in length, weighing from four to eight or nine pounds. * * * * * * The carp will thrive best in artifical or natural ponds with muddy bottoms and abounding in vegetation. In large ponds it may not be necessary to add any special food; but in restricted inclosures, as, for instance, in those of a fraction of an acre they may be fed with the refuse of the kitchen garden, leaves of cabbage, lettuce, leek, etc., hominy or other substances. Grain of any kind is generally better boiled before being fed to the fish; but this is probably not absolutely necessary."

We shall see the time when the fish pond will be as common a feature of the farm as the pig sty is now.

IN-BRED TROUT.—Seth Green tells us that he thinks the cause of the brook trout in most of our streams not growing larger and faster is, that they are in-bred for so many years, and he has accordingly bought one hundred and ten thousand trout spawn of R. Burgess & Sons, of Bennington, Vermont. He hopes to raise a good many of them and cross them with our trout, and put the balance of them in Caledonia Creek.

WORK OF THE UNITED STATES FISHERY COMMISSION.—The labors of the Fish Commission during the last two years have added two valuable food fishes to the list of salt water varieties usually found in the markets of the Atlantic cities. These are the pole flounder and the tile fish. The former has been found in great quantities and over a wide range. It is destined to become an important source of food supply, both on account of its abundance and its fine qualities as an article of food. The tile fish resembles the cod in some particulars. It is said to be abundant, and is likely to become extensively used as an article of food. Captain Kirby, its discoverer, prefers it to the codfish.

Professor Baird is very sanguine that the California salmon will thrive in Southern rivers, where the temperature of the water at the spawning season does not usually rise so high as in the Sacramento River, where the salmon live and flourish.

Professor Baird says that during the past season the "thimble-eyed" mackerel reappeared in great numbers at Provincetown and other points on the Atlantic coast after an absence of forty years. This is also a valuable food fish. Experiments in hatching codfish have proved very successful. The Fish Commission hopes not only to restock the waters of the New England coast, but to extend the locality within which this valuable fish ranges much farther south. It is known that long ago the cod flourished in great numbers several hundred miles south of where it is now found.

Preliminary studies have been made with a view to actual experiments in breeding halibut, with which fish it is also hoped to stock the waters off the coast of the United States. Indeed, Professor Baird says that he looks upon all the work of stocking the lakes, ponds, and rivers of the country with fresh water fish, as only preliminary to that of stocking the sea with desirable salt water varieties.

ARTIFICIAL FISH HATCHING IN GERMANY.—An interesing report was produced at a recent meeting of the German Fishing Society, by which it appears that the total number of fish ova hatched at the expense of the German Fishery Club during the season of 1878-79, amounts to about six millions-and-a-half. From this number above five millions of young fish-fry, namely, salmon, Californian salmon (117,540 out of 162,266 ova), American trout, salmon, trout graylings, and several *coregoni* species, such as murinas, blue-cap fish, etc., have been successfully produced. These five millions of young fish have been distributed among the various rivers and lakes of Germany, the Danube, and Lake Constance, the latter receiving above two millions of fish-fry. In addition to this number, several millions of ova have been hatched in the various artifical hatching establishments in Southern Germany, Switzerland, and Austria—not connected with the German Fishery Club. Nearly one million of young salmon have been provided by the Swiss Government and deposited into the River Rhine and its affluents.—*Land and Water.*

NEW HAMPSHIRE.—Fish Commissioner, Samuel Webber, and his colleagues, have stocked the following waters during the past summer with land-locked salmon. Under the provisions of the law, none of these fish can be caught before June, 1884: Sunapee Lake, 10,000; Connecticut lakes, 10,000; Squam Lake, 10,000; Winnipesaukee Lake, 5,000; Massabesic Lake, 5,000; Newfound Lake, 5,000; Mascoma Lake, 5,000; Newidrewamcoe Lake, Wakefield, 5,000; Merrymeeting Pond, New Durham, 5,000; Nutt's Pond, Manchester, 5,000; Long Pond, Bradford, 5,000; Tarleton ponds, Piermont, 5,000; Jones' Pond, Raymond, 5,000; Dunkins' Pond, Ossipee, 5,000; Sandwich ponds, 5,000; Echo Lake, Franconia, 2,500; Rocky Pond, Hollis, 2,500; Chestnut Pond, Northfield, 2,000; Star Pond, Springfield, 1,500; Monadnock Lake, Dublin, 1,250; Stone Pond, Marlboroug, 1,250; Breed Pond, Nelson, 1,250; South Pond, Fitzwilliam, 1,250; Long Pond, Hancock, 750; Jack Pond, Hancock, 750; Norway Pond, Hancock, 750; Hunt's, Hancock, 750; Juggernaut Pond, Hancock, 750; Half-moon Pond, Hancock, 750; Willard Pond, Antrim, 750.

A letter from Commissioner Powers announces the capture of the twentieth salmon at the hatchery at Plymouth, making in all eleven females and nine males safely placed in the storage ponds at that place, and from the first spawners of which lot Mr. Powers has already secured over 30,000 eggs. This is believed to be the first large lot of eggs on record taken from artificially planted fish, which have returned to the waters in which they were placed, to spawn, and is a good item to place to the credit of New Hampshire and Massachusetts, by whose joint action the hatching-house at Plymouth has been established and carried on. Mr. Powers has also taken over 100,000 trout eggs from the stock of breeders which we have collected at the hatching-house, and the trout have not finished spawning yet.

HATCHING SPAWN OF FISH.—The Chinese have a method of hatching the spawn of fish, and thus protecting it from those accidents which ordinarily occur to so large portion of it. The fishermen collect with care, on the margin and surface of the waters, all those gelatinous masses which contain the spawn of fish. After they have a sufficient quantity, they fill with it the shell of a fresh hen's egg, which they have previously emptied, stop up the holes, and put it under a sitting fowl. At the expiration of a certain number of days, they break the shell in water warmed by the sun. The young fry are presently hatched, and are kept in pure fresh water till they are large enough to be thrown into a pond with the old fish. The sale of spawn for this purpose forms an important branch of trade in China.—*Literary Gems.*

SOME OF THE USES TO WHICH FISH ARE APPLIED—FISH MADE INTO BREAD AND BISCUIT.—At the city of Escier they dry their fish in the sun, and, by its extreme heat, reduce them to powder, like meal, and knead them into loaves, or mix them into a liquid form like frumenty; and in consequence of the scarcity of grain, the natives make a kind of biscuit of the substance of the larger fish (suppose tunny), in the following manner: First, they chop it up into very small particles, and moisten the preparation with a liquor rendered thick and adhesive by a mixture of flour, which gives to the whole the consistence of paste. This they form into a kind of bread, which they dry in the sun; a stock of these biscuits is laid up to serve the year's consumption. Besides feeding on it themselves, they accustom their cattle, cows, camels, and horses to feed on dried fish.—*M, Polo's Travels, by Marsden.*

—In China, in the month of May, a great number of ships are employed by the country people in the sale of fish spawn, which they sell to merchants by measure, and send it into the country to stock ponds, etc.

—An official report states the number of fish ova hatched at the imperial fish-hatching establishment at Hüningen between Jan. 1st, 1878, and March 31st, 1879, at 6,577,000. Of these some 5,500,000 have been distributed in Germany, England, Belgium, France, Luxembourg, Austria, Switzerland, Spain, and Italy.

—During the month of October over forty-one tons of fish were seized at Billingsgate and destroyed, as unfit for human food. Among these were 422 cod, 12,955 haddocks, 475 herrings, 404 lobsters, 230 mackerel, 658 mullets, 102 plaice, 42,440 smelts, 193 soles, 120 thornbacks, 123 turbot, 7,180 whiting, 131 trout and 7 salmon.

Sea and River Fishing.

FISH IN SEASON IN DECEMBER.

FRESH WATER.

Black Bass, *Micropterus salmoides*; *M. nigricans.*
Sea Bass, *Sciænops ocellatus.*
Pike or Pickerel, *Esox lucius.*
Yellow Perch, *Perca flavescens*
White Perch, *Morone americana.*

FISHING IN NEWFOUNDLAND.

I SUPPOSE that all your readers know that Newfoundland is a foggy place; still there is a good deal of fine weather, barring fogs, during the summer and early autumn, and the fogs do not prevail so much over the land as over the sea. Salmon were selling at St. John's when we were there, about the middle of June, at from threepence to fourpence per pound, caught outside in the sea in nets. When one considers how the rivers are poached, it is a wonder that so many salmon are left. There is a fine sheet of water (Kitty-Vitty) close to the town, with a small stream running out of it for a short distance into the sea. There is a fall between the lakes and the sea of about, I should say, twenty feet, up which a salmon ladder might be made, and a fine salmon preserved formed. An iceberg was aground at the mouth of the harbor, and a great deal of ice in the offing, and much reported to the northward. Sailing about in fogs, and at night among icebergs, is not very pleasant amusement—but when duty calls, etc. We made the land of the northeast part of Newfoundland about June 20th, in the neighborhood of Hare Bay; much ice about, the snow not melted off the land, which, bare, treeless and rocky, looked wintry and cheerless. We got into Croe Harbor in the afternoon—a snug little harbor, with some wood on hills surrounding (small firs); a small river runs into the harbor to the south; and a small brook at the head of the harbor. They both come from shallow, stony-bottomed lakelets a short way up. I took my rod to fish and explore, but soon saw that there was nothing to be got but sprats. I saw the track of one cariboo quite recent, and a couple of snipe. From Croe round to Castor, now on the west coast, are nothing but insignificant streams, in which salmon would not lay, but run up in freshets to small lakes up the country, where they are not prevented by weirs or nets which bar the way. Scanty as is the population, the salmon fishing has vastly fallen off on account of these practices. A snip-of-war visiting the coast in a flying manner once or twice in the season cannot prevent them. I did not see the Castor River myself, but one of our officers went there, and said it was a shallow, rapid stream, not a likely-looking place for rod-fishing, yet it used to be a good place for net-fishing many years ago. The fishing has now fallen off so much that a man who fished it said that it was scarcely worth the trouble. In Hawke Bay, a fine sheet of water entirely landlocked, and in which we saw many seals; are two small streams, one called the N. E. River, the other the Torrent; we tried the N. E. stream, and caught many small sea-trout close to the mouth, and saw several salmon rise, jumping clean out of the water, but they would not look at our flies. I walked up about half a mile, and found a beautiful pool just below a slight fall. Several salmon jumped clean out of the water, but would not look at any flies. I caught, however, almost immediately two fine sea-trout, about two pounds each, which fought very hard, after which nothing would take. I waded some way higher up, but seeing nothing in the shape of a pool or water in which fish would lay—the stream being very shallow, rapid and clear, the woods dense, and close down to the water, and the flies insupportable—I gave up. The ponds near Hawke Bay were fished by a Frenchman with an ingenious weir, which caught all fish trying to get up, and prevented any which might be above it from visiting the sea. There are no means of trying any of the streams between Hawke Bay and Bonne Bay, as they run into the sea on an open coast, off which we could not well anchor, the game not being worth the candle. Bonne Bay is a very picturesque place, resembling a Norwegian fiord, running up some six or eight miles into the country. High hills, pretty well clothed with birch and other deciduous trees, rise immediately from the water, which is very deep. There is quite a thriving settlement here, about six miles up. The south arm ends in a beautiful basin, with excellent anchorages, although deep—about thirty fathoms. Heavy squalls, however, rush down from the hills in blowing weather whisking the water up many yards high. A small stream runs into this basin, and being quite overarched with trees, we did not try it on account of the weather. The Humber River is situated up a deep and picturesque fiord, on which is a thriving settlement. It is a very large and rapid river, and goes a long way up the country; an immense quantity of salmon must go up it. A considerable lumber trade is carried on up the river, which does no good to the fishing. Some of us tried the St. George's River, in St. George's Bay, but it is, I believe, not worth the trouble.

At La Poile, on the south coast, we got the best sport—some fine sea-trout and grilse. A small steamer runs along the south coast from St. John's once a fortnight, I think, so that fisherman could be dropped and taken up quite conveniently at the different places; but they should take tents and a servant or two with them, for a man can not well keep camp, do cooking, etc., and do shooting or fishing beside. At Teross Harbor, in the Bay of Despair, there are some small sheets of water communicating with the sea by a brook, and one of our officers got good sport there with sea-trout—principally, however, in the sea near the brook. There are some fine arms of the sea or fiords to the Bay of Despair, with very deep water in them; cod are caught in them. At the head of the north arm is a telegraph station and a few Indians—a river runs into it. I went about one and a half miles up it, but caught nothing. The stream was strong, and no pools where fish were likely to lay; the wood was dense and close down to the water, which was often too deep and rapid to wade, so that locomotion was difficult and the flies insupportable. A rough-haired dog had followed me from the telegraph station, and the poor thing was so tormented by the flies that he rolled on the ground and ran about like a mad thing; and yet, strange to say, although the clearing round the station was small, the flies vanished on entering it. I noticed the same at St. John's. The flies do not give trouble in the clearings, yet in Labrador I have seen them troublesome in a harbor very

open to the sea. One of our officers went about three miles up the river above mentioned, and came to a pool below some fall, of immense size and deep enough to float a frigate. He said it was full of fish, and he caught a salmon. We went up the east arm of the Bay of Despair. The river running into the head is the best looking river by far. We saw some fine pools, looking very salmony; yet, beyond a small sea-trout at the mouth, there did not appear to be a living thing in it—the fishing destroyed, I suppose by poaching. The hills in the neighborhood looked quite eligible spots for sheep-farming, being free of timber, and green. We went up the other arm of the Bay of Despair to Conn River, where there is quite a little settlement. The neighborhood is prettily wooded. Lumbering and coopering are carried on here. The Conn River is a rapid, shallow and stony-bottomed river, destitute of pools; so far as we went, nothing to be caught, and, I believe, much poached. There is a settlement of Mic Mac Indians at the mouth, and from their beach we caught a good many small sea-trout. I went with an Indian to the Little Conn River; there is a fall close to where it runs into the Great Conn River, up which I should say that no fish could pass. Under the fall was a small but deep pool, out of which some Indian boys were pulling small sea-trout as fast almost as they put their hook into the water—the bait a bit of fish. We caught many with fly. The Indian with me said he believed that there were thousands in the pool. He said there was no use in going higher up the stream, as there was nothing to be got. It was only a small shallow stream with clear water. There are many deep fiords on the south coast of Newfoundland, but the flies are frightful. The chemists at St. John's profess to give you a kind of cold cream which will keep them off; but as I did not believe it I did not try it. Near Lamelin there is a brook running into the sea from a small sheet of water, about one-third of a mile up. A great many years ago I caught in that brook, in about two and a half hours, more sea-trout than I could carry, and loaded a man besides—one trout running up to three-pound weight. But now it is a very different thing; everything is swept with the net. There is a small stream near Trepaney celebrated for its fishing, yet they only appear to take in a very limited space. There is a small pool, not apparently more than a yard deep, which appears to hold hundreds. How they can stow themselves away I cannot understand. Between the pool and the sea (about, I should say, one hundred yards) is the only fishing. One of ours caught a salmon in the sea with the fly.—D. M., in *Land and Water*.

THE BERLIN INTERNATIONAL FISHERIES EXHIBITION.—It is officially announced that the preparations for the exhibition are progressing in a most satisfactory manner. It is now certain nearly all the nations of the world will contribute more or less to the exhibition. From numerous countries—for example, from Sweden, Norway, Italy, the Netherlands, Canada, Japan, China, the Malay Islands, etc.—considerable collections of exhibits are announced. The German Emperor has accorded three prizes to be given, and others are promised by the King of Saxony, the Grand Dukes of Baden, Oldenburg, and Schwerin, as well as by the free towns of Hamburg and Bremen. The buildings selected for the exhibition are the recently erected agricultural museum in the Invalidenstrasse, in conjunction with the premises of the now closed iron foundry, and numerous additional annexes.

BRACKET'S FISH PORTRAITS AT THE SEVENTH REGIMENT FAIR.—In our last issue the printer, who evidently puts a small estimate upon the value of fish pictures, made the price of the set of Walter M. Brackett's notable salmon portraits $13. We wrote $1,300, which is the value the artist places upon them, and not high at that. These splendid paintings are one of the most attractive exhibits at the armory fair.

LARGE PERCH.—The English perch evidently hold over our own for size. In looking over the report of the annual perch prize competition at the Piscatorial Society's rooms in London lately, we read of one fish weighing 4 lbs. 2 ozs., caught with a worm, and measuring eighteen inches in length. The writer speaks of having caught a perch weighing 5 lbs. 3 ozs., and heard of one weighing as high as 12½ lbs., though inclined to doubt the truth of the statement.

—Trolling for mackerel with a spinner or spoon is a favorite sport in some British waters.

WHITE WAX.—In making gut leaders and snoods, and dressing artificial flies, white wax is frequently preferable to black. The following is an old receipe for making it:—

Take two ounces of the best resin and a quarter ounce of beeswax, simmer together in a pipkin for ten minutes; add a quarter ounce of tallow; continue to simmer for fifteen minutes; then pour the mass into a basin of water, and work it with the fingers until it is perfectly pliable.

MOVEMENTS OF THE FISHING FLEET.—Seventeen fishing arrivals have been reported at this port the past week, six from the Banks with 70,000 lbs. (two fares) of halibut and 165,000 lbs. codfish; one from a Bay St. Lawrence codfishing voyage; and ten from Georges, with 90,009 lbs. codfish and 8,000 lbs. halibut. Total receipts for the week, 283,000 lbs. codfish, 78,000 lbs. halibut.—*Cape Ann Advertiser* (Nov. 21st).

WANTS THE FISH HOOK.—*Editor Forest and Stream:*—While fishing recently in an inland stream I succeeded in catching a pike some four or five inches in length, and presenting a bloated appearance. Curious to learn the cause, I disembowelled the piscatorial trophy, and discovered in its maw another pike fully six inches long. This I have since learned from older and more re-lie-able fishermen is not an unusual occurrence.

N. B.—Please send the fish-hook by mail to box 231, West Chester, Pa.

Wait a while.

YACHT DESIGN.—*Editor of Forest and Stream:*—In Mr. Kirby's opening article on this subject, published Nov. 6th, 1879, I take exception to a portion of his letter. Your correspondent, referring to the *Mohawk-Dauntless* race, thinks Mr. Smith is "mistaken as to the result while going to windward, but correct as to going before the wind." The reverse seems to me to have been the case. One of the titles in the *Herald* of Oct. 27th, 1875, reads: "The *Mohawk* the smartest yacht to windward."

The sharp, deep model, possessing concavity proportioned to the vessel's tonnage, is generally conceded to be superior for two reasons: Sailing at a greater angle safely, she can outpoint the shingle bottom, and possessing the ability to stow her ballast lower, she requires less of it.

Your correspondent's theory is further refuted by these facts: The *Mohawk* capsized, which of itself is enough to destroy all sensible confidence in her. The *Columbia*, after which she was designed more or less, has not hoisted racing colors since that disaster occurred. No new yachts have been constructed on that model, and none will be, unless some foolhardy man, possessing more money than wit, desires to risk *his* life experimenting in the shallow, if not absurd, theory of six feet in the water and one hundred feet in the air! Sailing machines and catamarans have gone out. Sailors are looking now for a model which possesses not only speed but comfort and sea-worthiness. Consequently keels and lead are now displaced by centre-board and sand-bags. A little spray on deck is far preferable to five feet of water and three inches of mud 'tween decks, to say nothing of the unnecessary expense attending the construction of a 300-ton coffin, vastly in excess of yachts of more moderate types.

Your correspondent is also mistaken, I think, in supposing the friction to be greater below the surface. He cannot compress water, and the friction five feet below the surface is less that that along the water-line, for the reason that the wave action along a vessel's side renders it so.

Designers of concave lines have failed to take into account the important item of rolling, and by this neglect they shift the centre of gravity and displace the relations existing between canvas and hull, while the latter lies on an even keel of centres of effort and centre of gravity. The only solution of this difficulty is to make the deck and water-lines conform to each other, so that what the vessel immerses to leeward she will take out, as nearly as possible, on the same transverse section to windward, and in no model is this factor more advantageously secured than that represented by the English cutter. DEJA DUGO.

Binghamton, N. Y., Nov. 12th.

Natural History.

CALIFORNIA FISHES.

THE following detailed description of the varieties of fish brought into the San Francisco markets was sent to the United States Fish Commission by Mr. B. B. Redding, Fish Commissioner of California, in response to the circular sent out by the Commission:—

Fish constitute a very important article of diet in this city and county, and ninety-three different varieties of fresh fish are sold in the San Francisco market. The supplies are obtained from the Sacramento and San Joaquin Rivers, the Bay of San Francisco, Monterey Bay, Tomales Bay, and the Pacific Ocean. Flounders and other flat fish are numerous and largely consumed in San Francisco. In their season are to be found in the market halibut (*Hippoglossus vulgaris*), Monterey halibut (*Paralichthys maculosus*), sole, or black-dotted flounder (*Psettichthys melanostictus*), large-eyed flounder (*Hippoglossoides Jordani*), left-handed flounder (*Citharichthys sordidus*), short-finned narrow sole (*Glyptocephalus Pacificus*), long-finned narrow sole (*Glyptocephalus zachirus*), turbot, (*Pleuronichthys guttulatus*), bastard turbot or check-finned flounder (*Pleuronichthys cænosus*), diamond flounder (*Parophrys vetulus*), mottled flounder (*Lepidopsetta bilineata*), rough flounder (*Lepidopsetta umbrosa*), striped-finned flounder (*Platichthys stellatus*). Tom cod are numerous, and considered one of the most delicately flavored of fishes, procurable at all seasons. The Tom cod of the Bay of San Francisco (*Microgadus Californicus*) differs from the Eastern species of that name.

A whiting (*Merluccius productus*) is found in the market in September. There are nine species of rock-fish found in the market during all the months of the year, viz., small-scaled rock-fish (*Sebastodes paucispinis*), black-banded rock-fish (*Sebastichthys nigrocinctus*), rough-red rock-fish (*Sebastichthys ruber*), clouded rock-fish (*Sebastichthys nebulosus*), pink-spotted rock-fish (*Sebastichthys fasciatus*), black rock-fish (*Sebastichthys melanops*), yellow rock-fish (*Sebastichthys flavidus*), black-eared rock-fish (*Sebastichthys auriculatus*), smooth red rock-fish (*Sebastichthys pinniger*).

There are three kinds of sea-bass, viz., sea bass (*Atractoscion nobilis*), little bass or king-fish (*Genyonemus lineatus*), the large-mouthed king-fish (*Seriphus politus*). No varieties of perch are found identical with the Atlantic species. There are thirteen species, viz., black perch (*Embiotoca Jacksoni*), banded perch (*Embiotoca lateralis*), orange finned perch (*Hypsurus caryi*), thick-lipped perch (*Rhacochilus toxotes*), small silver perch (*Phanerodon furcatus*), gray perch (*Damalichthys vacca*), large shiner (*Cymatogaster aggregatus*), large-eyed perch (*Hyperprosopon megalops*), silver perch (*H. argenteus* and *H. arcuatus*), Agassiz's perch (*H. Agassizii*), red-finned silver perch (*Holconotus rhodoterus*), cross-banded silver perch (*Amphistichus argenteus*), Sacramento River perch (*Archoplites interruptus*), and Jew-fish (*Stereolepis gigas*).

Of the *Scombridæ* there are Spanish mackerel (*Scomber colias*), Monterey tunny (*Chriomitra con color*), striped tunny (*Sarda chilensis-lineolata*), pompano (*Poronotus simillimus*), and horse mackerel (*Trachurus symmetricus*). A mullet (*Mugil sp.*) is occasionally in the market, supposed to be the product of those imported from the Hawaiian Islands and planted by the State Fish Commissioners. There are two varieties of fish called smelt, not identical with the Atlantic species—large mullet smelt (*Chirostoma Californiensis*), and small mullet smelt (*Atherinope affinis*). There are also two varieties of true smelt (*Osmerus thaleichthys* and *O. elongatus*). About 3,000,000 pounds of fresh salmon (*Oncorhynchus quinnat*) are annually brought to the market from the Sacramento and San Joaquin rivers.

The shad on this coast are the product of those given to the State by the United States Fish Commissioner. They are becoming numerous, several thousand being brought to market between January and July, 1879, and finding a ready sale at 75 cents a pound. The Pacific coast herring or Anchovy (*Engraulis ringens*) is in market every month.

Suckers (*Catostomus occidentalis*), German carp, originally brought from Europe (*Carassinus vulgaris*), Sacramento pike-headed gila (*Ptychocheilus grandis*), and split tail (*Pogouichthys inæquilobus*), are almost always to be found. The short-nosed sturgeon (*Acipenser brachyrynchus*), is sold annually to the extent of 300,000 pounds. Lampreys are very abundant, but never eaten.

Squid are numerous, but are not brought to market. They are retained for consumption by the Greek, Italian, and Portuguese fishermen. Shrimp are common and used principally by the Chinese. Nearly $500,000 worth are annually exported to China. Crabs are largely consumed, and are obtained in several varieties, some weighing as much as two and a half pounds. Clams are also abundant and largely used. Fresh-water turtles are nearly always in the market. Large quantities of trout are brought to market. The most abundant are the Lake Tahoe trout (*Salvelinus of Salmo Henshawi*), known as the silver trout and the black trout (*S. tsuppitch*). These average five pounds in weight, and often weigh fifteen pounds. Occasionally are found the Pacific coast brook trout (*S. iridea*) and the Humboldt River trout (*S. virginalis?*) The fish sold in the San Francisco market as salmon trout are, first, salmon grilse weighing from half a pound to three pounds; and second, brook trout (*S. iridea*) from short coast streams emptying directly into the ocean. This brook trout, which at the sources of rivers does not grow to exceed two pounds in weight, will in salt and brackish water at the mouths of rivers often weigh six and eight pounds. Carp are frequently in market, and are the product of nine fish brought from Hamburg by Mr. A. J. Poppe, of Sonora County, which have been widely spread over the State. Cat-fish (*Amiurus albidus*) were some years since brought to the State by the California Fish Commission. They have increased very rapidly, and are to be found in market throughout the year.

REMARKS.—All the principal fishes here mentioned are scientifically described in Hallock's "Sportsman's Gazetteer," which is exclusive in this respect.—[ED.

FISH EATING CHARACTERISTICS OF THE BLACK SNAKES.—The black snake, like the Chinese, seems to adapt itself and mode of living to its surroundings. In the stagnant pools and marshes it stretches out on a log or reed, too lazy to catch a line fish or any other animal than those which are fascinated by its glance. But this species is not always found in circumstances of this nature, and hereby hangs a tale.

In 1877 the writer was engaged in the U. S. Government engineering operations on Lake Erie. An examination of the topography of this body of water shows its shore to be made up in places of vast marshes, hundreds of square miles in area; on one hand, again a stretch of shore line of high bluffs, and precipitous rocks on the other. The surface of the lake figures with an immense number of islands and rocky and pebbly reefs. The condition of the lake and the isolation of many of its island reefs and marshes, render it a secure retreat of literal thousands of the slimy, sickening black and water snakes. It was rendered necessary for our very comfort in camp that hundreds of these hand-maids of Satan should be slain. Well does the writer remember one six-footed, broad-shouldered fellow, who would wade in the water up to his shoulders, suddenly catch an unsuspecting snake by the tail and snap his head off so quick that it landed in the snake's paradise with no knowledge of the mysterious force that sent it there. In the little pebbly shoals in the centre of the lake these reptiles were found abundantly, or elsewhere closely watched by the arctic and black terns which kept them away from their eggs. The story easily draws its own conclusions; there was nothing else to eat but fish, the main portion of which were the leavings of the terns and herring gulls. But to be more accurate, I may testify, and can bring other members of the party—some thirty in all—to substantiate the same, that it was a frequent occurrence to see a black snake swimming about its head six inches above water, with a small fish in its mouth. It is freely confessed that I never saw them have fish, except on Lake Erie, and for the life of me I can conceive of nothing else for them to get in many places. The fish of which we observed them to partake most freely, was a small bullhead, near the marshes. In the reefs, however, any species seemed in demand. I cannot leave these reefs until I relate an incident foreign to the matter: One day we stopped on an island known as the "Old Hen," quite near the East Sister, to dine. So thick were the snakes, however, that it was found too sickening to eat until they were cleared away. The party began operations, and as fast as a snake was despatched it was thrown on top of a huge rock in a common heap. When we were through and the party exhausted, the snake community was diminished by several hundreds, while in a quiet retreat we dined in peace. A visitation to the place a month later showed a great heap of skeletons which would have delighted some naturalists. Out of sight of land, and in a territory seldom invaded by man, these snakes accumulate in untold numbers, so that it was no common occur-

rence to see them sunning themselves in heaps on wild rose bushes, logs, and rocks, and many a poor man has lost his dinner as he suddenly stumbled on a heap of the twisting slime. I may say again that in view of their numbers and isolation from accustomed food, that there is simply no other way than to adapt themselves to such food as comes in this territory, which was fish and an occasional blackbird. It is true of the black capped chickadee in winter, picking the refuse of the hog in the farmyard, or Hon. E. B. Washburne eating mule meat in the siege of Paris. I may answer the query, therefore, propounded in the last number, that under certain conditions of food supply, the black snake lives wholly or partially on fishes.

WILLIAM HOSEA BALLOU.

HOPPER AND HORNET.—A correspondent who signs himself "Hop" has sent us the note printed below. We suggest that the creature which attacked and carried off the grasshopper, was a hornet of some species, as these insects commonly prey upon grasshoppers, whereas bumble-bees never do. What the hornet was after, was the juices of the hopper, not his "molasses." Our correspondent's note is as follows:

When I was attending the Custer Monument Unveiling at West Point, I sat near the platform, and, happening to see a grasshopper an inch long alight on the drapery, poked it with my cane. It made a jump of a yard or less, and had hardly come to rest before a big bumble-bee flew down over the heads of the crowd, and wholly undisturbed by their presence, swooped upon the unsuspicious grasshopper, and grappling him up as a hawk would a hen, carried him off without apparent effort.

Now, what did the bumble-bee want with that grasshopper? Did he wish to steal his "molasses," or suck his blood? Does a grasshopper yield either blood or honey?

HOP.

DEATH FROM SKUNK BITE.—Our correspondent, Mr. S. F. Martin, of Oakland, Cal., sends us a clipping from the Mendocino, (Cal.) *Beacon*, of August 30th, with regard to this painful subject. Mr. Martin states that he knows the account to be a reliable one, and we print it in the hope that it may reach the eye of some one who can give us further information with regard to this terrible disease than we now possess.

The cutting is as follows: We learn from Jerry Donohoe that a man named Hagler, residing in Round Valley, died with hydrophobia at his residence on Saturday last. Mr. Hagler was bitten on the toe by a skunk in April last, and on Friday was taken with convulsions. Medical aid was at once procured, but could render no assistance. The unfortunate man would snap and bite at every one who came near him, and the sight or sound of water would throw him into convulsions. He died in sixteen hours after being prostrated. This is the first death from hydrophobia we know of in this county.

CAPTURE OF TWO ESCAPED PRISONERS.—By an odd coincidence the same mail brought us the two following items, one from New Brunswick, the other from Illinois. We confess to a feeling of sorrow for the unfortunates, which after having escaped so many perils, have at last been brought to bag. Mr. Geo. A. Boardman, writing from St. Stephen, N. B., under date November 12th, 1879 says:

A white-headed eagle has been seen for a long time flying about Grand Manan Island with something attached to its feet. It was lately shot and found to be in a steel trap with about fifteen inches of chain. The foot bone appeared to have been fractured, but so long ago that it had healed, and with such an enlargement of the bone as nearly to cover the jaws of the trap, which was with difficulty removed.

The other note comes from our Rushville, (Ill.) correspondent, "Aix Sponsa," and is dated November 11th, 1879. By grayduck we presume he refers to the gadwall, (*Chaulelasmus streperus*). He writes:

While three of us were hunting on Meredosia Bay, this State, toward the last of October, we crippled a gray duck from a large flock flying over, and found a hole in the web of its foot with a string tied in it in a hard knot. The hole was almost the length of the foot and entirely healed around the edges.

—The crew of the *Epes Tarr*, a Gloucester fishing schooner, recently discovered off Sable Island Bank, at a depth of 250 fathoms, a valuable specimen of a crustacean, which proves to be one of the most remarkable of the new species yet discovered on our coast. It belongs to the genus *Polycteles*, and most of the known specimens are from the *Challenger* expedition, and were never before known nearer our shores than off the Spanish coast.

WILL SHARKS DEVOUR MEN?—Some time ago we had a discussion as to whether or not a shark might, could, would, or should devour a man. Several mariners bold, who had never seen the thing done were struggling in the negative of the question. Here is some evidence in point, told by the *Fiji Times*: "A canoe left Loma Loma with twenty-five natives on board, bound for Totoya. They were going about, when a sudden squall sent the sail against the mast, capsizing the canoe. The unfortunate passengers clung to the canoe, and might have escaped with consequences no worse than those which would have attended discomfort and exposure, but for the fact that the capsize occurred in a locality infested with sharks. These ravenous monsters seized their victims one by one, devouring twenty-three out of the twenty-five unfortunates whose lives were thus placed at their mercy. Of the two who escaped, one is a woman; but her situation is very critical, the whole of the flesh having been taken off one leg.

LIMPET PRODUCING A MARKING INK.—Of the species of limpet, a shell-fish found here (Minehead) at low water, some are red, others white, black, brown, yellow and sand color; when the shell is picked off there will appear a light vein lying traversely in a little furrow near the head of the fish, which may be taken out by a bodkin or any pointed instrument, and will form an excellent marking ink. The letters or figures made with this liquor will change to several colors when placed in the sun, according to the time of day and season of the year, and will ultimately finish in a fair, bright crimson, which, after being laid out to dry, will abide all future washing.—*Collinson's History of Somerset.*

CAPTURE OF A SWAN IN RHODE ISLAND.—PROVIDENCE, R. I., *Nov. 15th.—Editor Forest and Stream*:—On the 12th inst. I found a swan (*Cygnus Americanus*) in a market in this city. Upon inquiring about it, heard, to my surprise, it was killed in this State. Wrote to the party who sent it to market, and received the enclosed letter, which tells the story.

This is the first swan that has been killed in Rhode Island, as far as I know, for thirty years, and how much longer I cannot say, for that is as far as my record goes back.

NEWTON DEXTER.

P. S. The locality spoken of in Mr. Stanton's letter is in the south part of the State, on the ocean shore.

CHARLESTOWN, R. I., *Nov. 13th.*

Mr. Newton Dexter:

SIR—Mr. Joseph C. Church received a letter from you in regard to that swan in Mr. Stoke's market. As I killed him, Mr. Church gave me your letter. I was at the Narrows at Quonocontaug Pond last Sunday morning, and there came two of these swans from the east, about fifty yards high. I killed the head one and George Noyes, who was with me, wing-tipped the other, but he got to sea. Your friend, Mr. Vars, of Niantic, will tell you who I am. Hoping that we may sometime have a nearer acquaintance, I am very respectfully yours,

A. F. STANTON.

Women's Column.

PHILADELPHIA, *Nov. 18th*, 1879.

Editor Forest and Stream:—

SIR: I have read with much interest and no little amusement the various letters from sportsmen's wives, and with your kind permission will add my mite.

I think the great mistake of the ladies alluded to above, was, that they did not begin right. I, too, am a sportsman's wife, but I never had a tithe of the trouble they speak of. I have been married nearly twenty-five years, and have often accompanied my husband upon his quail-shooting excursions in Maryland and Delaware, and have enjoyed myself very much. Of course I did not shoulder a gun and march with him over the fields and through the woods and branches and cripples; but while he was off with the men and dogs I was enjoying myself with those of my own sex. But I have often thought that if I were a man I, too, should be a sportsman.

One beautiful afternoon in November, about six years ago, my husband asked me if I ever saw a dog point a covey of quail, and upon my answering in the negative he said: "Just slip on your hat and shawl, and we'll find a covey in less than fifteen minutes, for they are out feeding now." I did not care much to see the dog point the birds, but to please my husband I accompanied him. He helped me over the fence, and we took our way across a stubble-field, down towards a large pine woods, the dog (old Nat) scampering on ahead. When we were more than half way across the field the dog stopped, threw up his head, stood a moment, then, with his nose close to the ground, walked in a slow, zigzag manner. "Stop," said my husband; "he's trailing them; don't crowd him." Then to the dog—"Steady, boy; ho! ho!" and presently the dog stopped, his limbs became rigid, and his long, feathery tail stood straight out on a line with his body. "What's the matter with Nat?" I asked. "Why, bless your little heart," said my husband, "he's got the birds as firm as a rock." "Where are they?" I asked. "Not three feet from him," replied my husband. I strained my eyes to get a glimpse of them, but not a bird could I see, while the dog stood as firm as though carved of stone. "Now," said my husband, "stand right still, and I'll flush them and make a shot." He stepped just ahead of Nat, and such a "whir-r-r" I never heard in all my life before. I seemed to be surrounded by birds. "Bang, bang," and away flew the birds to the pine woods, while I stood trembling scarce able to speak. When I came to my senses Nat stood in front of me, wagging his tail, and two birds were lying at my feet. The whole performance was enacted so quickly that I could scarcely realize it, and for weeks it was fresh in my memory.

Let me say another word or two to those ladies whose husbands require so much waiting on. My husband always has his "traps," as he calls them, ready. If he were called on to-night to go "down the river" to-morrow morning, he would be ready. He has a large box with ever so many cartridges of all sizes of shot ready. His "big gun," as he calls it (and it is a big one, for I can scarcely lift it) is always clean and bright. His breech-loader, of which he takes especial care, and which shines along the inside of the barrels like burnished silver, is in its case; and he can get up at any hour of the night, prepare his own breakfast, and be off to the boat-house without disturbing me. That's the way I brought him up.

He is commodore of a yacht club, and very fond of sailing. Last June when the Quaker City Yacht Club had its spring regatta he was one of its judges, and although he had plenty to occupy his attention he found a good place for me on the judges' steamboat, and I had a fine view of the yachts as they rounded Chester buoy; and I assure you, sir, it was a grand sight. No wonder men love yachting. Dear me! I just felt as though I would like to have been on one of those beautiful yachts, skimming over the rippling water like a bird.

Now, sir, I fear I have intruded too much upon your valuable space, and will say to my sisters who have sportsmen for husbands, and who sometimes put up with inconveniences, especially in the matter of dogs (I have raised six), that there are many worse creatures than sportsmen, and that there is a vast difference between a sportsman and a "sporting-man."

SALLIE.

A WISCONSIN SPORTSWOMAN.—*Oconto, Wis., Nov. 8th.—Editor Forest and Stream*:—We were to have started for our ride of thirty-five miles at 8 A.M., but the gentleman, in order to make an early start, always has to commence starting the night before; it was noon before we were fairly off, and then we went without him; didn't give him time enough. However, he followed us the next day.

Our friend's residence stands upon the bank of a sheet of water which would have delighted the heart of "Deerslayer" himself to see. His farm is new, and only a small clearing breaks the wall of green which encloses as beautiful a little lake as can be found. It is well named "Crystal Lake." The water is so pure and limpid one's boat seems to be floating in the air. The waters teem with the finest fish—immense black-rock and yellow bass, perch, and catfish. One pickerel was caught last spring, the first and only one, while away down in its subterranean depths, where the sounding-line has yet failed to find bottom, are supposed to lurk trout which would put to the blush the fabulous ones of the Rangeley Lakes. The water of this lake is softer and purer than rain water, and would rival famous "Tahoe" for transparency. It has no apparent outlet or inlet, and is about a mile in diameter.

About four miles distant the "south branch" of the Oconto River affords as fine trout fishing as you will find in the North. The banks of the lake plainly indicate that at some time this lake must have found an outlet into the South branch referred to, hence we infer there must be brook trout in the lake.

The forest surrounding it is full of deer; bears are quite numerous, and "quill-pigs," as a friend from Maine calls them, are abundant. There are also partridges, and lots of them; altogether, a sportsman may find plenty of amusement and something better than glass balls for a target.

The morning after our arrival my husband and myself took a boat and rowed over the lake to the hunting grounds. After walking until I was tired out, I was deposited at the foot of a comfortable stump and told to wait "until I start a deer." Well, I waited and I waited, and then I waited; but alas! I waited in vain. No noble, branching antlers broke upon my strained vision, and gloomy thoughts of salt with a substratum of pork for dinner glanced through my mind.

My lord came back a disgusted man, and I finally walked home around the broad white beach, while he followed at dusk, without having even shot some good farmer's calf.

That night, in a drizzling rain, he and our friend started out with a lantern, and long after midnight they came in, cold, wet, hungry, and empty handed, and I wont repeat the oration which was delivered on that occasion; if not exactly a happy effort, it was forcible and to the point.

The next day we tried the fishing, but with no better success. It was too late in the season, and the fish would not take the hook, so we returned home with one poor little yellow bass as our only trophy.

One of the children took the basket out of doors to clean the fish for the mocking bird. He carelessly left the basket out there. A pig came around to pick up his dinner and was suddenly picked up by the upper lip. And lo! a fifty pounder on our hook. Then began a most laughable race. Mr. ———, his long figure clearing ten feet at a bound, started in pursuit, with all the children after him. The pig squealed, the children shouted, and with seventy-five or a hundred feet of line unwinding behind him, poor piggy "put in" the best time ever made in an amateur race. Finally the pursuer caught the pig by one ear, but the effort was too much for him, and down he came, a foot at a time, and shut up like a jack-knife on the pig, and after a protracted struggle he succeeded in extricating his porcine highness from his predicament.

DIANA.

THOSE SPORTSMENS' WIVES.—*Dear Editor*:—Being an old reader of FOREST AND STREAM, little in its columns escapes my notice, especially anything headed similar to the above. Now, these letters from Diana, Ruth, and others are really getting to be a serious matter. The truth is, my wife has been reading FOREST AND STREAM, and I am likely to become a victim, she having threatened to expose the little eccentricities of a sportsman she knows of. Now, Mr. Editor, you must forbid the publishing of any more of these letters, or I must cease to be a subscriber. I don't exactly mean to stop the paper, b-u-t, b-u-t well, let those wives write us up in some other journal (the *Sun* for instance) where no one will ever see it. The description of the preparations for a "camp out," as pictured by Ruth, in your issue of Nov. 13th, is a shade too personal; it fits the heads of many of us too well, we can't stand any more of it without being heard from. So, please, Mr. Editor, devise some means for the relief of the hunted sportsman.

YOURS, ONE OF THEM.

FOREST AND STREAM ABROAD.

[*From the London Fishing Gazette of Nov. 1st, 1879.*]

THIS capital sporting paper comes to us regularly every week from the office, No. 111, Fulton street, New York, and every number seems an improvement on the last. Many and many an interesting paragraph have we marked for quotation from its pages, but for want of space have had to place them amongst our store of valued sporting notes culled from all quarters. Now there must be a large number of our readers in various parts of the country who would like to know what our American cousins are doing in the way of fishing and shooting and hunting. To them we say with confidence, try FOREST AND STREAM for three months. In time they will come to order the paper three years in advance! and pay for it too, as some of the American subscribers do. Now that the long winter evenings are upon us, we can imagine no greater pleasure for an all-round sportsman than a quiet hour or two in a cosy armchair, near a cosy English fire, with the latest number of *The Fishing Gazette* of course! and FOREST AND STREAM; and if to these are added the fragrance of tobacco and an appreciative betterhalf who doesn't object to smoking, why so much the better. The opera and theatre, concert and ballroom, have their charms; but in our opinion they only teach us to value the more the quieter but truer pleasures of home life.

We never take up a copy of FOREST AND STREAM without a feeling of thankfulness that such a grand sporting country as North America should be in possession of an English-speaking, and therefore English sport-loving race. Think of the continent of South America, equally as

large, abounding in rivers, teeming with game of all kinds, and note the contrast. In North America sportsmen of all classes are to be counted by thousands and ten of thousands; every State has its game laws; almost every town its sporting club. In South America the only sport one ever hears of is when some wandering Englishman or American publishes a book of travel, or sends a letter to the sporting papers. An amusing instance of how they shoot partridges in South America was related to us the other day by a gentleman who had lived some years on the Platte River. Talking with him, as we travelled from the West of England in the Flying Dutchman just when the partridge season had commenced, of the prospects of sport, we asked him how they shot partridges in South America; he said, "Well, I don't know that there was much shooting about it, but it was done on horseback, as is every thing else there, in this way: A party of fifteen or twenty of us would start away into the country until we came to the ground we had decided to operate on; we spread out in a large circle, which was gradually narrowed, and the birds, being bewildered with the cries of the hunters—driven towards the centre—we then rode in and knocked them down with our whips." The other occupants of the carriage were an officer, fresh from the Zulu war, and Sir Thomas somebody or other—and the laughter this novel method of shooting partridges evoked, may be imagined. This reminds us that they have yet some things to learn in the States; and now and then one comes across such a paragraph as the following from the Oct. 16th. No. of FOREST AND STREAM:—

"*Milbury, Oct. 17th.*—Mr. John M. White started a fox to-day, and after an exciting chase *shot* (!) him on Bringham Hill in Grafton. It was a beauty, and weighed nine and three-quarter pounds."

What will our fox-hunting readers say to that? We prophesy that when FOREST AND STREAM for Oct. 16th, 1979, is published, such a paragraph will be looked on much as it would had it appeared in one of our own sporting journals; but foxes will not be so plentiful in America then, and fox-hounds will have increased; there are already several packs in the country.

FOREST AND STREAM is so readable, and contains such an immense amount of interesting matter relating to fishing, shooting, &c., that we feel we are doing it bare justice in thus bringing it specially to the notice of our readers. It contains every week over forty columns, divided under the following headings:—*Fish Culture* (from this section in the number before us we learn that over seven million salmon eggs have been distributed for hatching purposes by the U. S. fishery establishment at Baird, to other parts of the Union, to France, Holland, Canada, Germany, and New South Wales), *Natural History, The Kennel, Yachting and Boating, Sea and River Fishing, Furs and Trapping, The Rifle, Game Bag and Gun, Rational Pastimes* (here we find impartial reports of how "Dafts Team" and the "Gentlemen of Ireland" have been beating the Americans at cricket), *Archery*, and in addition to the above there are special articles on "The Game and Fish of Alaska"—Alaska ought to be a paradise for trout-fishing, and as for salmon two tons weight are said to have been caught at one haul of the net; but, horrible to relate, the trout won't look at a fly, and are only to be taken with roe; and as for the salmon, well, here is what the writer says, and we think it goes to prove the theory that this fish does not feed in fresh water:—

"As the salmon season closes, I reflect how baseless were my expectations, and how foundationless the lies of those who made me believe that salmon could be caught here by the barrel-full, as one would catch cod off Cape Ann. Except by the natives with nets and gaffs, there has not been a salmon caught here on a hook this summer, and flies of all kinds, spoons and minnows have been cast and trolled in vain pursuit. So a summer in Alaska has not yielded me a salmon."

Then we have a most amusing article entitled "A Winter in East Florida." Could any but a country man of Mark Twain or Artemus Ward describe a snore like this?

"Sitting around the blazing pine-logs that night, the time passed quickly while talking of hunting, fishing, and sailing, and it was 11 o'clock when we turned in. Ben, as was his usual custom, was asleep and snoring in five minutes—and such a snore! Ben was my case of nasal catarrh, but it was no 'light catarrh' that he struck in his 'beautiful snore;' but a compound of bassoon base-drum. Shakepeare says that—

> "Weariness
> Can snore upon the flint, when rusty sloth
> Finds the downy pillow hard."

"But Ben's snore was not produced by weariness; nor were his slumbers flint-locked; but his proboscian music, proceeding from a stub-and-twist full-choked, double-barrel organ, was Wagnerian in pattern and wonderful in effect and penetration.

"I heard Strobhar, who is hard of hearing, say to King in their tent a few rods away: Hab! just listen to that bull alligator bellowing up the creek! It's one of the boys snoring,' replied King. 'Well, by the Great Horn Spoon! no need of a fog-horn in their boat!' A few minutes later I heard a peculiar rumbling and roaring sound proceeding from the eastward, which I at first thought to be the sea; but as it rapidly came nearer it became louder, and the ground began to tremble and roll, jarring the guns on the rack, and producing a rattling among the pans outside. The heavy rumbling seemed to pass right under me with an oscillating and wavy motion, and disappeared in a westerly direction. I found myself rolling out of my mossy bed and became conscious that it was the shock of an earthquake or some internal convulsion; and was a prolonged shock, or rather a quick succession of two shocks lasting nearly a minute altogether. The boys were all now wide awake and discussing the matter. Strobhar said he heard it distinctly, but he thought it was Ben's snoring. This event occurred on the night of January 13th at 11,30 o'clock. I learned afterwards that it was quite severe in some portions of the State. At Cape Canaveral light-house it threw oil out of the lamp on to the reflectors, and it shook the solid brick tower of Jupiter light from base to dome, while the keepers of both lights made the best time on record for a hundred feet downward.

J. A. HENSHALL."

Then we have an article on the splendid services to science of the American ornithologist, Dr. Coues, who has been invited to visit England and Europe for the further prosecution of his studies by such men as Huxley, Tyndall, and Spencer. Next "Fishing Industries of the Gulf Coast," "The Sportsman Defined," "A Trip to North Park" (the "park" being an immense tract of country in Colorado), "The Expansion of Gun Barrels," and other articles and "notes" in profusion.

In addition to the reading matter there are ten pages of advertisements; and if advertisers in this country want to know how to make their announcements attractive they should look over a copy of FOREST AND STREAM. Take Mr. Orvis' advertisement of his flies, accompanied as it is by the engraving of a splendid trout just closing his jaws on one (it must have brought him many an order simply from its attractivenes); then Messrs. Mann & Co.'s illustrated advertisement of their trolling-spoons. This firm says: "We manufacture fifty-nine different kinds of trolling-spoons adapted to the waters of every State and Territory. Our 'perfect revolving' has proved to be the best ever invented," &c. Then the various railway companies, instead of dry lists of trains, giving glowing accounts of the various kinds of sporting countries they open up. Of course the advertisements should be nothing if not "*tall*," and everybody says his goods are the "best in the world," "finest made." Tatham's shots are "more free from shrinkage, more spherical, more uniform, heavier, and of brighter and cleaner finish than any other;" Dupont's gunpowder is the "most popular in use;" Keep's best gingham umbrella is "fifty per cent. stronger than any other umbrella;" Mr. L. Lum Smith's imitation stained glass is the "most remarkable and beautiful invention ever patented;" Henning's fishing pants are the "best made goods in the world;" Charles E. Lewis has two dogs for sale, "the handsomest I ever saw;" A. D. Law's cartridge is "the only one in the market;" (there are a dozen others advertised in the same paper); Card's patent ball trap is "the only one that throws every way except at shooter and spectator;" Good's mocassins are "the best thing in the market;" N. M. Shepherd has the "largest stock of jewelry on hand," and "does more business than any other house;" the English *Fishing Gazette* is the "only paper in the English language entirely devoted to angling." But it's time to stop now. (It certainly was the case when we sent our advertisement; but, as we have taken up shooting lately, we shall be accused of using the "long bow" as well as our American friends!) All the same, FOREST AND STREAM is a first-class paper, and we only hope our readers will try it.

—Card's rotating trap seems to be making its way around the world. In a letter now before us from the firm of W. W. Greener and Co., they state that the traps are selling at the rate of one hundred per month. They are sent to every English colony, to Poland, Austria, France, Italy, Germany, etc. We predicted as much when the trap appeared, nor are we at all surprised to see such a sale.

FROM HELL TO HEAVEN.—Sometimes the pains of disease are so great that it seems as if they could not be borne, and sometimes the minor pains worry men and women into the grave by preventing rest and sleep. Then the soothing influence of Warner's Safe Nervine is like a translation from hell to heaven.—*Adv.*

—Messrs. Lord & Taylor, whose advertisement will be found elsewhere, possess superior facilities for supplying out-of-town customers with underwear, shooting jackets, etc. In this large store will be found almost every article of ladies' and gentlemen's outfit.

THE EFFECTS OF THE COLD SNAP.—The fierce winds have in numerous cases produced pains in the limbs and back. Frost bites are also now in season. Speedy relief is effected by Weston-Rowellene. Depot 381 Sixth ave.

—The Bodega Hamper contains whiskey, gin, rum and brandy. Anyone who likes whiskey, gin, rum and brandy should read the Bodega advertisement elsewhere.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

☞ *We make no charge for answering inquiries in this column.*

H. N., Jacksonville.—The sharpie is well adapted to your purposes. Write to our advertisers for prices, etc.

INQUIREE, Toronto. We can furnish you design and specification for four ton cutter, as required, for $20. Time, one week. Model of same, $15 extra.

T. D. A., Franklin, Pa.—Would it do to breed the two cockers of which I send pedigrees? Ans. Yes; we should think they might make a very good cross.

SAMLET.—In making a fish-pond, do not attempt to clean the bottom, but leave the vegetable matter as it is. It harbors food for the fish.

ZWARF, Bath, N. S.—We cannot trace any of the pedigrees you want, and would suggest that you write to the owners. We can furnish you their addresses.

J. M. H., Yonkers—The charge for a 12 gauge gun is 3 1-3 dr. powder and 1 1-3oz. shot. The different brands of powder are adapted to different kinds of game.

H. M. G., Philadelphia.—Please tell me whether a setter bitch named Flora, owned by John Bentler, of this city, received a medal in the last dog show held here. Ans. No; a bitch named Flora was entered by Robert Mulready, but received no award.

E. H., New Orleans.—Have not heard of paper masts being used as yet, though it may come to that before long, in view of the increasing uses to which paper is being put. Whether such spars on small craft would stand the test, is of course an open question now.

J. R., Nelsonville, Ohio.—I have a gun that cost $35; 8¼ lbs. weight, 10 gauge, and 30 inch. barrels; with 4 drams of powder, 1¼ oz. No. 8 shot, at a 30 inch. circle at 40 yards, I put in with the right barrel, 396; with the left barrel, 403 pellets. Was that a good target? Ans. Yes, excellent.

J. A. S., Pepin, Wis.—What kind of sail would you advise for a boat 14 feet long for use on Lake Pepin, pretty rough sometimes? Ans. Where the winds are shifting, with flaws, as they are liable to be on Lake Pepin, a catboat-rig is handier and far safer than a jib and mainsail, or even a sprit or leg-of-mutton.

C. O. B., Boston.—I have a Dash III. setter pup, four months old, that got scratched in one eye by a cat two months ago. The eye seems to be all right, with the exception of a white film on the sight. Is there anything that I can do for him? Ans. Blow into the eye with a quill a little powdered burnt alum.

GEORGIA, Atlanta, Ga.—1. Is it safe to use buckshot in a No. 12 breech-loading gun with choke barrels? If so, will I have a safe charge if I chamber the shot in the muzzle of the gun to find the number of shot to be placed in each layer in shell? Ans. It is safe to use buckshot in the manner described, by first chambering them in the muzzle.

E., Marlboro'.—My dog has had the distemper for a month past; is now somewhat better, but very weak, and seems to be growing weaker quite fast. What is the trouble? Will the feeding of meat do him any injury? Ans. He wants nourishment and tonics. Feed him beef or mutton broth with vegetables, and give him every day a wine glassful of codliver oil with two or three drops of wine of iron in it.

W. J. P., Hagersville.—1. Is there any difference in the shooting of two rifles, .40 cal., 70 grains powder, similar in every respect, except that one is straight-chambered and the other bottle-necked? 2. Is a 26-inch, .40 cal. barrel long enough to burn 70 grains powder? 3. Would it impair the shooting of a 12-inch, 22 cal. pocket rifle, which uses 22-cal. short cartridges, if it was chambered for 22-cal. long cartridges? Ans. 1. The preference is now given to the straight shell. 2. Yes, 3. No.

F., New York.—I have a pointer dog, two years old, who is continually nibbling, or rather snapping his front teeth together, and while so doing presses his nose against the ground or against any person near him. He has done this for a year past; and I should like, through your paper, to know the cause and remedy. Ans. The cause is local, and should be discovered by a careful examination of his jaws. Bring him to this office, and we will look at him.

G. B., New York.—1. Will you kindly inform me if my dog's tail, which is rather short, will be an obstacle to her receiving the prize, as I wish to enter her in the following show? 2. How can I get her in condition? 3. When will the next Westminster Dog Show be held? Ans. 1. No penalty is exacted for docked tails at dog shows. 2. By giving her regular exercise and proper food. Before commencing, it is well to give a couple of capsules of tar for a few days. Wash once a week and groom her coat every day. 3. Probably in April.

C. G. F., Frederick, Md.—I have a pointer dog whose tail bleeds very much when hunting, and he gets very sore on the shoulders, and the inside of his hind legs. Can the bleeding of the tail be removed by any other means than cutting off the first joint? What can I use to cure the redness and soreness off his shoulders and legs? Ans. Probably it would be difficult now to cure the soreness of the tail, and if the end was cut off after the shooting season is over, it would be healed and in firm condition for next year. Rub the sores with carbolic salve, and afterwards with vaseline.

PRECAUTION.—What kind of boots is best to wear while hunting in Florida in sections where there is danger of meeting rattlesnakes? Can those snakes bite through heavy grain-leather boots? Are rubber boots a better protection than leather, and would there be any danger of being bitten above the tops of knee-high boots? Would it be advisable in dangerous sections to wear rubber leggings over leather boots? Ans. The danger from snakes in Florida in winter is so slight that any common shooting-boot would answer. Probably the best prevention there could be taken would be to wear ankle-boots, with knee-high gaiters strapped or buttoned over woolen trousers or stockings.

G. A. J., New York.—My pet cat is troubled by a persistent tendency to throw up his food, and an equally disagreeable habit of dreuling when asleep. He is only five years old, fat and in good health, playing considerably every day, and not apparently suffering from any loss of his teeth. He has never been castrated, but rarely goes far from home, and always sleeps in a nest prepared for him at the barn. What can I do to cure him? His saliva has a disagreeable odor, but his eyes are bright, and his whole demeanor very affectionate and gentle. Ans. The trouble is due to over-feeding. His diet should be changed, and consist of as little meat as possible. Some catnip should be procured for him. A small dose of some aperient would not hurt him.

A. L. P., Albany.—My rough coat dog has some skin disease which causes him to bite and scratch off hair and skin until sores appear. Seems to be in good condition otherwise. The itching is so intense as to cause him to howl and cry. Is very large, weighing 140 lbs. The smell from him is intolerable. I feed him boiled Indian meal, a little cooked meat and potatoes, and have for a couple of weeks been giving him Fowler's solution, arsenic, eight to ten drops daily. Ans. Wash the dog thoroughly with warm water and soft soap, and after drying apply the following ointment:—Sulphur sub., 8 ozs.; whale oil, 8 ozs.; oil of tar, 4 oz.; ung. hydrarg., ½ oz. Wash off and repeat in three days, and again after the same interval, if necessary. Give the Fowler's solution in the quantity named twice a day. It would be well to shave the dog.

T. W. B., Montreal.—I am desirous of building a sharpie yacht, about sixteen feet over all, and as I am a novice I do not know the proper breath of beam, length of keel, size of centre-board, etc. Would you let me know the proper dimensions, size of sail (cat-rig), mast, boom, gaff, etc. Ans. Sharpies being narrow, should be longer than other boats to get accommodation or service out of them. Would recommmend 20 or 24 feet long in preference to only 16 feet. For sharpie 24 feet long give 6 feet 6 inches beam. She will draw only a few inches of water when complete. They have no keel, the bottom being of three-quarter inch boards, nailed across the sides. Round the latter up for the after third of their length. Step mast four feet from bow. Boom, 19 feet long; hoist, 15 feet; gaff, 10 feet. See back numbers of FOREST AND STREAM. For shorter sharpie increase the proportion of beam.

W. D. W., Philadelphia.—I have a water spaniel troubled with rheumatism in the loins and hind-quarters. He is four years old; in good health otherwise, well housed, and fed principally on vegetable food; has plenty of exercise. It does not come from exposure. Can you prescribe any treatment? It is of two years' standing. He is extremely sensitive to the touch in the parts affected, and suffers much pain. Ans. Stonehenge recommends the following somewhat empirical remedy as the most reliable he knows: Score a red herring with a knife, and well rub in two drachms of nitre; give every morning on an empty stomach, and keep the dog without food for two hours after. At night give a drachm of camphor made in a ball. If the dog will not eat the herring, it may be mixed with broth. Another remedy is carbonate of ammonia, three to five grains, to be given two or three times daily. Hand-rubbing and an embrocation of turpentine and ammonia will be found beneficial.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY,

—AT—

No. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpariel type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

***Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, NOVEMBER 27, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Thanksgiving.

THE most brilliant politician never conceived the idea of making the Annual Thanksgiving Proclamation a party issue; for it was never urged against the most sordid and morose candidate for the gubernatorial chair, that having no good cheer in his own heart he might refuse to set apart this day of kindly sentiment, when chill November should have succeeded the rich October days. And what eternal obloquy would follow His Excellency who should forget to call upon the people to give thanks! For in New England, particularly, this Thursday in November is the one season of the year for the gathering of the sons and daughters and grandsons and grand-daughters, cousins and uncles and brothers-in-law, and the whole family tribe, back to the old homestead. The day is one of tender memories. As one Thanksgiving succeeds another, some old places about the family board become vacant, or are filled by new faces; and with the joy and merriment of the day mingles oft-times the tender regret and the longing for one look from the dear eyes now closed forever. The Thanksgiving Day festival is like a wayside inn, where the travellers pause in their pilgrimages, rehearse the incidents of the way, and take heart for the toil before them.

We have already spoken of the change in the mode of celebrating our holiday festivals. They are losing, in large measure, their religious character, and are being merged into seasons of sport. This day especially is looked forward to by sportsmen as a field holiday, and to-day the fields are resounding with the report of shot gun and rifle. Its place in the calendar gives to this November anniversary advantages as a field-day over all the others which are recognized in our American year.

There is a sensible invigoration in the air; it quickens the step and expands the soul. The man who takes this one day from his business to get a sniff of fresh air, a look at the country, and mayhap, a bird for his bag is a better man ten times over when he comes homes tired and hungry, but thankful.

Sometimes people express a natural surprise at the large circulation of the FOREST AND STREAM, a "sportsmen's" paper; they did not known there were so many sportsmen. Ask them what they mean by that term, and they are at a loss. Sportsmen is to them vaguely an idle fellow, who shoots and fishes and lounges around the village tavern, smokes a huge pipe incessantly, and drinks between times. Did these people only see the letter-heads which come to us, under which are written correspondence for every part of the paper, they would soon alter their notions about the American Sportsman. They would find here a busy lawyer, snatching a moment from his briefs to put in a rejoinder to that fellow who wrote about penetration last week, a clergymen leaving his sermon to dabble in a game law controversy, a physician scribbling a game note on the way to his patient, merchants who stick to their counter fifty-one and one-half weeks in the year, and go off shooting the rest of the time, and the busy, hard-working men of every trade and profession who accomplish the work of the world. These are the American sportsmen, to whom a holiday in the fields means respite from toil and care. Would it not be an excellent plan for one of our political parties to nominate a governor who will give two Thanksgivings? Every sportsman without distinction of other political belief, will "scratch" the regular ticket in favor of that man.

DURATION OF LIFE IN ANIMALS.

AT the recent meeting of the British Sanitary Congress, held at Croydon, an interesting address was delivered by the President, Dr. B. W. Richardson, F.R.S., who, under the title "Salutland," sketched an ideal country, polity, and people. This fancy sketch reminds one in its general plan somewhat of the "Frankville" of Dr. Sarrasen, one of the most recent of the many absurdities from the pen of Jules Verne, but, while of course wholly imaginary, it points out what improvements the race may reasonably hope to make during the next two or three centuries, and draws a pleasant picture of the possible condition of things at the end of that time.

In the introduction to his sketch, Dr. Richardson referred to the ordinary age to which man attained, and mentioned in this connection a number of facts respecting the duration of life in some animals, which have been brought to light mainly by Flourens and Owens. The latter has shown in a recent paper in the *Geological Magazine* that the average life of the hippotamus is thirty years. This fact was arrived at by taking into consideration the dentition of the animal, the age at which the teeth are renewed, and their natural wearing out, the period of gestation, the development of the skeleton, particularly with reference to the age at which the epiphyses become firmly united to the shafts of the bones; and lastly, the pathological condition of an animal that has reached full longevity, to discover whether death was attributable to disease in any particular organ, or merely to a general decay and breaking down of the system from old age alone. In the hippopotamus which died not very long ago in the Zoölogical Gardens in London, and which was known to have passed the age of thirty, Prof. Owen found that the teeth were much worn down, that all the bones of the skeleton were consolidated, and that all the organs of the body were equally degenerated, so that death occurred not from the weakness or disease of any particular organ, but from the general giving way of all the parts. He therefore concluded that the term of life of this species was to be set at thirty years, a conclusion which agrees with all the facts known in respect to this animal.

An animal may be considered as fully mature when the skeleton is perfected; that is, when the epiphyses, or loose terminal portions of the bones, are firmly united with their shafts; and Flourens has laid down the law that the natural term of life of any animal is five times the period which precedes perfected maturity. So that, when we know the age at which any mammal becomes mature, it is easy to calculate the age to which it may attain. On this basis the elephant, which becomes mature at a little past thirty, should live to be more than one hundred one fifty years old; the camel, mature at eight, has reached full life at forty; the horse, mature at five, reaches full life at twenty five; the lion and the ox should live twenty years; the dog at least ten; the cat, seven and a half; the rabbit, five.

Now, on this basis, it is evident that man, who is mature at twenty, or soon after, should live one hundred years; and Dr. Richardson, in view of the facts briefly summarised above, is led to conclude "that man, even in this stage of his probation on the planet, is naturally destined to walk upon it, endowed with sensibilities of life and intelligence, for a period of one hundred years, and that until he realizes this destiny practically, he is in value of physical life actually degraded far below his earth-mates, whom he designates as the brute creation, and over whom he presumes to exercise his, to them, almighty will."

It appears then, if these calculations are to be trusted, that man dies when he has lived only to the beginning o the second third of the natural term of his life. It is as if the elephant were to die at sixty, the camel at sixteen, the horse at ten, the dog at four, and the rabbit at two. It is true that we sometimes see a case where a man really does live out his full life; but how rare it is, and how we wonder at it! Man is, in truth, reckless of life, and gives it up early and easily.

And what is the remedy for this brevity of life? Must man continue to perish just as he has reached his full powers, and has succeeded in storing his mind with knowledge and experience of the highest value to his fellows? Is there no remedy for the state of things to which we have called attention? These are questions for the sanitarians to answer; but as yet we look in vain for a reply.

RECENT FACTS ABOUT ANÆSTHETICS.—The third report on the action of anæsthetics to the Scientific Grants Committee of the British Medical Association has been made recently, the report embracing the results of investigating the condition of the blood pressure in animals under the influence of chloroform, ethidine and ether. The experiments, which were made upon rabbits and dogs, seem to have been performed with great care, and give rise to the following conclusions: Ether, when administered to animals, has no appreciable effect in reducing blood pressure; chloroform and ethidine have a decided effect in that direction. Chloroform has sometimes an unexpected and apparently capricious effect on the heart's action. The occurrence of these sudden and unlooked-for effects is a source of serious danger, because the blood pressure is with great rapidity reduced to almost zero, while the pulsations are greatly retarded or even stopped. By ethidine the reduction of blood pressure is not, so far as has been observed, through sudden and unexpected depressions. Chloroform may cause death by primarily paralyzing either the heart or the respiration. Although not free from danger on the side of the heart and the respiration, ethidine is in a very high degree safer than chloroform, inasmuch as the former does not compromise the heart as does the latter. A legitimate deduction from the facts given is that ether is by far the safest of the three anæsthetics used, and that ethidine is much safer than chloroform and equally efficient.

A MILLIONAIRE'S AVIARY.—Peter Goelet died last week. Peter Goelet was worth all the way from $12,000,000 to $20,000,000—we would be satisfied ourselves with the lower estimate. He thought a great deal of his money; so much that he never spent a cent when he could save it. We couldn't begin to tell how much real estate in New York belonged to him; it was a principle of his life never to sell an inch of land once in the possession of the Goelet family. He lived alone in a house on Broadway, just above Madison Square. The dwelling stood apart in a large yard in the midst of stores and business houses, and the Broadway passers used to stop to peep through the iron railing at Peter Goelet's companions. Theee were pheasants from India, storks from Egypt, Guinea fowls and rare birds from all over the world. A magnificent milch cow contentedly chewed her cud and reigned over the enclosure. In winter the cow was housed in a barn back of the house, and the birds were safely sheltered in the upper chambers of the house and fed from the hand of Peter Goelet, late millionaire poultry fancier, now gathered to his fathers. N. B.—When a man is gathered to his fathers, his money is gathered to his children.

GUNS AND TELEPHONES.—The sportsman is always ahead. He is the man who puts into best uses the latest invention of the age. Here is an incident showing this. Mr. Robert A. Packer, the Superintendent of the Pennsylvania Railroad, has been hunting with a party of friends in far-away Nebraska. A few days ago he sat in the telegraph office at North Bend in that State, and talked for two hours with his wife and friends at Saye, Pa., two thousand miles distant. The telephone connection was made by the railroad and Western Union wires—North Bend to Chicago, thence to Perth Amboy, N. J., to Easton, Bethlehem and Sayre, Pa. We are living in a wonderful age.

SPRINGFIELD ROD AND GUN CLUB.—Enclosing us a bill of fare of their sixth annual dinner, E. H. Lathrop, Esq., the President of the Rod and Gun Club of Springfield, Mass., says: "You see, we still keep it up." If by that is meant that at the date of the letter (Nov. 21st), the club were still making merry around the board, which, according to the bill, was spread Nov. 18th, we are of the opinion that they *are* still keeping it up, and our advice to them is to let it down again.

By the way, the Japanese style of illustration now so much in vogue serves admirably for sportsmen's bills of fare. The one now before us has numerous designs, all as *apropos* as if engraved specially for the occasion.

NEW YEAR'S PRESENTS FOR SPORTSMEN.—Any new subscribers sending us $4 by January 1st will receive the FOREST AND STREAM for the thirteen months from date to January, 1881. Parents cannot give their sons (and daughters, too; see our Women's Column) a more useful and entertaining holiday present than a year's subscription to this journal. It teaches the young idea how to shoot and gives general information on all subjects relating to field sports and natural history.

—Six hundred years ago in England a pheasant cost about as much in the market as did a fat lamb. Now the market quotations show a great difference, but we have known men to spend as much money to secure one poor bird as would buy a half dozen sheep.

OUR CANDLE'S FEEBLE RAY.—A Massachusetts man had some boys' tool-chests to sell. He advertised them. In reply to the notices inserted in one Boston paper, which claims to have 140,000 subscribers, he received scores of replies. But he didn't sell a solitary tool-chest. With all his other advertising he did not dispose of a single one. In our "Answers to Correspondents" we once happened to casually mention this man and his tool-chest. Now to the time required by the FOREST AND STREAM to go to a town in the hill country of North Carolina, add the time required by a letter to go from that same town to Springfield, Mass., and you have the time elapsing between the appearance of that notice in our Answers and the sale of the first tool-chest by the Massachusetts man. This is not an unusual case either. Here is another one, and there are hundreds more of them:—

Editor Forest and Stream:

To "T. H." Boston, you say: "You are one of the half-dozen men who, of all those we reply to in our answers in the course of a year, remember to thank us for our pains." Now I am ashamed to say I am one of the guilty. But I must now give my best thanks for the answers I have received to two or three questions. I can say I have derived much valuable assistance from that modest column. In one case I asked for names of works relating to one of your States, and, in addition to your reply, I received from many publishers and other gentlemen in New York much valuable information, advice, papers, catalogues, maps, &c., all extremely useful to me: and all this I got from one small question addressed to your paper. The information I received on that one subject was fully worth to me the cost of a year's subscription. HEMLOCK.

The Rifle.

MASSACHUSETTS.—*Boston, Nov. 14th.*—The third annual long-range match, between teams of five from the Massachusetts Rifle Association and the Walpole rifle club took place to-day at Walnut Hill. The shooting, by both teams, and at all the ranges, was of a very high standard of excellence. The average, for both teams was 208 4-5 per man. Messrs. Brown and Washburn lead their respective teams, the former with 218 and the latter with 216, for the three distances; Mr. Brown further distinguishing himself by going back to 1,000 yards with 150, a clean score, thirty bull's-eyes in succession, to his credit, being the first time that both the 800 and 900-yard ranges have been captured together by a rifleman. The weather favored the sport, not affording much trouble to the marksmen. The light was good, and the wind, ranging from "7 o'clock," at the opening of the match, to six, near the close, was quite easily managed throughout the day. The result of the match, the third defeat the Walpoles have suffered, though in neither case have they had reason to feel ashamed of their efforts, is as follows, the competition having been governed by the usual rules for long-range contests:—

MASSACHUSETTS RIFLE ASSOCIATION.

Difference in favor of the M. R. A.															20

At the conclusion of the firing at 800 yards, lunch was had in the "winter shed" at the range, and, after the marksmen had arrived in town, a dinner was partaken of at "Jossler's," tendered by the Massachusetts Association to the visiting team.

Springfield, Nov. 15th.—This fall field-day of the Springfield Rod and Gun Club was a pleasant and successful affair, and the crack of rifles was heard from the West Springfield range, behind the Beldon House, all day long. The contests were all at 200 yards, off-hand. In the open-to-all match there were nearly fifty entries, for nine prizes, and the winners were: Bumstead, 33; Charles, 32; Law, 32; Hull, 32; Barrett, 31; Chapin, 31; Matthewson, 31; Bradford, 31; Kniel, 30. In the amateur match Chapin took first and Branford second prize. The team match for $25 was won by the first amateur team, a miss of the target in the final shot of one of the Rod and Gun's losing them first place. The teams and their scores were:—

First Amateur Team.—Charles, 48; Law, 39; Lock, 38; Wilson, 40; total, 165.

No. 1 Rod and Gun.—Bumstead, 45; Barrett, 44; Matthewson, 43; Van Vlack, 33; total, 165.

No. 2 Rod and Gun.—Mayott, 43; Chapin, 44; Dedrick, 39; Bradford, 37; total, 163.

Maynard.—Garner, 39; Horr, 41; Conkey, 39; Lamotte, 39; total, 158.

Second Amateur.—Bull, 41; Hull, 41; Birnie, 37; Richard, 31; total, 150.

—In the Mammoth Gallery shooting at Boston, J. O. Mattoon made eight consecutive bull's-eyes, and pocketed the $20 in gold, which is a standing prize for the doer of that feat over the 150 feet range.

Medford, Nov. 21st.—The Raymond Sportsman's Club held its usual competition at Bellevue Range to-day. The weather conditions were exceedingly unfavorable, both for glass-ball and rifle shooting, though Mr. O. F. Belcher succeeded in making a clean score in the glass-ball match, the result of which is as follows:—

	Single Trap.	*Double Trap.*	*Rotary Trap.*
O. F. Belcher	10	10	10—30
W. B. Witherell	9	9	10—28
W. Charles	10	7	8—25
J. B. Smith	9	6	9 24
F. Butler	4	6	8—18

Mr. J. F. R. Schaeffer heads the list of riflemen with the fine score of 44 out of a possible 50 at 200 yards. The result of the rifle match is appended:—

J. F. R. Shaefer	4	4	4	4	5	5	5	4	5	4—44
E. James	4	4	5	4	4	5	4	4	4	5—43
J. R. Tille	4	4	4	4	4	4	4	5	4	5—42
E. Bennett	5	4	4	4	4	4	4	4	4	5—42
C. M. Gureth	4	4	4	4	5	4	5	4	4	4—42
J. C. Smith	5	5	4	4	5	4	3	3	4	4—41
C. P. Gleason	4	4	4	4	3	4	3	4	3	5—38

A meeting of the Raymond Sportsman's Club occurs at Bellevue Range Thanksgiving Day, when the final competition in the handicap subscription glass-ball and rifle matches will take place.

Hopkinton, Nov. 18th.—At the pistol practice of a squad in town styled "The Vagabonds," last week, the following good scores, at six rods, were made:—

R. Walton	4 5 5 5 5—24	W. W. Smith	4 3 5 3 5—20
J. Gregory	5 4 4 5 5—23		

—The Rifle Club held a match at their range at Claflin's grove Nov. 15th. It was a perfect day, the air being as warm and balmy as in September. The sky was overcast with light, fleecy clouds which obscured the sun, giving that peculiar gray light so much desired by riflemen and so favorable for good scores. The wind was gusty, indicating 8 o'clock on the dial. There was a larger attendance than usual of both visitors and riflemen. The conditions were 200 yards, off-hand, 15 rounds. The best scores are:—

C. A. Sumner	4	4	4	4	3	5	3	4	4	4	5	4	4	4	—60
N. Jewell	4	3	4	4	3	4	4	5	4	4	4	4	3	3	—57
D. Dorchester	3	4	3	4	5	4	3	5	4	4	3	4	4	2	5—57
J. M. Webb	4	3	0	4	4	4	4	3	5	4	3	4	3	4	3—52
Owen Wood	4	3	5	3	4	4	4	4	3	3	3	4	4	3	—55
P. W. Smith	3	4	3	4	4	3	4	3	5	4	3	4	4	3	—55
W. B. Claflin	4	3	3	3	4	4	3	3	4	4	4	4	3	8	4—54
O. H. Smith	3	4	4	2	4	4	3	3	4	2	3	3	4	4	3—50

MAMMOTH RIFLE GALLERY.—*Boston, Nov. 22d.*—The regular monthly prize shoot is progressing finely, some very brilliant shooting being done last week. Mr. J. O. Mattoon was successful in getting the extra prize of $20 for a clean score of eight consecutive bull's-eyes; but the management still pay $20 for any one who will make a score of eight consecutive bull's-eyes. The following is the score—150 feet; rounds, 8; possible 40:—

J. O. Mattoon	5	5	5	5	5	5	5	—40
E. Whittier	5	4	5	5	5	5	5	—39
H. A. Pickering	5	4	5	5	5	5	5	—39
E. F. Richardson	5	5	5	4	5	5	5	—39
T. A. Pollard	5	5	5	4	5	4	5	—38
C. Edwards	5	4	4	5	5	5	5	—38
T. D. Parker	5	5	4	4	5	5	5	—38
A. L. Eames	5	5	5	4	4	5	5	—38

Boston, Nov. 22d.—Pleasant weather greeted the riflemen at Walnut Hill, and the two matches of the day, the "silverware" competition and the November "amateur series," had quite numerous contestants. The atmosphere and temperature at the range was almost perfect; the light was excellent, and the wind so gentle, that it scarcely stirred the flags. Mr. C. R. Griffing in the "Amateur Series," scored 41 in his ten shots at 200 yards. The best scores in the "silverware" match, at 200 and 300 yards, are given as follows:—

SILVERWARE MATCH, 200 YARDS.

E. B. Souther	4	5	5	4	5	5	—33
E. F. Richardson	5	5	4	4	5	5	—33
C. R. Griffing	5	5	4	4	5	5	—33
J. Nichols	5	4	4	5	4	4	—31

300 YARDS.

E. F. Richardson	4	5	5	4	4	4	—30
E. B. Souther	4	4	4	4	5	4	—29
C. R. Griffing	3	5	4	4	4	4	5—29

The next competition in this match will occur on Thanksgiving Day, at Walnut Hill. The "amateur series" will be contested at the same time, and glass-ball and turkey shoots will vary the monotony of the occasion. The attractive programme provided for the day's sport will form a "fitting *finale* for the two day's shooting, with rifle and shot gun announced at the same range, to immediately precede it.

Wakefield, Nov. 22d.—The Wakefield Amateur Rifle Association have completed a new winter shed at their range, and Thanksgiving Day there will be a series of contests, lasting all day. In to-day's competition the following results were obtained at 200 yards:

FIRST CLASS.

Roger Howard	5	5	5	5	4	4	4—32		
	3	5	5	4	4	4	5—32	}	65
	5	4	4	4	5	4	5—31		
D. H. Walker	4	4	4	5	5	5	4—31		
	4	5	4	5	4	4	4—30	}	61
	4	4	4	5	4	4	5—31		

SECOND CLASS.

W. L. Cook	5	4	5	4	4	4	5—31		
	4	4	5	4	5	4	4—30	}	60
	4	4	4	4	5	4	4—29		
F. Winship	4	4	4	4	4	5	5—30		
	5	4	4	4	4	4	4—29	}	58
	4	4	4	4	4	4	5—29		

The rifle match, which was to have taken place Saturday at this range between the Roxbury City Guard and the Richardson Light Guard, was postponed on account of the non-appearance of the former team.

CONNECTICUT.—*Collinsville, Nov. 19th.*—Canton Rod and Gun Club; practice meeting at 200 yards, off-hand; three pounds pull; 10 shots. Very dark weather:—

											Mass.	*Creed.*
Fancher	9	10	7	10	10	12	10	9	11	10—	98	42
Andrews	12	12	9		11	11	8	10	10	6	10—	97	42
Hillwell	9	10	12	7	10	9	9	8	11	9—	94	43
Hull	10	10	6	10	10	12	8	5	9	11—	91	40
Lewis	10	5	10	5	10	12	9	7	9	11—	89	41
Laubenstein	7	8	11	7	12	7	10	7	9	7—	85	42
Case	6	11	9	8	10	9	7	11	7	8—	86	41

We notice the remarks of your correspondent "Drury" in regard to the ungraceful hip rest. It certainly is an unhandsome way of shooting, and of no advantage to the shooter, unless he is housed from bad weather. The Canton Club, with one or two exceptions, have discarded it for a year or more, and, as a consequence, shoot more quickly at the stand, look better, feel better, and do as well on the target as before. Z.

SCHUETZEN NOTES.—The Jersey Schuetzen Corps held their annual meeting last week at Hoboken and elected the following officers to serve for the next year:—John Horsmann, Captain, after Captain A. Ermisch declining to serve any longer as such; A. Appel, Recording Secretary; F. Schumann, jr., Financial Secretary; F. Hansen, Treasurer; John Gleistein, Custodian; John Raschen and J. Dehmke, Shooting Masters. The newly elected Captain is no greenhorn, as he used to be the First Captain and Starter of the company sixteen years ago.

—The Baltimore Target Shooting Rifle Association, 1,400 men strong, also elected their officers as follows:—Ed. Gronan, President; A. Martini, Vice-President; F. Hasselhorst and Chas. Steuth, Shooting Masters; Jos. Letzer and E. Buschmann, Secretaries; Chas. N. Oehm, Treasurer; Herm. Spanhake, Gebh. Leimbach, Fred. Brandan, Henry Quast, and Philip Walter, Directors.

Game Bag and Gun.

GAME IN SEASON FOR DECEMBER.

Moose, *Alce Americana.*
Caribou, *Rangifer caribou.*
Elk or wapiti, *Cervus canadensis.*
Red or Va. deer, *C. virginianus.*
Squirrels, red, black and gray.
Hares, brown and gray.
Wild turkey, *Meleagris gallopavo.*
Pinnated grouse or prairie chickens, *Cupidonia cupido.*
Ruffed grouse or pheasant, *Bonasa umbellus.*
Quail or partridge, *Ortyx virginianus.*
Woodcock, *Philohela minor.*

Swans, Brant, Wild Ducks, Geese, &c.

☞This table does not apply to all the States. It is meant to represent the game which is generally in season at this time. State regulations may prohibit the killing of some species of game here mentioned.

NEW JERSEY STATE SPORTSMEN'S ASSOCIATION.—An adjourned meeting of the New Jersey State Sportsmen's Association was held at the rooms of the Jersey City Heights Gun Club, on Thursday the 20th inst., President Eaton in the chair. Congratulatory speeches were made over the success of the tournament by the President, Dr. Bird, Messrs. Geiger, Von Lengerke, and others. After a full exchange of opinion, by vote the meeting was adjourned until 1 P. M., January 8th, at the same place, when the election of officers for the ensuing year and the appointment of the Committees will take place. Among the Committees to be appointed, is the very important one on the revision of the Game Laws of the State. Also the matter of giving the charge of the Tournament each year to some individual club will be discussed and settled. A full meeting of the delegates is earnestly desired.

—Captain A. H. Bogardus will probably not shoot his proposed match against six American shots. It is possible that he may go to England again next summer to shoot a series of four matches against any four Englishmen. The preparatory course of challenges has been entered upon in the New York *Herald.* It always takes a great deal of newspaper shooting to prepare the knights of the gun for their real work.

THREAD-WOUND CARTRIDGES.—*Rochester, N. Y., Nov. 21st.*—Being in Rochester for a few hours, I accepted the invitation of Dr. Rider to go out and shoot some of the thread-wound long-range shot cartridges made in this city. We fired five rounds at fifty-five yards, and five at ninety-yards, using a modified choke breech loader, paper shells, 10-guage, four drachms of powder, two pink-edge wads, No. 9—the cases held upon an average 175 pellets No. 6 shot. The poorest pattern, in a 30-inch circle, at fifty-five yards, was 134 pellets; the best 172 pellets. The average of the five targets, 154; or 88 per cent. of all the pellets in the charge. At ninety yards the poorest target on a paper, 36x40 inches, was 83 pellets; the best target, 109 pellets; average of the five, 97 pellets, or over 55 per cent. of the charge. These shells are made for fifty, seventy, and ninety yards, and must be used for the distances intended, or the results will not be satisfactory; the ninety yards' shell used for the shorter distances will make a round hole of the size of the bore of the gun. The passage of the shell through the air unwinds the threads, and the shell comes apart, permitting the shot to spread. The unwinding of the threads is the same as a time fuse; therefore the necessity of using them for their intended distances. Two first quality pink-edge wads must be put upon the powder to confine the gas, so the direction says; and they must be used as directed. Your Florida correspondent deviated from the directions (using one), and the results did not please him. In shooting these long distances, one must find from practice where his gun shoots. Remember the sights are not parallel to the bore of both barrels. One or two shots from a rest will tell where to aim to hit the object aimed at. The Doctor tells me "that it is not best to have too much choke in the barrel using these shells." In duck shooting these shells will help a man's bag wonderfully.

W. H. JACKSON.

HUNTING THE BIG HORN.

THE subjoined sketch, which is fresh from the pen of an experienced Black Hills hunter, vividly delineates the almost inaccessible character of the country where the mountain sheep resort, and the difficulties and hardship of their pursuit. It is the first account we have ever read from such a source; that is, coming from one who has "been thar," and writes his experiences in the mountain vernacular. The writer is "Texas Jack."

Some distance further back in the mountains we struck a rough region and came to a high peak called Old Baldy. I had never seen Baldy before, and I never want to see him again. We camped near the foot of the hill, and I proposed to climb on top and see what it looked like. None of the party seemed disposed to tackle him, so I shouldered Kate (a favorite rifle) early next morning and started up alone. It was a long, hard climb, and when I got on top I found out what it looked like—a dead jump-off of some fifteen hundred feet! that's just what it was on the other side. As it wouldn't be healthy to go further in that direction I concluded to lay there and gaze on the valley and scenes below (a long way below, I found out afterwards). It wasn't such a bad lay-out after all, provided a fellow was fond of looking over a heap of country at one time. Eventually I discovered a small band of sheep grazing by a little lake in the valley. They seemed almost straight down from where I lay, but how to get at them was something else. I meant to try it on anyway, so crawled along the edge of the precipice for a long ways, going down many rough, steep places, until I came to the lowest gap there was, and it looked mighty scaly, some eighteen or twenty feet nearly straight down; but there was snow to light on. I could get down, perhaps, but not up there again that I knew of. It was a go, any way, so I reached Kate out clear of the rocks and let her drop. She struck, but foremost, turned over and started down the snowbank; at first slow, but she soon went out of sight some two hundred yards away, going at the rate of about a mile a minute. Next *I* came, but not to go coasting with Kate, for I struck square on my boot heels and stuck fast. It was kind of an edging job from there down. The snow was a little harder than I had counted on, and I had to stamp several times before I could get hold enough to risk taking up the other foot. It was no nice place to play sliding down the hill, all by myself, especially when I didn't know exactly about where I was agoing to haul up. At last I came on to Kate. She was lodged up against some loose rock at the end of the snowbank, and no bones broke. I now hurried on, sure of a sheep, but I felt sheepish enough when I found they were at least a mile further than I had calculated, and before I reached the place they had moved camp and were asleep perhaps somewhere up in the rocks.

The next thing was to get back to where I had started from. I thought it all over, and decided to try it round the other side of old Baldy, thinking it would be a better chance to scale the ridge; but how much I was mistaken—I can't tell you how much, just here, but it was the roughest place on earth, except one, and I don't think anybody has ever found that one. It looked easy enough when I started in, but before I got out—wait till I tell you. The farther I went along the mountain-side the worse it got, and more of it, until I came to a point where I could see neither bottom nor top! I was just sticking up among the stones like something that had growed there! I had but one chance to go ahead, and that was to jump down off the rock, some ten feet. If I did that I should have no chance at all to go back. It is strange how a fellow will press forward when he gets into trouble, though he may know it will take him deeper and deeper into it. I dropped Kate first; then swung myself down. I had but a few feet to drop, but that rolling business was what worried me the most. I struck all right. There was some earth and small timber ahead, and I was hurrying along as fast as possible, when all of a sudden the rocks commenced rolling down all around me. Looking up, I caught sight of an old ewe's head and neck stuck out over the rock some two hundred feet above me. Up went Kate and down came the ewe clear over my head, and lodged against some fir bushes quite a distance below. I crawled down and took off a quarter. I was pretty tired, but had rather pack meat than go hungry. I had already made some calculations on doing like a dog on a deer hunt—eat and drink nothing, and lay out that night. After a good deal of hard climbing, nearly straight up, I reached the top of the ridge, or backbone, as we call it. One step would put me on the descent either way. I sat Kate down, straddled the rock, and dropped into meditation for a moment. It was a strange scene; the sun had long since gone behind the mountain, and that peculiar yellowish green light (such, I believe, can be seen in no other part of the world,) shone over the sky; that is, what I could see of it for the high peaks around. Not a sound to be heard, save the faint roar of the torrents far down in the deep dark hollows below! I looked to Kate, my only companion. Thinks I, "old girl, this ain't no good place to be in; if I drop to sleep and tumble off this rock I shan't wake up much before Gabriel toots his horn." These thoughts put me astir! I hastily gathered up my little outfit and struck down the mountain; I was in for it now. The further down I went the rougher it got, more the ledges, and the greater distance I had to drop from one to the other. I got kind of desperate, and hardly stopped to look for a better place—just peep over, drop Kate, (always but foremost) then the sheep, and I would follow. Darkness was gathering fast, the weather was turning cold; I was nearing the valley and hope began to brighten a little, when I came to a dead sticker. It was the last ledge! All below was loose stone that slanted away to the cañon below. I looked over—no use talking—over fifty feet in the clear; no pair of legs in America could jump down there and ever come out with a whole bone in them. I scrambled along the ledge some distance one way; it got worse! Tried it the other, and found but one chance, and that a mighty slim one. It was where the water had cut a narrow crevice through the main ledge. If I could only hold on, it would take me within a reasonable distance of the loose stones below. It beat no chance at all; so over went Kate, meat next, and I commenced my descent bear fashion, (tail foremost, of course, the same as I do everything) holding on in any way, or to anything that was fast, as long as there was anything, and then I went about half as far as I expected and hit twice as hard as I ought to. The loose stones began to slide, and away went me, Kate, sheep, stones, and all, some twenty yards down the hill. It was quite dark now, but I managed, by feeling around, to find Kate and the sheep, and rustled off up the hollow, through the darkness and over the rocks, with a few tumbles and skinned shins.

I reached camp, that is, where camp ought to be; but it wasn't there. Although it was very dark, I knew I was within a few steps of the right place, and there I stood, dumfounded for a moment, thinking to myself, if this is not me, who in thunder can it be? I knew *I* was not lost; the camp must be lost. Presently I saw a little spark, and crawling under some logs came on to a heap of smouldering embers, the only sign of human existence. I gave the coals a kick, and a dim light glared around that made the old white logs loom up like so many ghosts. Whilst gathering some brush forty different imaginations rattled through my brain. Indians? I thought first; somebody shot accidently, or fell off the rocks and broke a leg; horses stampeded; everything; until I got a big light, when all was explained. Right over the fire hung a big flask half full of the best!—with a note attached saying, "Come into the river, party started at 3 P. M." Old Whity, my pony that was tied to a tree near by and had been quiet all this time, now began to snort and tear around as much as to say, "get that saddle and outfit on here, and let's be off," and you bet I did, and was off in a hurry, and did't forget the flask either. Whity took a near cut, and Kate took her chances along with me, through the thick timbers, up and down the steep rocks. Which ever way we went I don't know, (as I was very busy settling up with the flask,) but I do know that I was the first in to Bartler's Ranche on the Yellow Stone River, some eighteen miles from where we had been camped.

SPORT ABOUT NEWARK.—Newark, N. J., has so many sportsmen, young and old, that the editors of the weekly paper there always devote a certain amount of their space to shooting and fishing notes. The *Call* thus sums up the facilities for sport in the vicinity:—

"In the spring all the meadows lying on either side of the Passaic River in Essex and Morris Counties are favorite feeding-ground for snipe and many varieties of wild ducks, and have been well known and patronized by Newark gunners ever since the time when Frank Forester lived at The Ceders and frequently drove to Pine Brook for a day's shooting. And in July the thickets in the same vicinity are well beaten for woodcock; but as these birds are found in almost every swamp at that season of the year, it would be useless to particularize any one locality. The Passaic below Chatham and all its tributary streams furnish good woodcock shooting occasionally,

though seldom enough to make a trip for this especial purpose advisable. Grey squirrels are found in almost every large woods in Essex and the adjacent counties in small numbers, and afford excellent practice for the small-bore rifle. Bay-birds haunt almost every salt marsh along the coast, and at one time made the Elizabeth meadows a favorite gunning-place, but the condition of the soil has been so altered by railroad enterprises and drainage schemes that the birds have almost entirely forsaken it. A few years ago a noted gunner named King frequented a scald near Brinton Range, and often made bags of from 50 to 200 birds in a day, and the struggle for bough-houses was so sharp that many would occupy them all night to secure them for the next day.

"The fall shooting for quails, rabbits, partridges and woodcock is not confined to any particular localities, but every county in the vicinity receives its quota of Newark visitors, and none come home without a fair display of game. The Delaware, Lackawanna and Western Road takes out many parties, and scatters them along the route at almost every station from Millburn to Phillipsburg, most of them getting off in Morris County, though those who choose Sussex generally have the greatest sport. The Pennsylvania and New Jersey Central Roads both pass through splendid shooting-grounds, and carry from this city many lovers of the dog and gun, who are set down at various spots within twenty or thirty miles from this city, and are picked up again in the evening with a good share of the game which has escaped the traps and snares of the farmers.

"Among the prominent sportsmen and owners of fine dogs in Newark are Dr. Robinson, Mr. A. P. Baldwin, W. R. Hobart, R. H. Brientnall, Ebenezer Green, W. and W. B. Durand, Charles Heath, Jacob Pentz, Dr. Pindell, J. R. Burnett, N. J. Demarest, C. Williger od, Joseph Baldwin, James A. Hedden, A. Van Volkenberg, Inslee A. Hopper, Frank B. Allen, E. P. Ward, W. W. Byington, Viner Hedden, James Peck, Charles Leroy, E. F. Baldwin, C. C. Currier, George Roubaud, W. F. Quinby, Albert Darling, Jacob Decker, Samuel Streit, E. F. Beck, and a host of others too numerous for these columns.

"Perth Amboy, Prince's Bay, the Central bridge and Canarsee are the favorite fishing-places frequented by Newarkers, and the worthy anglers of the city contain among their number Asa Whitehead, Horace Freeman, Dr. Dutcher, Dr. Andrews, George Watson, James M. Durand, H. M. Mason, Thomas Austin, Theodore Morrell, E. P. Ward, Wallace Durand, Harry Smith, G. A. Wiedenmayer, Joseph H. Wright, W. N. Swezey, with four or five thousand others whose names escape our memory at present writing.

"The local opportunities for fishing are as fine as could be found in any section of the country, and the variety of the fish is no doubt as extensive as any place in the world can show. Of anglers we have a host, who all delight in communing with nature through the medium of a 'stick and a string.' Within easy reach of the city, trout, black-bass, yellow perch, big pickerel and countless smaller varieties of fish can be caught, and river and sea-fishing of every description can be reached in an hour or two by any one who prefers it. Striped bass, weakfish, bluefish, blackfish and the vulgar porgy all helped to divert the hard-worked business man or mechanic in his hours of relaxation; and many are the Newarkers who take advantage of our easy communication with salt waters to spend a day on the bridges or in open boat, enjoying the delights of capturing a mess of fish."

SHOOTING IN NEW BRUNSWICK.—*St. John, N. B., Nov. 18th.—Editor Forest and Stream:*—As you are doubtless aware, by inexorable decree of the weather's clerk the shooting season in this northern province of New Brunswick generally closes about the first of November. Thenceforward, if any hardy sportsman indulges in his favorite pastime, he does it with tingling fingers and nose reddened by cold.

Taken as a whole, the season has been one of unusual brilliancy, and our crack shots have had better sport and more of it than usually falls to their lot. Various game birds have abounded, and in the vicinity of this city—say, within a distance of seven or eight miles—woodcock have been unexpectedly plentiful, but sportsmen who have ventured further away to the vicinity of the Loch Lomond lakes or along the banks of Garnett's Creek, have also returned with large bags as rewards for their increased exertions.

Including a very few sportsmen from out-of-town, and numbering in all not more than a dozen guns, I think it would be within the mark to state that not less than six hundred woodcock have been killed by our sportsmen during the season which has just closed. It will be readily appreciated that this is pretty good work for so small a number, whose time has necessarily to be mainly devoted to the more serious matters of life, and who find little leisure from the whirl and activity of absorbing business cares.

In addition to the bags of woodcock which have been taken, a larger number of English snipe has been killed in the vicinity of St. John than has been customary for many previous years. Thanks, in part, at least, to the "discriminating laws" (which have been pretty widely attacked), the broad Sackville marshes and some of those of a similar nature along the St. John River have this year given some grand sport to those who have had leisure and opportunity to visit them. Well-filled bags have not been at all rare.

It will not be without interest in this connection if I speak briefly of the dogs, which, in my opinion, are best adapted for shooting over in this country. My own fancy and experience lead me to place in the foremost rank a strain of imported spaniels introduced by Capt. McMurdo, a retired English officer, formerly a resident of this Province, but now living in Evington, Campbell County, Va. For cock shooting this spaniel is unquestionably the best dog which I have seen in use here—going unhesitatingly and unerringly where the pointer or setter would scarcely venture. For open field shooting, such as snipe, it seems to me that it would be difficult to improve upon the spaniels, as bred and trained by Capt. McMurdo. Several of them are owned in this city, and I have had good opportuntity to observe and judge their great merits.

Capt. McMurdo still retains his interest in his spaniels, having taken his breeding dogs with him to his Southern home. His skill and enthusiasm for his pet breed will, no doubt, achieve success in introducing his spaniels into a district where, I believe, they have not heretofore been looked upon with any great degree of favor.

I have already referred to the excellent shooting in the neighborhood of the Loch Lomond Lakes. There is grand fishing as well in the same waters. It seems to me that for these reasons, as well as for the grandeur of the surrounding scenery and the excellent opportunities for boating and yachting which they afford, these lakes ought to become very popular places for a summer resort.

Hitherto there has, perhaps, been a lack of sufficiently comfortable accommodation in this vicinity; but this want will no longer be felt. The Ben Lomond House, which is situated in immediate proximity to the shore of the largest lake, and in full view of the finest scenery, has passed into the hands of Mr. Thomas F. Raymond, the ever popular landlord of the Royal Hotel in St. John, by whom it has been thoroughly renovated. Mr. Raymond's reputation as a skilful and generous caterer is widespread, and tourists need not fear but what in his hands they will be thoroughly well cared for.

Both moose and caribou are said to be plenty this season, and doubtless will afford considerable sport before the close of the season, on the first of January next.

Two English gentlemen, Sir Harry P. Burrard and Mr. H. S. Bigger, leave here to-morrow morning for Canaan, where they will spend some time in the woods in quest of these noble animals. They will undoubtedly give a good account of themselves. Not many weeks ago Capt. Brannen and his crew, while crossing Grand Lake in the steamer *Fawn*, came across a large caribou swimming in the lake. They captured it alive, and an effort is being made to tame and train it to harness. LAPIS.

THE ORIGINAL OF "LEATHERSTOCKING."—Apropos of the reference made by a correspondent in an article, Oct. 29th, entitled "A Plea for Still Hunting," in which the writer mentions that Cooper's Leatherstocking was a veritable being, and placing him inadvertently in the Seventeenth instead of the Eighteenth Century, our valued correspondent writes from "Near Peake's Cross Roads, Spottsylvania County, Va.," under date of Oct. 30th, the following:—

NEAR PEAKE'S CROSS ROADS,
SPOTTSYLVANIA CO., VA., *Oct. 30th.*

In an article headed "A Plea for Still Hunting," signed "Antler," which was printed in your issue of Oct 23d, the following appeared: "Cooper's Leatherstocking was supposed by many to be a myth, existing only in the brain of the author; but reliable historical information proves that such an individual did exist *in the latter part of the Seventeenth Century*—a man of English origin, whose antecedents were well known to Mr. Cooper," etc.

The following account of Sir Jennings Beckwith, the original Leatherstocking of Cooper, taken from the old *Turf Register and Sporting Magazine* for *March*, 1834, at which time Sir Jennings was well and "happy," may prove interesting to other sportsmen, as it did to me—showing, as it does, of what stuff the sportsmen of the olden time were made:—

"Sir Jennings Beckwith was born in Richmond County on the 10th of February, 1764. His father, Jonathan, was the son of Sir Marmaduke Beckwith, baronet, the first clerk of the county under the Crown; his mother, Rebecca, was daughter of Richard Barnes, Esq. Sir Jennings [March, 1834,] is six feet high, muscular, without many gray hairs, and can crack a walnut with his teeth. The family have been devoted to the turf and all kinds of hunting and fishing, laboring in search of amusement, but never known to do anything to bring a penny to the pocket.

"When fortune throws anything useful in the way of this old man, he is uneasy so long as there is a shot in his locker. He moved to Frederick County, Md., and on losing his wife, to the 'far West,' in 1808, where he stopped in the forks of the Ohio and Mississippi. He made two trips to New Orleans in open boats, and twice visited his native county. He delighted in joining the Indians in excursions to their hunting grounds. In 1810 he left the post in Arkansas with a servant and an Indian to guide them through the wilderness, who, becoming bewildered by high waters, lost them four months and six days, during which time Sir J. was nine days on the ground from an attack of paralysis. They were out of provisions three days, when the Indian shot a fox giving suck. The old man says he and the Indian ate it, but it was monstrous tough. His servant could not go it for some time, but at last he took his share. They returned to their starting pole. He then went to Cadron, where he bought a horse with his rifle, and mounting his servant also, they travelled without a guide to St. Genevieve. His next move was in 1826 to the lead mines near Prairie du Chien. In 1831 he came to Richmond County again, where he spends the winters fox-hunting and the summers fishing, as he cannot see now to shoot. He is the happiest man in the world, and is the life of every party. He rides like an Indian when on a chase, sees the fox as often as any other person, and is sure to be up at the death. He lately hunted with Major Beale, who at seventy-five years of age, has a few dogs, and "going ahead," he took the wrong path; it would have done you good to hear the old Major cry out: "Boy, boy, you are going wrong!"

"Sir Jennings was always called 'Leatherstocking,' and signed himself so when writing for the press, which he did with much grace and ease. BIRDSHOT.

AIMING AHEAD.—*Abbeville, La., Nov. 15th.—Editor Forest and Stream:*—I have been no little interested in the discussions on wing shooting at crossing shots, some contending that in such cases you must aim ahead of the crossing bird, while others say the proper plan is to direct the gun on the bird and move it along with the bird, or in other words follow up the bird with the gun. In this latter way it is said Bogardus shoots. I think it may be very safely said that no man ever killed a bird at crossing shots who did not aim ahead, however much they may think they do and have done otherwise. The impossibility of hitting a swift-flying bird while crossing at any distance by following up with the gun has been demonstrated by several writers in your paper already, and I do not propose any elaborate argument on it, but will only say it can't be done. It is simply a question of mechanics, which admits of mechanical demonstration, and what crack shots say about how they shoot proves nothing, only that they are mistaken. Let me illustrate a little. It is contended by the advocates of the moving-up-the-gun theory that the lateral motion of the gun barrel gives the charge of shot a lateral motion equal to that of the crossing bird, and thus enables it to cross the path of the bird just where the bird is at the instant of crossing. Now, no one will probably pretend that the lateral motion of the barrels can give the shot a lateral motion greater than the motion of the muzzle at the time the charge pops out of the gun. Well, now let us figure a little. A swift-flying pigeon in crossing moves at the rate of sixty miles an hour, or one mile per minute, or eighty-eight feet per second. Now it will take about two seconds to aim and fire at the bird, and consequently in those two seconds the muzzle of the gun must pass through a space of 176 feet laterally to keep up with the bird. Does anybody think he moves his gun muzzle through 176 feet while he is taking aim? He does not, nor even through ten feet of space. The absurdity, then, of giving a lateral motion to the shot of 176 feet in two seconds by moving the muzzle three feet in that time is apparent. It must be remembered that the force of the powder cannot give the charge any lateral motion whatever; it only gives it a direct motion square across the path of the bird.

It is of great importance that correct principles be taught those learning to shoot on the wing, and it frequently occurs in books of instruction for wing shooting that the reader is told to keep his gun moving forward on the bird, or sometimes ahead of the bird, until the charge is out of the barrel. This moving of the gun is worse than useless in practice, as it makes the aim more uncertain and unsteady, and is of no assistance to the shot to keep up with the bird. The only possible way a crossing bird can be hit is to hold far enough ahead so that the shot will reach the point aimed at the same instant the bird does, and to do this a firm, motionless aim is the best. Practice alone can enable one to learn the proper distance to aim ahead, and all attempts to keep the gun on the bird only embarrass the learner and are useless. This is simply a dry question of mechanics, controlled by fixed and eternal laws of motion and force, which are capable of being, and are, well understood. And mere opinions do not weigh a straw when the contrary is demonstrated mathematically. Let our teaching be done on correct principles. PAPABOTTE.

THE "CITY OF WORCESTER."—This sporting car has returned home. The party travelled over 4,000 miles, at a total expense *per capita* of $310, exclusive of cost of ammunition. The score of the game netted for their own use and given to friends was: 1,557 prairie chickens; 69 geese; 250 ducks; 188 quail; 17 snipe; 9 woodcock; 11 yellow legs; 20 plover; 13 jack-rabbits; 15 gray rabbits; 7 sand-hill cranes; 3 mergans er ducks; 8 prairie dogs (not for the table); 1 blue heron; 9 pigeons; 2 deer; 3 badgers; 1 coyote; 3 sharp-tailed grouse; and 1 raven

—The London *Illustrated Dramatic and Sporting News*, in describing a Rochester invention (diving decoy) says: "Here is an excellent idea on the manufacture and working of decoy ducks, which, so far as we know has never been used in this country. Nothing more ingenious of the kind has been discovered. A correspondent of an excellent American journal, FOREST AND STREAM, sends this excellent recipe."

NEW YORK—*Niagara Falls.*—Large numbers of wild geese have been recently carried over the Falls.

PENNSYLVANIA—*Appelbackville, Nov. 2d.*—Quail shooting is good. A party of four of us bagged 125 in a day. Pheasant shooting is not as good as last year on Haycock Mountain; several fair bags made by parties. Rabbits and hares more plenty than for many years. Wild pigeons were plenty last week, and also ducks on the Delaware River. S. T.

NOTES FROM VIRGINIA.—*Nov. 22d.*—One of the warmest November suns I ever remember, has through the whole month been shining on the dryest of stubbles and pastures, that this season of the year has within the memory of man witnessed. The best of dogs, till the last few days, have been almost useless. Birds, however, are plentiful, and much stronger than usual on the wing, and, in spite of the want of scent, some good bags have been made. I have just returned from a six day's hunt in the counties of Campbell and Pittsylvania, which resulted in the killing of four hundred head of game to four guns (350 quail; 47 "old hars;" 3 woodcock, and—marvellous to relate—a pheasant. The scarcity of woodcock is noteworthy; in ordinary seasons we should have probably killed 12 or 15. There have been more woodduck, I think, than usual in the creeks this summer and fall, while great flocks of wild geese are already cackling in the wheat fields by the Staunton River. A party from here spent an enjoyable fortnight during October among the mountain regions of Bath County, bagging several deer, three bears, and getting good sport among the pheasants. Several accidents have occurred this fall. A turkey hunter calling, as he supposed, a big gobbler, shot a negro through the head, at twenty paces, who, in turn, was under the delusion he was creeping on some scattered specimen of the monarch of game bird. A Spanish gentlemen, at Millboro' Springs, shot a negro in the eye with his right barrel, and emptied the contents of his left immediately into the arm of another African. Report says that the "Don" was so badly scared, and his generosity was so great, that our Ethiopian friends ultimately concluded that they had come in for a good thing. RINGWOOD.

NORTH CAROLINA.—*Nashville, Nash Co., Nov. 18th.*—FOREST AND STREAM is very much liked here, but the country people are too poor to take it extensively. Game, in the shape of deer, turkeys, ducks, rabbits, coons, squirrel, quail, woodcock, are fairly plentiful, but little fishing of any kind. Agriculturally, this section of the State is not promising, though ordinary crops can be raised. Cotton does not pay. C. P. K.

DAVIS HOUSE—*Welden, N. C.*—There is fine hunting in and about this place; plenty of grouse, willet, turkeys, and deer, and any quanity of small game. D.

ONE-THIRD SENECA.—*Warsaw, Ill., Nov. 11th.*—There is a vast amount of material for a readable book if col-

lected together, in the camp life adventures and incidents of gentlemen sportsmen. An occasional anecdote appears in the public press, but where one is served up a myriad are rehearsed among the immediate members of the party connected with the adventure for a few times, and by degrees the affair loses its freshness and ridiculous aspect and is dismissed into oblivion. A party composed largely of our sportsmen's club here, had a little whirl at experience in camp life on a recent trip up into Iowa that was not exactly on the programme at the outset, and may have given some of them a clearer insight into the true character of the half-breed Indian than they formerly possessed. The party, numbering about a dozen hunters from here and Keokuk, went by train to a small station north of Fort Dodge, Ia., where they employed a half-breed Indian to haul their outfit some thirty-five miles distant to the grounds they proposed to hunt over. All went well for a few days—shooting excellent and fishing ditto, and everyone was having a jolly time. This untutored aborigines, true to an acquired instinct when in the company of his pale-face brethren, duly and truly provisioned for such an occasion, came to a point on an unbushed demijohn and retrieved it unbidden, which confirms the precedent that the Lo is a natural retriever of such game, but does not take to water unless there is a prefix of fire. In the act copious libations were absorbed into the semi-savage's maw, which stirred up his dormant energies to a startling extent. He executed the delightful manœuvres of the "green corn," "buffalo," "snake," "moon," "war," and divers other dances, and taking umbrage at some remark of the boys in his peculiarly sensitive condition, declared in these memorable words:—"I am one-third Seneca, and don't you forget it!" and the boys vow they never will, for on the return of the party to the railway they discovered that the Seneca brave had retrieved as much of their outfit as he could carry off, such as a keg of powder, sack of shot, drinking-cup, clothing, etc. In conclusion I will merely add, the boys smothered their rage, uttering at infrequent intervals an ominous ejaculation which sounded very like *Ho-la-wan-gus.* AARON AROUND.

TENNESSEE.—*Nashville, 11th.*—Up to within the last few days the weather out here has been unfavorable to field sports, too dry and warm. On last Monday week in visiting a friend some few miles from this city, I met Colonel W. H. Johnson with a half dozen couples of his fine pack of fox hounds going out for a little run. A little further, I met T. C. hunting a field for quail, behind two beautiful setters, which were working with the care and precision of veterans. J. Nicholson, Esq., is out very often with his brace Jet and Belle, they are beautiful animals, and are reckoned among the best in our neighborhood. Although Clarke, Pritchitt, H. Burkholz, R. C. K. Martin, and Charley Griffith, all claim kennels equally as good, scarcely a day passes that some of these gentlemen are not out, and judging by their bags are amply rewarded by finding plenty of game.

I hear very little of the coming contest between Campbell and Bryson. It excites very little interest here. Game is reported plentiful in almost every part of our State, and the feeling is fast growing for the establishment and close adherence to a thorough system of protection laws. Once this is done, in a few years our woods will again be filled with dear, bear, turkeys, and the smaller game. J. D. H.

LOUISIANA FOR SPORT AND WORK.—*Abbeville, La., Nov. 14th.—Editor Forest and Stream:*—The Louisiana farmer is now having his harvest time. The manufacture of sugar has commenced, and all over the land the smoke of the sugar house is seen, and the aromatic odor of the new sugar and syrup is rife in the land. The golden orange and the banana are now plentiful, while an abundance of game is on every side. Verily this is a land of abundance. When I think of the thousands said to be starving in the great cities, I wonder why they do not come to the country, where there is a constant demand for labor, and an abundant reward for it. While they stick to their crowded homes in the cities, a life of want only awaits them; whereas a few years of intelligent, sturdy toil here, would place them beyond the reach of want, and their future ease would be assured. Why should people stick to their old homes, on worn-out lands, in frozen climates, while in Louisiana is to be found a delightful climate, a fertile soil, abundance of fish and game, all within the reach of all who are able to get here. The stock-raiser, the farmer, the fruit-grower and gardener, can all find profitable employment; and those who love the dog and gun can find plenty of game to amuse their leisure hours. Three black bears were killed on Bayou Tigre week before last; they appear to be unusually plenty this year. Deer are very fat and fine now, and some of the boys who drive deer have been out after them with great success. Prairie chickens are scarce. The constant practice of burning over the prairies and thus destroying their nests, as well as cover, has nearly exterminated this fine bird in the vicinity of Abbeville. On the first day of September last the Vermillion River country was visited with a hurricane, which blew down a great quantity of vegetation, and blew a great many of the leaves off the trees, and filled up the swamps at the head of the river with water. After a few days the water in the river was observed to be much discolored and black, apparently being colored by the leaves and vegetation blown into the swamps by the storm. The buffalo fish were poisoned or made sick from the effect of the water in some way, so that they died by thousands. Hundreds of dead fish, that would weigh from five to twenty pounds, were to be seen floating down the river. The destruction of this species of fish was enormous. The catfish, perch, and bass did not appear to be affected by the water. Reports of similar destruction of the buffalo fish on the Bayou Teche, Gropetête, and many other streams, have been published.

The summer heat is now passed, and the long lines of ducks are pouring down upon us. The honking of the geese, and the shrill cry of the cranes, are heard by day and by night, as they sweep down to their feeding grounds along the shore of the Gulf of Mexico. Snipe will soon be plenty, and before long the glorious woodcock will be here in great abundance. Ah! then there will be royal sport. Partridges are pretty plenty, and in fine order. I was out in my cornfield about the first of this month, and unexpectedly flushed a covey of young partridges. They were not near grown; just beginning to fly. This is quite unusual, I think, for young covies to be about so late in the season; at least it is new to me, as I do not recollect ever seeing so young a brood in November before. I am quite fond of partridge shooting, but I hate to kill such beautiful and interesting creatures. It's royal sport though. Sometime since, after the season had opened, I took my gun out of summer quarters, put it together, and walked out into a field where I knew there were birds. I had no dog, so I was prepared to shoot when any should rise. I had not proceeded far in the field before a small covey flushed before me. The whirring of their wings as they rose, disconcerted me at first a little; but I quickly rallied, and up came the gun; one glance along the glittering Damascus barrels, one touch of the trigger; a little cloud of smoke, and poor Ortyx is no more. No more will his cheery call to his mate gladden the summer fields, or his sounding pinions startle the passer by. Poor Bob White was stone dead. I picked him up; gently smoothed down his feathers, and kissed him; and then put him in the softest corner of my gun pocket: but I was in no mood for shooting, so I did not follow up the covey. PAPABOTTE.

OREGON—*Eugene, Nov. 6th.*—The goose shooting is at its best now in this vicinity, and they swarm in the stubble fields, and from there fly to and fro for water at the river and marshes. There has not as yet been a sufficient fall of rain for good duck shooting, although two of us in a trip of seven miles by skiff on the river, made a bag of eighteen mallards and two geese. Last week a wagon load of gunners, myself included, killed twenty-eight geese and three mallards in a half day's shooting at flyways in the stubble fields. With decoys, and a pet dog in the middle of the field, without a doubt a single gunner could average from eighty to a hundred geese daily. All fall sowed grain must be surrounded with twine, otherwise the geese soon destroy it. I intend going to a favorite field soon for a day's sport, where last year in a forenoon twenty-one geese feel to my "Remington." As they are rather more plentiful this season, probably I shall kill more. Many fields of wheat, injured by rust, were not cut this fall, and the ducks and geese feeding at these places have become so plump and fat, that they will burst open when striking the ground. J. G. STEVENS.

The Kennel.

INSTITUTING EASTERN FIELD TRIALS.

AS was remarked in our last issue, we are gratified that a company of gentlemen have been found sufficiently energetic and alive to the importance of establishing field trials at the East to take up this praiseworthy object where it was so summarily dropped in the spring of 1878 by the Baltimore Kennel Club, who had been selected as the foster father for the enterprise instituted the previous year by the efforts of Capt. John M. Taylor, formerly the Kennel Editor of FOREST AND STREAM. It is important that the working qualities of our sporting dogs shall be practically made manifest and adjudicated upon, and their performances be compared with those which have been run in the western trials.

All worthy objects which look to the general good and to the profitable advancement of sportsmen, should have the willing support of the sporting fraternity, irrespective of the *personnel* of their immediate promoters. We consider the objects for which the Eastern Field Trials Club was formed a good one, and eastern field trials a desideratum, and we would therefore urge (so far as our influence may go), those gentlemen who have in times past looked favorably upon such an establishment, to join hands in the present movement and push it to a success by their donations, entries, their personal attendance and attention, and their moral support. We are glad to learn from the letter which we print below, that the prospects are very flattering.

It was Capt. Taylor's original idea to work the competing dogs in Virginia, Delaware, or Maryland, as being more centrally located in respect to that group of commonwealths known as the Eastern States, in which Ohio should certainly be included in these days, besides working the dogs on native game instead of plants. We should conform to this view as likely to produce the best results, but inasmuch as Long Island has been selected, and there are some native birds there, irrespective of the 500 to be put out; and in view of the fact that the ground is of much the same physical character as that to have been been selected in the States named by Capt. Taylor, we may congratulate our enterprising friends upon their choice, and unite with them in acknowledging the courtesy and friendly disposition of Mr. Lorillard, who is the club's choice for President, if not already actually installed into that office.

Those who have been foremost in pushing this movement are Messrs. Chas. H. Raymond, Dr. Wm. Jarvis, J. W. Munson, the able Secretary of the National Kennel Club; Colonel Ormsby, Dr. Aten, Wash. A. Coster, Judge Gildersleeve, J. Von Lengerke, Jacob Pentz, the field editor of *Turf, Field and Farm*, and many others, of whom the names of several were mentioned last week. The present status of the club at date of writing, is stated in the following extract of a letter from Mr. Von Lengerke to the managing editor of this paper.

NEW YORK, *Nov. 20th.*

It is beyond a doubt that the club will number over a hundred members before the middle of December, when it is proposed to hold the first trials. Mr. George L. Lorillard, to whom the club tendered the presidency, with his well-known generosity has tendered his splendid estate of three thousand acres, situated at Oakdale, L. I., for the use of the trials, which was, with thanks, accepted by the club. Dr. Aten, who was one of the strongest promoters, has procured five hundred live quail in Minnesota, to be liberated on the grounds a few days previous to the trials. This number of birds, together with those bred on the estate, are thought sufficient to carry the trials through. Capt. Tucker also tendered the use of Robbin's Island, in Peconic Bay, and Mr. Goddefroy tendered the use of his farm near Port Jervis, N. J., and liberally offered the use of his conveyances and some valuable prizes.

Quite a number of gentlemen have handed in their initeation fee of five dollars, and also a number of entries have been made already. The furtherance of this good cause now being in the hands of thorough, energetic men, I beg you, Mr. Editor, to also lend a helping hand, and encourage this late movement, knowing that your paper has before been identified with several attempts to inaugurate trials East. When it was proposed last year by the Baltimore Kennel Club to hold a field trial in Maryland, several gentlemen of means and influence promised liberal support to the funds for such an undertaking, and as this is the only requisite, at present to bring this first trial to a speedy and successful issue, I hope that these gentlemen will make good their old promise, and support the new club with either entries or donations, or by at least joining as members.

I, myself, shall feel amply repaid for my little labor, if by joining us and giving credit where it is due, all will work harmoniously for the good cause of improving and advancing the interest of our sporting dogs. "In Union there is strength."

J. VON LENGERKE.

We have now placed the credit of this resuscitated venture where it belongs; and to show that we are equally ready to claim credit for ourselves when it is due, we print the following extracts from two letters of Captain Taylor, which may hereafter serve as data in the written history of the "Eastern Field Trials Club:"

BELLEFONTE, VA., *February 4th*, 1877.

J. ADDISON SMITH, ESQ.:—

* * * * * * *

Is there any chance of making a common cause, or combination of the sportsmen of Maryland, Delaware and Virginia, to unite in a society to inaugurate Field Trials this coming fall? It is conceded by all that the late show of dogs at Baltimore was the best ever held in America, and would it not be as well to add "Field Trials" to your already successful association?

I need scarcely say to you or the gentlemen who take this important matter in hand, that I shall only be too pleased to give my time and what influence I may possess, free. JOHN M. TAYLOR.

BELLEFONTE, NOTTOWAY, VA., *March 15th*, 1878.

I wrote you a letter last year on the propriety of holding field trials somewhere in the East. Hitherto the State of Tennessee is the only one in the Union that has claim to having inaugurated dog field trials in America. A field trial is the only real way of testing a dog's merits, as it is held in the field and the birds shot, on just the same plan as in the ordinary field sports, over a dog, with this proviso, that the dogs and handlers of dogs must conform to certain laws, which are mutually agreed on beforehand by the owners of entries. There are so many good dogs now everywhere, especially in New York, Boston, Philadelphia and Baltimore, that a section of country I am sure could be found within easy access at comparatively moderate fares, to and from the before-mentioned cities. This is all important, and a great desideratum with owners of dogs who wish to enter their animals in a field trial. To talk plainly, how long would it take to carry out these trials, and what would be the total cost to owners and spectators? These questions should be answered distinctly, as the great complaints hitherto made have been, "The distance is too far, and the pleasure does not justify the expense." In my opinion the section of country to hold these trials is in some part of either the States of Maryland, Delaware or Virginia.

I would like to comment on what has been hitherto the great drawback to the successful issue of field trials; and that has been the scarcity of birds; not that there has not been a goodly number of quail, but in a totally insufficient quantity. Where is the section of the country within easy distance of the large northern cities where quail can be found to test successfully thirty or forty dogs. If the birds fail everything fails, and in placing a new recreation before the field sportsmen of America, it behoves the managers of field trials to be sure that there are plenty of birds.

On my return from Europe, where I expect to see the the working of dogs at the Horseheath field trials, I trust to be able to compare their trials with our own. I shall be pleased to give such observations to the public; at present I am totally opposed to the laws and rules on "points" governing trials now in vogue.

Would it not be a good plan for the owners of homing pigeons to carry along a few of their crack birds in connection with the dog field trials? Even should there be telegraphic communication, it would be grand sport to throw up a couple or so of "homers" and carry the news of the winners of the field trials, and they could have a race on their own account. JOHN M. TAYLOR.

DISTEMPER AND PNEUMONIA.

CHARLES H. LIFFNER, of Philadelphia, had the misfortune to lose his valuable setter dog Dan, on Nov. 16th. Being uncertain whether his death was caused by distemper or lung fever, a post-mortem examination was made by Dr. Birch, of Philadelphia, when it was found that the cause of his death was lung fever. A number of Philadelphia sportsmen who hunted over Dan expressed their unqualified delight with his performances. His pedigree was not very long, merely being out of a Maryland bitch by an imported English setter, which proves that the best dogs are not those with the longest or oldest pedigree. Dan's fine record, training, sensible behavior in the field, and many good qualities, made him a rival of the finest bred dog in America.

The loss of a good dog is always grievously felt, and doubt of the cause of death serves to increase the calamity, for the reason that the dog's master will remain in uncertainty whether proper timely treatment might

not have saved his life. Hence, it is desirable, not only for his own comfort of mind, but for the sake of science, that post-mortems should be made when practicable. Some of the symptoms being very similar, and sometimes scarcely distinguishable, even to an experienced physician, we may be conferring a benefit by reprinting here what Hallock's "Sportsman's Gazetteer" furnishes on this subject. We quote :—

True canine distemper is of extremely rare occurrence, if indeed it ever makes its appearance in the U. S. and Canadas. As laid down by that eminent pathologist, Kolliger, it is a disease attended by a catarrh, consisting essentially in an irritation of the brain and spinal marrow, and characterized by frequent convulsions tetanic in character; its fatality being enhanced by the supervention of inflammation of the lungs.

The disease is wondrously fatal, only about ten per cent. making recoveries.

The disease, *generally* known throughout the world as distemper, is commonly *pleuro-pneumonia*, though many other disorders are ofttimes included under the same title.

There appears to be two forms of *pleuro-pneumonia* to which the dog is subjected, one of which seems to be somewhat *epizootic* in character. This is then, perhaps, entitled to be called distemper.

It may be that pleuro-pneumonia, as exhibited in the dog, only takes this form. Or it may be that it assumes two forms : the one due to irritation and inflammation, result upon the use of a morbific poison, and the other, from more natural causes. At all events, the disease, though not contagious, would seem to be infectious in one of its forms ; this may, however, be due to the disorder, though not usually virulent in character. We are drawn to this belief, not only from the deductions of pathologists, but from the results of personal observation, verified by an autopsy of an animal which died from an ususually severe attack of so-called distemper but a few days previous to the writing of this article. The result of the examination will be found further on.

It is very difficult to point out the diagnostic symptoms of pneumonia to the non-professional observer, as we ascertain its extent, its situation, and every step of its progress, by means of the ear. All the symptoms that give us the most sure information respecting the nature of the disease, the event to which it tends, and the remedial treatment which it requires, spring out of the actual changes wrought in the pulmonary substance itself ; and these changes are disclosed to physicians by auscultation. It is necessary, therefore, in order to treat this disease understandingly and properly, you should know, first of all, what those changes are which are produced by inflammation of the substance of the lungs ; that you should know the morbid anatomy of pneumonia, as an indispensible groundwork for the knowledge of its pathology. For this reason, if none other, the account of the autopsy given would be valuable in order to grasp more fully the rationale of treatment.

The majority of cases of *simple* pneumonia in dogs is allowed usually to run its course unnoticed, no symptoms being observed other than a slight cough, or comparative dull condition of the animal ; or it passes for a very slight attack of distemper, and runs its usual course, terminating favorably, thanks to the constitution of the animal, and not the so-called distemper remedies. But if the simple inflammation of the lungs involves the surrounding tissues, as may be the case from the outset, or as a result of pneumonia proper, it becomes an entirely different affair. The pleura (the serous membrane that lines the interior of the thorax) is most likely to be involved, and the disease becomes *pleuro-pneumonia*.

A diagnosis and remedies for the disease follow in the succeeding pages, 502–508.

OUR LONDON LETTER.

Editor Forest and Stream :—

At last England, land of fog and gloom, has been blessed with a few fine days, and the inhabitants thereof are cockie in consequence, and for a time, at least have given up all thoughts of emigrating *en masse*. Though it is the gloomy month of November, would-be suicides postpone the event *sine die*, and only sharpen their razors for the purpose of shaving, and if they loll over London bridge, it is only to gaze with a kind of dreamy satisfaction on the sunny smile that dimples the muddy cheeks of old father Thames, and not with the idea of seeking a slimy grave in his depths on the anywhere—anywhere-out-of-the-world principle.

We are all in hopes here of having a fine open winter; green fields, blue skies, no American telegrams, peace, and plenty, and general jollity. Amen ! We shall see.

The Brighton Dog Show has been the event of the week so far as the canine world is concerned. By same mail I send you a prize list. A long and critical report of the show might not interest your readers, and would be encroaching on your space and good nature, so I shall not trouble you with one, more especially as our English sporting papers cannot fail to reach you almost as soon as my letter. However, a word or two about this important meeting may not be amiss.

The entries numbered about seven hundred ; quality well up to the average. The show was held in tents at Preston Park, about a mile and a half from this London *super mare*. This was a somewhat breezy arrangement for the time of year, and we fear many poor dogs will suffer from inflamed mucous membranes in consequence. Mr. Giltrap's beautiful Irish setter, Gurryower, a dog who is all over one of the best I have ever seen, and simply brimful of quality, was positioned right in front of an open draughty door-way. If he has caught his death I shall not wonder. The animals were well benched, and separated each from each by galvanized iron screens. I was, I believe, the first in England to suggest this arrangement, and I recommend it to the use of my Yankee cousins. It prevents much bloodshed and fighting. I was sorry to see many good dogs suffering sadly from mange ; they ought to have been removed or rather never admitted. I also saw one case of a dog down with distemper. This does not say much for the zeal of our vets, and I do but mention it here in order that secretaries on the other side of the herring-pond may profit by the errors of those on this.

Might I mention here, by the way, a plan of treatment by which I never fail to cure cases of mange. The canine patient is quarrantined ; that is, of course, put in a place by himself. A perfectly clean kennel, warm and dry, is told off to him, the bedding of which should be renewed at least twice a week. Before he is put in, he is washed well with mild yellow soap, the soap being well rinsed out of the coat, his skin is then rubbed all over with this liniment :—creosote, four drams ; olive oil, seven ounces ; mix, then add solution of potash, one ounce. The sores should also be dressed with a little of the green iodide of mercury ointment. The washing and subsequent dressing should be done thrice a week at first, afterwards twice. Medicine : a dose of castor oil once a week, and Fowler's solution ; the dose of the latter is three drops for a very small dog, to seven or eight for a mastiff, gradually increased in three weeks to thrice that quantity thrice a day, unless the appetite fails and the tongue gets silvered, and the eye injected. In this case omit the medicine for three days, then begin again. Food, liberal and good. Water, abundant ; fresh air and exercise, plenty. Finish off with tonics and cod liver oil.

Ten bloodhound dogs and five bitches put in an appearance. The objectionable dog was absent ; his owner knowing better than to show under such a judge as the Rev. Mr. Mellor. These animals were a grand show. Old Lueth XI is a true bloodhound all over ; he is the sire of many winners. Next to him on the bench was Mr. Ray's Rupert. Rupert won third ; he is well bred, but somewhat plain; his ears shortish, and lacks the length of head, breadth of muzzle, and wealth of wrinkle, so characteristic of this noble breed. Number three was young Robin Hood, good in color, and a pup of promise. Number six, the far-famed champion Rollo, by Roswell, out of Peeress. He is out and out the best hound on English benches. He had first and cup, of course ; he is good color, the tan being as bright as burnished gold. Number seven is Merton, a very taking hound, though a little broad in skull and short in leather, but good in body. Mr. Nichol's Nimrod won second (No. 8). He is only a baby, but a very promising one.

The judging of the bitches was, in my opinion, faulty. First went to Dido, who has not fulfilled the promise of her puppyhood. She has a good body, though a trifle saddle-backed, and her beautiful color can never fail to take a judge's eye, but she is thick in skull, which constitutes an ugly fault in the opinion of the best men. Belladonna, the bitch who was placed third, ought to have been first ; she is very good, and her head is most taking and perfect. Diana has a capital long head and good color, but lacks ear. Baroness, who was second, was the bitch that was illustrated in the *Field*—Stonehenge's is choice ; she has a fine long head but lacks leather everywhere ; she is also beautiful in color. Mr. Morrill won first in the puppy class with a son of his Rollo, a grand youngster, and one who bids fair to equal, if not to beat his father.

The mastiffs were, as usual, grand. Deerhounds you Americans do not seem to use, and I am sorry for it. They are most noble looking, whether in the field or on the hearthrug.

The pointers were very good. The setters inferior in many respects to your own. Retrievers excellent. Spaniels good ; they are cheap in this country. Fox terriers, as usual, in swarms, and very fair all over. Dachsunde were poor. I hope to be able to give you, at some future day, a proper description of this dog of dogs ; he ought to be most popular in America.

Collies held their age well. Good ones (pups) can now be bought for £5 5s. or £6 6s. Good bull terriers were not numerous in Brighton, but the bull-dogs were fair. Some very good bull terriers put in an appearance, but really A 1 dogs of this breed are somewhat rare now, even on English benches, though of the old fighting, thicker-headed animals, you generally find plenty about the streets.

Wire haired fox terriers are rather fashionable in England at present, and a more useful animal you could hardly possess, if game, which, however, they are not invariably.

The next great English show will be Birmingham, and that will close the canine exhibitions of the present year, and Alexandra Palace is expected to open the ball for the year 1880. GORDON STABLES, M. D., R.N.

THE POINTER.

BY IDSTONE.

I CANNOT find out at what date the pointer was introduced into this country (England), but there seems little doubt that he is a later importation than the setter, and that he originally came from Spain, where dogs of the same class as the spaniel pointer, from which our brilliant performers descended, may there be met with occasionally, sleeping by the old greystone fountains, or jogging with solemn gait after the lazy muleteer. * *

Gradually the notion prevailed that the old Spaniard was too slow. He trotted, instead of galloping ; he quartered his ground ; he carried a high head, and this brilliant style gave him command of wide parallels, whilst his exquisite power of scent served him instead of speed to such an extent that, only give him the wind, and he would crawl up to his game in a direct line. But in long days he lagged, rolled in the sun, or wagging his short tail, followed panting at his master's heels. * * * To counteract this, it was found absolutely necessary to cross him with some lighter frame. * * * I am by no means sure that the foxhound was the only cross used to give pace and fire to this well known English breed ; but I am sure that the pointer's staunchness has not been injured. Fresh colors have been produced, and these various colors have been the outward marks of what sportsmen established as their own breeds.

When the improved pointer first came to be fashionable, a Duke of Kingston was well known for them ; afterwards Mr. Edge, justly celebrated for his blotched dark liver and whites, with slightly bronzed cheeks. These dogs were large, well-framed, grand goers, fine dogs on their game, and delighting in their work. He realized high prices, and what is better, he disseminated the right breed.

Lord Derby, Mr. Edge's contemporary, and the grandfather of the present Earl, was also a sincere admirer of the Edge Kennel, and bred from that strain in profusion; whilst the Lords Litchfield, Sefton, and Stamford had, I believe, a breed of the same wonderful excellence.

The late Mr. Lang, the well known gunmaker of Cockspur street, bred, I believe, from the kennels I have named; and from some source or other he obtained a lemon and white, or orange and white breed, which has been held in very high estimation for the last ten years or more ; although Mr. Antrobus, Mr. Comberbache and Mr. Darbyshire still hold their own with liver and white.

If the pointer of the present day has a failing, that failing is delicacy. He has been refined, perhaps, too much for hard and exhaustive work. He is a model of beauty, worthy of the capital material from which he has descended. He is to be found now in every kennel of mark, with all the attributes and the properties of the highest class, and with intelligence and observation deserving the name of reason. His airy gallop, his lashing stern, his fine range, his magnificent dead-stop on game, his rapid turn to catch the wind of the body-scent, his perseverance under a trying sun to reach a faint and hardly perceptible stain of game borne to him on the breeze ; his glorious attitude as he becomes (directly his wide-spread nostrils assure him he is right) stiff and motionless, with limbs wide-spread, and head aloft, and stern head high, and his implicit obedience to the lessons he has learned perhaps two or three seasons past—all these wonderful gifts put him on a level with that paragon of hounds with which he claims relationship.

And such is the pointer of the present day, as he is to be found in the kennels of Mr. Whitehouse, of Ipsley Court, in Warwickshire ; of Lord Lichfield, Mr. Garth, Mr. Vernon Darbyshire ; or Mr. Brockton, of Farndon, a better dog than whose Bounce I never saw on game.

When the first trial of dogs in the field took place, the chief distinctions were gained by Mr. Brockton's Bounce, liver and white, for large dogs, and by Garth's Jill, and Mr. Whitehouse's orange and white Hamlet, for dogs of less size. Hamlet subsequently gained great and deserved popularity by winning the Bala Sweepstakes of twenty-five guineas each, against any dogs that could be brought against him. * * * This celebrated dog Hamlet has been one of the most successful dogs of the day, numbers of his offspring, combining first-class form with excellent stamina and nose. Mr. Whitehouse's Rap, a dog of the same color, excels the old dog in outline, though in style of working Hamlet never will be surpassed. These orange and whites are closely connected with Mr. Lang's breed ; Bob, the father of Hamlet, having been the property of a Mr. Gilbert, who had the mother from Mr. Lang.

The setter is the slowest dog to improve. No dog of that beautiful class has ever attained the speed of Mr. Garth's Drake, or equalled in form Mr. Whitehouse's Rap.—*From Notices of the Best Dogs of the Day, and their Breeders or Exhibitors.*

A POET WHO DISLIKED DOGS.—Alfred de Musset always declared he hated dogs for the reason that twice in his life an animal of the canine race had come within an ace of wrecking his fortunes.

The first time was at a royal hunting party when the poet, Louis Philippe's guest, when a bird was flushed, fired hastily and sent the citizen king's favorite pointer to meet Cerberus.

The second time was when, a candidate for the Academie, De Musset went to pay the customary visit to an influential Immortal whose chateau was in the environs of Paris.

At the moment that the poet rang at the gate, an ignoble whelp of incredible ugliness, covered with mud, rushed to meet him with joyous barks, and fawned upon him to the detriment of the poet's new pantaloons.

Disgusted as De Musset was, it would have been perilous to drive off the Immortal's faithful dog, so he was compelled to let the frightful animal lick his hands, cover him with caresses and mud, and precede him to the drawing-room.

A moment later the Academician entered. De Musset noticed his embarrassment, at which he was not surprised, considering the behavior of the animal. They adjourned to the dining-room, followed by the dog, which, after giving vent to his delight by various gambols and cries, placed two muddy paws on the cloth, seized the wing of a cold chicken and began contentedly to devour it.

"That's the most abominable brute I ever heard of," thought De Musset, and continued aloud, "You are fond of dogs, I see."

"Fond of dogs?" said the Immortal. "I hate dogs."

"But this animal here?"

"I have only tolerated the beast because it is yours, sir !"

"Mine?" said De Musset, "I thought it was yours, which was all that prevented me from killing him !"

The two men roared with laughter, and De Musset made a friend.

Late that day a yellow dog crossed the frontier of the Rhine at Strausburg with the air of an animal that had scored upon the tablets of its memory a decidedly unpleasant recollection, and headed for Constantinople with undiminished celerity !

NAMES CLAIMED.—Mr. W. Harrison Bradley, of Chicago, claims the name Peg Woffington, for a bitch whelped in February, 1878, out of Ducat's Ruby by Fowler's Ranger.

Mr. Charles A. Eldon, 120 Hudson Street, New York, claims the name of Nimrod for his liver and white pointer dog.

Mr. William B. Hammond, Bethlehem, Penn., claims the name of Flash for his liver and white pointer bitch.

Mr. Owen Eckert, Hickory Run, Penn., claims the name of Bessie for his lemon and white pointer bitch.

Mr. A. Pennington Carter, Lehigh Tannery, Penn., claims the names of Don II and Nina for his liver and white pointer dog and bitch. All the above whelped June 29th, 1879. Carter's Gipsey by Don.

Mr. W. R. Elliot and Mr. F. Winthrop claim, respectively, the names Rose and Mona for two Gordon setter puppies by Grouse out of Mall ; purchased from Dr. J. S. Nevin, of London, Ontario.

Mr. N. Elmore, of Granby Conn., claims the name of Queen for his white, black and tan English hare beagle pup, whelped September 30th, by Victor out of Lucy.

Mr. Garret Roach claims the name of Surprise for his liver and white pointer pup, by Sensation out of Queen II. and F. A Guild claims the name of Startle for his liver and white pointer pup by Sensation out of Queen II.

VISIT.—Mr. Nicholas Leonard's bitch has been bred Florrie (Bassett's Queen Bess–Copeland's Pete) to Mr. H. F. Deane's pure Lavaruck dog Pride (Pride of the border–Petrel).

—Geo. G. Barker, of Boston, has lost his champion pointer bitch Gillespie's Fan ; she died on the 20th of November of head distemper (probably).

—See the advertisements of H. B. Vondersmith, of Lancaster, Pa., in this week's issue.

N. A. K. FIELD TRIALS.—*St. Louis, Nov. 15th.*—A prominent eastern patron of dog matters subscribes $100 to the guarantee fund of the coming Field Trials of the N. A. K. Club, but wishes his name withheld from publication. We now have eleven subscribers at $100 each.

THE GAME OF CRICKET.

GENTLEMEN OF IRELAND TWELEVE vs. COBOURG EIGHTEEN.—The twelfth game of the Irish team series, and the fourth and last in their Canadian tour, was played on the Agricultural Grounds, at Cobourg, Ont., on Oct. 18th and 20th, in the presence of a very large number of spectators. There were over five times as many on the grounds as there were at Toronto, and fully twice as many as at Hamilton or Whitby. The home team was selected from Cobourg and vicinity, and as the score will show, exceeded that of the visitors by 35 runs in the first innings. The match resulted in a draw, there not being time for the Irishmen to finish their second innings ; score :—

GENTLEMEN OF IRELAND VS. PENINSULA.—The thirteenth and last game of the Irish team series was played at Detroit, Mich., on Wednesday and Thursday, Oct. 22d and 23d, when the eleven of the Peninsular Club were defeated by an innings and 107 runs. The wicket at the Woodward avenue grounds is unquestionably one of the finest in the United States. When the English team visited it, it was too wet, but all through this match it was in fine condition, and played to perfection. The Irish team went first to the bat, and thanks to the handsome contributions of Messrs. Trotter, Casey and Nunn, all three gentlemen getting into forties, the innings did not close before the tins showed 207. The Peninsulars disappointed their friends by only making 43 in their first venture, of which Mr. C. B. Calvert assisted with an excellent 20, not out. The home club, of course were obliged to follow their innings, which was finished at an early hour on Thursday—the second essay proving to be worth only 57, Mr. Joy's 19, not out, being the only double figure. Following is the full score, which speaks for itself :—

GENTLEMEN OF IRELAND.

Littlejohn	5	28	..	..
Bamford	12	38	1	1
White	17	38	4	4
Dale	10	25	2	3

To Exham's (slow round) bowling the team was thus placed : Hamilton, point ; G. Hone, wicket-keeper ; Nunn, long-on ; N. Hone, mid-on ; W. Hone, jr., long-leg ; Casey, cover-point ; Colthurst, mid-off ; Trotter, slip ; J. Hone, short-leg ; and Miller, long-field-off. To Hamilton (very fast round)—Exham, point ; G. Hone, wicket ; Nunn, long stop ; N. Hone, square-leg ; W. Hone, jr., mid-off ; Casey, draw ; Colthurst, cover point ; Trotter, long-on ; J. Hone, long-slip ; and Miller, long-leg. This arrangement was adhered to, with slight alteration, throughout the trip.

THE DAFT MATCHES.

The following is a complete and correct summary of the matches played by the English team during its visit to the United States and Canada, with averages both of batting and bowling :—

Date and Place.	*Sides.*	*First Innings.*	*Second Innings.*	*Total.*
Sept. 10th, 11th, at Toronto	Daft's Team	82		104
	Canadians	31	72	103
Daft's team won by 10 wickets.				
Sept. 12th, 13th, at Toronto	Daft's Team	209	..	209
	Englishmen	76	67	143
Drawn—22 lost 14 wickets in second innings.				
Sept. 15th, 16th, at Toronto	Daft's Team	122	..	122
	All-Canada	65	54	119
Daft's team won by an innings and 3 runs.				
Sept. 18th, 19th, 20th, at Hamilton	Daft's Team	186	..	186
	17 of Hamilton	48	35	83
Daft's team won by an innings and 103 runs.				
Sept. 22d, 22d, at London	Daft's Team	71	139	210
	West'n Ontario	37	38	75
Daft's team won by 135 runs.				
Sept. 25th, 26th, at Detroit	Daft's Team	161	..	191
	18 Peninsular C.C.	59	..	59
Drawn on account of rain.				
Sept. 29th, Oct. 1st, 1st, at Syracuse	Daft's Team	183	..	183
	22 of Central N.Y.	43	50	93
Daft's team won by an innings and 70 runs.				
Oct. 3d, 4th, 6th, Staten Island	Daft's Team	188	..	188
	22 of N.Y. City and vicinity	67	84	151
Daft's team won by an inning and 27 runs.				
Oct. 10th, 11th, 13th, at Nicetown, Philadelphia	Daft's Team	149	133	282
	15 of Phila	70	67	137
Daft's team won by 145 runs.				
Oct. 17th, 18th, 20th, at Stenton, Philadelphia	Daft's Team	171	..	171
	Young America	47	111	
Daft's team won by an innings and 60 runs.				
Oct. 21st, 22d, at Ardmore, Pa	Daft's Team	183	..	183
	22 of Merion C. C.	67	55	122
Drawn—Merion lost 13 wickets in second innings.				

The following are the analyses of the batting and bowling of the English players :—

BATTING AVERAGES.

Names.	*Matches.*	*Innings.*	*Runs.*	*Most in Innings.*	*Most in Match.*	*Times Not Out.*	*Average per Innings.*
W. Oscroft	10	12	246	82	92	0	20.6
E. Lockwood	9	10	205	88	88	0	20.6
A. Shrewsbury	10	13	208	66	66	2	18.10
W. Bates	10	13	200	49*	53	2	18.2
R. Daft	10	12	191	37	37	1	17.3
W. Barnes	10	12	198	34	34	0	16.6
T. Emmett	10	11	164	49	49	1	16.4
G. Ulyett	10	12	177	44	44	0	14.9
G. Pinder	11	13	89	20	20	4	9.3
J. Selby	10	11	103	44	44	0	9.4
A. Shaw	11	13	43	9	10	0	3.4
F. Morley	10	12	19	6	6	5	2.5

The asterisk signifies "not out."

BOWLING AVERAGES.

Names.	*Matches.*	*Innings.*	*Balls.*	*Runs.*	*Maidens.*	*Wickets.*	*Average runs per Wicket.*
A. Shaw	11	20	2,129	438	202	170	2.38
T. Emmett	9	8	548	149	63	42	3.23
F. Morley	10	15	1,532	351	212	109	3.21
W. Bates	4	5	466	138	56	23	4.26
*W. Barnes	1	1	48	15	5	6	2.3

*In one match only.
Emmett, 3 wides and 1 no ball.

In addition to the above, Daft's team played a one day's match, with eighteen base-ball-cricketers, which they defeated af follows :—

Date and Place.		*Sides.*	*First Innings.*	*Second Innings.*	*Total*
Oct. 15th, at Grounds, Brooklyn	Union	Daft's Team	107	..	107
		18 B.-Ball Players.	62	27	89

Daft's team won by an innings and 18 runs.

This match is purposely omitted from the above summary and averages.

THE WONDERFUL BOWLING OF THE ENGLISH TEAM.—The annexed table shows the great success the bowlers of Daft's team had with the ball. Out of 393 batsmen that have faced the attacks of Shaw, Morley, Emmett, Barnes and Bates, only 19 *different* players scored double figures—that is, 10 runs or over. This really should be recorded as a curiosity in the history of cricket :—

Date.	*Place.*	*Sides vs. Daft.*	*Men at Bat.*	*Scorers.*
Sept. 10, 11	Toronto	22 Canadians	44	Wells, 11 ; Hall, 11.
Sept. 12, 13	Toronto	22 Anglo-Can'dians	38	{ Kirchoffer, 21 and 10; Baillie, 13; Behan, 18; Brodie, 14
Sept. 15, 16	Toronto	22 of All-Canada	43	Behan, 23 and 13.
Sept. 18, 19, 20	Hamilton	17 of Hamilton	33	Parkin, 12.
Sept. 22, 23	London	22 of West. Ontario	43	Kennedy, 10.
Sept. 25, 26	Detroit	18 of Peninsular C.C.	18	Joy, 17.
Sept. 30, Oct. 1	Syracuse	22 of Central N. Y.	42	.....
Oct. 3, 4, 6	Staten Island	22 of All New York	43	{ Hubbard, 19 ; Cross, 27.
Oct. 10, 11, 13	Philadelphia	15 of Philadelphia	30	{ Large, 17; R. Newhall, 13.
Oct. 17, 18, 20	Philadelphia	11 of Young America C.C.	22	{ R. Newhall, 12 and 11 ; Clark, 14 ; D. Newhall, 13; Van Rensallear, 11.
Oct. 21, 22	Ardmore, Pa	22 of Merion C. C.	37	{ Stroud, 16 ; Fox, 10 and 13; R. Williams, 10.
			393	

Behan and R. Newhall obtained double figures three times, and Kirchoffer and Fox twice.

Including the base-ball match, the figures would read : Number of batsmen, 429 to 20 double scorers, George Wright having contributed 20.

DAFT'S TEAM'S ENGLISH AVERAGES.—Appended will be found the averages, both batting and bowling, of Daft's team in England, in first-class matches during the past season :—

BATTING AVERAGES.

Names.	*Matches.*	*Innings.*	*Runs.*	*Most in Innings.*	*Most in Match.*	*Times Not Out.*	*Average per Innings.*
W. Oscroft	19	31	731	140	140	2	26.27

ARCHERY.

ARCHERY IN CALIFORNIA.—*Overland Train, Near Cheyenne, Nov. 8th.*—*Editor Forest and Stream* :—During my month's stay in California I met a number of archers, and I found them equally as enthusiastic on the resurrected old sport as the majority of archers, in fact, my acquaintance with the class generally, leads me to believe that an archer is about the most enthusiastic admirer of his particular sport of any class of sportsmen I have ever met.

They all theorize on the "trajectory," estimate on the chances of a 4s. 6d. arrow going a few inches farther than a five shilling, debate on the relative merits of the English and American weapons, and in fact, there are about as many theories in regard to archery as there are archers. I find these in California not only well up on theories and enthusiasm, but equally as well advanced in skill.

There are at present three well organized and flourishing clubs in San Francisco, one or two in Sacramento, Stockton, San Jose, and others organizing in different parts of the State, and next season bids fair to be very lively on the Pacific Coast. California is wonderfully well adapted for archery for the reason that they can practice out of doors the year around.

The first State Archery Tournament was recently held at Sacramento, and some very extraordinary shooting was done, especially by the winner of the championship medal, Mr. Frank C. Havens, who made the wonderfully large score of 527 at the American Round, which is the best score at this round I have heard of being made in a match. He has several times exceeded this score in his private practice, but private scores as a rule are so unreliable, that it is to be hoped that archers will base their records more on public shooting, than on some wonderful private scores, made under peculiarly favorable circumstances ; for it misleads the public, and mortifies the archer to find himself loaded down with

wonderful "private score," and when he gets into a match, only able to make about half as many.

Mr. Havens has practiced archery more or less for the past four years; has a very easy, methodical style of drawing, a perfect loose, and seems possessed of a cool and reliable nerve. He has practiced very little at the larger ranges, having confined himself almost entirely to the forty, fifty and sixty yard ranges, evidently believing in the principle that it is better to become master of the shorter ranges before attempting the longer, and in this I am of the opinion that he is right, as evidenced by the sorry failure of nearly every archer at the Chicago National meeting, who attempted the longer ranges. Mr. Havens promises to be present at the next Grand National, and hopes to bring his team with him, in which event it is no two to one that some of the best prizes don't go to California. While Mr. Frank Havens represents the highest skill in archery on the coast, he has no unskillful rivals in Messrs. Bush, Darneal, O'Connell, A. W. Havens Ward, Stratford, and many others, to whom the writer is under obligation for the many courtesies shown him.

A match has been arranged for a telegraphic shoot between the Oakland Ben Club of San Francisco, and the Archery Association for Thanksgiving day.

If successful in their match with the Chicagoes (which the writer is sorry to admit they are very apt to be) they purpose going for some of the bigger game, and some interesting telegraphic matches between the Atlantic and Pacific clubs may be expected.

A. G. SPALDING.

ARCHERY SCORING,—*Editor Forest and Stream*:—It is one of the boasts of this noble pastime that it is free from the charge of unfairness, and holds out no inducement to fraud; that all who practice it together occupy equal ground, and stand or fall in proportion to their merit. As in the game of chess both parties start equal, so with this. All have the same position and distance, aim at a similar target, fly the same number of shafts, and, in case of hits, the punctured cynosure tells the result without prevarication or opportunity of deception. Whereas, in many games this fairness and freedom from trickery does not exist. Even when the start is equal, the sharper will generally win, although his competitor, in a fair field, might be his superior.

I have tried to see how this boast of archery would hold out. Mr. Brownell, president of the E. A. A., thinks that the present value of colors is not the proper one; that the making of three blacks, for instance, at a single end, evinces more talent than a gold with one arrow, while the other two go *horn spoon*. Yet the score is the same; and he suggests that the colors be rated in single numerals from one to five, as more appropriately awarding merit than the present system.

In all this, however, craft does not come in. In what I am about to allude to it seems to me that it may. I mean the rule that an arrow cutting two colors shall be counted to the highest. There could be no objection to this were the size of arrow tips alike—that is, uniform in size.

Several girls at play agreed that she who could throw her bonnet the highest should be queen of the day. One, more artful than the rest, secured a stone inside of hers, and thus beat all competitors. And it is evident that large arrows (leaving skill in shooting out of the question) will break more lines than small ones; and is not here an inducement to gain an improper advantage by using the largest arrows possible?

Ladies' arrows are necessarily smaller than those of gentlemen, and are not their owners thus disadvantaged when shooting with gentlemen? In using small targets, as in short range shooting, the inequality or unfairness in question becomes all the greater. Why not let the centre of the arrow, rather than its extreme, decide the score in all cases? This would give perfect equality to all shooters, and make all *finesse* in the size of arrows superfluous.

GEO. A. DUDLEY.

Ellenville, N. J., Nov. 14th.

—One of the most promising of American archers is Mr. O. W. Kyle, of the Highland Park Club. He procured his first bow in October, 1878, and is now scoring like an archer of five year's practice. He shoots in beautiful style, so strikingly graceful as to draw the remark from Mr. Maurice Thompson at the Chicago meeting that "he would rank in the best four at the next National Meeting." Since the first of October he has averaged 135 points with thirty arrows at sixty yards.

On the last round of ninety arrows at sixty yards, shot October 29th, he scored as follows:—

	1st 30.	2d 30.	3d 30.	Total.
O. W. Kyle	28-162	29-149	28-150	85-461

Shooting ninety-six arrows at eighty yards on the afternoon of Oct. 29th, he scored thus:—

	1st 48.	2d 48.	Total.
O. W. Kyle	41-151	32-150	63-301

Shooting like the above will yield a Double York Round of 800 points.

Nov. 3d.—Four members shot the York Round, and the following scores were made:—

	100 Yds. Hits.	Score.	80 Yds. Hits.	Score.	60 Yds. Hits.	Score.	Total Hits.	Score.
Will H. Thompson	33	112	28	172	24	148	85	433
Maurice Thompson	31	107	34	164	17	93	82	364
John A. Booe	28	81	27	119	18	76	68	276
Theo. McMechan	19	77	24	94	20	98	63	269

Nov. 8th.—The Club shot 216 arrows at 100 yards, and the following best scores were made:—

	1st 72		2nd 72		3d 72		Total	
Will H. Thompson	43	169	40	154	44	186	127	509
Maurice Thompson	33	145	39	151	34	144	96	420
John A. Booe	21	83	37	115	28	112	76	310
M. C. Klein	13	43	16	52	11	41	40	134

On the same day two ladies shot the English National Round:—

	60 Yds. 48 Arrows		50 Yds. 24 Arrows		Total.	
Mrs. John Lee	35	163	20	102	55	265
Mrs. M. C. Klein	25	113	22	122	47	235

This was the finest scoring ever achieved by the ladies of this Club.

ORITANI ARCHERS.—The prize meeting last Saturday was a very successful one. Mr. W. C. Beecher won the gentlemen's club championship, and Mrs. W. H. Holberton the ladies' championship. The FOREST AND STREAM subscription was awarded to Mr. J. J. Berry, of Hackensack.

—All the archers attending the National Meeting at Chicago will remember the happy face and joyful voice of Miss Laura Owen, of the Des Moines Toxophilites. She was then apparently in the best of health, and bid fair to live for many pleasant years. But now, alas! that bright young toxophilite is no more! She ceased to be, on the 29th day of October last, and Mrs. W. F. Hackney immediately took possession of her bow and arrows, and proposes to attend the next National meeting in her place. Our hand to the bridgegroom! We rejoice that he has more *owin'* to him than formerly. This is no *hackneyed* pun!

NEW YORK ARCHERY CLUB.—At the field meeting Saturday last Mr. John W. Sutton won the Gentlemen's Badge by a score of 192.

The ladies did not shoot on account of the cold. A grand "shoot" will take place Thanksgiving Day at 10 o'clock A.M. at Mount Morris Square, One Hundred and Twenty-fourth street and Fifth avenue. The regular monthly meeting will be held at the residence of Mr. Geo. W. Pond, 327 West Twenty-third street, Saturday evening, November 29th, where applications for membership will be received.

THE BEST BOW.

I ENTER with great hesitation into the discussion going on in these columns with reference to the relative merits of American and English bows. Most of such discussions are provoked by rivalry between dealers, and being carried on in a spirit of bitterness are productive of no good result. That it is right for makers and dealers to advertise their goods by every fair means, no one should deny, but no permanent success can come of anything less than real merit. A bow is not an easy weapon to make or wield, and almost as much skill is necessary to produce one as to attain proficiency in its use. I have always naturally leaned to the side of our own country when any rivalry rose between it and any other land, and am therefore frank to admit a slight prejudice; but my interest in archery has been so great that I feel sure that I have tried faithfully to find and use the best tackle in the world. One does not like to pay several hundred dollars for archery goods without using some care to get the best. I have used in the last four years in my own practice the following bows:—

Five self-lance, three backed-lance, three rosewood (backed), six beefwood (backed), four snakewood (backed), two self-snake (grooved back), four self-lemon (*citronella*), and one backed wood, unknown to me—made by Highfield, London; two self-Spanish yew, one lance and hickory and one self-lance—made by Aldred, London; one self-snake—made by E. & W. Madle, London; Spanish self-yew, four snake (and lemon-back), two beefwood (lemon-back), two rosewood (lemon-back), one amaranth (lemon-back), two lance and hickory and one self-lance—made by Horsman, New York; one rosewood (swamp ash-back)—made by King, of Kokoma, Ind.; four Bois d'Arc (hickory-back), one self-Bois d'Arc, one lance and hickory and one three-piece (hickory, cocoanut and hickory)—made by Reckard, of Crawfordsville, Ind.; one split bamboo—made by Conroy, Bissett & Malleson, New York. Also arrows by each of the above makers; also by Walter Granger, of Buffalo, N. Y., and by one or two other Americans and several English makers. Several of these makers have kindly sent me for examination, test and approval or disapproval, samples of their goods, and I have tried to give my true ideas of the goods regardless of the result. Now nearly all the goods had some defects. It seems scarcely possible to get a bow with no defect in it. Yet while the English bows were the most accurately constructed, the American bows proved by far the most enduring. The principal defect in the American bows lies in the lack of sufficient wood in the centre, causing the bow to bend in the handle, and thus jar greatly, and both tire the arm and destroy the accuracy of the shooting. The split bamboo did not have this fault, but it bent most in the lower limb, the exact reverse of what it should. It has been put through the utmost strain a bow could have, and stood it perfectly, and has at last partially yielded only to neglect in allowing it to stand against a damp wall all night, whereby the glue in the lower limb became softened. A friend from Marietta, Ohio, writes me that his experience with the split bamboo was disastrous; but I can only say from my own experience that, barring the faulty bend, my bamboo was a magnificent bow.

The Madle self-snake bow proved a failure, shooting very well for a short time, and then breaking into dust, almost, with a 27-inch draw. The rosewood-backed, with swamp ash, by King, was almost perfect, but before giving it a just trial I suffered it to stand in a room in a brick house where there was no fire; it got damp; the glue parted, and it was ruined. The Bois d'Arc bows, by Reckard, were very fair, but warped a little sideways by reason of the insufficiency of the seasoning of the timber. The three-piece cocoanut was excellent for a few weeks, but broke by reason of the failure of the glue.

The lance (self) bows of Highfield all finally yielded by pinching, and so did the Aldred self-lance. However, one of the Highfields endured a vast amount of work. The three backed-lance bows and the three backed rosewood of Highfields all yielded very soon by the parting of the glue, probably weakened by the ocean voyage. One of the beefwoods went in the same way, while the other stood splendidly, shot as well as any hardwood bow could shoot, and finally yielded to the clumsy knee of an interloper at a private shoot, who was too poor to pay and too large to chastise. The self-snake was too heavy in the hand; the backed snakewoods were good for a short time but broke, and the lemon bows (citronella), beside being heavy in the hand, soon set so badly that they were useless. Now, do not understand me to insinuate that Mr. Highfield is not a good maker. He is one of the very best in the world. The trouble is that there are only three sorts of good bows. First—A good self-Spanish or Italian yew. Second—A good yew-backed yew. Third—A good hardwood-backed bow. In my opinion, based on careful experience, no self-hardwood bow is good. Now the trouble with Highfield's backed-hardwood bows was that the salt water damp of the voyage weakened the glue so that they were soon ruined. Mr. Highfield himself, in a long letter to me, affirmed this fact. It was not his fault, but misfortune, that he lived on the wrong side of the pond. The lancewood self-bow of Aldred pinched, and the backed-lance was broken by being stuck through the wheel of a moving cart. So it would be impossible to say what its history might have been. The two yews of Aldred were beauties, one of fifty-seven pounds costing $77, and the other, fifty pounds, costing $49. The heaviest bow was apparently perfect and shot as well at first as any bow ever made. I scored 360 at the Double York Round with it in a rushing wind, the first attempt in a match with H. C. Carver and Ford P. Hall, of Highland Park, Ill., and Charles A. Jay, of Kokomo. But within a few days it began to shoot to the right. I could not for a time imagine the cause, but I soon found that it was gradually wringing in the handle. Within a period of three weeks it turned so much as to be useless, and finally pulled to pieces. The fifty pound bow has proved to be perfect so far, and no swifter or more regular shooting bow ever sent an arrow to a mark. Now the heavy bow was just as good, except that the grafting in the middle had in some way failed. I do not suppose it could have been done better by any one on earth, but I have learned enough about timber to know that while a piece may bend straight with the grain and never warp or twist while in the billet, it may twist when sawed out and grafted. The bow proved to be worthless when neither maker nor archer could have foretold such a result.

Of the Horsman bows the self-lance broke short off six inches from the upper horn, after short use; the two lance backed with hickory have stood well so far, but have not been much used. The amaranth backed with lemon has not been shot over thirty times, but shoots well, casting, or setting, however, a little more than it should do. The two rosewood bows have stood well, with one of which I have made the second highest score with thirty arrows at sixty yards I have ever made—192. The two beefwood bows have stood perfectly, and bid fair to stay with me permanently. The four snakewood bows have proved to be the best hardwood bows I ever saw, in which opinion I am joined by every member of the Wabash Merry Bowmen.

Mr. John A. Booe, who is one of the most brilliant shots in this country, has one of these snakewood backed bows, and says it is better than the finest Spanish yew bows, two very fine specimens of which, made by Aldred, are in his ascham. Here, of course, I cannot agree with him, as I think no bow equal to a Spanish self-yew—not that the yew will give you any greater score, for it will not, but the shooting is more pleasant by reason of the soft recoil. I can shoot any one of my snakewood bows on one day and my yew on another, and average as high scores with one as the other; but the yew is my favorite because of its gentle recoil. Being sure that an American could make as good a yew bow as an Englishman, Mr. Maurice Thompson and myself induced Mr. Horsmen to send to Europe for a few billets of Spanish yew, and attempt the manufacture of a self-yew bow for each of us. He did so, and the result was that the bow for Mr. Maurice Thompson has proved to be the most perfect Spanish yew bow I have yet seen in America, and for which he would not take $200. The bow made for myself was just as perfectly fashioned and shot as well, but there was a defect in the wood of the lower limb, and it at once began to pinch.

This was no fault of the maker, but arose from the fact that there are so many bad places in billets of yew that are concealed until, perhaps, the last finish reveals them. Sometimes these defects are not quite reached in finishing the bow, being yet barely under the surface, and are revealed only by the strain of stringing and shooting the bow.

So I come to the conclusion that there is really very little difference in the actual value of a bow made by an Englishman and one made by an American, provided each uses the same sort of timber. But the American has the advantage of delivering his bows to his customers without the damaging ocean voyage. So that if I were choosing between a best hardwood backed bow of American make and one of English make, I should choose the American bow, on the ground of its durability, and I would thereby not disparage the excellent workmanship of the Englishman, for his bow will endure much better in England that would that of his American rival, if it were sent over there. The English arrows do not seem to be so much affected by the voyage, or, rather, there being no lateral strain upon them, the glue is still sufficiently strong to hold.

Therefore, so far as arrows are concerned there is little choice between the best arrows of any maker. I feel no hesitation in saying that I can shoot equally well with arrows of Highfield's, Bown's, Aldred's, Madle's Buchanan's, Muir's or Feltham's, imported to this country, or with Horsman's, Granger's, Conroy, Bissett & Malleson's, or any other first-class maker's best goods. The steel piles of most American arrows have been rather too thin, but Mr. Horsman, in a letter before me, says he is now boring the piles out of solid steel. This will be a great improvement. Now it is not at all strange if a dealer in Aldred's goods should deem them best, or one who uses a favorite yew bow with the Magic name "Muir" on the back should cleave to it as the "best bow on earth," as one glorious old archer of England writes me. One archer will like the goods of the maker who made a certain favorite bow which has served him faithfully, while another who has had ill luck with bows of the same maker, be he American or English, will be too prone to conclude that the maker is not reliable. The simple truth is that a perfect bow is very hard to get, but I feel sure that one who wishes a bow to cost from $3 to $20, should buy an American bow. I have no one to advertise, and do not intend to have, and I sincerely trust no writer will seek to make the Archery Department of the FOREST AND STREAM a "dark and bloody ground" wherein the rival makers or dealers in archery shall meet to fight the battles of the bow. The puffery of goods should be put into the regular advertising column, and duly paid for, while the archery department should be for the interchange of ideas about archery, pleasant and profitable. Of course the mere mention of the name of the maker of any archer's bow or arrows, is perfectly proper, but it is a very delicate matter to call particular attention to any one maker.

Further, I feel no hesitation in saying to manufacturers that if they will make their bows all *good* ones they will have no difficulty in selling next year, all they can by any possibility prepare.

WILL H. THOMPSON.

PUBLICATIONS.

A FOOL'S ERRAND: By one of the Fools. New York, 'Fords, Howard & Hulbert. Price, $1.

This is another book treating of political and social life at the South, since the Civil War. It is written by a man who fought in the Northern army, and afterwards settled in the South. There are some exciting chapters in the book.

Burke's Texas Almanac for 1880, edited by N. A. Taylor, contains a vast amount of information about the State of Texas, and will be found a most desirable book of reference. It contains 232 pages, and has a township map of the State. Published by J. Burke, jr., Houston, Texas. Price, 75 cents.

MAGAZINE LITERATURE.—The magazines are all unusually rich this month. This has come to be the rule with the December numbers. It is always important to begin right; and in magazine publishing it has come to be recognized as equally important to end right; for the last number of the year is put forth as a promise of what the next year's numbers are to be. The day of renewals is at hand.

One noticeable indication of the prosperity of our American magazines, is the promise of permanent enlargement made by the *Atlantic* and *Scribner's*. This also shows the increasing demand by the reading public for periodical literature. When the literary history of the Ninoteenth Century is epitomized by the student of the future, a strongly marked feature will be discovered in the growth of our monthly, weekly, and daily journals. The talent of this country, like that of Europe, is largely devoted to magazine work. Books come from the press in countless numbers; and yet the book is not all that it once was. Many readers have no time for it. The daily paper, the weekly journal, the monthly magazine; these must be read, because they are "timely;" they contain the literature of the day which is talked about in common conversation. To be ignorant of this, is to confess one's self behind the times.

After all, it may be questioned whether this new order of things is wholly for the best. We read too much, many of us. And we read what is put before us, rather than what we might select with judgment and with some definite aim. Three-fourths of the time employed in skimming over the stock supplies of a monthly magazine, might have been devoted with vastly greater profit to pursuing some course of study.

Miscellaneous Advertisements.

FERGUSON'S

RUST PREVENTER,

The best article yet discovered.

For Fire Arms, Surgical Instruments, Cutlery, Tools, exposed parts of machinery, etc.,

IT HAS NO EQUAL.

For Sale.

20-Bore Gun for Sale.

A SUPERIOR 20-bore, rebounding lock breech loader, with case and implements, and about 300 shells and wads for sale. This gun was built to order by a well-known English maker, Mr. T. Conway, of Manchester, England, has been only one season in use for woodcock, snipe, quail and other small game. It is perfection. The owner disposes of it on account of removing where only large game is found. Price $80 complete. Address Box 1081. Post office, Quebec, Canada. Nov27-3t.

FOR SALE.—A Greener modified choke, 10-bore, central-fire breech-loader; splendid shooter; weight about 9½ lbs; top lever snap action; rebounding locks; little used. Price $100. Address E. G. SIMCOX, Emerson, Manitoba. Nov27 1t.

FOR SALE—A Dougall highest quality, breech-loading shot gun, 8 lbs. 3 oz. weight, Damascus barrels, 31 in., 12 bore, modified choke, lockfast action, rebounding locks. Fine harness leather case with implements. The gun has been used very little and is as good as new. Address, A. C., Forest and Stream Office, Fulton street, N. Y. Nov.27-1t

W. & C. SCOTT & SON, laminated steel, 12-bore, central fire breech-loader, pistol grip, rebounding locks, 7¼ lbs. First rate order. Price $65. Enquire of HODGKINS & HAIGH, Nov13-2t 398 Broadway, N. Y.

PARKER FOR SALE.—As good as new, 12-gauge, 8¼ lbs., 30-inch Damascus steel barrels; left barrel full choke; will guarantee her to field choke; 50 brass shells and loading tools. Gun cost $90, will sell the lot for $55. Address JAMES SUTHERLAND. Nov13-3t Winchendon, Mass.

RICE LAKE, Canada.—WILD RICE for sowing in fields, lakes and fish ponds. Delicious for desserts. Very scarce this season. One bushel to twenty-five, $4 per bushel. If 5 bushels or more, twenty cents per lb. added. Next season orders before August 1st, 1880, honored one to four hundred bushels. Address CHAS. GILCHRIST, Overseer of Fisheries, Fort Hope, Ontario, Can. Nov27-cot

The Kennel.

THE FOLLOWING PRICES will show I mean sell out!—

Victress, pure Laverack, full sister to the Great Countess, one of the best bitches that ever lived. She is by Old Blue Dash II. and Model. Victress won two prizes—Manchester, H. C., Birmingham. To parties in want of a pure Laverack to breed this is a rare chance. Price $75, not one-half what she cost; was sold at public outcry in England for $200.

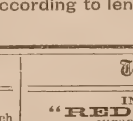
Irish setter Gipsey, red, and some white; hunted some on quail; very obedient and easy to handle; sire of Gipsy, Rodman's Dash, who was the best Irish setter on game in the United States. She is a good brood bitch, and just served by my red Irish setter King Bee, who was sired by champion York; a perfect beauty, and if she fails to pup will serve her free next time, but she never missed. Price only $35.

France, a field trial bitch; a beautiful head; ears hang low; a good brood bitch; never hunted her; bought her in Illinois; will guarantee her to stand a pigeon in yard for twenty minutes, and from her movements I think would be good in field. Price $25. Litter of pups worth four times that amount.

Llewellin setter bitch one year old, blue ticked; raised and bred by L. H. Smith, of Strathroy, Ontario, Canada; sire, Paris, and dam, the pure Laverack bitch Peeress; Peeress and Paris are both broken, and Paris is one of the best field dogs in this country, that money cannot buy; the Chicago *Field* of Nov. 8th, '78, gives a cut of the famous Paris and his field winnings and on the bench; parties buying will get pedigree and his winnings printed. Price only $50. These are bottom prices.

Address H. B. VONDERSMITH, Lancaster, Pa. Nov. 27-tf

ON SALE.—The celebrated English bull dog champion Gambler, K. C. S. B. 4549; color white, with brindled ears; weight 45 lbs. To describe his successful career on the show bench would be superfluous. Suffice it to say he has obtained upward of 300 cups and prizes, both in England and on the Continent, and pronounced at the Great Bull Dog Show at Bath, where he received the Bull Dog Club Medal from the hands of Vero Shaw, Esq., the judge, to be the most typical specimen extant. He is at the present time in the most vigorous health and bloom, and capable of sustaining his prestige for many years to come. To execute an immediate sale $75 will be accepted. Also my entire kennel of pugs of both sexes; most of them winners at our leading shows. Prices, from $5 to $20, according to merit. WM. SEFTON, Nov27-2t. Paradise Terrace, Blackburn, England.



The Kennel.

IN THE STUD.
"RED GROUSE,"
IMPORTED IRISH SETTER.
Address EDWARD LOHMAN, 171 E. 87th St. N. Y.

ASA L. SHERWOOD,
Skaneateles, N. Y.

GORDON ENGLISH, AND FIELD TRIAL SETTERS
OF PUREST STRAINS.

Imperial Kennel

Setters and Pointers thoroughly Field Broken.
Young Dogs handled with skill and judgment.
Dogs have daily access to salt water.

N. B.—Setter and Pointer puppies; also, broken dogs for sale; full pedigrees. Address H. C. GLOVER, Toms River, N. J

A RARE CHANCE.—Whelps for sale, out of champion Fire Fly, by champion Elcho. Also, whelps out of Belle "Pride of the Border"—Kirby), by Carlowitz. Address H. W. GAUSE, Wilmington, Del Oct. 9, 1mo.

PINE LODGE KENNELS.—I am prepared to take a limited number of dogs, either setters or pointers, and train them thoroughly. I give my puppies seven months' work out of the twelve, and guarantee satisfaction, if the dog has all the natural instincts. References on application. Prices, $30 and $75, according to length of time I keep the dog, with discount to parties at long distances. A. WINTER, Cairo, Thomas County, Georgia. Oct 2,tf.

RATTLER.—In the Stud.—Blue belton, Llewellin setter, winner of three bench prizes, by champion Rob Roy, winner of the Eagleton field trials, out of the pure Laverack bitch, (Pickles). Will serve bitches at $20. Litters warranted. Inquire of L. F. WHITMAN, Detroit, Mich. Jan 2tf

POINTS FOR JUDGING DOGS.

A PAMPHLET compiled from "Stonehenge's" new edition of "Dogs of the British Islands," and containing the "points" by which every breed of dogs is judged in this country and England, together with a description of the same. For sale at this office. Price 50 cents.

GOOD PUPS FOR SALE.—Have three setter dog pups and one bitch by Lathrop's Dick, out of my Mollie, for sale; are 3 months old. These will make good field dogs. H. J. FERRY, Palmer, Mass. Nov20,2t

IN STUD—The two white imported Bull Terriers, Teddie and Viper; weight, twelve and twenty pounds; also English bulldog, Crib; weight, forty-two pounds. For particulars address "CRIB," 23 Myrtle street, Boston. Orders taken for thoroughbred bull pups from the above Crib and imported Judy, to be whelped Nov. 28th. Portrait of Judy can be seen at this office. Nov20,1mo

HIGHLY-BRED PUPS FOR SALE.—The setter bitch Prink, by Averrill's Mont, out of Ethan Allen's Cosey, has been bred to the dog Ethan by Ethan Allen's Boss, out of Cosey, on the 23d Oct., 1879. Applications for pups will be placed on file in order of reception by JOHN JOHNSON, Thistle Kennel, North Manchester, Conn. Nov13,cot

ONE SCOTCH RABBIT HOUND, for sale, nearly two years old; all right everyway. A. S. CREAL, Hadley, Saratoga Co., N. Y. Nov.27-2t.

FOR SALE.—Two Gordon setter bitch pups; full-blooded; perfect black and tan; six months old; good sire: with pedigree on both sides. Also one Gordon setter dog, two years old; winner of first prize on the bench; perfect black and tan, and a perfect field dog; all broken, with a full pedigree; a rare chance for a good dog. Enquire of CHAS. T. BROWNELL, P. O. Box 250, New Bedford, Mass. Nov27

DOG WANTED—Irish setter preferred. Must be a perfect retriever. Wanted almost entirely for use at pigeon matches. Address, with price, H. A. W., care of this office. Nov.27-1t

The Kennel.

Neversink Lodge Kennels.

The following celebrated Dogs are for sale.

DOGS:

St Bernard dog "Marco"; rough coated, two years old; a magnificent animal—Rev. J. Cumming Macdona's stock—second prizes Hanover Show and Rochester.

New Foundland dog "Keeper"; four years old; first prize Westminster Kennel Show, 1879.

Pointer dog, "Croxteth," liver and white; one and a half year old; out of Lord Sefton's renowned stock—one of the handsomest pointers in the United States. Second prize in the Hanover International Show. Broken.

Blue Belton setter, "Decimal Dash," eighteen months old; sired by Llewellyn's celebrated "Dash"—a magnificent stud dog—never exhibited.

Irish setter, "Rover II"; pure red; son of Macdona's champion "Rover." Never exhibited; thoroughly broken.

English setter, "Ranger II"; a pure bred Laverack, son of Macdona's celebrated "Ranger". His get won the first Hanover and Paris shows.

English setter "Ranger Rival," a half brother to Ranger II., never exhibited.

Any of these dogs will serve approved bitches at $25.00.

Bitches.

St. Bernard "Bruantels," rough coated, out of Prince Solm's celebrated stock; a magnificent bitch, in whelp to "Marco," 1st prizes in Hanover and Rochester show.

Pointer "Queen," liver and white. 1st Westminster Kennel Show 1878, in whelp to champion "Sensation."

Gordon setter "Beauty," 1st Boston Show 1878, 2nd New York Show 1878.

Pointer "Dora"—liver and white, out of "Queen" and "Sancho," in whelp to Croxteth.

Blue Belton setter "Silk," in whelp to Ranger I.

Irish Setter" Moya," out of Col. Hilliard's "Paimerston;" will be bred to Rover I.

English Setter" Donna," white and lemon, in whelp to Ranger II.

Pups out of all the above first-class bitches can be secured by an early application. Besides I offer for sale pointers, setters of minor quality, but of good thoroughbred stock; full pedigrees. Particulars will be furnished on application to

FRANCIS O. De LUZE,

18 South William Street, New York.

Also Spratt's Dog Soap, and direct orders taken for Spratt's Medicines.

I WILL SELL THE BALANCE OF MY valuable Kennel of Setters at the following sacrifice, which is less than one-third what they have cost me: The pure black-and-Tan Gordon bitch, Midge, a great beauty, and winner of the first prize and best brood bitch at Philadelphia Show, and for speed, endurance and scenting powers in the field she has no better; price $100. Imported red Irish setter bitch Floss, winner of prizes at the following shows: Cork Show, Ireland; Centennial, St. Louis, Baltimore twice; New York and Philadelphia. She is a great beauty, and a fast worker in the field; price $75. Imported red Irish setter bitch, Colleen, winner of prizes in England and here; price $75. The red Irish setter bitch Nora: a slashing strong bitch; only two and a half years old, and the making of the best field worker that I have ever seen; price $40; a great bargain. A handsome Llewellyn setter bitch; a beauty and a capital bitch in the field, and a good brood bitch; her price, only $65. One brace of handsome puppies, five months old; large, strong, healthy pups, out of Arnold Burges' celebrated Champion Field Trial and Bench Show winner Druid, and the Llewellyn bitch, Leda; price $25 each. This is a rare chance to obtain a pure breed dog at a low figure. Full pedigree will be furnished with all of the dogs. C. Z. MILEY, Lancaster, Pa. Oct23.tf

ST. BERNARDS FOR SALE.—The undersigned, wishing to reduce his kennel offers for sale several magnificent imported Mount St. Bernard dogs and bitches, carefully selected from the best European strains. To be sold for no fault. For prices, pedigrees, etc., address.

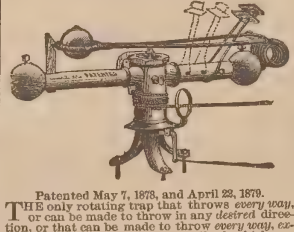
Thread-Wound, Long-Range Shot Cartridge Cases.

For Muzzle-Loading and Breech-Loading Cylindrical and Choke-Bore Shot Guns.



Any desired closeness of pattern made at 50, 70 and 90 yards, with penetration superior to that made by the best choke-bores at 40 yards.

INDISPENSIBLE TO HUNTERS OF ALMOST EVERY KIND OF GAME.

Ten and Twelve Gauge now ready.

This Cartridge consists of two semi-cylindrical cases, wound with thread, containing one ounce of shot, heavy in front and light in rear, to keep it from turning. When the thread is all unwound by the friction of the air, the cases fly apart, and the shot scatters. The cases are sold empty, to be filled by the purchaser with any size of shot.
Price, $5 00 per Hundred. 20 sent post-paid for $1 00. Address

Sportsmen's Routes.

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R.R.

Mackinaw, Grand Rapids and Cincinnati Short Line

FOR THE

Trout, Grayling, and Black Bass Fisheries,

AND THE

FAMOUR SUMMER RESORTS AND LAKES

OF

NORTHERN MICHIGAN.

The waters of the

Grand Traverse Region

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in those waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory.

The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at many points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections.

The hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing.

During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide (an attractive illustrated book of 80 pages), containing full information and accurate maps of the Fishing Grounds and Time Cards, address A. H. LEET, Gen'l Pass. Agent, Grand Rapids, Mich.

GUNPOWDER.

DUPONT'S

RIFLE, SPORTING and BLASTING POWDER.

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1801, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN,

Nos. 1 (coarse) to 4 (fine), unequaled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING,

Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.

DUPONT'S EAGLE RIFLE,

A quick, strong, and clean Powder, of very fine grain for pistol shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING," FFG and FFFG. The FG for long range rifle shooting, the FFG and FFFG for general use, burning strong and moist.

SPORTING, MINING, SHIFFING, and BLASTING POWDERS of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar, and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

F. L. KNEELAND, 70 Wall Street, N. Y.

N. B.—Use none but DUPONT'S FG or FFG Powder for long range rifle shooting.

THE HAZARD POWDER COMPANY

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only.*

Hazard's "American Sporting."

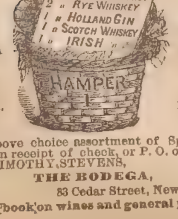
Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for up-land prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. *Burns slowly* and very clean, shooting remarkably close and with *great penetration.* For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG in kegs of 25, 12½, and 6¼ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist.* The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* Powder of the country.



Superior Mining and Blasting Powder.

GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

ENGLAND AND AMERICA.

COLT AND WEBLEY.

The two GIANTS in gun-making at the present time, are P. WEBLEY & SONS, Birmingham, England, and the COLT FIRE ARMS Co., Hartford, Conn. Both owe their marvelous success to the same two causes. First, that they learned just what constituted PERFECT GUNS. Second, that they applied labor-saving machinery to their production. The result is, THE BEST GUNS IN THE WORLD, AT VERY SMALL COST. You can now buy a COLT or a WEBLEY gun, which it is a pleasure to use, for no more than is commonly paid for guns bearing unknown or fictitious names.

Of WEBLEY'S GUNS we have the TREBLE WEDGE GUNS—every gun having beautiful Damascus or laminated steel Barrels, Rebounding Bar Locks, Pistol Grip, Lever For part, Double Bolt, and Extended Rib.

DOUBLE BOLT GUNS (Top and Side Lever). | WEBLEY-LANG SELF-COCKERS.
SINGLE BOLT GUNS (Top and Side Lever). | EXPOSITION GUNS (various styles).

The last four styles named above constitute a JOB LOT, which we are selling off at about half their real value. These guns are in NO WAY inferior to the Treble Wedge guns as regards quality of material or EXCELLENCE in shooting, and are the CHEAPEST lot of guns we have ever seen.

Of COLT GUNS, we have all the regular grades, and, in addition, THE CLUB GUN. This gun is made for US, with selected barrels and the very finest materials, and is designed especially for Glass Ball and Pigeon Trap Shooting. Gentlemen who indulge in these contests will be obliged to either shoot the COLT CLUB GUN, or lose the prizes.

Every one of these guns has an elegant heel plate, with the Rampant Colt in a circle, and the words "The Club Gun," beautifully embossed upon it. *Any* Colt gun not answering to the above description is not the Club Gun.

Besides the Webley and Colt DOUBLE guns, FOREHAND & WADSWORTH, of Worcester, Mass., make for us a SINGLE barrel breech-loader with Scott pattern Top Lever. These guns are very light and handy, and just the thing for BOYS or men who cannot afford to buy Double Guns. They cost but a mere trifle. We are happy to announce that we are the principal distributing agents at New York city for all three of the above-named manufacturers.

Original.

MOONLIGHT ON THE ANDROSCOGGIN.

I STOOD in early youth upon the brink
Of a silent river, flowing solemn, slow,
At that mysterious hour when shadows grow
To sombre shade, and outlines softly sink
To dimly blended masses dark, and shrink
From earthly sight all earthly things below.
The faint wind's rushing wings had cooled the glow
From out the last long ray of dying pink
And crimson of the sunset's parting flush,
And all was gloom. When o'er the rippled wave
There leaped a sudden flash of silver light—
A quivering lance. All nature was a-hush,
As haughtily along the jewelled pave
Majestic swept the glorious queen of night.
The shadows fled. The cloud of shimmering mist
Fluttered, throbbed, and broke in rugged rents
When through them flashed the shaft, as through the tents
Of some wild desert tribe avenging hissed
The glittering spears of Ishmaelites, who wist
Of no law but of might. The tall flags bent
Before the royal presence, as they sent
Their homage thro' the quiet air, and kissed
The ground in meek submission. Through the reeds
A murmuring whisper crept, that swiftly swelled
The zephyrs to a rushing blast, and swept
The white waves onward, strung with glistening beads—
Then died away. And upward calmly welled
The deep, strong breathing of a world that slept.

Bethel, Me. JOHN PRESTON TRUE.

The Resources of Alaska.

[FROM OUR CORRESPONDENT ON BOARD THE JAMESTOWN.]

THE uninterrupted rain and storm for the last three weeks have so entirely broken up all shooting and fishing excursions that I have found myself at a loss for a supply of material suitable for your columns, but a scrap book loaned me by a friend has filled the void. In this book my friend has pasted the gleanings from each monthly batch of papers, in which items in connection with Alaska affairs have appeared. It has become thus a history of the attempted rise and successful fall of the Sitka Republic.

Among the scraps I find under date of January, 1879, a letter from Professor Henry W. Elliott, written to answer and confute certain points and assertions in the report of Major Morris, Special Agent of the Treasury Department, as to Alaska. I am fully aware that Professor Elliott is entitled to be considered a reliable authority upon Alaska, as he has devoted much time and study to the subject, and from conversation with him previous to my visit to the country, and comparison of the views then expressed by him with such as I have formed, I find that in many essential points our views coincide; but in some, as expressed in this letter, in an interesting article published in *Harper's* of November, '77, and in letters to myself, we differ widely. In his critique on the paper of Morris he (Elliott) declares his "willingness to cheerfully acknowledge himself in error" if the views he holds and publishes can be shown by Morris to be erroneous. I do not know and have never seen Major M., and have no disposition to act as his champion, but I have learned something about Alaska, and looking upon Elliott's printed matter as public property I propose to myself the duty of accepting the challenge thrown out to the Major.

I think that it is probable that both gentlemen are somewhat in the positions of the two honest men who fought to prove—the one that the shield was golden; the other that it was but silver. And I think that the advocate of silver is rather inclined to attribute the tarnished surface to an undue admixture of baser metal. They have seen this shield from very different points of view. I have been skirmishing around it for some time with my eyes well open, and provided with excellent assaying outfit, by which I have been enabled to, I believe, arrive at a very safe understanding as to the true nature of the metal.

"Coming down from my generalities," the three main points at issue between the two authorities are in connection with the resources of Alaska, agricultural and mineralogical, and for stock-raising.

As to the first I will quote:—

"The Major knows as well as I do that the agricultural possibilities of Alaska are null and void; if he does not, then let him cite a single instance where an acre of ground has ever been or can be annually planted in Alaska successfully with a crop of either corn, wheat, barley, or potatoes.

As to the second—

"If he thinks stock of any kind can be successfully raised wheresoever in Alaska, let him locate a spot therein where he will undertake to manage profitably 500 head of cattle, sheep, or hogs; where he will not have to feed, water, and shelter them six months out of every year, in a country where he cannot cure hay nor grow grain.

As to the third—

"If the gold mines, of which the Major speaks so positively, are so rich, why are they not worked? * * * When miners find anything of value in Alaska they will go it lively without any assistance from the Government," and speaks of such reports as "fairy tales."

Before undertaking to discuss the points thus raised, I wish to establish a firm basis. I assume, then, that the strict letter of the text is not material so long as its spirit is taken fairly into consideration. For instance, that ability or inability upon the part of Major Morris to locate spots to successfully manage a market garden, or run a stock farm, cure and make hay, etc., for superintend a gold mine, is not the question at issue, but rather whether these businesses can be transacted by any one.

Again, I would note that the wording of the points is so general that it would be impossible to either prove or disprove them entirely. The "either" and "or" in the first problem, and the specific number of head of stock in the third, are saving clauses.

So far as I can judge, I agree with the Professor that an attempt to cultivate the cereals enumerated would probably be crowned with failure; the summers are not long or hot enough to ripen the grain before the September rains; but potatoes can be grown and many other valuable vegetables, as I shall presently show by facts.

I am not sufficiently posted in the mysteries of a granger's profession to undertake to speak very positively as to the number of stock of any kind which any given amount of land would support, but that there is land here which will support some stock, I will also prove by facts.

And as to the necessity of giving shelter, food, and water for six months out of the year, I do not believe that it exists, and will give reasons for my unbelief; and facts again to prove that hay of good quality can be cured and has been. I will in answer, first treat of the agricultural possibilities and stock prospects in connection.

First, as to vegetables. We have been here three months, and during that period have been plentifully supplied with a variety of good vegetables, among which have been radishes, lettuce, carrots, onions, cauliflower, cabbage, peas, turnips and potatoes, and have a prospect during the coming month of beets, parsnips and celery, all of which look well in the gardens.

The cauliflower and cabbage are as good as I ever ate; the potatoes are just coming on, and are not quite ripe yet. I had this day (Sept, 17th) at my dinner, a potato grown here which was seven inches long, three inches thick, and weighed one pound five ounces, and it was one of many I have seen which would average from one-half to three-quarters of a pound in weight. Its flavor was good, and I shall, as do all other people here, depend upon this market for my winter's supply.

There are many small gardens which return crops, as in all other countries, in proportion to the care and skill displayed in their cultivation. I have seen plenty of "the watery walnuts dubbed potatoes," but they came from gardens belonging to people so excessively pious that they trusted God for everything, and put in no work themselves. Some of these gardens are *over* "a single acre" in extent, and have supplied good crops annually for quite a while. On Japonski and Biorka, and Survey and other islands there are hundreds of acres which could be cultivated with profit, if the population were great enough to furnish customers. On Biorka, an island about twevе miles from here, there is now under cultivation a thriving vegetable garden of several acres, and these acres have been under "annual" cultivation for some years.

In regard to stock raising: While the army was here Japonski Island was used as a stock ranche. There has been kept on it as many as sixty head of cattle, over one hundred of sheep, and over three hundred of hogs; all of which obtained their own food for a much greater portion of the year than they could have done in any State north of Alabama; and there was no difficulty in getting good hay. Twelve miles north of here are the Katliansky and Nesquasarisky bays and plains, which, having been planted with timothy some years ago by a settler named Doyle, furnished to the troops an average of sixty tons of good hay, cured during the heated spell of July, when the temperature goes up into the nineties; and this year those who cut a little for their own supply estimate that there was at least one hundred tons. In the immediate vicinity of Sitka there are three thousand acres of arable land, much of which is now well grassed and covered with white clover. And on the summits of some of the foot hills there are plateaus now covered with wild grasses, where innumerable deer obtain pasturage and where goats and mountain sheep would thrive. In general terms, then, I believe that the vicinity of Sitka, if provided with experienced truck gardeners and cattle raisers, would support with vegetables, fresh meat of several varieties, fish, game and berries of a dozen kinds, a population of three thousand people, and San Francisco, Portland and Victoria would supply the cereals and groceries.

But no such population could find homes here now. Most of the land belongs to the Government, and there is no way provided by which a home can be procured. The Territory having been ceded to us by treaty, is not subject to preëmption, and there are no buildings here suitable for dwellings which can be obtained.

The miners, who come by each steamer, camp out in the most gypsy-like manner, or roll up in their blankets in some one of the vacant rooms in the barn-like, dilapidated Government houses. There is no hotel or boarding-house of much capacity. Groceries and all necessities other than raised in the country are very expensive. An irruption of a hundred men would produce a corner on everything; but with due time the expansion is practicable.

And now about the mines. I will not undertake, Mr. Editor, to give you any very valuable information about them. Reports in regard to mining matters are generally presumed to be tinctured, and I wish to avoid any such implication.

But I will say that I firmly believe that the stories of their richness are not all "fairy tales," and that there is plenty of rock which will pay well for working in this vicinity. There are on Baranoff Island, on which Sitka stands, fifteen or twenty located and recorded quartz ledges, many of which have been found by assay to be auriferous, and some of which are now being developed. A five-stamp mill, which had been laboring under disadvantages incident to want of experience of its managers, "cleaned up" for last steamer and sent to market a fifteen hundred dollar bar of gold—Alaska's first; and it will probably repeat the performance next month.

And now, Mr. Editor, I think that you may fairly expect that in your next issue there will be a card from Prof. E., "cheerfully acknowledging himself in error." He must believe my statements, even if he differs from my conclusions, and in thus entering into the discussion I comply with his own request that "you [I] shall take full notes, and give to the world the truth about Alaska, as I see it," and expressing a most flattering estimate of my capability and honesty.

I will devote the rest of this letter to extracts from my journal:—

EXTRACTS FROM MY DIARY.

Sept. 1st to 7th.—A dull and gloomy week, with rain on six of the seven days. Wind generally from S. E., twice strengthening into a gale, as we could judge from the heavy sea visible outside, which produced heavy surf on the outlying reefs and islands. Total rainfall 2.3 inches (don't point that 23. I dread the man in your office, who, in my last, turned table-cloth and Table mountain into Sable.)

Very few sea fish brought in on account of storm.

Dog salmon very plentiful; the Indians and Creoles gaffing great numbers of them in the fresh water streams. No one but themselves will, however, partake of these hideous looking creatures. Salmon still jumping among the channels between the islands, but not very plentiful. Hunter's cannery closed work and shipped produce, which, with that previously sent, amounts to over 280,000 lbs. canned, and a number of barrels of corned.

Caplin: For several days immense shoals of a small fish, which I believe to be caplin, have at each flood tide lined with a windrow, a yard wide, and several inches deep, the beaches in the vicinity. The fish is about five inches long; the back is nearly flat, and extends on each side into a ridge. The back is dark green; sides and belly pearl color, tinted with rose; ventral fin, remarkably large; no visible scales. They come in myriads; and it was but a few minutes' work to gather a bushel, alive and hopping. Each incoming wave stranded its host, who foolishly seemed to be trying their best to get ashore out of the way. We found them very delicious greatly resembling smelt; but better, if possible.

Codfish: A specimen, of so-called, was sent me from the cannery, where they gather in numbers to feed on the offal which escapes the squaws. This fish was not a cod, if, as I believe, all members of that family possess the tentacle from the lower jaw. This had none; nor have I seen a fish here which has. In general appearance, this one resembled a rock cod.

Trout: We have entirely ceased trout fishing; the creeks are too high; the fish too slimy, soft, and flavorless; and salmon roe, our only successful bait, has become scarce.

There has but little shooting been done during the week. A few beach birds have been shot, mostly plover and ringnecks.

A petrel, of a genus entirely new to me, was shot near the ship. In shape it resembles the ordinary Mother Carey, but is somewhat larger, and differs in color. The length of the ordinary petrel is about seven inches; color

black; with a little white on outer edge of tertial feathers. This bird is nearly nine inches long; quite so, if measured to tip of wings folded, instead of tail, for the former project half an inch beyond the latter. The plumage is mostly dove color, with black bill and legs, white chin, and outer edge of tertials, and dark brown on outside of wings: it has the nostril tube on bill, and single dependent claw in place of a hind toe, which mark the petrel family.

Sept. 7th to 14th. Six days of these seven have been devoted to irrigation, and on the odd day there was quite enough water furnished at intervals, to make it a worthy companion of the others. Seven times twenty-four is one hundred and sixty-eight; and of that number of hours it rained one hundred and thirty-two, and blew an almost steady S. E. gale, which sent the surf dashing over the reefs and made out-door exercise a failure. Our rain guage records over three inches for the week, and I confess myself greatly puzzled as to the statements in regard to the Deluge. I am satisfied by observation, that two inches a day is a very heavy rainfall; that, with fifty per cent. added, would make but 120 inches in forty days and nights. And it wouldn't require much of a hillock to get up, and be safe from that. I guess there's some mistake in that story.

Sept. 14th to 22d. Sitka climate is like a Portuguese devil—either very bad or very good. The first three days of this week were of the first type—horrid; the remainder magnificent—gentle northwest winds, clear sky, temperature of 70 degs. in sun, 60 degs. in shade, smooth sea, and everything lovely. Canoes bringing in lots of game, and we securing a fair proportion ourselves. We let the ptarmigan shooting out to the Indian. Their pursuit involves a fearful climb to the summit of the highest of the mountains, where, above timber and snow lines, they are plentiful. One of the officers, who ventured, shot twenty-five in travelling a mile. They are now very handsome; their wings and part of the body having turned white, the remainder resembling that of our ruffed grouse. The meat of the ptarmigan is dark, and far ahead of that of the grouse, of either of the varieties we have here. Their meat is white. There are three very different birds of the grouse family plentiful. One, very like our ruffed grouse; the ptarmigan; and one, which is much larger, weighing about three pounds, about twenty inches long, and so dark a brown as to resemble greatly an old black hen, called here the "blue grouse." It may be an old cock grouse, for all I know; it's tough enough to be old, and I never saw a bird like it East.

The ducks are assembling; several varieties; but they are very wild, and hard to get at. We have no large bags as yet. Coots, widgeon, and a few sprigtail and teal, so far.

Sept. 21st to 30th, inclusive.—During the last nine days the rainy ones have had the best of it "by a large majority," but they have been eventful with me.

Sunday night, one of the prettiest girls in Sitka, her mother, a Kamschatkan, got married, and I did all I could to help her off. My steward and I ran the supper, and I danced and drank tea all night. Before I came to Sitka, I should, judging by my experience in Cadiz, Manila, and other Spanish places, have given to the "ox-eyed señoritas" the medal for champion partnership, but these Russian creoles beat them badly, for they can talk as well as dance, and are not at all like the young lady at the Dignity Ball in Barbadoes, who at the dance at the "Brass Castle," informed Midshipman Marryatt that "I'd have you to know sar, I came here for to dance not for to chatter."

Oh, those Barbadoes Dignities! Is there not one among your readers, who, like myself, has received this note:—

"RESPECTED SIR:—The pleasure of your company is requested at a ball to be given at the Brass Castle on the evening of the—

JANE ANNIE SMITH, Landlady.

But that's getting out of Sitka waters.

On Monday—I find I've committed myself, and let out a secret—most of my friends who with me attended that dance and wedding, describe it in their letters home, as occuring on a week day, not Sunday—perhaps I'm mistaken, and it was Monday—however, I'll let it go, so as not to get chronologically confused. I find these Greek Church people are pretty good Christians, and so are the Señoritas referred to, and they all do it Sunday night, and expect to go to Heaven all the same; and I don't see why I shouldn't if they do.

Well, on the morning after I was a used up individual, and I resolved upon a strengthener and took it in the shape of a trip to the mountains to pick up information about the gold mines, shanty out, eat heartily, sleep soundly, and shoot ptarmigan. I was gone several days, and in my next letter you will have the details of a trip in which two of us bagged about 123 ptarmaigan, besides half as many we killed but couldn't get.

Since my return, I have devoted my spare time, and as many shells as I could get loaded, to ducks, which are here in thousands, mostly of one kind, about the size of a female domestic duck, brown back, medium sized bill, and a dusky white breast, a white patch under each eye, and very good eating.

At first we tried to get on them in our boats, but soon found it impossible. They knew to an inch just how far our guns would carry, and would dive and plume themselves, and not notice us until we were exactly twice that distance off; then away they would go, straight away, and we would look at them, and make unpleasant remarks. If there happened to be any miserable, skinny, long necked filthy shags among them, they would come straight to us and around and around our boat, apparently daring us to shoot, and sometimes out of pure disgust we would, and get a little savage happiness by seeing them tumble.

But we've got their gauge now; there are certain shoal channels below the islands, where kelp grows in abundance, and there they feed. Landing with our boat on the opposite side we cross over, and send her around to approach gently the feeding flock, and as they rise and shoot through the opening between the islands, we stop lots of them. I was lost for an hour and-a-half this evening, of which time an hour was occupied in going and coming, and killed ten, one for each cartridge I had with me, although I must confess that the average was made good by some lucky shots which brought down two or three, for they are an awful easy bird to miss. They go like bullets, and I have not yet learned with certainty how far ahead to hold. The boat stationed in the direction in which the tide is flowing picks up the killed as they float out; we have learned that it don't pay to chase a wounded one; they swim faster then a boat can pull. If, when one drops he is legs up, he is ours; heads up, and the chances are nil.

Next month, canvas backs and mallard are expected.

The little delicious caplin comes no longer. Where they come from, why they come, and devote themselves to suicide, and where those who fail go, are problems which I give up.

The mountains are covered with snow, and the deer are coming down close; yesterday morning two swam from the mainland to an island near the ship, were chased by Indians and shot.

Deer hunting would be pleasant now, but for the bears, which are large, plentiful, too plentiful, and savage.

When you see a bear skin, as I did this morning, bigger than any ox-hide I ever saw, your desire to see a live one oozes out after the fashion of Bob Acre's courage.

Many geese fly over going South, but none have tarried with us.

I hope in next month's letter to give you some account of them. PISECO.

TROUTING ON THE NEPIGON.

PROBABLY most persons who wield and esteem a fly-rod have heard of the Nepigon. In the traditions of the angler that trout stream, compared with other trout streams, is what, to the Indian of the woods, are the ideal happy hunting-grounds. To others and to me the Nepigon has been for years the Mecca of promise.

In the August of this year a Chicago party, of I. F. Bonfield, I. L. High, I. H. Bissell, L. Pratt and myself, was made up for an excursion to that river. Its supplies for the subsistence department were provided and shipped from Chicago by the Chicago and Northwestern Railroad to St. Paul, thence by rail to Duluth. The next stage of the journey was by steamer from Duluth on the Francis Smith, an elegant side-wheel passenger vessel of the Sarnia line. It is only by the Canadian steamer of the Collingwood or Sarnia line, to be taken at Sarnia, Saulte Ste. Marie or Duluth, that the Nepigon can be reached, and by them at irregular times only. The American steamers never go to Nepigon.

Red Rock, so called from a towering ledge of rock at the mouth of the river, is nearly 300 miles from Duluth. Part of the trip along the north shore of Lake Superior is in sight of the most bold, striking and picturesque scenery, including points like Thunder Bay, Prince Arthur's Landing and Silver Islet, and almost countless islands outlying the main land. Nepigon Strait, entered between mountainous cliffs, extending twenty miles to the river between a chain of islands and the shore, is a continuous stretch of splendid scenery of land, cliffs, woods and water of uniform wildness. Red Rock is simply an old trading-post of the Hudson Bay Company, now of little business or importance, and consists of three or four company buildings and a few cabins of half-breeds, and is more than a mile up the river.

The night of our arrival the steamer anchored off the mouth of the river, and lightered us and our paraphernalia, in two small boats, in the darkness, to the dock, where the night was made more night by the glimmer of a single faint lamp. We found immediate use for our sleeping-kit, for the only accommodations the Company's agent could furnish us were the free quarters of a bare and empty room, where our blankets could be spread. We were aided in our attempts to make the most of the situation by Mr. Halliday, of Hornellsville, N. Y., and Mr. Canfield, of Morristown, N. J., who landed with us from the steamer. In the morning we found the schooner *Tom Boy* ready to weigh anchor for Marquette, with a party, consisting of H. L. Harding and A. G. Weld, of Boston, and Prescott Ely, of Marquette, who reported to us some of the wonders of the trouting, particularly of a six and a half pounder trout taken. This certainly entitled the *Tom Boy* to hoist the metaphorical flying colors at her masthead.

Red Rock can tolerably fairly outfit fishing parties in the way of food supplies, very well in the way of tents, and excellently in the way of canoes and guides. Mr. McLaren, the Hudson Bay Company's agent, hired to us three tents and three birch-bark canoes, and secured for us the necessary retinue of half-breed auxiliaries. It was but short work for him to enlist and subsidize for us Michel, Louie, Pierre, Francois, Jean Baptiste and William as our working force and guides. They were all faithful and athletic fellows, thoroughly familiar with the river, and apt and trained in all requirements for the service.

The river issues from Lake Nepigon, and is a water-course of much volume, running nearly due south forty miles. Near the source of the river is Victoria Falls, where the whole body of the water rushes over a pitch of probably about fifteen feet, between rocky points probably eighty feet apart. Some of our party dropped their flies in the tumult of the waters there, but their success, though fair, was far eclipsed by a bit of brief by-play of Louie, the pot-walloper, with an extemporised tackle of a limb and line, with a bait of pork, who snatched right out of the whirling billows a five pound and a four pound and a half trout. The upper half of the river is girded on one side—sometimes on both sides—with overtowering cliffs, bluffs, palisades and rounding ranges of hills, clothed with a scraggy or stunted forest. There are many rapids. It is above and below these tumultuous breaks that the fishing is best. Between the rapids are deep, smooth reaches of stream, often swelling and rounding into wide expanses. Three of these are of extent enough to be named lakes—Lake Helen, Long Lake and Lake Emma. On Long Lake we had much of swell and sea, as if of Superior itself, on our passage over it. The water is exceptionally pure, clear and transparent—so much so as sometimes to reveal the shoals of trout that whisked about in the depths below us. At one place, just where the current began to curve into the rapids, I caught several trout averaging two pounds, every one of which I could see darting up to the fly before the seizure. In the lake, Bissell measured the depth at which a white pebbelstone was visible on the bottom, and found it twenty-three and a half feet! The purity and transparency of the stream were such as to make it a tempting and seductive element for bathing; but its temperature was found to be rather frigorific for a sportive plunge.

The country is without trace of settlement and cultivation, or trace of passage and travel, other than that of the foot-trail of the portages. Of these portages there are probably not more than eight or ten. They are mostly short and easy, though there are two of a mile and a half each, well enough marked, but stony and rough. There are three or four points or places called "pools" of more repute for fishing than other localities, such as "Alexander's Pool," "Cameron's Pool," "Hamilton's Pool," all in the lower flow of the river. As we learned, comparatively few of the persons venturing to the Nepigon ascend it to its source. They content themselves on the really ample yield of the noted pools within easiest access. But it was in less known nooks and sweeps of water in the higher courses of the river that we found the sport most lively and exciting, and certainly the scenery of the Nepigon, in its upper half, is greatly more picturesque, grand and attractive than it is along the downward twenty miles. There are palisades which surpass those of the Hudson. There are ranges of hills, and lines of cliffs, and walls of rock, and islands and islets of manifold shape and size. The lake itself, not frequently visited, embosoming on its margin groups of islands, presents a glorious water view and perspective. From a peak of rock on one of these islands—christened by my comrades who climbed with me the lofty apex, with appropriate ceremonies, off-hand, "King's Peak"—there is a prospect and vista of many miles of lake and island scenery of inexpressible loveliness and beauty.

The Nepigon flows through a region wholly unfitted for cultivation or any industrial productiveness. Its soil is barren and stony. Its timber is worthless. It is likely to always remain a solitude and a waste. On account of these very conditions—of the sterility that will keep it as a desert—the river itself will be comparatively undisturbed, and continue a solitary stream, a typical, fitting and fruitful nursery and home of trout—a part peculiar and reserved, as if by design of Providence, for the propagation and perpetuity of trout and for superlative trouting. Its difficulty of access and its isolation will limit the number of sportsmen who will resort to it, and so preserve it from depletion if not from decimation.

During this season Mr. McLaren informed us only seventeen persons have made piscatory pilgrimage to the Nepigon. A few of these we met. Among them were two adventurous ladies, Mrs. A. H. Leonard, of New Orleans, and Mrs. Thos. Poland, of Shreveport, La. In the endurance of the roughing and in fruition of the delights of the trip they were fully the matches and equals of their husbands and of Mr. A. Bomar, of Shreveport, La., who accompanied them. It is no exaggeration to say that both the fish and the fishing on the Nepigon are the finest and most satisfactory of all trout and trouting. The fish are most abundant. The water in many places hides hordes of them, and in some places reveals through the crystal transparency numbers wantoning in groups. Nor do they populate pools only here and there and far between. They are nearly ubiquitous. Wherever the water moves in visible currents, whether swiftly and furbulently, as at rapids, or more gently, as in many reaches between bluffs, the angler will meet with a ready rise to the fly. As a general thing our party captured all it sought or desired to take. There was seldom any complaint of "bad luck" in respect of numbers or of weight. We always caught at any one time more trout than were necessary to supply all the platters and to satisfy the appetite. The excess beyond the needs of the meal was returned living to the stream. Very many more scores of trout were dropped back in the river than were placed in the frying-pan, and we were very liberal, too, to ourselves.

The Nepigon trout are the peers of any of the species anywhere. Some of them are touched with a deep red on the belly and fins. The coloring of the enamelled skin was vivid and high-toned always. By means of our pocket-scales we could accurately test the weight of those caught, and the figures, transferred to the tables of the record, enabled us to estimate the average with precision—and the average of our taking was one pound and three-quarters. Very few of the fish were less than a pound. Those between two and three pounds were common, while some would figure between three and four pounds.

A great part of our fishing was from the canoes. The vexatious mischance of hooking an overhead tuft of hemlock or whirling flies into the intrusive twigs was thus avoided, and there was opportunity for scientific throwing and impunity for reckless or awkward casting. So we lost but few flies from casualties.

JOHN LYLE KING.

Chicago, Oct. 20th.

Fish Culture.

HATCHING HERRINGS ARTIFICIALLY.

LONG CONTINUED experiments made in Scotland and England to hatch herrings by gathering and impregnating the ova after the method of fish culturists, seem at last to have been rewarded with success; at least, "Mr. John Adorson, of Ochill Park, Bridge of Allair," claims in a note to *Land and Water* to have succeeded. Some very interesting information concerning the habits of herrings and their methods of depositing their spawn are printed by Mr. Frank Buckland in a recent issue of his paper. Referring to some specimens of eggs received from Ballantrae, Scotland, he says:—

These eggs had, for the most part, been laid by the parent herrings upon the long and broad fronds of the laminaria or oar-weed. In some instances the eggs were so thick upon the weed that the weed itself could hardly be seen through them. In some cases the eggs were glued, as it were, to the weed in less numbers, and every now and then I came across a mass of eggs the size of a thimble. The oar-weed itself, as we all know, is fastened to the bottom by roots, which resemble somewhat, in structure and power of holding, the grasping tendrils of the vine. To one of the great fronds of oar-weed was luckily still adhering the stone which it

had grasped. The roots of the weed had formed a kind of bower, and in this bower was a collection of herrings' eggs, suspended here and there not unlike the bunches of grapes as one sees them portrayed in pictures of Italian vineyards.

Herrings' eggs are about the size of and look very much like sago. Each egg has, like the salmon egg, its own oil vesicle.

A long time ago, when staying at Folkenstone, I artificially impregnated some herrings' eggs, and so far developed them as to get the eye in perfection in the egg. In no aquarium I know of have, as yet, herrings' eggs been hatched out, but I hope in the course of this next autumn to be able to do so at some of the aquaria, especially at Yarmouth.

Ballantrae is the most remarkable place in the United Kingdom for the spawning of herrings. Whereas herrings spawn on the east coast of England and Scotland (taking the extreme dates) from the latter end of May to December, that is, measuring from the Shetlands to the North Foreland, these Ballantrae herrings never spawn in August, but, on the contrary, begin about the 1st of February, and the spawning goes on till the 1st of April. This spawning bank is ten miles long and two miles broad. The average depth is ten fathoms at low water. The mode of catching the herrings is to sink fine cotton nets, by means of heavy stones, to the bottom of the sea. These long nets sit upright in the water, and the herrings are meshed by the head in the net. This mode of fishing at Ballantrae has been going on (according to Mr. Thos. Gullies, surgeon, of Ballantrae) for nearly two hundred years. Having in my official report, 1878, gone into the natural history of the herring, I have come to the conclusion that soil and climate very much influence the size and external appearance of the herring. The Ballantrae herring are not the same kind as those found in the North Sea—say from Berwick down to Lowestoft. They are a very much larger kind of herring; they are, I believe, Atlantic herring that live in the deep submarine valleys of that ocean, and that come in to spawn in February and March. When the herring are spawning the water at Ballantrae is warmer than the air, and this is as far as I can get with my Ballantrae temperature. With the egg-covered weeds, I received some specimens of the spawning herring themselves. They were quite full of the milt or eggs, and the eggs were quite ripe and running out like shot.

I find that each female herring on an average contains 20,000 to 30,000 eggs. What a vast number of eggs there must be deposited in this large spawning ground at Ballantrae. A new fact came under my notice. It is that herrings eat their own eggs. In several cases I found that the herrings full of milt or roe, as the case may be, had their stomachs completely gorged with herring eggs. When at Peterhead I made the discovery that herrings' eggs on being extracted from the parent fish instantly become adhesive. The same thing happened to the eggs of the Ballantrae herring, even although the parent fish were dead. I treated them in the same manner as I do the eggs of salmon and trout, and ascertained that the moment the milt touched them, they became firmly adherent, not only to one another, but to the vessel in which they were operated on. Is not this a proof that there is beauty, order, and design, even in herrings' eggs? and I should like much to ask philosophers how they can explain, except by the direct laws of an All-wise Providence, that herrings' eggs should become instantly adherent the moment they are deposited. If it were not so, these frail and delicate organisms would be destroyed by the merciless waves of the sea, and thus the race of herrings would be imperilled, to the great detriment of the human race.

THE SUMMER RESORT OF SETH GREEN.—The summer resort of Seth Green, or one of his, at least, is situated in the famous Irondequoit Bay of Lake Ontario, quite near Rochester. The nearest approach to it by rail is via the Rome, Watertown, and Ogdensburg railway. In other days it was an important harbor, but the weeds long since closed up its mouth, and the sand filled into the channel leading into it from the lake, and made it useless for commercial purposes. Not so for pleasure, however, as it receives the annual outpourings of people from Rochester and all northern New York. Famous in history, surrounded by lofty hills, prolific with evergreens and beautiful vineyards, it has quite an aspect of an Alpine lake. On the east side a long line of rugged sand hills covered with young cedars and hemlock, interests the eye, while on the west side may be seen the carefully cultivated grapevines ready to catch the first sunshine of the day. It is a romantic spot. No St. Lawrence glides by in sublime march to the sea, as among the islands, but stretching away at the feet the Irondequoit presents as pleasant waters as ever charmed the sportsman. Centrally situated in the bay, at the foot of the bluffs, a point of land projects into the water, on the highest part of which is situated the club rooms of Seth Green.

In 1876, during the progress of some government engineering operations, the writer spent some four weeks here. We met the veteran fisherman often and found him as genial and liberal as the greatness of good nature can make one. Running out from his club rooms was a long dock for his boats. Strange as it may seem, the hydrographical operations as noted at that time indicate a depth of eighty feet directly in front of his dock—the deepest place in the bay. The club house was a commodious wooden frame, managed by an old cook who could tickle the inside of a hollow log with his viands. The fisherman himself spent much time with his favorite sailboat, which was painted green and so named. I never heard him spin a yarn, though I never had a doubt of his capacity to do so. The following tale is said to have originated with him, though I cannot vouch for it, as on the day it was purported to have been told to my brother of the corps, I was in Rochester. I am not certain but that I related it once in the Oswego *Times*, but am positive it was never copied by the press: "You see," said Mr. Green, "I have known days when I could hook a pretty large fish." As there was'nt a doubt in any eye, he proceeded. "One day I happened out on a dock at Chicago and a man wanted me to hold his pole and bait the monsters of the deep, while he went up town for a chew of tobacco." Green stopped to adjust a mosquito and declared:

"I had'nt been there fifteen minutes before——"

"You had a twenty pound pike," observed the chief engineer.

"Or an immense pickerel," said an assistant.

"Or a huge Michigan trout," added the recorder.

"No boys, hold your gib—yo're out. I had been there about fifteen minutes when the fellow came back and I had'nt hooked a dumb thing."

I am sorry I was'nt there, as I should like to have seen what it was in the club house they were all so anxious to get on receipt of this. The engineers do assert, however, that he is a generous joker. WM. HOSEA BALLOU.

AN AQUARIUM FOR BALTIMORE.—Mr. John W. Garrett, of Baltimore, has offered the Park Commission of that city $10,000 with which to construct an aquarium at Druid Hill Park. The commissioners are now considering the feasibility of the project, and if it is deemed practicable, Baltimore will have a most useful adjunct to her present facilities for scientific study.

TRANSPORTING LIVE FISH BY FREEZING.—Wm. C. Prime, Esq., says in one of his autumn letters:—

All experienced anglers know that codfish, striped bass and many other salt water fish may be frozen while alive, and kept frozen for a long time, and when thawed out will be as lively as ever. I have been trying for some years to ascertain whether salmon and trout can be thus frozen and transported alive, but the difficulty in summer has been that they cannot be kept alive long enough to freeze by any process available to me. Mr. Lang told me that he once took a large lot of trout through ice in the early spring, on a bitter cold day, and kept his fish in a hole hollowed out in the ice and filled with water, when at evening he found them frozen solid. He gathered them out, carried them some miles in the bottom of his sleigh, and when they were thawed out in cold water every fish was lively. This is important as affording a method of transporting trout alive, to or from places difficult of access. The experiment ought to be tried thoroughly, and if it be found practicable it would prove oftentimes useful to fish breeders, in sending fish for stocking ponds, and in transferring varieties of fish across continents and oceans.

The fact that some of the cold-blooded animals thus live in a frozen condition strikes many persons with surprise and even doubt. As to fish, I know the fact by repeated personal experience with salt water fish. I have no doubt that it is true of pickerel, though I never tried it. A moment's reflection will remind any one that large numbers of animals, especially the larvæ of moths, and worms of all kinds, are frozen solid every winter, but are lively enough in the spring.

SUCCESSFUL CULTIVATION OF HYBRIDS.—*Rochester, Nov. 17th.*—It is claimed by scientific men and theorists that it is impossible to hybridize fishes of different genus. The question has been discussed to a considerable extent. The ground on which they base their claim is that a dog and sheep cannot be crossed, or any other animals bearing the same relation to each other. I have no proof that they can, but I do know that I have on several different occasions crossed the striped bass with the North River and Potomac River shad, and also have crossed the salmon trout with the white fish, and batched the hybrids. The fish crossed are of different genus, but the kinds operated with spawn at the same season of the year.

SETH GREEN.

AGE AND WEIGHT OF CARP.—The carp was introduced into Europe from Central Asia centuries ago, and into England in 1504, since which time they have so increased that carp-ponds are now a feature of many estates. Wonderful stories are related of the longevity of the carp, of the size attained by certain specimens. In Austria they are said to have reached the age of 140 years, and single specimens have been taken weighing 40, 50 and even 90 pounds. They thrive best in stagnant or slowly running water, and they lead a healthy existence in bog pools where other fish cannot live. During the winter they remain in a state of semi-torpidity, and eat nothing from November to March; though during this time there is no sensible dimunition in their weight.

—The Manchester, N. H., *Mirror and Farmer* has been seeking truth at the bottom of the well, and has succeeded only in finding "the profundity of ignorance" in a fish pond. When one agricultural paper tries to give fish-cultural instruction to its readers, said advice being just ridiculous enough to make a mud-turtle crow, it affords the thoroughly informed and practical editor of the other sheet an opportunity to crow too. Having found its opportunity, the *Mirror* proceeds to read its constituents some very sensible advice. We are glad to see intelligent discussions of all such questions. The agricultural editor of the future must be well up on matters piscatorial. If he flounders about in the mud his subscriptions will be swamped there too.

NEW ENGLAND.—The *Massachusetts Ploughman* estimates that one farm in every four in New England has a stream which is fed by living springs, and if properly dammed could be made productive by the propagation of fish. The agricultural papers are giving attention to farm fish culture. This means that before very long no farm will be thought complete without its fish stock.

Sea and River Fishing.

FISH IN SEASON IN DECEMBER.

FRESH WATER.	
Black Bass, *Micropterus salmoides: M. nigricans.*	Pike or Pickerel, *Esox lucius.*
Sea Bass, *Sciænops ocellatus.*	Yellow Perch, *Perca flavescens*
	White Perch, *Morone americana.*

PICKEREL FISHING.—We have put in a plea more than once in behalf of pickerel fishing, which is not to be despised as a sport, however it may be decried by most anglers. Taken from clear, bright water the pickerel is an estimable fish for the table, those of the largest size not being troublesome for their bones. In one of his recent letters to the New York *Journal of Commerce*, the veteran angler, Wm. C. Prime, Esq., who is the author of that engaging book called "I Go a-Fishing," relates some pleasant personal experience of his in last September at a pond in Vermont, situated some sixteen miles from Montpelier. The pond is near what is known as "Williamstown Gulf," a rugged defile, with a quaint little hotel at the bottom. Mr. Prime writes:—

It was not yet sunset, and the pond we had passed on the left was worth investigating. I took a rod and fly hook, and walking back to it found a boat. The sun was setting, and the smoky air made the light a deep red. The hills were covered with autumn foliage, coming down close to the pond at one side, while around its other shores was a grass meadow in which cattle were standing, not feeding, gazing at me and at the red sun. Not a breath of wind moved.

I had learned that only pickerel and perch inhabited the pond, and accordingly, using an eight-ounce rod, I put on a very small spoon or spinner, of a sort which I have made for casting with a light rod. The spinner is no larger than your little finger-nail, and I use it without any feathers or body. If you have any fancy for pickerel-fishing, go to this little pond. I never found such a crowd of the miserable wretches in so small a space. The water was clear but full of weeds around an open central spot of less than an acre. When I cast the spinner, the instant it struck the water, before I had drawn it an inch, there were three, four or five rushes from as many directions, the water rolled up around the spinner, and one fish had seized it while the others whirled around it and retired. Of course it was a pickerel. But I was puzzled, for his behavior was that of a bass. He rushed fiercely, struggled hard, and I began to doubt what he was, till he went into the air precisely like a black bass. And he did it twice more before I landed him. I never saw pickerel show such game. The next cast produced the same result. The fish rushed fiercely from all sides, evidently seeing the spoon in the air before it struck the water, and taking it as if they were accustomed to taking flies. On the whole the game character of the fish elevated this pickerel-fishing into true sport, and I kept at it till it would have been dark but for the rising moon. Then came the moment, which I have often noticed in pickerel-fishing, when by common consent, as if a curfew bell had sounded, they suddenly ceased to move, and I could not tempt another one. I had thirteen, averaging about a-pound apiece, and was afterwards told that an occasional seven or even eight pound fish has been taken out of this pond.

The brook which runs out of the pond is a good trout stream in the spring, notwithstanding this reservoir of trout enemies at its source. I saw plenty of young trout in it as it flows by the tavern.

The closing sentence of this pleasing sketch will substantiate, and will recall to many of our readers what, our correspondent "Penobscot" has written at length in the 11th volume of FOREST AND STREAM on the matter of pickerel destroying trout. He wholly controverts and disproves the prevalent idea that pickerel are the especial enemies of trout, and that the two species of fish cannot exist in the same water. It will be interesting to the reader to revert to what is there stated. When pickerel and trout have been kept confined together in the same tank the trout have shown themselves to be the most aggressive of the two. In the tank of Mr. Messenger at the Bromfield House in Boston, where trout, black-bass and pickerel of varying size were originally placed—the largest of each being nearly equal—five trout and one solitary bass are the sole survivors! In a pond where these fish are found together, especially the trout and pickerel, the habits of the two species are so radically different as to keep them widely apart, the trout seeking the deep, cold water, and the pickerel the warm shallows and the weeds. Only when the pickerel extends his foraging expeditions are the trout likely to suffer. As to the spawn, the pickerel never eat it. Like tigers and cats, they usually lie in wait for their prey, but sometimes hunt, pursue and seize it while trying to escape. They do not live on dead matter when they can get the living.

OYSTERS FOR EUROPE.—The oystermen of Fulton Market and Long Island are shipping great quantities of oysters to Europe, one shipper, Mr. Shaffer, alone sending off about 1,000 barrels per week. It is said that oysters which are sold for shipment at 90 cents a tub could not be sold in this city for 50 cents.

NORTH CAROLINA FISHERIES.—The fishing industry of Beaufort, N. C., is now of important proportions and growing in extent. The largest wholesale dealer is Mr. G. N. Ives, formerly of New Haven, Conn., who ships fresh fish to Richmond, Danville, Lynchburg and Petersburg, and large quantities to New York. The varieties caught are sheepshead, Spanish mackerel, hog-fish, spots, trout and mullet

MOVEMENTS OF THE FISHING FLEET.—Only three Bank arrivals have been reported at this port the past week—two with 39,000 pounds fresh halibut and one with 20,000 pounds codfish. The number of Georges arrivals has been five, bringing 45,000 pounds codfish and 4,000 pounds halibut. Whole number of arrivals eight. Total receipts, 65,000 pounds codfish and 24,000 pounds halibut. The stock of Georges fish on the market has been reduced to less than 1,000 quintals, and the stock of Bank is small. The fleet report rough weather and a small catch.—*Cape Ann Advertiser, Nov. 26th.*

Some of the Gloucester skippers contemplate a winter mackereling trip off Hatteras and the southward.

FISHING IN FLORIDA—*Marietta, Ga., Nov. 24th.*—As the season for Florida fishing is at hand, a few extracts from my fishing journals, giving the species, numbers and weight of fish taken at Halifax Inlet by one rod for the last four years, may be worth the attention of anglers who are bound to those shores for the first time. I know I should have been glad to have got a few items of the sort ten years ago. Looking back to my journals for 1870–'71 I find that the fish are as plenty now as then. The seasons vary however, and some years one kind of fish is plenty and another scarce :—

Number and weight of fish taken at Halifax Inlet, East Florida, in the winters of 1876, 1877, 1878, 1879, by one rod :—

1876. *Feb. 1st to April 16th.*	*Number.*	*Weight.*
Redfish or bass	60	300
Sheepshead	10	270
Groupers	9	27
Snappers	7	21
Pigfish	44	60
Whiting	98	56
Salt-water trout	15	45
Blackfish	125	62
Sailor's choice, or scup	187	69
Cavalli	4	15
Totals	559	902 lbs
Sharks, rays, congers, catfish, etc., 46 weighing		300
Total		1,202 lbs

Largest bass fifteen pounds.

1877. *Feb. 1st to May 25th.*	*Number.*	*Weight.*
Bass	69	345
Sheepshead	302	606
Trout, groupers and snappers	20	60
Whiting, blackfish and scup	200	100
Sharks, rays, congers, catfish	48	480
Totals	539	1,591 lbs

Largest bass thirty pounds.

1878. *Jan. 25th to April 15th.*	*Number.*	*Weight.*
Bass	56	156
Sheepshead	144	432
Drum	3	30
Groupers	3	15
Snapper	4	12
Trout	9	27
Pigfish, whiting and blackfish	102	50
Cavalli	2	8
Totals	263	730
Sharks, rays, congers, catfish	36	320
Total		1,050 lbs

Largest bass thirty-six lbs.; largest sheepshead six lbs.

1879. *March 4th to April 25th.*	*Number.*	*Weight.*
Bass	31	186
Sheepshead	73	292
Groupers	5	30
Snappers	4	12
Drum	3	24
Trout	4	16
Blackfish and whiting	80	51
Pigfish and scup	73	38
Cavalli	14	42
Ladyfish	1	3
Totals	283	684
Sharks, rays and catfish	40	350
Total		1,034 lbs

Largest bass twenty-six lbs.; largest sheepshead eight lbs.

Bait used for sheepshead, clams and fiddlers. Bait used for other fish, cut mullet. The same tackle as is used for striped bass and weakfish in western waters. S. C. C.

FISH SWALLOWING FISH.

PEMBINA, Dak., *Nov. 19th*, 1879.

I HAVE of late read some large stories in FOREST AND STREAM of fish swallowing fish, one of which *stumped* me, and, in Hoosier parlance, it would take the persimmons. It was told by one of the Professors of the Smithsonian Institution, and was a whopper. If Prof. Baird will back him in that yarn I may believe him. But, come to think of it, I will believe him anyhow, as it is only a small fish story in comparison to the old fellow that swallowed the whale, all of which our good mothers taught us to believe.

In FOREST AND STREAM of Nov. 13th I see the list is open for stories of fish swallowing fish, and as a prize for the best one the biggest fish-hook that can be found in the city of New York will be given. I have no desire or expectation to win the hook, as the postage or expressage on it to this place would be more than it is worth; besides we have neither whales, sharks or hippopotami in our waters, while we manage to take our catfish (we have some monster ones, too) and sturgeon on common-sized hooks.

Prize or no prize, I will give you a couple of incidents of my sporting in years and years gone by, but never forgotten. Angling was my passion from boyhood. I could patiently wait for a nibble for hours, fish in a puddle for tadpoles, or tear down a craw-fish's mud pile in a wet prairie, and amuse myself by angling for the crab. I was a true disciple of Sir I. W., and of the fishes of our Western waters I don't think he could have taught me anything. I know all their habits, haunts and feeding-time, and would catch them when others alongside of me would not get a nibble.

Well, now I am on the old man's brag, and had better hold up for the two promised incidents.

My first incident relates to a black bass swallowing a black bass. I was then in the "Sucker" State, on the old Wabash, about two miles below the Grands. Myself and partner (poor fellow, he hung up his fishing-tackle long since) were fishing on the Hoosier side of the river, opposite the Wing Dam on the Little Rapids, near the mouth of White River.

We were fishing for bass, and near noon we had a string of near thirty—none less than two pounds and some over three pounds. The fish had gone to their noon's rest, and from lack of amusement, we began to feel hungry. Having no grub for lunch, my partner proposed that we should take our rifles and kill a few squirrels, and then go to a cornfield about a half-mile distant and lift a mess of roasting ears, to all of which I willingly agreed. Just as we were ready to start I hooked a six-inch bass, and left it a prisoner on the hook until my return. We killed four or five squirrels, then raided the cornfield, and returned to camp with the plunder.

We were gone about an hour, and on arriving we struck a fire, and then took a look at the lines. The first pole I raised was the one with the bass on it, and to our astonishment I had a four-pound black bass hooked, dead and stiff. It had completely swallowed the bass and hook, and had swam and worried until it died—a thing that bass will do, as I have had it happen to me on several similar occasions—minus the corn-stealing. So, you see, bass are cannibals and will eat one another. We rebaited the hooks, and then went for our feast. We roasted the squirrels on sticks before the fire, and cooked the corn in the hot ashes, with the husks on. Then two wolfish boys made a square meal, not on hog and hominy, but on squirrel and Hoosier corn, without the fear of a Sunday-school teacher before our eyes. We finished the afternoon in fishing, and when we loaded our "dug-out" the bottom of it showed as pretty a lot of black, striped and white bass, with goggle-eyed perch and a few catfish, as old anglers would want to look on.

The other affair was on our old trail from here to Crow Wing.

You may remember several small lakes in the Leaf Mountain this side of Detroit Lake. We had stopped with our "brigade" of carts near one of them for dinner, and to "spell" the animals. While the boys were cooking dinner I took my gun to see if I could not get a mess of ducks or a goose for supper.

In skirting along the lake I noticed something near the shore making some funny evolutions, as if trying the ground-and-lofty-tumbling business in the water. It excited my curiosity, and going close to the water—"oh ye gods and little fishes!" I saw a doubled-tailed fish, tail up and tail down, no heads about it. I didn't think of Barnum, but I thought how Prof. Baird would be pleased to get his "grappling irons" on that specimen. I drew a bead on that two-tailed fellow with my splatter gun and blazed away, and then went for it like a little darkey for a dollar in a mud-hole; soon had it captured and on shore. There it was—a tail at one end and a tail at the other; but, like Barnum's mermaid, it was a fraud, as on examination it proved to be a fourteen-inch pickerel that had attempted to swallow a twelve-inch sucker. The sucker was more than half swallowed, and must have been caught some days before, as the tail end was soft, stinking and bloated, while the head end in the pickerel was digested to the bone. The lightness of the external part of the sucker kept the pickerel from sinking, and all it could do was to digest its extraordinary meal on the surface, and think of the folly of a fourteen-inch pickerel attempting to swallow a twelve-inch sucker much bigger than itself.

I did not send that double-tailed fish to my old friend Prof. Baird, nor did I ever think to tell him of the matter; but I am ready to believe any yarn that may be told of what a pickerel will undertake to do when it makes up its mind to do it, just as a glutton of a boy would try to stow away a pile that would feed the inmates of a county poorhouse.

NEW JERSEY—*Caldwell,*—Was fishing last week in the Upper Passaic, and hooked a large pike. He had completely swallowed the hook, and finding it impossible to disgorge it, I cut him open, and what was my surprise to find inside a smaller pike, which had also swallowed the hook. I cut him open and found inside a small black bass—hook still swallowed; cut him open and recovered my hook. I had baited my hook with a common earth worm, but was astonished to find it neatly baited with a common minnow. Now how did this happen? Do you suppose the minnow took the bait first, and was then swallowed by the bass, and so on successively, or did the large pike take the bait and pass it down to those inside? Oh, by the way, you may send that hook. L. SPEER.

FISH SWALLOWING FISH.—*Elmira, N. Y., Nov. 20th.*—*Editor Forest and Stream* :—I have had some fifty-five years' experience with the rod. Some years since I was trout-fishing in Little Beaver Brook some six miles north of this city, and I took a brook trout with bait, some ten inches in length. A plump looking trout he was, and when I dressed him I took from his stomach a fish known here as a horned dace, which measured just 5¼ inches in length, well proportioned and in good condition. Only a few scales about the middle were displaced, the trout weighing about eight ounces after being dressed.

W. L. G.

WISCONSIN—*Sunny Bank, Oconomowoc, Nov. 3d.*—Noticing your offer in FOREST AND STREAM of Nov. 13th, 1879, of the biggest fish hook for the biggest fish story, etc., I cannot resist the temptation to enter the lists, having had numerous adventures "by field and flood" myself. The season of 1861 proved one of my good years in that line.

On the 4th of July of that year for the lack of better amusement, I put in the most of that very hot day with my wife fishing in Lac La Belle, and had a very fine day's sport with the bass and pickerel. On reaching the landing on my return, I discovered that I had lost one of my sleeve-buttons (they were the old-fashioned kind, two buttons joined with a link). I knew, of course, I had lost them in the lake as I had them on when I started out. One week from that day I went with my wife for an early morning fish of a few hours, to as near as I could judge the same fishing ground of the week before, about two miles down the lake. We had a very fine morning's sport and I captured, among other fish, an eight-pound pickerel; took him home and had him dressed for dinner, and in him found the lost buttons of the week previous. Luckily I found them as I did, or he would have lost them. This may sound fishy, but it is true nevertheless, as can be testified to by my wife and numerous friends.

Speaking of fish swallowing fish, an acquaintance of mine was fishing in Silver Lake about three miles south of here a few years ago, with a live minnow for a bait, when a perch took the minnow, a bass took the perch, and before he could land the bass a big pickerel gobbled the whole three—four fish on a single hook and only one in sight. J. C. HITCHCOCK.

BEDFORD, O., *Nov. 23d.*

Editor Forest and Stream :—

I am going to make a *cast* for that big fish hook mentioned in a late number of FOREST AND STREAM. When I was breeding trout, twenty odd years since, I spawned a two-year-old trout which was very full of eggs, and after extracting the eggs she turned on her side and appeared much worse for the operation. I thought she might die, and in order to know if she survived the operation, I placed her in a little pool, where I kept some yearlings. The next day I examined her and found she had swallowed, or partly swallowed a yearling trout. The yearling protruded out of her mouth about an inch—she was all right.

Some twenty years since Judge E. D. Potter of Toledo, O., and I were fishing for trout at the Sault Ste Marie. One morning we each caught one trout that would weigh about two and a half pounds each. The Judge dressed the trout for our breakfast, and the one that I caught had a bar of lead in its stomach that weighed three-quarters of a pound. The Judge sticks to it, to this day, that that trout never swallowed that bar of lead. I can't say that he did, but I do say that I won a bottle of very old Otard on the weight of my trout, and the Judge paid it like a man.

And, now, for the big hook, and if this don't win, I will never try again:

Some thirty odd years since, two acquaintances of mine, whose word I am willing to vouch for (Messrs. Murray and Crawford), were engaged in fishing for lake trout and white fish at Presque Isle, Lake Huron, with gill nets and set lines, baited with herring. It was customary with men in their employ, when they went out in the lake to raise their gill nets and set lines, to take a trolling line with them baited with a herring, by which means they often took several lake trout. On one occasion, while trolling, an immense trout made a bolt at the herring with mouth and gill covers wide open. The herring not only slipped into his mouth, but through or under one of the gill covers, and slid along up the line, and broke water near the boat, and the same instant a small lake trout seized the herring and was hooked fast; and immediately afterwards a large lake trout seized the small trout and swallowed him far enough to get hooked himself, and all three were hauled in together. As the first one could not slip over the other two trout, I am aware that this looks very fishy, but nothing is more common, when trolling for lake trout, and when one is fast, than for several trout to follow the hooked trout, as I have often seen myself, not only with trout but black bass, and even brook trout. T. GARLICK.

The fish hook is still unawarded. We are confident that there is a greater story yet to come. Who will tell it?

FACTS ABOUT BATS.

NO order of Mammalia is so well defined and so readily recognizable as the Chiroptera, or bats. As their ordinal name implies, all of them are provided with true wings, and they are otherwise modified so as to be fitted for aerial locomotion. In almost all other mammals—whether they walk upon the land, swim in the sea, or dwell among the branches of the trees—the propelling power is mainly in the hind limbs, or hinder part of the body, but, in the bats, the reverse of this is true. In this order it is the fore limbs which furnish the power by which the animal progresses, while the hind legs and feet are small, weak and almost useless for locomotion. So much is this the case that Mr. Dobson tells us that the combined length of the emur, tiba and foot rarely equals that of the fore arm alone.

Bats are found in all regions where flying insects abound, and though most abundant in the tropics, extend their wanderings even to the confines of the Arctic Circle. No species of this order are known from St. Helena, Iceland, the Galapagoes or Kerguelen Island; but in most of the islands of the Pacific Ocean they abound.

The family *Vespertilionidæ*, to which belongs our common brown bat, has the widest geographical range of any group of the Chiroptera, and not only this, but its habits carry it to higher latitudes, both north and south of the equator. We are told that the northern limit of the species appears to be the isotherm of 32°, and Nilsson states that *Vesperugo borealis* extends to the northern part of the Scandinavian Peninsula, and probably reaches the Arctic Circle. Blasius has reported the same species from Northern Russia and the borders of the White Sea. Our own *Verspergo noctivagans* has been taken on the shores of Hudson's Bay, another common species near Lake Winnepeg, and a third in the Aleutian Islands, while Darwin records the appearance of a bat on the island of Tierra del Fuego. Several other families are abundant in temperate climates, but none of them have so extensive a range as the *Vespertilionidæ*. Other families, as the *Pteropodidæ*, *Nyctridæ*, and *Phyllostomidæ*, are confined almost entirely to the tropics.

It is not generally known that many bats are to a certain extent migratory in their habits, performing journeys more or less extended at the approach of winter, or when, for any reason, their food supply fails them. We are told, however, by Dr. Trouessart, of Villeveque, that this is true of several European species, and Mr. Dobson in his recent great work on this order, of quotes Hutton as stating that one of the frugivorous bats, Pteropodidæ, (*Cynopterus marginatus*) will travel thirty to forty miles in a night and back again in search of food. These great powers of flight would account in part for the very wide distribution of this group throughout the islands of the Pacific Ocean, in many of which bats are the only indigenous mammals. But the fact that *Atalapha Grayi*, the only species reported from the Sandwich Islands, belongs to an American type, is not to be explained in this

way, since these islands are distant from the American coast nearly twenty-five hundred miles.

Fossil bats have been discovered in deposits of the Tertiary age, but, as might be imagined, from their small size and the frailness of their bones, not in any great numbers. From the eocene gypsum of Montmartre Cuvier described *Verspertilio parisiensis*, and two genera, *Nycetherium* and *Nyctilestes*, have been discovered in the Bridger eocene of the Rocky Mountains. These specimens, though fragmentary and incomplete, indicate that the bats are an old type which was firmly established in the Tertiary and reached back very likely to Mesozoic time.

All the Chiroptera are most voracious feeders, and, in countries where they abound, the fruit-eating bats do an enormous amount of damage, and are regarded as nuisances, from the injury which they cause to the orchards. Hutton says: "In Nipal this bat (*Cynopterus marginatus*) is a perfect pest, from the havoc it makes among the ripe pears and guavas." Mr. Dobson tried an experiment with an individual of the same species, which is so interesting that we may give it in full. He says: "To a specimen of this bat, obtained by me at Calcutta uninjured, I gave a ripe banana, which, with the skin removed, weighed exactly two ounces. The animal immediately, as if famished with hunger, fell upon the fruit, seizing it between the thumbs and index fingers, and took large mouthfuls out of it, opening the mouth to the fullest extent, with extreme voracity. In the space of three hours the whole fruit was consumed. Next morning the bat was killed, and found to weigh one ounce, half the weight of the food eaten in three hours. Indeed the animal when eating seemed to be a kind of living mill, the food passing from it almost as fast as devoured, and apparently unaltered, eating being performed alone for the pleasure of eating."

It used to be thought the vampire bat fed only upon human blood, but it has been shown by the investigations of later travellers that it is mainly frugivorous. Some bats live upon a mixed diet, feeding indiscriminately upon insects, fruits, frogs and even smaller bats; and our own southern, or leaf-nosed bat (*Macrotus naterhousii*) is in this class. Some, too, catch fish, and even bathe in the sea, swimming with ease.

This group has until within a short time been but little studied, owing mainly to the difficulty of investigating the habits of the different species, all of them being nocturnal in habit. Mr. Dobson's work, which filled a want long felt, describes about 400 species of bats, thus cutting off about 400 of the 800 names heretofore given by naturalists.

AN ALBINO WILD CAT.—Some New York gunners went down to Foster's Meadows, on Long Island, rabbit shooting last week. One trophy of the day was a wild cat, half-albino, weighing twelve and a half pounds. The skin has been stuffed and mounted, and now adorns the restaurant of F. Fleischmann, 316 Grand street, where interested parties may have a look at it.

NOTES ON ALLIGATORS.—The correspondent who furnishes the following notes is a native of Florida, and has spent the last twelve years hunting on the Gulf Coast, paying especial attention to the habits of the beasts, birds and fishes. The notes which he gives are to be taken for what they are worth, but we are assured that all the statements made are based on careful observation. Our correspondent desires to furnish only facts, and is willing to let other people theorize on them, if they wish to:—

Monticello, Fla., Oct. 15th.—We have three species of alligators, differing from each other in the following manner: The black alligator is short, very large for his length, and inhabits principally lakes, ponds, sluggish streams, and lives or has his house in holes that he makes in the banks near the water's edge, and often the entrance is under the water. Next is the brown alligator, long, slim, and very swift and active, and much straighter from his eyes to tip of nose than the black. He lies at the bottom, in deep holes and under shelving rocks and sandbanks, and inhabits the running streams and along the beach. The next is similar to the brown, differing only in shape of head, lower tusks protruding through upper jaw when his mouth is closed. I only saw one of this. J. M. Galphin killed him at the mouth of Arch Creek, on Key Biscane Bay, measuring only eight feet. The alligators build their nest in this latitude in August; further south in June and July. They are made of damp earth and green grass, heaped together from two to four feet high, and four to six feet in diameter at its base, and packed very firm by the use of the head for a hammer. The female collects her material by gathering her mouth full, and what she can hold with her fore paws, and moves backwards with her load to the nest. When all is complete she opens a hole on top, and lays her eggs, often two, and sometimes three, layers—separating each layer with a little earth and grass, and never fails to evacuate on the top of her eggs, and covers about six inches to a foot with the grass and earth. I have often found these nests in very shady and concealed places, showing that it is not essential for the sun to shine on the nest to hatch the eggs. When hatched the young are about five or six inches long, and croak for a day or two until the old one appears. She then stays near-by to protect them. Moccasins eat them, and the male alligator will destroy a whole family if he catches the mother away from her post, but will not fight to get them, but runs as soon as she appears. I saw a large trout or black bass catch one of the little ones once. The manner in which the black alligator digs his hole is interesting. He loosens the earth with his fore paws, and swallows the dirt until he is full, and backs out and swims to deep water, where he vomits it up, and comes back and repeats the same operation, continuing it until the hole is sufficiently long and deep to conceal him. They will eat anything that has life and flesh, except a snake, and, for all I know, may eat them; but I have seen them catch dogs, deer, and cows and hogs, and have had them to take my duck that I had killed, while floating on the water; and in cutting them open have found in the brown alligator sea trout, redfish, horseshoe, crabs and terrapins. The black alligator I have often watched rooting in the mud at the bottom for mussels, of which they are very fond. And in the summer I have seen them lying out of water on a log or bank catching flies. The alligator holds his mouth open, and myriads of blow flies accumulate in his mouth, and every now and then he will shut his mouth, and catch a mouthful. I watched one at this for some time, and then killed and opened him, and found, to my astonishment, that he had fully a half peck of flies in him, which he had caught while I watched him—not over two hours. I have often heard that they eat knots of wood, and lay up all winter. This is false. The knots of wood are his grindstones, and are used in assisting him to digest his food. Alligators only remain in winter quarters from one to ten days at a time, and are out every warm spell during our winters. WANDERER.

UNIQUE AND TRUE.—The toad dug out of the rock, the lobster in the tin can, the mice in the glass ball, and the sundry other imprisoned specimens of natural history discovered from time to time, have been supplemented by the discovery made by a man at Chickies Falls, on the Susquehanna, just above Columbia, Pa.:—

A man living there, named Thomas Wilson, while rowing among the rocks, caught a large log, which he towed up opposite his house and drew out of the water. While thus engaged he was surprised to hear a vigorous splashing, apparently on the inside of the log. He proceeded to investigate the matter and split open the log, when to his astonishment he cut into and laid bare a large cavity. In this were three large bass, one of them weighing over five pounds. The only theory to account for their presence is that they came in through an exceedingly small hole and could not get out again, but stayed there and flourished, finding plenty of food in their prison.

—Frogs are popularly supposed to live on air. But they don't. We made a note of the bill of fare of one frog's dinner the other day. He began early and ate late. The things disappeared down his throat in this order: Three blue-bottle flies, one fiddler crab, seven blue-bottle flies, one grasshopper, one fiddler crab, three blue-bottle flies, one live mouse, two blue-bottle flies; and he was as pert and frisky and playful as if he had not been mortifying the flesh like a jolly old friar, as he is.

REMARKABLE FECUNDITY OF A COW.—There was recently exhibited at the Oldenburg Cattle Show in Hanover a cow which has dropped nine fully developed calves in four years, namely, two in June, 1876; three calves (one of which survived) in June, 1877; two in April, 1878; and two in June, 1879.

SHOWER OF SPIDERS' WEBS.—*Milltown, Maine, Nov. 9th.*—As you editors are supposed to know everything, and to answer all kinds of foolish questions, I would like to ask an explanation of the following, or the name of the insect, that can cause such gossamer showers.

Most every fall, the last part of October, as I go shooting, I find the meadows, fences, telegraph wires, etc., etc., all covered over with a coat of cobweb, upon the meadow so thick as to trouble the dogs, and every few moments had to be removed from their heads, but what was the strangest, the air is filled with long threads floating in every direction as high as you can see, as if coming from the clouds and falling to the ground. It has a very pretty effect as it twists and turns towards the sun. In driving several miles, and even over quite high ground, could see no end to this cobweb shower. The day was a most lovely one, Oct. 22d, and wind southwest. If caused by some kind of spider, as I suppose it must be, I can hardly understand how such quantities can be formed and so high in the air.

GEO. B. BOARDMAN.

The gossamer threads were undoubtedly produced by spiders. We have read of something similar, but cannot at the moment recollect where. Can any of our readers assist our defective memory? We have an impression that Darwin mentions something of the kind in his voyage of the Beagle.

AMMONIA FOR SNAKE BITES.—*St. Leonard, Province of Quebec, Nov. 18th.—Editor Forest and Stream:*—Under the above heading in your issue of the 13th a correspondent (C. H. C.) writing from Rico, Col., mentions aqua ammonia as being a sure cure for snake bite. It will no doubt interest your correspondent and others to know that for years past ammonia has been successfully employed in Australia in these cases. The discovery of its power in arresting the effects of the bites of venomous snakes was first made by Professor Halford, of Melbourne, Australia, and ammonia is now commonly used by most doctors throughout Australia and with the most satisfactory results when the case is taken in time. C. H. C. directs that the wound be cut slightly and the ammonia applied to the cut. The bitten person is also to take a little ammonia in spirits internally. By Professor Halford's method the ammonia, mixed I believe with water, is injected under the skin into a vien of the arm. I am unable to describe the arrangement exactly, not having seen any case myself, but no doubt Professor Halford would be happy to answer any letter addressed to him upon the subject; or perhaps some of our Australian friends could enlighten us. I know that at any drug store in Melbourne small cases, suitable for the pocket, can be purchased containing a small syringe with gold point and some ammonia ready for use. Many sportsmen when out shooting regularly carry these cases. I may mention that the black and tiger snakes of Victoria are reckoned fully as dangerous as a rattlesnake. Ammonia has been tried in India as an antidote to the poison of the cobra, but without much success. The experiments made were not very satisfactory. HEMLOCK.

A VALUABLE RELIC.—The Museum of St. Petersburgh has recently secured a head of *Rhinocerus tichorhinus* in an excellent state of preservation, and covered with patches of hair. It formed part of a nearly complete carcass which was found on the banks of a tributary of the Yana, about one hundred and thirty-miles north of Verkhoyanak. This species was an inhabitant of Europe and Siberia, during Quaternary time, and was covered with long woolly hair, which fitted it to endure the cold climate which preceded and followed the Glacial Period. It was of great size; a frozen specimen discovered near Wilan, in 1772, measuring eleven and a half feet in total length. The bones of this animal have been found in Europe in the same deposits with those of man.

TRANSMISSION OF HUMAN RABIES TO THE RABBIT.—Some interesting experiments have recently been made in France by M. Raymond, of the Academy of Sciences in Paris, on the transmission of human rabies to the rabbit. Two rabbits were inoculated; one with the blood, the other with the saliva of a person suffering from hydrophobia. The one which had been inoculated with the saliva, showed symptoms of rabies four days after treatment and soon died. Thirty-six hours after death pieces of its salivary glands were removed, and these were introduced into two other rabbits, and these also died, paralysed, without passing through any violent stages.

WHAT ARE ENGLISH DUCKS?—*Cynthiana, Ky., Nov. 16th.*—Apropos of your Indianapolis correspondent, I will say that I often heard both species of the genus *Anas*—the mallard (*A. boschas*) and the black mallard or dusky duck (*A. obscurus*)—called "English" duck in Florida; more frequently the former. It is also so called along the Georgia and South Carolina coast. Your "I. C." further says the females of the two species closely resemble—implying, probably, that I was mistaken in regard to the same. Now while the *male* dusky duck has some slight resemblance to the female mallard, in size and contour, the *females* of the same species are no more alike than a female hawk and a feminine henshaw.

J. A. HENSHALL.

The Kennel.

BIPEDAL DOGS.—A deficiency of limbs in animals is not so infrequent as to make the object a marvel, yet when such abnormal cases occur, they afford considerable interest to the scientific observer, as well as to those not well informed in natural history. One interesting consideration connected with deficiences of this kind, is the remarkable compensation of nature which gives a greater development of power and activity to the remaining limbs, enabling the cripple to perform most, if not all, the exercises and functions of the perfect animal. This adaptability of the bodily framework to the varying conditions of existence, is one of the marvels of the creation.

Those who have visited the dog shows of the Westminster Kennel Club, in this city, cannot have failed to notice a dog of fair size, say twelve pounds in weight, which was on exhibition, whose fore limbs were entirely deficient, but which nevertheless had remarkable activity and powers of locomotion, being able to leap, stand, and walk rapidly on its hind feet, feed itself, and otherwise enjoy life as well as dogs favored with a full complement of legs. Its actions were like those of a kangaroo. This dog was born with only two legs, and instances are on record, with specimens preserved in museums, where cats, calves, and even horses, have been born with the fore limbs similarly deficient.

It is likewise noteworthy that animals which have become deprived of their limbs by accident, contrive, in course of time, to acquire the faculty of progressing with remarkable facility, as for instance, a dog with three legs, or a man with a single leg and a crutch.

We are not aware that animals which have been born without fore legs have ever transmitted this deficiency to their progeny; but it is well known that the Manx cats, indigenous to the Isle of Man, are born without tails, and inherit this deficiency from generation to generation.

A remarkable instance of a similar quality in a dog, was brought to our notice recently in Plainfield, New Jersey, the dam having a caudal stump of about two inches in length, and transmitting this peculiarity to some of her pups, though not to all; and if we are not mistaken, to a *third* generation. A like case has never been brought to our notice.

PERSONAL.—We were favored on Tuesday last with a call from Mr. R. A. Hume, of Glasgow, and Mr. Givleen, of Balauney, Ireland, who arrived the previous day, by the Anchor Line steamer *Livonia*, from Glasgow. Mr. Givleen proceeds at once to Montana to join his brother on his ranch near Fort Benton. Mr. Hume was formerly a resident of Richmond, Va., and will be remembered as an exhibitor of fox terriers, etc., at the first Baltimore dog show. He brings with him now a pair of Dandie Dinmont terriers, one of which was the first prize winner at the late Edinburg show.

EASTERN FIELD TRIALS CLUB.—The first Eastern field trials competition will be run on Dec. 10th, 11th and 12th, as per announcement in our advertising columns, which see. We are looking forward to this event with much interest.

ALBANY DOG SHOW.—Owing to the impossibility of finding a place large enough to hold both poultry and dogs, the committee of the Eastern New York Farmers' Society has decided to postpone their proposed dog show until spring.

THE MISFORTUNES OF UNCLE TOM.—We regret to hear that Mr. T. A. Jerome's prize pug bitch, Puggy Dear, has lost her litter of ten pug whelps by Col. Tichener's noted pug dog. They were all engaged, and had they lived would have gambolled through the parlors of Mr. S. L. M. Barlow, Col. Tichener, Mr. Edward Gale, and many other friends of Uncle Tom. Mr. Jerome informs us that some time ago he loaned his red Irish setter bitch Nellie to a Mr. John W. Owens, of Ocean City, on the eastern shore of Maryland, to stand to the celebrated red Irish setter Ben, at the time this noted dog was standing in Baltimore. Now Mr. Owens informs him that the bitch Nellie has been stolen. We, therefore, ask the favor of our dog-loving friends in Maryland to aid in the recovery of this grand breeding Irish bitch. In order to advance that laudable object we append a description of Nellie, viz.: She is solid red, body color, with a small white full on her chest, standing twenty-four inches at the shoulder, dark hazel eyes, and of most kind disposition.

Will our Virginia friends be so kind as to lend their aid, and help the genial old sporting gentleman out of his sorrow? She is said to have strayed or been stolen some months ago.

THE N. A. K. C. FIELD TRIALS.

THE field trials of the National American Kennel Club were held at Patoka, Ill., Nov. 24th to 28th. There was a good attendance of sportsmen present, among them being L. H. Smith and Montague Smith, Strathroy, Ontario, with their celebrated dogs Paris, Clip (his full sister), Twilight and Lass o' Lowrie; D. C. Sanborn, Baltimore, Mich., with the field trial champion Nellie, Desdemona, Macbeth, Dan, Rob Roy, and the Harvard Kennel Club's Countess; Major J. H. Dew and Harry Bishop, Columbia, Tenn., with the Montview Kennel's Lincoln and Count Fred; J. J. Swedenborg, New Brighton, Pa., with Button and Thunder; Palmer O'Neill, Pittsburgh, Pa., with Dash; C. B. Whelford, St. Louis, with the St. Louis Kennel Club's Bow and Faust and Marchioness Peg; Chas. Bicker, St. Louis, with Patrick; A. E. Sterling, Cleveland, with Con; George Waddington, Geneva, Iowa, with Pearl, Bob, Flora, and a red setter called Dan; Luther Adams, Boston; E. C. Nichols, Battle Creek, Mich.; W. A. Van Brunt, Horicon, Wis.; A. K. Delaney, Maysville, Wis.; W. H. Lin, Decatur; Chas. A. Fisher and H. P. Taff, of St. Louis.

Messrs. E. C. Sterling and John W. Munson received the entries for the Club, and Theodore Morford, of Newton, N. J., Capt. Pat. Henry, of Clarksville, Tenn., and James Patterson, of Philadelphia, officiated as judges, G. E. Patterson being elected to fill a vacancy caused by the absence of E. F. Stoddard, of Dayton, Ohio.

The first event upon the programme was the run for the Puppy Stakes, pointers and setters, under eighteen months; purse $300. The entries were: Twilight, by Gladstone, out of Mercy; Marchioness Peg, by Druid, out of Peg; Countess May, by Dash, out of Countess Ada; Count Fred, by Windem, out of Norma; Patrick, by Berkely, out of Dora; Con, by Stoddard's Bob, out of Nora. J. H. Dew handled Fred; C. B. Whitford, Peg; D. C. Sanborn, Ada. The day was clear, with a brisk breeze. Birds were scarce; only three coveys were flushed during the work of the day, between 8.30 A.M. to sunset, and the birds when scented were rarely ten feet from the dogs. Flushes were therefore frequent, and then the birds took cover in dense growth, where both dogs and judges had difficult work. The order of running was determined by lot. The first pair put down were Marchioness Peg and Twilight. Some birds which had been flushed by the spectators took covey in a ravine thicket. The youngsters worked here for three-quarters of an hour, the only score being a flush against Twilight. Countess May and Count Fred then broke the field, and kept at it for a full hour, when Countess May ran into a covey without making game. Following up the birds Count Fred scored two fine points. The brace then flushed two birds, but the judges would not decide which of them was to blame for the error. The judges followed the dogs through brush, mud and stubble for an hour, when Countess May made game in a cornfield some sixty yards to the windward of Count Fred, who pointed, drew up twenty yards, and then stood, the birds being flushed by his handler, while Countess May was laboring with the wind against her. They were then taken up, Count Fred being ordered to be ready to back any dog the judge might select. The Irish setters Pat and Con, being put to work on dry ground, scored six flushes, Con making one point and being declared the winner. Marchioness Peg and Twilight were then put down again. Peg pointed, Twilight refused to back, and caused her to break and leave the bird, which was flushed by a spectator. The point and the heat were awarded to Peg. Of the three winners, Con and Marchioness Peg ran first. The feature of the day was a point by Marchioness Peg where a hare had run, Con and Count Fred backing her up in magnificent style. The score was two broken points for Marchioness Peg, and a point and a flush for Con. The heat was awarded to the former.

The second day proved much more favorable for fine work. Count Fred and Marchioness Peg were put down, Count Fred making the first point. Before Peg could be brought up to back him the birds rose and flew into the adjoining woods. Here the dogs showed much speed in beating up. Peg and Fred both made game, but the latter's handler lost a point by wrongly ordering his dog away. Working very rapidly, Peg flushed a bird, on which she crouched as soon as possible, but it rose. Fred made a false point, and Peg backed him, the brace being shortly afterwards ordered up, and Fred declared the winner of the stake. By mutual agreement Countess May and Peg divided second and third. Con was placed fourth.

Then followed the Free-for-All Stake, purse $500, in which the entries were:—Bow, by Bang, out of Luna; Macbeth, by Leicester, out of Nellie; Desdemona, by Leicester, out of Nellie; Lincoln, by Dan, out of Lill II.; Dash, by Bob, out of Fan; Button Fast, by Sefton's Sall; Nellie, by Belton, out of Dimple; Lass o' Lowrie, by Paris, out of Smith's Pearl; Pearl, by Ranger, out of Valentine's Nellie; Dan, by Rake, out of Fannie.

Desdemona and Lincoln began the contest in a corn field, and had worked about half an hour when the proprietor ordered the whole company off. During the parley which ensued some birds were discovered near a fence by the inevitable small boy. Here Lincoln flushed them without making any sign of game. They settled again near the fence, and further work here resulted only in two flushes for each dog. Two birds marked in the open field were started by Desdemona without a point, Lincoln pointing twice on singles in a heavy growth of briars, and finding one covey; while Desdemona added to her score one point and one demerit for failing to back. Lincoln retrieved a shot bird, and was declared the winner after the brace had been ordered up. Button and Dash then took the field, Button soon gaining a point, Dash backing. The bird was flushed, but Button refusing to move, a dead bird was discovered. Then in cover Button pointed a hare, Dash backing. Birds having been flushed by the handlers, Button would undoubtedly have made a point had not his handler ordered him away. Another proprietor appearing upon the scene, the sport was interrupted again, the rest of the heat being two flushes and two points for Dash and two flushes for Button, Dash getting the decision. Of the next brace, Nellie found birds first, making a fine point, and being backed by Faust. Nellie then retrieved a shot bird, and made another point on a single bird, Faust backing. Faust pointed and Nellie backed, but nothing was moved. Then followed a flush and a point for Nellie. Then in the woods Nellie found a bird and crouched, Faust working up and pointing over her. Nellie flushed a bird; Faust did the same, Nellie pointing where the bird had been. Nellie was declared the winner. After a delay of two hours Lass o' Lowrie and Pearl were put down. The Lass made the first point, but the birds rose before Pearl could back. Then Pearl found a covey, and the Lass backed her. Pearl retrieved two birds, and afterwards scored another point. A false point by the Lass was not backed by Pearl. False points for both followed, after which Pearl stood, and was backed by the Lass. The Lass scored another point on a single bird in the wild grass, both making independent counts on the covey. The Lass retrieved a bird; she afterwards came to a point, Pearl refusing to back her, trailing in and locating the bird in beautiful style. Lass was declared the winner, the judges highly commending the work of the brace.

After a vexatious delay, caused by the absence of Bow's handler, the second brace for the day, Lass o' Lowrie and Nellie, were put into the field first. Both dogs worked finely for an hour and a half, when the Lass pointed first, Nellie backing, then drawing ahead, and locating the covey. The Lass pointed a scattering bird, and Nellie retrieved a bird in fine form. The Lass pointed at a fallen tree top, was ordered on, and after roading for fifteen yards, pointed in grand style. Then both pointed simultaneously on the succeeding raise, and moving on each roaded and pointed alternately until Nellie gave up the scent and ranged out, and got into the birds about sixty yards ahead. Lass o' Lowrie followed with a point which Nellie backed, momentarily moved in and picked up a dead bird. Another bird caused both dogs to point from different directions.

Nellie having retrieved a bird, trailed one for some eighty yards, scoring a point and winning a closely contested trial. Rain interfered with the trial after Bow and Lincoln had been put down; Bow only making a flush. The party then repaired to other grounds, where Lincoln scored the first point—Bow backing; then Bow in turn scoring a point and Lincoln backing him forty yards away, and then having winded the birds while working up a hill, trailing them 200 yards. Bow again made a point and was backed by Lincoln. Bow then made another point, and both afterwards pointing so simultaneously that each handler claimed the first for his own dog. Two more points were scored by Bow, and one by Lincoln, who also retrieved two birds.

The rain prevented a continuation of the trials on Thursday, and Friday was an almost equally unfavorable day. But it was decided to go on, and Bow and Lincoln were ordered down. The first point was scored by Bow, Lincoln backing him finely; then Lincoln pointed and Bow backed. After a flush by Bow, who was ranging down the wind, the two were ordered up, and the heat awarded to Lincoln. Dash and Dan were then put down; Dan making the first flush, then alternately pointed and trailed for three minutes, finally getting too close to the bird and sending it up. Dan then pointed a hare and Dash backed. Both pointed together, Dash slightly in the lead, and were kept standing for about ten minutes while an artist sketched them. The score following was for Dash, two points, a flush and one bird retrieved; for Dan, two backs, one point, a flush, and a retrieve. Dash was awarded the heat.

Of the three winners, Lincoln and Nellie were then put down, the former proving the faster of the two and scoring a victory. He got the first point, Nellie having flushed a covey. Nellie pointed, and was supported by her competitor. Then followed a point for Nellie, a false point for Lincoln, a true point for Lincoln, and a flush for Nellie; and the heat was awarded to Lincoln. While the judges were consulting, Nellie disappeared in the weeds and was discovered to be standing on a bunch of birds. In the next heat Lincoln soon defeated Dash, his score being one point to a flush for the latter. The judges were unable to decide as to the relative claims of Bow and Nellie to compete with Dash for the second prize. They were therefore ordered down, the score being for Nellie, four points in succession, then a false point, two points, two flushes; for Bow, a point, a back, a point, two backs, three points. Darkness prevented a continuation of the trial. TIMBAL.

[The conclusion of our correspondent's report has failed to reach us.]

—At the annual meeting of the National American Kennel Club it was voted that the present officers should hold their positions until January 1st, 1880, and the following officers were elected for a term of one year from that date; President, C. H. Raymond, Morris Plains, New Jersey; First Vice President, Luther Adams, Boston; Second Vice President, Harry Bishop, Louisville, Ky.; Secretary, C. D. Dubois Wagstaff, Babylon, Long Island; Treasurer, Theodore Morford, Newton, N. J.; Executive Committee: J. H. Dew, P. H. Smith, E. C. Nichols, Capt. Henry, M. C. Campbell. Board of Appeals: E. T. Stoddard, Anthony Higgins, Jno. A. Nichols, P. H. Bryson, J. M. Tottler, Jr. A committee, consisting of J. H. Dew, C. B. Whitford, Capt. Pat Henry, Theodore Morford, and D. C. Sanborn, were appointed to arrange the field trial rules for 1880. TIMBAL.

EASTERN FIELD TRIALS.

WE print herewith the rules under which the Eastern Field Trials are to be run next week. They are those in use by the National American Kennel Club, which has just run off its Trials at Patoka, Illinois. The club's committee intimate that noticeable changes in the scale of merit points will be made before the recurrence of next year's trials, especialy in respect to retrieving, as it is very properly stated by the secretary that a great portion of the ground hunted at the East, especially where ruffed grouse are hunted, is so dense with cover that not five birds in ten would be gotten if the hunter had to gather the killed himself. A dog that retrieves is indispensable, and, of course, the better he does it, the more valuable the animal.

We trust that those desiring to enter their dogs for competition will study these rules, so that each can see what is required to gain success.

Rule 1. Managers of field trials shall advertise the time and place where the meeting will be held, the date of closing entries, the scale of points, and the names of judges at least thirty days before the trials take place. In the event any judge or judges fail to act, the competitors shall fill all vacancies, each competitor being entitled to one vote.

Rule 2. Dogs shall be drawn in braces by lot, and run in heats, the beaten dogs to be retired (except as hereinafter provided) and the winner to be drawn and run again. The dog winning the final heat in the first series of heats shall be declared the winner of first prize. Then the judges shall select from among the dogs which have run with the winner of first prize, such dogs as they think possess sufficient merit to entitle them to a chance of winning second or third prize and run them against each other. The winner among these shall then compete with the dog that ran the final heat with the winner of the first prize. The winner of this last heat shall be declared the winner of second prize, and his last competitor, shall be declared the winner of third prize. The fourth dog in order of merit to be declared by the judges without further running.

Rule 3. When two dogs owned or trained by the same person shall be drawn together, one shall be run only, and he with another dog which shall be immediately drawn, and the dog left over shall be drawn again. If at the latter end of a trail it be found impossible to avoid running two such dogs together it may be permitted.

Rule 4. The judges shall order up the dogs as soon as they have determined which is the best according to the scale of points in Rule 5. The privilege is granted the judges of ordering up any dog or brace of dogs that have not sufficient merit, in their opinion, to get placed, but hese may be put down again if there is a possible chance for them to win.

Rule 5. Positive points for merit; Pointing, 35; pace, 20; backing 8; style, 7; staunchness, 8; ranging, 5; quartering, 5; obedience and disposition, 7; retrieving, 5; total, 100. Negative points for demerit: False pointing, 1 to 7; breaking (in each offense), 3; breaking shot (each offense) 5; chasing or breaking shot and chasing (each offense), 10.

Rule 6. No person except the judges, attendants and reporters will be permitted to accompany the handlers of dogs. Two persons will not be permitted to work one dog or a brace of dogs. If from any cause the handler of a dog or brace of dogs is disabled to such an extent that he cannot shoot, the judges shall appoint a person to shoot for him. The handlers of the two dogs shall go together, as if it were a brace of dogs, so that the dogs shall be upon an equality as to ground, opportunities for pointing, &c. No spectators will be allowed nearer the handler of dogs than seventy-five yards to the rear. No person shall make any remarks about the judges or dogs in the hearing of the judges; such persons so offending shall be expelled from the grounds. Should any handler of dogs annoy the judges after having been ordered to desist, the judges shall order such dogs as he is handling up, and out of the race. The privilege is granted the handlers to ask the judges for information or explanation that has a direct bearing upon any point at issue; pending such question, the dog shall not be under judgment. Dogs afflicted with any contagious disease, or bitches in season, will not be permitted on the ground.

Rule 7. Pointing hares, "stink birds," larks, turtles, bittern, or any bird generally considered game shall not be deemed false points. A dog making a false point, and discovering it to be such, without any encouragement from his handler, shall not be penalized.

Instructions to Judges.—(Pointing)—The judges will allow only those dogs the maximum that point all the birds possible for them to point under existing circum-

stances; a dog to earn the maximum number of points under this head must display a first-class nose and exhibit great judgment in finding and pointing his birds, and make no flushes that a dog with the above qualities would avoid in ordinary hunting. The dogs are to be hunted in all respects as in an ordinary day's shooting. Inexcusable or willful flushes will detract from a dog's score under this head, but the character of the flush must be always taken into account in estimating the penalty, if any. The judges must not ask the handlers if their dogs are pointing, but must decide for themselves. They shall always consider the nature of the ground, the wind and the birds, and not penalize a dog for flushing a bird it would be impossible to point. The penalty for flushes to be graded by the character of the offense. The judges shall not require the handlers to work their dogs down wind.

(Pace)—The dog that maintains the fastest gait throughout the trial, except when in cover or on game, to receive the full number of points, all others to be graded by him.

(Backing)—The maximum only allowed such dogs as stand or drop instantly at sight of another dog pointing. But no dog shall be expected to back unless the dog pointing stands and is motionless. A dog shall not be said to refuse to back unless he sees the dog pointing. To get credit for a back, the dog must stop at least ten yards (when practicable) in front of the handler.

(Style)—The judges shall consider the dog's grace in ranging and drawing, and attitudes in pointing and backing.

(Staunchness)—The maximum allowed such dogs only as do not advance from their point when they are on game until ordered on.

(Ranging)—The maximum only allowed the dogs that maintain the most killing range throughout, viz., wide or close, as the necessity of the case may require.

(Quartering)—The maximum only allowed such dogs as work at right angles with the handler unless the nature of the ground renders such work impracticable.

(Obedience and Disposition)—The maximum only allowed to a dog that works promptly to the gun without noise or severity, and is obedient, prompt, cheerful and easily handled.

(Retrieving)—To receive the maximum under this head a dog shall go promptly and cheerfully for the bird and deliver it to the handler without mouthing or mutilation.

(False Pointing)—The judges shall give a dog ample opportunity to discover whether or not he is on true point, and the penalty shall range from one to seven for his acts throughout the heat.

(Breaking in)—Is when a dog through imperfect breaking or from excitement leaves his position when the birds rise, whether the gun is fired or not, and starts to break shot or chase, but stops within a few feet from the point from which he started, of his own accord or command.

(Breaking Shot)—Is when a dog runs in when a shot is fired, with the intention of getting the bird, and does not stop promptly at command.

(Chasing)—Is when a dog follows the bird either when the gun is fired or not, to an extent to be beyond the control of the handler for the time being.

(Puppy Stakes.—Rule: Dogs over eighteen months old, shall not be eligible for the puppy stakes. There will be no points allowed for retrieving in this stake. Rules otherwise as above.

Brace Stakes.—The rules governing the brace stakes shall be the same as those used in the all-aged stakes, with the following exceptions: The maximum for ranging shall be ten instead of five; the maximum for pointing shall be ten instead of five, and the total one hundred and ten, instead of one hundred. The brace to earn the maximum for quartering must cross each other systematically, and work independent of each other, or one dog must quarter the ground on one side of the hunter while the other dog quarters the opposing side, the dogs meeting at or near the center. Each brace will be run separately, instead of running in heats, and be judged by the scale of points as laid down and explained.

BREAKING YOUNG RETRIEVERS.—William Ridgway, of 169 Piccadilly, London, has recently published a capital little pamphlet entitled "Observations on Breaking Retrievers," which contains some practical instructions, of which we give the following extract:—

About the most critical period of the breaking of a young retriever is when he first sees game. You must be careful how you take the bird from his mouth (let no one else do it for you), so as not to let the dog drop it before you have hold of it, for if it flutters away your dog may be tempted to bite it, and so injure his temper somewhat. If he lets go too soon, step back a pace or two, and encourage him to carry up to you; if, on the other hand, he holds on too tight, take hold of his cord with one hand and jerk it as you receive the bird with the other, saying "Softly" to him all the time till he releases his hold. "Softly" is a very important word, to be constantly used, and perfectly understood by the dog, that he may be punished, if he ever requires it, for being in any way rough with a cripple at any future time in his life. Always keep as quiet as possible when your dog searches for dead or wounded game. You may pretend to look too, but not keep calling out to him, "Hie, lost!" If he is wild your doing so will make him overrun the place or scent; and if he is slack he will expect you to find for him and show him too much where he is to seek for it. If possible, do not let him be disappointed in his search, for if you have a dead bird in your pocket you can easily drop it, and let him come upon it before he quite gives up seeking. Then caress and praise him well for his exertions. Praise for good work is a great reward. Should you see a running bird flutter and try to rise above turnips some way before your dog whilst he is following by scent, do not hasten to lift him (*i. e.* take him off the place where he is following it to put him nearer to the bird), but give him time to trace it as much as possible by himself; because if you lift him you make him wild, and he then will raise his head and try to see the bird, not keeping his nose down as he ought to do. Do not send a dog after a wounded hare until the hare has got out of sight. Your dog must then follow by scent; the hare will not run so far or so fast if not pursued at once, and will often stop and become stiff, and so be easily secured for you. Many hares will beat a dog that follows at once, and never be taken, as when warm they can run, even when much hurt, to a considerable distance. Numbers of dogs are ruined by being broken too quickly; all their courage leaves them. They will not hunt in thick hedges, or seek long or at all out of sight for wounded game, and this would not have been the case had they been broken by degrees. Their masters call them perfect retrievers because they never run in, and will follow them loose through coverts full of game, but for any practical purpose as retrievers they are almost entirely useless.

A SMART RABBIT DOG.—*Newark, N. J., Nov. 14th.*—*Editor Forest and Stream*:—Mr. James H. Haley, at New Vernon, Morris County, has a dog called Sport, who is hard to beat on rabbits. Mr. H. says it is a very unusual thing for Sport to lose a rabbit, and judging from what I saw of him I think Mr. H. speaks truth. Yesterday I had the pleasure of hunting with Sport, and one coincident will serve to illustrate his strength of nose and skill. A rabbit was started in a piece of oak sprouts. Bunnie bounced out into a long field of cabbage, through a peach nursery, down a fence, along which was piled some heaps of brush, under which he concealed himself where the dog could not get at him. On being stamped out of this brush he ran through a long corn stubble, crossed a road into a thick field of blue-bent. The dog never failed to have the game well in hand until he got into this blue-bent, where he appeared stuck; but he proved equal to the task. The mercury was at 80 deg. F. We were on a high hill, and I was hunting in my muslin shirt sleeves and straw hat. The dog was panting, with his tongue at full length. The earth was dry and hot. Sport tried the track from every point for about ten minutes, but no go, when he deliberately stuck up his head and tail, started for the road, down which he went to a swamp a quarter of a mile away, to a spring of water. Mr. H. proposed that we go to the house, about a mile, and get dinner, assuring us that Sport would have the rabbit all right when we came back. By the time we got half way to the house, sure enough we heard the dog open afresh, and until we got to the house his steady tongue convinced us he had no bother. Dinner finished, Sport was still at work. We carried bread and water out to him, which he stopped and took. After taking his refreshments he shook himself, picked up the track, and for fifteen minutes kept the cotton bobbing, when a lucky shot ended the race. Notwithstanding the difficulties of the day we had a number of fine runs, and got every rabbit, except one holed.

Sport is a fairly bred fox-hound, five years old, black saddle, tan legs and cheeks, white breast, of moderate size, and is regarded by many as the best rabbit dog in Morris County. STRAIGHT BORE.

CURE FOR MANGE.—*Washington, D. C., Nov. 24th.*—*Editor Forest and Stream*:—I have found the following treatment for a bad case of mange very efficacious, and communicate it for the benefit of those who may have dogs affected with this annoying disease. For one week or ten days give six grains of iodine of potassium dissolved in one drachm of distilled water, divided into two doses, night and morning. Wash thoroughly twice a day the afflicted parts with the following: Three drachms of muriatic acid in one quart of soft water. The iodine of potassium will somewhat weaken the dog, and if he or she should be debilitated from any other cause, say distemper, I would, after the week or ten days' treatment with iodine potassium, give small teaspoonful of bitter wine of iron in large teaspoonful of cod liver oil twice a day. For distemper I have found nothing equal to strychnine, given in the outset in granules of 1-120 of a grain, and increased after few days to 1-60 of a grain. G.

SOFT SOAP FOR FLEAS.—*Monroeton, Pa., Nov. 15th.*—*Editor Forest and Stream*:—In almost every issue of FOREST AND STREAM I see questions and answers on the flea question, how to rid our canine friends of the pest, etc. I have a simple specific, which, although the receipt prescribed by "Gunner" in this week's paper may be "sure pop," is, I think, equally efficacious and much more simple. I set my pup, be he large or small, in a wash-tub which already contains about two pailsful of water just warm enough to be comfortable, and then proceed to work half a pint of good, strong soft soap into the hair, using as little water as possible. I gradually wash the soap out, and by the time that is done I will guarantee every flea on that dog to be a dead one. There is no danger of removing the hair, or injuring it or the dog in any way. ORTYX V.

Moira, Franklin County, Nov. 26th.—The parties from Vermont that went up to the sixteen-mile level, on the St. Regis, with a pack of hounds, two weeks ago or so, returned last week with five whole deer and a saddle and two hides of others. I understand they lost four of their dogs while there. ADRION ONDACK.

—There was great excitement on Thanksgiving in Clinton and Westbrook, Conn. Fox hunters with nine hounds were out. John Dee, of Westbrook, captured two, and William H. Merritts, of Clinton, one. Another one was driven into his burrow and dug out.

—Mr. H. G. Wotherspoon's (Quebec) red setter bitch Cora II. whelped on Nov. 28th six dogs and five gyps. The dogs and one of the gyps all red, and the other four gyps white and red, white largely predominating. A beautiful litter of pups.

—Mr. J. H. Steele's (Ellington, Conn.) orange and white setter bitch Tip whelped Nov. 22d eight puppies (four dogs and four bitches), all orange and white, and sired by C. H. Merrick's Doe (Ethan Allen's stock). The bitch was hunted constantly, birds being shot over her two days before she whelped.

—Mr. Henry W. Livingston's lemon and white pointer bitch Rose (Snapshot-Gypsy), on Nov. 24th whelped eleven pups, all lemon and white (five dogs and six bitches), by Orgill's champion Rush (Flake-Lillie).

THE MODEL RAILWAY.

There is no link in the chain of railway from the Atlantic to the Pacific Oceans, that has played so directly an important part in that great continental railroad, as the link of five hundred miles composing the Chicago & North-Western Railway, from the inter-continental metropolis—Chicago—to the Missouri River at Omaha.

In starting westward from Chicago, it was the pioneer to connect with the Union Pacific Railway; it virtually made that road practicable, and was substantially the father of it. It thus earned its well deserved title, "The Old Pioneer." That it in a measure exhausted itself financially in its rapid and forced construction across the then unsettled but rich prairies of Illinois and Iowa, accounts for the fact that it was for some time as its later day and would-be rivals smilingly put it, "a streak of rust." Yet its history, on a review, shows it to have ever been, as to time and to absence of accidents, a "Cunard line" for safety, speed, and regularity at terminal arrivals. This may be accounted for from its having less gradients and curvature than its new competitors to Council Bluffs, at the same time being the shorter or inside line. It started its trains last from termini and arrived first. It has ever been the most accomodating for the through passenger. This much for its past history.

The last two or three years, in its roadway, its rail, its equipment, has witnessed the most wonderful change of any road in the east or west. It is now the First-Class Railroad; second to none, the equal, we think the superior, of any, which justly entitles it to the appellation, The Model Railroad. Gravel ballast, white oak ties, steel rails, stone culverts, iron bridges, first-class engines, coaches that are airy and elegant for comfort, having Miller couplings and Westinghouse steam brakes, and attached to each train is one or more of those marvels of splendor, the Pullman Palace Hotel cars, in which the traveler eats and sleeps in more luxurious apartments than old world potentates ever dreamed of. The matchless track, the scientific equipment, has won for this road, for its ease and comfort that mead of praise, the triumph of art in railway travel. Its praises should be ever sung in the far Orient, and especially those near lands that owe so much to the continental railroad—Colorado, Nevada and California, and the distant Occident—that all may know of its well deserving of the public's patronage. Quite in place will it be here to say, that much travelled, observant and skillful officer of the United States Army, Major-General Irvin McDowell, in passing over it the other day, on his way to San Francisco, was pleased to say of it: "It is the finest road I ever travelled on, either in Europe or America."

The road has additional praises to those of its excellence of construction, natural location, and perfect equipment; the *esprit du corps* of its employes lends a charm in their care, attention and gentlemanly deportment, which adds the cap sheaf, grace, to its material perfection.

For the year past it was a road without a terminal detention. Its greatly increasing through travel and immense way business will soon require a double track.—*Republican, Dec. 7th*, 1878.

The recent completion of several branch roads in Minnesota, in the interest of the Chicago & North-Western Railway Company, suggests the statement that the total length of lines of the Chicago & North-Western Railway is 2,158¼. This is the greatest mileage operated by any company in this country. It is made up of six divisions of the Chicago & North-Western proper, and eight proprietary lines, and the whole system is subdivided into twenty lines and branches. To control successfully such a vast and complex system of railways evidently requires talent of the highest order, and the splendid condition, financial as well as physical, which the property now exhibits, is sufficient testimony to the ability of the management.

The nucleus of this great system, the old Galena & Chicago Union Railway, was open from Chicago to Elgin, 42 miles, in 1850, only twenty-eight years ago. The Chicago & North-Western Railway Company came into being, as the successor of the Beloit & Madison, Rock River Valley Union, and Chicago, St. Paul and Fond du Lac companies, in 1859. In 1865 the Galena and Chicago Union was consolidated with it, and in the few short years that have followed the young corporation has gone forward with astonishingly rapid strides, to its present proud position. What its future enlargement may be is left to imagination. A study of the map, which shows the system already reaches into five states and a territory, may prove suggestive of possibilities yet ahead.—*R. R. Age, Dec. 12th*, 1878.

—The Diving Decoy Co., of Rochester, N. Y., make a rubber ball target for trap shooting. It is inflated by the shooter. In addition to the other advantages claimed for it, is that the participants are always warranted in making a tremendous blow about their work.

DANGER SIGNALS.—Five eminent men have died within the past few weeks of Bright's Disease, and many more will soon die of the same fearful destroyer because they do not take Warner's Safe Kidney and Liver Cure, the only sure remedy for this and other kidney and liver diseases.—*[Adv.*

TALL SONS OF YORK.—At Niblo's Garden, a few days ago, an advertisement calling for 200 men, six feet high, to serve as supernumeraries, was filled from the number of applicants in an hour and a half. One might infer from this that there were very many able-bodied men in this city still out of employment.

—An American engineer has been studying the great wall of China. It is 1,728 miles long, and being built without the slightest regard to the configuration of the ground, is sometimes carried 1,000 feet down into abysses. Brooks and small rivers are bridged over by it, and strong towers on both sides protect large rivers.

—Oedema and Enema are the pretty names which Mrs. Wilson, of East Lounsberry, Ohio, has just given her twin sister children.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

—AT—

No. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpariel type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*** Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, DECEMBER 4, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of mail service if money remited to us is lost.

☞ Trade supplied by American News Company.

AN UNFAILING RESERVOIR OF USEFUL AND ENTERTAINING KNOWLEDGE.—We invite our readers' attention to the variety and amount of matter placed before them every week. The columns of the FOREST AND STREAM have never been more "full of meat" than they are now. We are constantly in receipt of, and place before the thousands of our appreciative subscribers every week, a collection of incidents, adventures, scientific papers, practical instructions, news notes and records, which, when we remember that this is supplied fifty-two times every year, may well challenge some surprise among newly-made acquaintances. One reason why we are always fresh, always entertaining, and always valuable, is because we have all Nature for our inexhaustible field of study.

The FOREST AND STREAM is one of the most peculiar papers in the world, intrinsically, *per se*, and to edit. In a far greater degree than any other journal of which we have any knowledge, it has been made what it is to-day by the voluntary interest manifested in it by its subscribers and readers. Our correspondents number hundreds to each issue of the paper, and thousands in the aggregate. They are scattered abroad in every quarter of the earth. That which, is a familiar everyday commonplace to one person in his peculiar sphere and location, to others, in other parts of the world, proves of rare novelty and interest when described in our columns. Thus we have at our command a corps of self-appointed *attaches*, who voluntarily contribute to each other's entertainment and instruction.

The FOREST AND STREAM has become recognized as the proper medium for the interchange of views, theories and experiences. It has also become the purveyor of all good things pertaining to its broad field. While our gratification is great at its increased strength and usefulness, we are not forgetful of our indebtedness to personal friends of long years' standing, as well as to those whose faces may be strange to us, but whose sympathies have become interwoven with ours until they have formed a spiritual acquaintance and alliance which it will be difficult to break.

When any journal has succeeded in enlisting such active interest in itself, it is significant of a most substantial foundation.

SEVENTH REGIMENT SCORES.—The full scores of the Seventh Regiment gallery shooting at the Fair will be given in next week's issue. Look out for them.

WHO WAS HE?

JAKE HESS, an Adirondack guide, while hunting in an unfrequented neighborhood, about five miles from the Fourth Lake, Fulton chain, thirty-five miles from any dwelling, and far from any known trail, discovered part of the bones of a human skeleton. A party, of whom the most active member was Dr. C. Hart Merriam, the ornithologist, well known to our readers, investigated the spot, and after long and careful searching collected the bones of the skeleton and the following articles, most of them embedded beneath a thick growth of moss: The entire back half of a pair of trousers, the waistband entire, and measuring thirty-six inches round; one pocket flap, with an old-fashioned clasp; portemonnaie of heavy pressed leather, containing two three-cent silver pieces, one dime silver piece, and a copper cent, all bearing date of 1853; two padlocks, one medium sized, iron and intact, the other brass, and without a handle; two trunk keys, tied together on a piece of tape; a hone, well preserved; a shaving brush; the fragments of two bottles, which, when put together by Dr. Merriam, formed a five-ounce vial with the raised letters, "Folger's Alosaonian, New York"—a preparation now out of the market—and a two-ounce vial, with the raised letters, "B. A. Fahnestock's Vermifugo;" a tin blacking-box, full of blacking; part of a shoe brush; part of a cedar lead pencil; the entire cloth of a coat; a hat; all the parts of both boots. The coat was made of the same material as the trousers—a black or brown broadcloth of good quality. The coat was an old-fashioned half-skirted frock, with brown velvet collar and lapels. It was lined in the body with good blueish-barred woollen stuff, and in the skirts with figured alpaca. The buttons were brass, with handsome embellishments on their faces, in the shape of what is known as the rectangular or Greek border. The two lower buttons on the flaps of the rear skirt-pockets were of the same size and kind as the other buttons, and the buttons on the upper part of these flaps were small brass ones, with a star on each. The sleeve-cuffs had small brass buttons like the latter. In one of the coat skirt pockets were found a pair of blue coarse woollen socks, a ball of coarse woollen yarn, and a large darning-needle, which was stuck through the ball. The hat was a fine silk one, with high straight crown, medium width, uncurved brim, bound with a narrow silk binding, the band being of silk, and a half-inch wide. With the exception of the plush and the lining, the hat is well preserved, the "sweater" being light yellow and in perfect condition. The boots, which are almost perfect, are No. 8s, of good make, with narrow toes, and pegged. Sewed boots were uncommon in the time in which the wearer of these is supposed to have met his fate. No watch or chain was found, and no trace of hunting or fishing apparatus. Neither was there discovered any indication of a valise or pack of any sort. Singularly enough, every trace of linen and cotton goods was gone from the garments, every vestige of even the canvas between the outside and the facings of the coat having disappeared, although the woollen and velvet are all well preserved. The coat was found parted at most of the seams, as also were the trousers, but the coat was buttoned at the breast. All the coat buttons and pantaloons buttons were well preserved. A few small bones were found among the cloth, all more or less gnawed by rats, with the exception of the upper bone of the right arm, which is in perfect preservation. When the ground had been carefully dug over, all the above remains were removed by Dr. Merriam to his laboratory at Locust Grove, in Lewis County, and there, after being carefully cleaned and assorted, were placed in glass cases, to await identification. Dr. Merriam engaged the guides to continue the search at his expense. The result was that on Friday last Jack Sheppard reported the last "find." This consisted of some shirt-buttons, part of the front of the left leg of the trousers, with the cloth part of the pocket, a knife, the left femur bone, left tibia, and part of the lower jaw, all pretty far gone. Sheppard took these to Dr. Merriam, and reported that he had found them scattered far apart, and by digging up the ground with a hoe. The beginning of the snowy season rendered further exploration impossible, and beyond the above it is improbable that any more of the remains will be found for many months at least. Dr. Merriam, after cleaning the bones, made a careful examination of them. He found that all the teeth back of the second bicuspid were entirely gone—in other words that the deceased had, at the time of his death, no molar teeth on the right side of his under jaw. The Doctor also found that the alveolar border had been entirely resolved, and that the angle of the jaw was approaching its normal condition in old age. From these facts Dr. Merriam concludes that the man was past middle age, or rather an old man. He also believes him to have been a medium-sized or not very tall man. The knife found was a jack-knife with a "hump-back" blade.

Now, who was this wanderer? Probably his identity will never be established. Dr. Merriam says:—

I believe it is claimed that this is the first instance of a human skeleton having been found in that wilderness. Nothing can be more mysterious than the fate of this man. There has been found no indication that he was either a hunter or a traveller. Had he been either he would not have been found where he was. He seems to have been a wanderer. He was apparently a man in comfortable circumstances, at least was well clad. How much money he carried cannot be guessed, for the four coins found, being all of one date, perhaps were carried as tokens, and all traces of paper would have disappeared long ago. He seems to have not been accoutred for a journey, and yet was found in one of the darkest parts of the wilderness, thirty-five miles from civilization, and in so rough, lonely and inaccessible a place that it was by the merest accident that even an old guide got there. In that part of the woods it would take a hardy man to travel twelve miles a day, so great are the obstructions in the shape of boulders, windfalls and torn ground. Eagle Creek, in the language of the guides, "goes nowhere and leads nowhere." I cannot think of foul play in connection with the case, for no victim would be taken so far into the forest. As the remains were found, they suggest that the man had fallen off the rock, the boots having been discovered lying toward it, and the bones of the upper part of the body in their order lying with the head toward the water. But what in the world was a man with a broadcloth suit on, wearing a silk hat, and carrying padlocks in his pockets, doing in that part of the earth? And how did he ever get so far in such a costume without being observed? I confess that I cannot conceive of any plausible explanation of this Adirondack mystery. If I could get a good reason for the man's presence in the forest at all, I could readily account for his failure to get out, on the hypothesis of insanity, caused by being lost. A man is seldom so completely insane as when he is utterly lost in a dense forest. He will then do the most singular things. He will sometimes fail to recognize the most familiar faces and objects, and will sometimes walk around and around in a circle until he drops dead from sheer exhaustion. The skeleton has been in the woods many years. The growth of moss over the clothes was an old growth. This root, which I carefully cut away from over the shin-bone, where it was growing entwined about the relic, is over half an inch thick, and has at least six concentric rings in its formation. I never knew of but one man attempting to make his way through the Adirondack wilderness without the help of guides. That was two years ago, and that man was well dressed, and was bent on making his way alone. He made inquiries about the correct routes, and tried to follow them. But his conduct attracted so much attention that the guides kept track of him, fearing he might meet with harm. He was kept in sight for several days, but at last got lost, and we have never since heard of him.

THE NEW MODE OF JOURNALISM.—Mr. Whitelaw Reid, in a recent address before the New York State Press Association, expressed his conviction that news gathering had reached its limit in this country, and that in future the journalist would give more attention to fine writing. The police court reporters of some of the metropolitan journals have adopted Mr. Reid's theory. This is the way they put it into practice: Wolf Painter, a fishmonger of Bayard street, who unites in his two ferocious names the totem survival of two most savage beasts, was brought up before the Court at the instigation of Mr. Bergh, upon the charge of having, with fish-knife keen, sundered in half a tabby cat. The reporter thus epic-izes the case:—

The principal witness against him was Mrs. Ann McGuire, of No. 302 Pearl street. On the 23d of last October, she said, she was passing through Bayard street with her eyes on the ground, when through accident she happened to look into Painter's shop, which is in the basement, some ten or twelve steps down from the sidewalk. She caught sight of the unsuspecting and unfortunate cat prowling around the place; then saw it smell the fish exposed for sale. A demoniacal look passed over Painter's face, and grasping a large fish-knife, ran at the animal, caught it by the tail, and cut through its body. The cat howled, and Mrs. McGuire joined in with a series of screams. Joseph Tibold, the aged Irish owner of the cat, living next door, came hurriedly down stairs to learn the cause of the disturbance, and found the animal dragging its mutilated body to his feet. He picked it up carefully, butchered so fearfully—severed in half; watched it a minute or two, till its last breath it drew, then boiled with wrath. Then he and Mrs. McGuire repaired to court and made charges against Painter. Mr. Tibold was the next witness, and corroborated the above story, adding that the prisoner kicked the cat after he had cut it. Painter denied the charge. He said that he was alone in the store when he heard the cat yell with pain, and then noticed that it had cut itself. He said it was fond of fish, and no doubt in its search for its favorite dish pushed against one of the knives, which fell and cut it. He offered two witnesses, the first of whom, a man, contradicted him by declaring that Painter was not in the shop, but was sitting outside in his company when the cat meandered up to them in a mutilated condition. His other witness, a woman, further injured his case by declaring that the previous witness did not see the cat. The Court found the prisoner guilty, and sentenced him to a month's imprisonment. This announcement astonished the friends of the accused, who were present in large numbers. Painter's face wore a look of utter wretchedness, but a painter's hand would be required to accurately picture the look of triumph that lit up the face of Mr. Bergh.

A CHICAGO GAME DINNER.—At the twenty-fourth annual game dinner given by Mr. John B. Drake, of the Grand Pacific Hotel of Chicago, the other evening, five hundred and twenty ladies and gentlemen sat down to fifty-five tables. There were seventy different kinds of game. The tables and the room were decorated in sumptuous style, and in hunters' taste.

HIGH LIFE.—Miners are sometimes very rich, and it takes a very rich man to live high where provisions and everything else are high, as they are where a miner lives on Mount Lincoln, Colorado—in fact, 14,157 feet high. But that's not high. Galera, a little railroad village in

Peru, is 15,645 feet high. The inhabitants all come of high families; drink Hyson tea; make high scores when they go shooting; eat their game a little high, and have a high old time of it all the year around. And if the tide ever gets up there it will be a high tide sure enough.

GAME PROTECTION.

MOONLIGHT IN A NEW PHASE.—*Richmond, Va., Nov. 20th.—Editor Forest and Stream:*—In your issue of Nov. 20th your Washington correspondent, over the signature "O.," relates very graphically his duck-shooting at night on their roosting-grounds. I beg to ask if it is not questionable taste in the leading game protective journal to publish such things, thereby giving it the color of legitimate sport. Night-shooting is known to be the most injurious to the hunting-grounds, and is inexcusable, except to the veriest pot-hunter, who goes exclusively for the bag—not sport—and will invariably drive the game away more quickly than any other manner yet devised. Wild water fowl disturbed on their roosting-places will invariably leave. More can be done to drive game away from a section by three nights' hunting on their roost than by four weeks' shooting during the day. Section 1 of game laws of Maryland reads as follows: "That no person shall at any time in, on, or over the waters of the State of Maryland, shoot at, or shoot any waterfowl bedded in flocks, either upon the *feeding* or *roosting grounds* of said waterfowl, or elsewhere, from any vessel, boat, float or canoe, or any craft of any kind whatever." Section 3 reads: "Or shoot any waterfowl *flying* about their feeding-grounds or elsewhere over the waters aforesaid," etc. We have fine hunting-grounds, and always extend most heartily the right-hand of fellowship to all sportsmen; but if they must shoot ducks at night, we sincerely hope they will stick to the Maryland side of the Potomac.

GREENHEAD.

The above communication is from the President of the Virginia Fish and Game Protective Association. To the implied charge against ourselves we can only say this: We aim to publish an interesting as well as a useful paper. How far we accomplish this, it may be left with our readers to decide. But we must assume to ourselves the privilege of determining what it is proper for us to publish and what it is improper for us to publish. We cannot reject the communication of a man who writes a good story, simply because his adventures do not contain a *quantum suff.* of moral teaching. No doubt many a man reads his FOREST AND STREAM on Sunday, but we are in no sense of the word a Sunday-school paper. Our constituents ought to understand by this time that when we publish sporting papers we do not thereby subscribe to, nor endorse, all that their writers may say or do. Nor have we any fear that our influence for game protection will be lessened because we have allowed a man to describe the sport of shooting ducks by moonlight. We cannot afford the time to follow duck hunters in their skiffs, and moose hunters through the forests, and trout fishermen up the mountain side, and dog the steps of our contributors all over the world, to see if they are transgressing some law. We have not the time for this. Our friends can hardly ask it of us.

MAINE STATE ASSOCIATION.—*Portland, Nov. 25th.*—Several communications relative to the above subject have appeared in your columns of late, and a step has been taken by the organization of a State association that I hope will be productive of practical results. Several years since my brother (Manassch Smith) endeavored to effect a combination of the fish and game clubs in this State so as to secure a union of forces towards accomplishing desired results. While the majority of our sportsmen are interested in the propagation and protection of fish, as well as birds and animals, there was too much apathy among those interested especially in fish, to insure combined action.

All over the State there are sportsmen who are awake to the importance of a more rigid enforcement of our game laws, and much is said but little done; and practically little can be done until there are officers paid to enforce the laws. In the fishery department we have a few, a very few, paid wardens. But even these few efficient officers render most valuable service to the State under the direction of the commissioners, and there is already a marked change in the observance of the laws in localities guarded by them, and the practical benefits arising therefrom have produced a change in public sentiment which renders it now easier to obtain a conviction by jury, of the poachers arrested. If the State legislature would furnish us with sufficient funds the work could be effectively carried out all over the State; and when everyone who is interested in, and has a knowledge of, the importance of increasing and protecting our fish and game, will personally use his influence and energy toward effecting this, it will be done.

Although the protection of game is not one of the official duties of the commissioners of fisheries, yet much has been done in the past by my colleague, E. M. Stillwell, Esq., who, to my personal knowledge at various times, was instrumental in punishing those who had been in the custom of killing game out of season, and very much more might be done in the future with a fund at command to be used in the furtherance of this object. My duties the present year have more than ever taken me about over different portions of this State, and given many opportunities to learn of infringements of the laws for the protection of game, in which as naturalist and sportsman I am no less interested than as an official in the fishery laws.

If a warden is sent into the wilderness to detect parties fishing with set-lines in winter, he is instructed to also detect deer slayers if possible. But we have no funds to employ an officer to detect violators of the game laws. I have personal knowledge of the fact of game killed out of season (and in large quantities, too,) within the present year; and had I the necessary fund, with authority to use it as I deemed best for the purpose, I could put a stop to nearly all of this business in one season, and keep it stopped thereafter. Few sportsmen have any knowledge of the amount of game killed each year out of season, even in their own immediate vicinity. A sportsman in conversation with me deplored the scarcity of woodcock and grouse in favorite coverts that formerly afforded fine sport. I chanced to know that a market hunter had each season, for three years, shot in these and other coverts for miles around, during July and August. This game was marketed in Boston, and it is very probable that the now famous woodcock served for Mr. John Fotler, jr., at Young's Hotel in close season was killed in Maine. But one may ask why I, having knowledge of these things, have not stopped them? Simply because I could not afford to devote the necessary time at my own expense, to obtain the requisite evidence, and arrest, and conviction of the offenders. My familiarity with the habits and haunts of game, and my frequent visits to the various portions of our State at all seasons of the year, give me an intimate knowledge of these facts, and if the State of Maine, or the sportsmen of this State, will furnish me with the munitions of war, I will exterminate, or materially decimate the ranks of these enemies to the propagation of game.

EVERETT SMITH.

DUCK SHOOTING IN STRATFORD HARBOR.—*Milford, Conn., Nov. 23d.*—In your issue of Nov. 20th I notice a communication signed "Black Duck" on duck shooting in Startford Harbor, which deserves some notice. Your editorial remarks are based on the *ex parte* statement of your correspondent, but even so they are satisfactory.

The law to which our anatine friend takes exception has been in operation something over a year; that is, this is the second season during which the birds have been allowed to occupy their feeding grounds without molestation, and in the view of many sportsmen besides myself, the ducks were more abundant last winter in the harbor than they have been for ten years past, and they stayed during the whole winter. Large numbers were killed while flying to and from the Sound. The birds fly over the beach or over the neighboring hills, and "Black Duck's" statement to the contrary, notwithstanding, did furnish fair sport last winter. The fact is that the benefits of this law are just beginning to make themselves felt. The ducks are very abundant now and will become more numerous each season. They fly over the beach each day, and besides this, scatter more or less over the streams and pond-holes of the surrounding country and up the river, thus furnishing many opportunities for the gunner. We have thus a great preserve at our doors. I am credibly informed that there has not been as good shooting on the Stratford marshes for many a long year as there was last season. After a few years, when the ducks shall have become thoroughly wonted and accustomed to regard the mouth of the river as a place where they will be secure, it may be wise to permit shooting for one or two days every two weeks; but to open the way for harrying the ducks now, while on the feeding ground, would simply be to reduce things to their old basis.

The slurs of "Black Duck" on the "selfish Milford men" are amusing. I don't think the Milford men, who were instrumental in having this law passed—and I know them all—are much more selfish than others; and I think the innuendo against Geo. ——, who keeps the hotel on the beach, especially uncalled for. Mr. —— is well known throughout the State, and has a host of warm friends, all of whom will testify to his excellent and genial qualities. "Black Duck" will not help his cause by traducing people in this fashion. The argument brought forward by your correspondent, that if he and his friends do not shoot these ducks, some one else will, is precisely the one advanced by breakers of the game laws everywhere. That is just what those men, who shoot woodcock in the summer in Connecticut, say; and it is certainly a most selfish principle to act on. If all these people would only do as they would be done by, we would have good shooting everywhere. Let "Black Duck" possess his soul in patience, and give the present law a chance. If it proves not to be effective, and does not increase the supply of birds in Stratford Harbor, all gunners will be glad to have it repealed.

Among others,
WHITE BELLY.

GUINEA QUAIL.—The Owego, N. Y. *Gazette* has this:—

Some interest has been excited among sportsmen in this village by articles recently published in a prominent sportsmen's paper regarding migratory quail. Last Monday a small boy, about thirteen years of age, came to the place of business of one of our well known sportsmen. Innocence was stamped on his countenance, and every lineament was expressive equally of verdancy and honesty. He said he was from the Gaskill neighborhood, and that he had a coop of young quail, which he had with difficulty caught near his father's barn. Our sporting friend looked at the birds and came to the conclusion that he was on the track of the *rara avis* described in his newspaper. He consulted with a fellow sportsman and the twain made a critical examination of the quail. The boy wanted a shilling apiece for them. He was anxious to secure his money as soon as possible, as he had left a span of young horses on another street and he was afraid they might run away. A dollar and a half was finally paid to him, and the rare birds became the property of our sporting friends. The prize was soon afterwards shown to a third sportsman a gentleman of a skeptical turn of mind. He examined the birds carefully for a moment, and then doubtfully remarked that they looked and peeped very much as Guinea chickens do. The eyes of the purchasers of the quails distended somewhat, and after a few moments, one of them remarked with a sigh, "Well, I guess we have been sold." The more they examined and reflected, the better satisfied they became that they had been victimized, and that the rustic, in whose mouth apparently sugar wouldn't melt, was a young fraud of the first water. The "migratory quail" were taken to the barn of one of the victims, and turned loose in the barn yard. They are now perfectly at home in their new quarters, and don't appear to migrate worth a cent.

THAT FLORIDA PARTY.—One more member is now desired to complete the Florida party under Dr. F., to which we invited attention some weeks ago. Must report by Dec. 8th. Communicate through this office.

The Rifle.

DR. CARVER ABROAD.—We are glad to learn from *Land and Water* that Dr. Carver of rifle-shooting celebrity, is earning so good a name abroad. In winning the candid avowals of esteem for his own behavior and accomplishments, he is earning substantial honors for his native country. We confess we are not proud of the performances of very many who set themselves up abroad as representative Americans. Our English contemporary says:—

Dr. Carver, we believe, was by no means popular at one time in New York, hence such marvellous shooting as he is capable of making being so designated. His shooting is no "trick" in the sense usually conveyed in the application of such a term. It may be a "trick" in the sense that it is a "trick" to shoot five-and-twenty English bred blue rocks in succession at thirty yards rise; a "trick" that any man who professes to be a shot may be proud of. We have seen the best shots in the world—that is, those who have shown public form—shoot, and are therefore justified in offering an opinion on the subject. Dr. Carver's rifle shooting is most emphatically genuine, and probably because he performed at New York all he announced he was capable of doing, he disappointed those prejudiced against him. Being perfectly innocent of that kind of swagger which characterises certain classes of Yankees, and altogether of an unassuming, manly, and straight-forward disposition, Dr. Carver has earned the good opinions of those who have come in contact with him here, as do also all his countrymen of a similar disposition who visit England. Great doubts were entertained and expressed at one time of his capabilities, but once having had proof of the genuineness of his prowess, the fullest credit was accorded him forthwith. Englishmen of all classes appreciate genuineness as much in foreigners as in their own countrymen, and are never backward to acknowledge it.

EVERLASTING SHELLS.—*Oakfield, Wis. Nov. 15th.*—I have been much interested in the letters of "Bexar" and "Subscriber," and as they seem to throw discredit on my favorite rifle, the Ballard, and the Everlasting shells, I will give you my experience with the same:—

"About three years since, I purchased a mid-range Ballard, forty calibre, seventy grains, and fifty Everlasting shells; twenty-five of the shells I have never used. The other twenty-five I have fired and reloaded at least forty times each, and in my long-range experiments I have often loaded from the muzzle, using 100 grains of powder. Have always used Oriental Powder. F. G., and to-day every one of those twenty-five shells are as perfect as the day I bought them. Not one has ever burst, expanded or stuck in the rifle.

"In fact, the rifle, shells and reloading implements, are as near perfect as any I have ever used; which includes the Remington, Maynard, Stevens, Whitney and Winchester; of which I now have a Remington, Maynard, and (my favorite) the Ballard.

"Subscriber, in his letter of Oct. 27th, says the Maynard shell will not expand or bother. I agree with him. But as the Ballard Everlasting shell is twice as thick as the Maynard, will he kindly give me the reason why the Ballard should expand, and the Maynard not. Provided, of course, that the shells properly fit the chamber of the rifle, and that the rifle is properly chambered for the shell."

HORICON.

MASSACHUSETTS.—*Boston.*—Magnolia Rifle Gallery has been filled during the past week by contestants in the Ludwig match, and the new Military match. Mr. Hollis sent ten shots into the little one inch iris and won the $15, extra prize. Following are the best scores in the Ludwig match:—

F. Hollis	5	5	5	5	5	5	5	5	5	5—50
J. M. Smith	5	5	5	4	5	5	5	5	5	5—49
E. F. Richardson	5	5	5	5	4	5	5	4	5	5—48
N. James	5	5	5	5	5	4	5	4	5	5—48
E. Whittier	5	4	5	5	5	5	4	4	5	5—47
C. M. Gueth	5	5	4	4	4	5	5	5	5	5—47
C. P. Gleason	5	5	5	5	4	4	5	4	5	4—46
W. R. Schaefer	4	4	5	5	5	4	4	5	5	5—46
J. F. R. Schaefer	4	4	5	4	5	5	5	5	5	4—46
P. Jones	5	4	5	5	4	5	4	5	4	5—46

The Military match opened on Monday, and has proved very popular. The match is open during the month to any regularly enlisted man of the State Militia; the best scores are:—

Private Spofford, Co. T., 2d cadets	4	5	4	3	5	5	5	5	5	5—46
Private Gardner, Co. D., 1st Regt	5	4	4	4	4	5	5	5	5	5—45
Sergant Osborn, N. C. S., 1st Regt	4	4	4	5	5	5	5	4	5	5—45
Corporal Everett, Co. D, 1st Regt	4	4	4	5	5	5	4	5	5	4—45
Colored Wales, 1st Regt	4	4	4	5	5	4	3	4	5	5—43
Corporal Lithgow, Co. D., 1st Regt.	4	3	4	4	5	4	4	4	5	4—41
Private Brownell, Co. D., Regt. List.	5	5	4	3	5	3	4	4	4	4—41

BOSTON, MASS.—*Walnut Hill, Nov. 27th.*—Thanksgiving was a gala day at Walnut Hill, but we have only space for the head scores in the several competitions. We print:—

SILVERWARE MATCH—200 YARDS.

W. E. Guerrier	4	5	4	5	5	4	5	5	5	5—32
R. Page	4	5	4	4	5	5	5	4	1	1—31

SILVERWARE MATCH—300 YARDS.

E. F. Richardson	5	4	5	4	5	5	5	5	5	5—33
E. F. Banks	4	4	5	5	4	4	4	4	4	4—29
H. Tyler	5	4	4	4	4	4	4	4	4	4—29
R. Page	4	4	3	4	4	4	4	4	5	5—28

THE GLASS-BALL MATCH.

	Single.	*Double.*	*Rotary.*	*Total.*
O. F. Belcher	5	10	5	20
E. S. Belcher	4	8	5	17
J. Nichols	4	9	4	17
H. A. Adams	4	10	3	17
H. Seaverns	4	7	3	14
E. M. Preble	1	6	4	11
H. A. Brown	1	2	1	4

NOVEMBER AMATEUR SERIES.

C. R. Griffin	5	5	4	4	5	5	4	5	5	5—47
S. B. Henry	4	4	4	4	4	5	4	4	4	4—41
Capt. Howe	4	3	4	4	4	4	3	4	3	4—37

The successful competitors for the turkey shoot were Messrs. Richmond, Henry, Osborne, Guerrier, Tyler, Sargent, Richardson, and Nichols.

The Raymond Sportsman's Club held its final competitions in the subscription glass-blass and rifle matches at

Bellevue Range to-day. The following is the result of the glass-ball competition :—

	Single Trap.	Double Trap.	Rotary Trap.	Total.
W. R. Witherell	10	10	8	28
W. H. Harrison	9	9	10	28
G. B. Blanchard	10	8	9	27
O. Dearborn	9	9	9	27
F. H. Raymond	10	7	9	26
J. C. Smith	9	6	9	24
B. J. Fisk	8	7	9	24
G. H. Fox	10	7	6	23
J. A. McLean	8	3	6	17

The following were the scores made in the rifle match at 200 yards :—

J. S. Bennet	5	5	4	4	5	4	5	4	5	5	5—46
W. Wales	5	5	4	4	5	5	4	4	5	4	4—45
J. F. R. Schaefer	4	5	4	4	5	4	4	5	4	5	4—44
J. R. Teele	4	5	5	4	5	5	4	4	4	4	4—44
E. Jones	4	5	4	4	4	5	5	3	5	4	4—42
C. P. Gleason	4	4	4	4	4	4	5	5	4	4	4—41

The Cambridge Glass Ball Association had a match Thanksgiving afternoon at Fresh Pond, the first prize, a silver cup, being awarded to J. Stevens, a Harvard student, his score being 17 out of 20. The second prize was taken by Police Officer Pullen of Station I.

Boston, Nov. 29th.—The Magnolia Gallery has been filled during the week by riflemen and military gentlemen, who are interested in the match, with military rifles. The scores for the week are as follows :—

LUDWIG MATCH.

F. Hollis	5	5	5	5	5	5	5	5	5	5	5—50
J. M. Smith	5	5	5	4	5	5	5	5	5	5	5—49

S. R. Smith	3	3	3	3	3	5	4	4	5	5	4—26
A. M. Johnson	4	2	3	4	2	5	5	5	5	5	4—25

In the afternoon the members of the association present, shot for the association badges.

The military badge was won by General S. R. Smith by a score of 45 out of a possible 70, and the all comer's badge was won by Lieutenant A. Allen by a score of 41 out of a possible 50.

CONLIN'S ANNIVERSARY.—Conlin, whom every rifleman the world over knows as the keeper of the best rifle gallery in this country, had a grand time on the 24th ult. in celebrating the fifteenth anniversary of the establishment of his gallery. During that time Mr. James S. Conlin has had a very wide acquaintanceship with lovers of that American weapon, the rifle. Every champion of every sort of shooting is welcome there, and finds a chance to show his skill, and any would-be marksman, with more facility in talking scores than shooting them, soon has the conceit taken out of him in that company. Conlin had provided a full "spread" on the night of his anniversary, and the bantling in its teens proved to have a great many friends. There were plenty of experts working with very even scores over the turkey, salads and drinkables, and all the clubs were liberally represented. There were L. V. Sone, who has a record of forty-three consecutive bull's eyes at a "Creedmoor target" reduced for gallery practice, and there is no better "holder" in the country than he ; Mr. Sibley, who can rattle off a full score almost at any time ; Frank H. Lord, who hardly ever misses anything at which he may send a pistol ball, and whose ability in this work is known on both sides of the Atlantic. The great talker, who looks like a philosopher, is Wilson MacDonald, and when anybody talks of shooting at the word, Mac stops talk, and goes to work, and with a score of 47 in possible 50 at the word three, a string of eleven inches, 35 yards, at word one, and 41 (two and a half inches) consecutive bull's eyes at word one, he can afford to wait till the boys show something as good. Capt. Bogardus, of course, was there, and for writing challenges, and backing them up with money and scores, there is none can outdo the great Illinoisian. Farrow, who has, with Capt. Jacksou, of Boston, the best all-range record in America ; William Hayes, who haunts German Schuetzenfests, and though he has not a drop of Teuton blood in him, persists in forcing his way by superior butt practice on to the throne of the Schuetzen Konig. Then there were other keen eyed marksmen present by the dozen. Bonett, Davis, Cheever, O'Donnell, Seabury, Fulgraff, Ward, Sherman, Dudley, Barker, Cullinan, Banks, J. Blydenburgh, and others to the number of a big crowd. There were good wishes enough uttered to overwhelm Mr. Conlin when he shall get into the larger quarters to which he is soon about to treat himself and his friends.

NEW YORK—*Conlin's Shooting Gallery.*—The Everybody's Match, which had been in operation for one month, ended Thursday evening, Nov. 20th. It was a complete success. There were seventy-eight competitors entered, and among this number there were many representatives of riflemen of this city and vicinity—the experts of indoor and of outdoor shooting. The average shooting was far better than in last year's match, while the contests of '76 and '77 show a still greater contrast. The winning targets are nothing less than marvels of skill in marksmanship, and to be duly appreciated must be seen. They are now on exhibition at the gallery. The conditions of the match were : Seven shots with 22-100 cal. rifle, three pound trigger pull, position off-hand, as required by rules of the N. R. A. ; the shots to be measured from the center of the shot to the centre of the bull's-eye. In case of a "tie" in the total measurement the target having the "wildest" shot to lose. The number of entries unlimited. The match to commence Oct. 20th and to continue one month. There were thirty prizes offered, consisting of useful and appropriate articles, all of which were fitting trophies for the contest. The best score to win the first choice, etc.

As can be seen by the appended list, the competition was of such a close character that it was necessary to measure the shots to the thirty-second part of an inch.

This was done very satisfactorily with the ready measurement targets, invented by Mr. Conlin. The names of the winners and the total measurement of their best target of seven shots are as follows :—

Name.	Inches.	Name.	Inches.
1. C. V. Sone	1 23-32	16. F. H. Holton	3 5-16
2. Geo. J. Seabury	1 23-32	17. D. S. Banks	3¼
3. S. W. Sibley	2	18. S. T. G. Dudley	3 7-16
4. W. Milton Farrow	1 1-16	19. Fred Kessler	3 9-16
5. Daniel A. Davis	2¼	20. D. E. Vannett	3¾
6. J. B. Blydenburgh	2 7-16	21. Leon Backer	3¾
7. E. B. Barker	2 4-8	22. C. J. Falco	4 3-16
8. Thomas Fitz	2¼	23. J. H. Bryan	4 2-8
9. D. O'Donnell	2¼	24. Wilson MacDonald	5 5-16
10. A. H. Cobb	2 6-8	25. S. H. Hubbard	4 5-16
11. J. H. Brown	2 13-16	26. W. O. Wetherbee	4 9-16
12. Wm. Klein	2 13-16	27. C. H. Eagle	4 7-8
13. Wm. H. Dunlap	2 15-16	28. M. B. Engle	4¾
14. P. Fenning	3 2-8	29. M. M. Maltby	5 1-16
15. C. G. Zettler	3 2-8	30. J. W. Mangam	5 2-8

—The Twenty-second Regiment Athletic Club games will be held at their armory, Fourteenth street and Sixth avenue, Dec. 12th, at 8 P. M.

NEW YORK SCHUETZEN CORPS BALL.—The twenty-third annual ball of the New York Schuetzen Corps, Captain David C. Yuengling, jr., will be held at Terrace Garden, 58th street and Third avenue, Wednesday evening, December 10th. This is always a pleasant occasion, and the managers have prepared for an unusually enjoyable time this year.

SCHUETZEN NOTES.—A prize combined with a poultry shooting took place on Thanksgiving Day at Union Hill Schuetzen Park. It was arranged by the Jersey Schuetzen Corps and proved to be a success, as the attendance was very large. There were open two poultry and some prize targets, besides the bull's-eye targets. Distance, 200 yards, and all the targets open for all comers. The first prize winners were :—

Prize Target, possible 75.—Wm. Hayes, 72 ; W. M. Farrow, 70 ; J. Feuning, 69 ; C. Judson, 69 ; Phil Klein, 69 ; Chas. Zettler, 68 ; D. Morse, 67 ; D. Miller, 66 ; Hy. Oehl, 66 ; John Raschen, 66 ; Herm. Raschen, 65 ; J. W. Schneider, 65 ; G. Joimer, 65 ; —— Harrison, 65 ; J. Blumenberg, 65 ; Thos. Broadway, 65.

Poultry Target.—Hy. Oehl, 70 rings ; Wm. Hahn, 67 rings ; D. Miller, 67 rings ; G. Joimer, 65 rings ; L. Vogel, 65 rings ; W. M Farrow, 64 rings ; F. Blumenberg, 64 rings ; W. Hayes, 64 rings ; A. Knopfer, 64 rings ; C. Judson, 63 rings ; Ph. Klein, 63 rings ; P. Fenning, 63 rings ; Thos. Broadway, 63 rings ; C. Zettler, 63.

WILLET'S POINT.—*New York Harbor, Nov. 27th.*—The Battalion of Engineers, stationed at Willet's Point, celebrated Thanksgiving Day by a series of athletic sports and a rifle contest. Some of the athletics were unique, the horse-collar contest capping the climax. The winners were as follows : Five miles, go-as-you-please, Saturday, Murphy and Eustace ; blindfolded race, Riley II. ; throwing light shot, McManus ; heavy shot, McManus and Henderson ; 100-yards race, Boyd and Kirwan ; heavy hammer, Beeker and McManus ; 300-yards race, Boyd and Richardson ; grinning through a horse-collar, two trials, Kirwan ; blindfolded wheelbarrow race, Murphy ; three-legged race, Bristow and Frazer ; sack race, Doyle ; standing jump, Boyd and Henderson ; running high jump, Kubs and Kirwan ; running long jump, Boyd and Kirwan ; three standing jumps, Henderson and Boyd ; hurdle race, Frazier and Riley ; 50-yards bucket race, Slaick ; greased pig race, Slaick. The rifle competition resulted as follows :—

	200 Yards.	500 Yards.	Total.
H. von Schon	3 5 3 4 5—20	2 5 4 5 5—21	41
S. Storer	4 4 4 4 3—19	4 5 3 5 4—21	40

Chas. O. Van Duzee	4 3 4 3 4—18	3 4 4 3 5—19	37

Among the prizes was one years' subscription to the FOREST AND STREAM, Sergeant Turner being the fortunate man to see his own success recorded in the first number of his year.

PENNSYLVANIA—*Westchester, Nov. 27th.*—Thanksgiving Day was made use of by the Westchester and Phœnix Rifle teams for a match at Phœnixville. The Pennsylvania team have already suffered one defeat on the Westchester grounds, and a second match was decided on.

A special train was provided for the two teams and their friends, and at 10 o'clock they proceeded down the Reading Railroad to the Phœnix range, along the Schuylkill. It is a very fine range. At about 11 o'clock firing began.

When the last round was fired, and victory perched on the banners of the Westchester team, Capt. N. A. Pennypacker made a short address, and the Phœnix team gave three cheers for the victors. Of the shooting, that of Mr. Leopold, formerly of the Pottstown, but now attached to the Phœnix, must be mentioned as extraordinarily fine, he making ten bull's-eyes and 117 points out of a possible 120:—

WASHINGTON, D. C.—The club match which was opened November 1st, by the Columbia Rifle Association, to be continued till January 1st next, was called Saturday last at 2 P. M. But two contestants entered. The afternoon was passably good, although the breeze fluctuated from 6 to 9 o'clock, and at times was quite unsteady in strength.

Following is the shot-for-shot record of the scores made :—

COLONEL J. O. P. BURNSIDE.

800 yards	5	5	4	5	5	5	5	5	5	5	4	4	3	4	4—68
900 yards	5	5	5	5	5	4	5	5	5	4	5	5	4	5	5—72
1,000 yards	3	5	5	5	5	5	5	5	5	5	5	5	5	5	5—73
Total															213

P. J. LAURITZEN.

800 yards	5	5	4	5	4	5	5	5	5	5	5	5	4	5	5—72
900 yards	5	4	3	5	3	4	5	5	5	3	5	5	5	5	4—66
1,000 yards	5	5	5	5	4	4	3	5	4	5	5	5	5	5	5—70
Total															208

COLUMBIA RIFLE ASSOCIATION.—*Washington, D. C.*—The second club badge of the series opened at Bennings' on the 8th inst., to continue till January 1st next, was called by the umpire, Dr. John Parsons, at 1.30 P. M. on Saturday last, the 15th inst., and notwithstanding the gale that prevailed and the threatening appearance of the skies, there were five entries. The two gentlemen who entered for the long-range contest were anxious to have a bout with the wind, and test the qualities of the improvements and additions made during the week to the great wind clock, consisting, in addition to a new and improved vane to work the hand on the clock, of an anemometer and two dipping vanes. The afternoon proved most fitting for testing the new instruments, and the long-range men were loud in praises of the improvements.

The scores were good in both matches, considering the very high and blustery wind of the afternoon, and the fact that the long-range match was finished in a hard shower, with fading light.

Following is the shot-for-shot record of the shooting in the short-range match :—

J. B. BURNSIDE.

200	0	5	3	5	4	5	5	5	5	4—41	
300	5	4	4	4	4	4	4	3	3	8—38—79	

A. A. ADEE.

200	5	3	4	4	4	5	4	4	3	3—39	
300	3	4	3	3	4	2	3	4	3	4—33—72	

H. W. ILLMAN.

200	3	4	4	3	3	4	4	4	4	2—35	
300	2	0	3	2	3	3	3	4	0	4—24—59	

Mr. J. B. Burnside and H. W. Illman each had the illluck to make a centre, or four, on the wrong target, which, under the rules, scored eaeh a miss. The long-range match resulted as follows :—

COL. BURNSIDE.

800	4	5	3	5	5	5	5	3	5	4	5	5	4	5	5—68
900	5	5	5	5	4	5	4	5	5	5	4	3	5	5	4—69
1,000	5	5	3	5	5	5	4	5	5	3	5	2	5	4	3—64—201

P. S. LAURITZEN.

800	3	5	5	5	4	5	5	5	5	4	5	5	5	5	5—71
900	3	4	5	5	5	5	5	5	3	4	5	5	5	4	5—68
1,000	4	5	4	4	5	5	3	5	5	3	5	5	3	3	2—61—200

—A. H. Weston, the Assistant Secretary of the National Rifle Association, has secured a full design for life membership certificates. The action of 150 life members is required to cover the pecuniary cost, when, at $1 each, members may secure parchment certificates.

OHIO—*Cincinnati, Nov. 18th.*—Cincinnati Shooting and Fishing Club; second competition for the Baker medal; distance, 200 yards; position, off-hand; 15 shots at Mass., Creedmoor targets:—

MISSOURI—*Sedalia, Nov. 14th.*—Sedalia has a new military company, the "Sedalia Rifles," just organized, and being equiped. You may expect something soon from this source. OCCIDENT.

Game Bag and Gun.

GAME IN SEASON FOR DECEMBER.

Moose, *Alce Americana.*
Caribou, *Rangifer arcticus.*
Elk or wapiti, *Cervus canadensis.*
Red or Va. deer, *C. virginianus.*
Squirrels, red, black and gray.
Hares, brown and gray.
Wild turkey, *Meleagris gallopavo.*
Pinnated grouse or prairie chickens, *Tympanuchus cupido.*
Ruffed grouse or pheasant, *Bonasa umbellus.*
Quail or partridge, *Ortyx virginianus.*
Woodcock, *Philohela minor.*

Swans, Brant, Wild Ducks, Geese, &c.

☞This table does not apply to all the States. It is meant to represent the game which is generally in season at this time. State regulations may prohibit the killing of some species of game here mentioned.

WHERE THE PIGEONS ARE NOW.—We learn from an exchange that the celebrated pigeon roost in Scott County, Indiana, is now, as it has been for seventy-five years, the roost of millions of pigeons. They fly away in the morning to their feeding grounds, many of them going to such a distance that they do not return until midnight. The timber on thousands of acres covered by this roost is broken down badly, large limbs being snapped off like reeds, by the accumulated weight of the birds. Thousands are killed nightly, but the slaughter seems to make no dimunition in the vast flocks that congregate there.

SNIPE.—While a scarcity of snipe has been reported by our correspondents all over the United States, they seem to have been more abundant than ever in the Province of New Brunswick the past season. We will thank our Southern correspondents to report their whereabouts wherever they make their appearance.

GUN ACCIDENTS AGAIN.—Dr. C. E. Rider, of Rochester N. Y., enclosing a newspaper item about a young man who has just lost his arm (cause, drawing gun out of a wagon muzzle foremost), suggests that a collection of gun accidents be made and classified, with the view of determining the most frequent causes, and so adopting protective measures. It is hardly necessary to make such a study of the subject. They all come under the general head of carelessness. There is no adequate excuse for nine hundred and ninety-nine out of one thousand of them. No device can ever be perfected to effectually withstand the foolishness of the careless handler of fire-arms. So long as gunpowder possesses its explosive properties, and so long as lead will bore holes in human bodies, we may expect to see and read of men shooting themselves and other people.

THE FOREST CITY CLUB.—The Forest City Shooting Club, of Ithaca, N. Y., which was organized last year, now numbers fifty members and has a fine club house on the shore of Cayuga Lake. The officers are: President, Levi Kenney; Vice-President, William H. Wilson; Secretary and Treasurer, William H. Denham. The club had a most pleasant reception at the Ithaca Hotel the other night, when wit and wisdom held high carnival, and all went merry as a married belle.

VARIOUS GUNS AND GUN MAKERS.

CAP ROUGE, P. Q., *Nov. 12th.*

Editor Forest and Stream:—

There are so many makers of guns at home and abroad that any person wanting a good weapon must be hard to please if he cannot find one to suit him without much trouble. The only thing is in the choice of the maker, and in this matter most people have their favorites. Of the various makers of guns, it cannot by any means be said that they are all first-class, even in the best guns they make; and of this no person has any means of judging, unless he has had considerable experience in the use of the different grades of the various makers.

In this article I propose to give some of my experience with guns I have had myself, or that I have used long enough to decide on their merits. I have owned myself, or had in my time, no less than thirty breech-loaders, and of these, with three exceptions, I never had duplicates of the same maker. All the best known American guns, exepting Clark & Sneider's, of Baltimore, and the new Colt gun, I have tried, one after the other. I have also had guns of most of the best known English makers, one of Irish and one of Scotch make. I will notice them in the order in which I have named them.

The first objection found in the American guns—and this applies to all makers—is that they manufacture guns with their own particular mode of action only, for opening and closing the breech. They will not take an order for a gun with any action the purchaser may wish to have, as each one, no doubt, considers his or their action better than any of the others. Now, in England if an order is given for a gun, this is left entirely to the taste of the person ordering, and the gun is made with this most important particular strictly according to his wishes. I think American makers lose many orders they might otherwise have.

Give me a Parker or Baker gun, but with a top snap, double bolt action, and they are equal to the best guns in the world for shooting powers, stability and solidity of make. The first American gun I owned was a Parker, costing $100, and to do the gun justice, I must say a better gun never left maker's hand. It was a 12-bore, and I presume was choked, as it was impossible for a cylinder to compare with it in pattern or penetration. The gun was well finished and put together, and showed that it had been carefully made. It was, in my opinion, however, unnecessarily heavy for the size of the bore, as it weighed nearly nine and a quarter pounds. I afterwards had another gun by these makers, and I found the same objection to it. This one was a 12-bore, 30-inch, plain steel barrels, and it weighed nine pounds two ounces. There was not the least attempt at anything like finish to this gun, although it cost $70 in Canada, without anything in the shape of tools, case, etc. However, like the other, it shot remarkably well, and, for a cheap gun, was well built and put together.

I have another objection to these guns, and that is the price. As compared with English manufacture of the same grade, these guns cost nearly, if not quite, half as much again, and, at the same time, they have no qualities superior to the English guns to cause such a difference. However, they are not alone in this fault, which is not a bad one, except for the purchaser.

The next in order is the Baker. These guns are decidedly the best made in the States, when all things are taken into consideration. They turn out as good work for less money than any other makers; and in the gun I used myself, and several that my friends have had, I have yet to see any flaw or show of poor workmanship. All that I have seen have proved themselves excellent shooters, and the locking action is solid and in good order, even in two cases that I know of where the gun had very hard usage. Their guns remaining tight and strong under repeated firing, proves, I think, that the single bolt is all that is necessary to keep the breech closed, and that it is equally as good as the many bolts or other locking devices of different makers. For myself, I prefer the double bolt; but I would not pretend to say that a gun with it is any more safe than one with the single bolt only.

The Baker gun I owned cost originally, I think, $100, and was well worth the money. The next was a gun belonging to a friend of mine, manufactured by Nichols & Lefever, of Syracuse, and cost $150. It was well put together, and shows good, careful workmanship; but after six months' use I have several objections to this make. I do not like so much extension rib as there is in this gun, as this, with the action, causes so much cutting away of the solid breech that it impairs the solidity. The action itself is complicated, or I should say that there is too much of it, so that if one piece breaks, no amount of amateur gunsmithing will serve to make the necessary repairing. In point of price these are the most expensive of the American guns, without any compensating qualities for the increased price; in this respect resembling the Purdy gun, made in England. One good point in the fitting is a hook under the barrels, which when the gun is unlocked catches upon a pin and prevents the barrels dropping with a jerk, like other guns; and it is this dropping which is, I think, in many cases the cause of the gun getting loose at the breech so soon, as the weight of the falling barrels must necessarily strain the connection a good deal in a gun constantly used. After using this gun I had access to a fine Daly, and also to a gun made by W. R. Schaffer, of Boston. Both these belonged to friends of mine, and I had many opportunities of examing their workmanship and testing their shooting powers, and I can say most certainly that they compared very favorably with any guns I ever saw or had in any and all respects. Of the new Colt gun, as I said before, I know nothing; it has been but a comparatively short time out, and I have had no opportunities of using or examining one. If they correspond in any way to their other work in general, I have no doubt but that it is a reliable and good weapon. Of the other guns made in the States it is not necessary to say much. Of course I mean by this guns that are well known throughout the Union. There are many private gunmakers in the various cities and towns who can and do turn out some first-class work. But my purpose is only to notice the makes of the large and best-known manufacturers. About the last in the list are the Stevens double-barrel and the Remington. Both of these guns are decidedly second-class, although I have some remarkably good shooting done with a Remington. Still the material, workmanship and general appearance of these guns are very much against them. Few sportsmen would care to pay the price asked even for the best qualities, when guns of better material and more reliable can be got for less money from any of the other makers. I am not in any way an advocate of cheap guns when they come under the heading of cheap and nasty, but it is possible to make a good gun—one that has good materials, workmanship, and is thoroughly reliable in every way—for a price that is within the bounds of reason, say from $75 to $175. Outside the latter price the purchaser gains nothing for increased outlay, except perhaps some elegant engraving and finish, which adds in no way to the goodness of the gun, and does add very considerably to the price. The following is a case in point:

On one occasion I was shooting on the St. Clair flats, when I met a gentleman who came there using a gun made by J. Purdy, of Oxford street, London. This gun, the owner informed me, cost him, laid down in Canada, $500. At the same time I was using a Greener costing $235, and had as a spare gun an American-made gun that cost $175. All the guns were the same bore (10), and within three-quarters of a pound of the same weight. On a comparison of the guns it was found that the Greener was equally well finished as the Purdy in every respect, and was in every whit as handsome a gun. It was also found that the fittings, stock and barrels of the American gun were as good as the Purdy, but it was not so well engraved or highly finished. As far as appearance, balance, etc., went, it compared very creditably with its high-priced rival. After this comparison we tried the guns at the target, and now mark the result. Although the Purdy was full-choked in one barrel and medium in the other, the American gun shot equally as well, made as good targets, and gave as good penetration as the other; while the Greener, being a full-choke in both barrels, beat the Purdy altogether both in target and penetration. This, I think, speaks very highly for American workmanship and the shooting power of her guns. After this trial I came to the conclusion that the gentleman in question had paid about $250 for some extra engraving and the privilege of having a gun bearing Mr. J. Purdy's name; and I think, moreover, that he came to the same opinion himself, although he said nothing at the time; but I heard after that he sold the gun at a price far below what it cost him. In concluding my paper on the best American guns, I would say, from my own experience, that they compare favorably in every way with the best English guns, and were I purchasing a fine quality gun now, I would have no hesitation in giving my order to one of the best American makers in preference to sending to England. Of course, as every sportsman knows, some magnificent guns are sent out of England; but who will affirm that if the orders for them had been given to an American factory, and the same price paid as for the English gun, that the weapon turned out would not have been as good in every respect. The Americans excel in every other branch of the iron and steel trade, and why can they not turn out as good work in the gun line? I think their deficiency in this line lies more in the imagination of sportsmen than in reality, and this they would soon find out if they would patronize home productions more. In guns, as in rifles, they will soon beat the world, and now they equal any in skill in using their weapons to advantage. Of single-barreled guns I have purposely said nothing. The ones made by Nichols, of Syracuse, and Hyde & Shattuck, are the only passably decent weapons of the kind in the Union. The others are all trash, with decarbonized steel or poor quality iron barrels, and cast locks and breeches, which are best left severely alone. It was only a short time ago that one of these precious tools burst in a man's hands in a village not far from here, and the consequence to him was almost instant death. The less said of them the better.

And now let us turn to the English side of the question. It is unnecessary to particularize each maker, as they are, in all cases, very similar, and so very numerous that it would take a whole paper of itself to give each one more than a passing attention. Like the American makers, each one has his favorite mode of action, but unlike them, they will make to order any action desired. Most of the weapons turned out have all the latest improvements, a few lacking only in some minor points. One objection to the English makers is that the very men who turn out the finest of work will also, from their factories, turn out some of the greatest trash in the world—guns so bad that they are ashamed to put their own names on them, and the country is flooded with this stuff through petty dealers, who, in many cases, are men who would not know a good gun if they saw one. Many sportsmen will not use guns made by these manufacturers, as I have more than once heard it exclaimed contemptuously, when speaking of certain gun makers: "Oh, he is only a trade gun maker!"

Most of the English makers, I presume, call themselves first-class, and undoubtedly many of them are; but the work turned out by some lacks much in stability, etc. The guns turned out by Scott, Greener, Westley Richards and Webley are too well known to need any description; but after considerable use of these and other makers', and numberless opportunities of examining the various grades of their manufacture, I have come to the conclusion that for general purposes, price, quality of work, etc., the guns made by Greener and Scott are ahead of anything made in England. The Purdy guns are undeniably very fine guns, but, as I said before, the price even of his cheapest grades is, to say the least, exorbitant. No sportsman likes to be taxed for an article nearly double its just value, when as good work can be got for much less money, unless they are of the class who like to pay for a name, and to whom money is no object. The Lankester guns have a reputation for being fine guns in every way, and from two of them I have seen and frequently used, I think they merit their reputation. I have also used a very fine gun made by Pape, but this gun I consider as second class. The one I used was a high-priced weapon, and so might be expected to be a good one, but it was not solidly built, and I must say I do not admire the action; it is not nice to use, neither does it look well. This gun was also deficient in shooting powers, which is the worst fault in a gun of any make.

Moore is another second-class maker, who turns out trade guns, and some of the worst ones at that. They are cheap and nasty. Bonehill turns out some good second-class weapons which are good shooters, but they lack in material and finish. They are, however, well worth the prices asked for them by the makers. The guns made by Williams and Powell are thoroughly first-class in every respect, at least as far I can judge. I owned one, and a friend had two, by these makers, and they were all as good as could be made. The only objection I have to them is the extreme fineness of the action.

In my gun all the parts were fitted so finely, that I have several times had the gun rendered useless by a few grains of sand blowing into the breech, while beach shooting on a windy day, which necessitated my taking the gun apart to clean. My friend also had the same objection to his two. This was a very inconvenient fault, but shows the extreme care taken in fitting the parts of the action. These guns are solid in material and workmanship, and are good shooters, fully worthy, I think, of their fair fame. The Irish gun I had was one made by Rigby of Dublin, and in every way was a first-class gun; it was made to order. It was as fine a piece of workmanship as a person would wish to see. The material was first-class, and the way that gun shot would delight the heart of the most fastidious sportsman. It was made with the lever under the guard action, and I always found it quick enough for any shooting I ever had to do. The Scotch gun was made by Hill, of Edinburgh, and what I have said of the Rigby will do in most points for this gun, so it is unnecessary to describe it. So ends my record of English guns. I have had none but the best, and I have given them all a fair trial, and my conclusion is unchanged from what I said in the early part of my letter, that with-

out doubt the English guns are fine guns, and first-class in all respects from the best makers, but the American guns, with some slight improvements, are equally as good at the same prices; and this I say, without being in any way prejudiced in favor of American guns, as I am English myself. My objections to the guns I have mentioned may not be classed as objections by many others, but then every one to his own taste and opinion in these matters. I merely give my experience, as I gained it, from actual use, and perhaps, if others would do the same they might find out many more things to cry out about than I have, while some again would defend the points I have found objectionable. I hope that some one more competent than myself will discuss this matter from an impartial stand point, and give us the benefit of more experience in the purchase and selection of a gun. If wishing the best maker success in the race will benefit him in any way, I sincerely wish it to him. AU. SAUBLE.

SHOOTING BUCKSHOT IN CHOKE BORES.—*Editor Forest and Stream*:—The undersigned, who has not crowded into your columns for some time, desires to state for the benefit of his sportsman friends the result of various experiments in trying to make a full choke-bore gun shoot buckshot well. Firstly, I desire to say, I have lost no less than four deer, by not having the gun loaded right with buckshot, and one fine buck was lost because the gun would not open easy. Why is it that some Parker guns, when new, all open so hard, while other breech-loaders work easy? If it were not for this one drawback, I should consider the Parker gun faultless. Mine strikes half the time so hard, I have to take off the stock-extension piece before I can open it. Explain; the Parkers have the floor. Why choke bores will not shoot buckshot closely, loading the ordinary way, I will not stop to conjecture. I have tried all the new plans[I have heard of, such as using bags, putting layers of three wads on the shot, chambering the shot at the muzzle, etc.—but there is but one way: I make my gun, No. 10, 30-inch, choke bore, shoot closely. viz.: The shell chambers seven No. 8 buckshot. I use five drachms of powder, one pink-edge wad, and twenty-one buckshot. Now take a No. 12 paper shell—it slips into No. 10 brass shell—cut it off short enough so that when in the brass shell twenty-one buckshot will just crowd in even with the top. You have now a pattern to go by. Cut as many of these—same size—as you wish loads of buckshot. Take the patterns now and cut a piece lengthwise out of each one, so when pressed together the pattern will just slip into the muzzle of the gun. Cut these all alike. When cut, they will look like this:

Now slip one of these into each shell down on to the powder wad. Put in your buckshot, just to come even with the top of the paper shell, and press a good wad firmly down on the buckshot. You will find (whether you look into the muzzle or not, when the gun is dis charged) that most of the buckshot will be thrown ten to fifteen rods compactly, and also that, when the load reaches the choke, the paper shell is pressed together, and the charge kept from diverging by being elongated. This idea is worth knowing. Try it.

R. W. H.

THREAD-WOUND CARTRIDGES.—*Rochester, N. Y.*—On Wednesday last a party consisting of Seth Green, Supt. Fisheries; W. J. Babcock, President Monroe County Sportsmen's Club; Dr. C. E. Rider, and myself, went to the farm of Mr. Babcock to try the thread-wound long-range shot cartridges advertised in your paper. The gun was a 10-gauge breech-loader, Charles Green's make, moderately choked, paper shells, four drachms Dupont's "choke bore No. 7," two Eley pink-edge wads, No. 9. Cases filled with an average charge of 175 pellets, No. 6 shot. Five shots were fired at fifty yards. The poorest target, 30-inch circle, had 157 pellets in it; average, 166; or 94 per cent. of all.

Ten shots at a paper target, 36x40 inches, seventy yards, gave one failure, the cartridge failing to open. Of the other nine, the poorest target had fifty-five pellets in it. Average of the nine, 131 nearly; or nearly 70 per cent. of all.

Five shots at 90 yards at paper target, 36x40 inches, gave 157, 97, 168, 142, and 132 pellets, or an average of nearly 80 per cent.

The average penetration in pine was 9-16 inch at fifty yards; ⅝ inch at seventy, and ½ inch at ninety.

This device, by which the effective range of the shot gun has been greatly increased, although not yet perfect, is, as it stands, in the opinion of the writer, more certain and effective than the Eley long-range wire cartridge.

I remember, while hunting in Iowa in the fall of 1873, of killing a Canada goose, seventy-five yards, with a Paine cartridge. This was, of course, prior to the time of the improvement made upon it by Schleber & Co.

A. B. LAMBERTON.

THE THREAD-WOUND CARTRIDGES.—*Rochester, N. Y., Nov. 23d.*—In reply to your Florida correspondent's letter in your last number, we would say (1): That he used but one pink-edge wad, where he should have used two. The cartridge must have a good bed behind it, in order to perform well. Besides, one wad is not sure to retain the gas; and the slightest escape of gas is fatal to the integrity of the winding.

(2) When he found his shots going to the left, he should have held to the right. The fault was in his gun; for the cartridges go where round balls will go when shot from the same barrel, only the cartridges are more accurate in their flight than round balls, as we have proved by experiment. To prove it, let him shoot a few ninety-yards' cartridges at a target seventy yards away; the cartridges will then go through the paper as solid bolts. Then from the same barrel shoot an equal number of round balls that fit the bore of the gun with a patching of, say, cotton flannel. We think he will find the first target will be the better by string measure.

(3) As to the tapes, they are of no use with brass shells. It is best to use the cartridges with paper shells only, as a matter of convenience.

(4) As to buckshot, if he will open one of the cases he will find that No. 1 will not chamber well. No. 2 buck chambers well, and for that reason we made the hole in the rear just large enough to admit this size.

(5). As to the general performance of the cartridges, persons inexperienced in their use generally make the mistake of experimenting with the longer ranges first, whereas they should first learn to use the shortest range. And for practical work also, five of the reds should be used for every one of the blue, because with the former you are virtually fifty yards nearer your game than with loose shot, and with the latter all imperfections of gun and cartridge, and all errors of judgment as to distance, elevation, allowance for wind, and motion of object, etc., are greatly magnified. H. H. SCHLEBER.

DITTMAR POWDER.—*New York, Nov. 18th—Editor Forest and Stream.*—When the Dittmar powder was first brought before the public, I purchased a couple of cans of the "B" and "C" grains, and tried several experiments with it, but could not get the penetration necessary for good shooting; nor was it satisfactory in any way, excepting the advantages that it possessed of having little smoke, and keeping the gun clean.

As there was no recoil when the charges exploded, I, of course, reasoned that the powder was extremely slow; otherwise the gun would kick as the inertia of the shot was overcome.

The penetration was sufficient for woodcock shooting however, and I used the Dittmar in this kind of shooting for several months, being delighted with the absence of smoke. Birds were frequently killed with the second barrel that escaped the first, when such a thing would have been impossible if black powder had been used.

One day, while shooting in the western part of the State, a charge exploded in a very strange manner. I fired at a woodcock in a fair shot where the bird had no chance of escape, but he flew on untouched, and the discharge gave me such a terrible shock that I was obliged to give up shooting for that day. Speaking of this occurrence shortly afterward to my friend, Amasa Drake, of Ithaca, he mentioned a similar accident to himself; when he had received a tremendous shaking up, and the fastenings of his gun were loosened by the discharge. Neither of us have used more than three-and-one half drachms of powder in ten bore guns. From that time we returned to the use of black powder.

This season, after reading all that had been written on the subject in the columns of FOREST AND STREAM, I decided to make further inquiries, and found that the sale of the article had increased very largely, that the powder was carefully tested before being put upon the market, and that no more accidents were reported from it.

Several cans of the "C" grain were given me by a friend, and loaded a couple of hundred of cartridges with this to be used on a hunting trip for partridges (ruffed grouse). To say that the powder was perfectly satisfactory, is not enough. It is the thing for the sportsman who shoots in the brush, and I shall never use anything else as long as the Dittmar is to be had. The tests at the target were all that could be asked. The first day out I made a double shot on a couple of partridges that jumped up together, and flew so nearly in the same direction that the smoke from black powder would have prevented my killing the second bird. I also killed a great many that were not stopped with the first barrel, and marked down birds whose course was difficult to follow through the trees. Sportsmen who make a specialty of partridge shooting as I do, will at once appreciate the advantages of this absence of smoke, and will find their pleasure and their bag doubled at the end of a day's shooting when using Dittmar powder.

The charge used by me on this trip was four drachms, with one and one-eighth ounces of No. 6 shot, in a ten bore Webley gun. The charges exploded evenly as far as it was possible to see, and the birds died in fine style.

MARK WEST.

A BEWILDERED SHOOTER.—*New York, Nov. 21st.—Editor Forest and Stream*:—Several years ago the late Richard Sands and I were hunting on a favorite ground of ours in Pennsylvania. We had been out for three days without getting a deer or a turkey, but on the fourth morning the hound started a buck, and Sands and I immediately posted ourselves on runways. After a run of half an hour we heard the hound bringing the buck toward us. Sands was waiting on a dry ridge that ran through a hackmatack swamp, and was very closely hidden. While the deer was coming toward us, but still a long way off, judging by the voice of the dog, Dick heard a turkey chuckle, and looking up he saw five big turkeys walking in single file along a log across a little stream within four or five rods of him. Here was a dilemma. Dick could not for the life of him decide whether to shoot at the turkeys and kill at least three for certain and scare the buck, or to wait and kill the buck and let the turkeys go. He let the turkeys walk off, and as they disappeared among the trees the hound's voice stopped all of a sudden. A pretty state of things for Dick: the birds were gone and the dog had lost the deer. While he was "cussing" the luck another turkey came out in an opening but at a very long shot, but he risked the chance and fired both barrels at once. The turkey was not hit, but it did not know where the shot came from, and being confused, ran within a few rods of Dick and flew before the latter could load up, and at the same time the buck, which had been coming all of the time and had run close to him, jumped off to one side in the swamp in a splendid chance for a shot, but bounced away before the gun could be ready, although it was a breech-loader. But you know that under the circumstances a man could not put a cartridge into a bushel basket in fifteen minutes, much less could he slip it into the breech of his gun; they never will go in when you only have six and a half seconds to spare. Since that day Dick's mind was always affected. LONG JOE.

A PISTOL SPORTSMAN.—I have shot with a 32 cal. pistol since March 13th: one wild goose which was shot on the wing, falling with both wings broken near the body, thirty-five rods less one-and-one-half feet from where I stood when the shot was made; four hawks and an eagle, three hawks and the eagle from the tops of tall trees from my buggy, one away at the distance of ten or twelve rods from where I stood; five pickerel after getting them on hook and line, and I think fully a score of rabbits, though could not give exact number. TONIC.

Ohio.

NEW HAVEN GUN CLUB.—*New Haven, Nov. 22d.—Editor Forest and Stream*:—The New Haven Gun Club have twice beat the Branford Club at glass balls, and this resulted in a regular challenge from the Branford Club, which was promptly accepted by the New Haven Club. But when we arrived on the shooting ground early on the morning of the match only half of the Branford team had put in an appearance, which broke up the match.

As the New Haven boys had gone to shoot, they made up a team, including what Branford men there were present, and the New Haven Club scored 219 coots, which was pretty good, considering the delay of forming a team. Nothing happened during the shoot to mar the pleasure of it, except that Hanson was somewhat startled when he received a single No. 3 in the head, and Beers received from a Branford man a whole charge of No. 4 in the back and side, but having on two shirts, two vests, a knit jacket, jumper, and several other clothing stores, the shot did not go through. Joey had to quit shooting at 11 A. M.; was sea-sick; it makes him dizzy to see the coots tumble. Merwin is always sick from the same cause, and this is the reason that he prefers to shoot pensioners, as he didn't have to see them fall. Howard did well with his 8-bore, but he killed his ducks so far off, and put so many shot into them, that most of them sank before he could get at them. He says he will have a very light duck-boat built, and if he does, and shoots that 8-bore in it, the recoil will send him under water stern first.

Fulton got his bony fowl and thought it wasn't fair not to count the ducks he could not pick up. Waterhouse can comb 'em every time when they come right over his head, and these are the kind of shots the boys like to have him get, as there is more room for his double barrel to circulate. Armstrong likes to stop at a regular hotel when he goes duck shooting, because they never forget to call him very early in the morning. Sanford's boat gave a lee lurch just as he pulled on a coot, and he killed him; which so encouraged the shooter that he goes ducking regularly twice a week.

The headquarters of the duckers of the New Haven Club are at George Lorndfare's, near Double Beach, where good board is furnished at one dollar per day, and the cove there is one of the best on the Connecticut shore for keeping duck boats. The club have about a dozen boats there at present, and Thanksgiving Day there was a grand duck shoot, after which the boys sat down to one of those sea-food dinners that no other man on the shore can get up like Mr. Lorndfare.

This place is less than one hour's drive from the city; there is good woodcock and partridge shooting within five minutes walk of the house, and the best of blue and black fishing can be had in their season.

There has been excellent woodcock shooting here, the boys getting all the way from six to twenty-six birds to a man; never before can the shooters of the present day remember such good shootng as there has been this fall.

Leete was out in the woods the other day, and saw a rabbit about two gun lengths off, and as he did not wish to blow him *all to pieces* he thought that he would rake him along the back, so he let go and missed him, although John was somewhat surprised he did not forget that when Waterhouse wasn't around, he was the champion second barrel shot in the club, so he let go again, and missed; but John thinks quick, and being a special constable, and good on the run, he threw down his gun, and gave chase to the rabbit and caught it by the tail, and cut its throat with his jack-knife.

NEW YORK—*Shelter Island, Nov. 24th.*—The wild fowl are scarce along these shores to-day, the cold, blowy weather and the sail and battery boats combined having dispersed them to some more genial feeding ground. The scallops, their favorite food, are plentiful here, and I see a dozen craft dredging for them every day, but the poor fowl are too much disturbed to enjoy the feast. Nearly all the bunker steamers and yachts are now laid up, but the few that still continue the business have been doing well the past week. One of them, the *Peconic*, has been very lucky, taking as many as 200,000 in one day. The factories close up early, as their expenses are very great, the two on this island employing over one hundred men in the work. The geese have been flying over here, bound south, but they pass over beyond rifle shot, looking insolently down upon us, without stopping.

ISAAC M. LELLAN.

NEW YORK—*Hornellsville, Nov. 23d.*—About fifteen deer have been shot near here since the 1st of November. Two were seen last night right in the village; they followed a load of hay, and eat some that the man dropped for them. Plenty of red foxes. JOHN.

NEW JERSEY.—*Cape May, Nov. 5th.*—Dennisville, sixteen miles northwest of here, is a paradise for sportsmen. Mr. Al. Benezet, proprietor of the three Creedmoor shooting galleries here in summer, is located temporarily at Dennisville for the winter, and gives us the following information respecting sporting matters. He is an enthusiastic sportsman, but being engaged in mercantile pursuits cannot fully indulge his bent; is very reliable in his statements, and cheerfully informs brother pleasure seekers of all good points respecting shooting anywhere in this vicinity or through our county. Quail shooting commenced Saturday last, and they are very numerous indeed. In riding from Court House to Dennisville, four miles, he saw eight covies a few days before the law came in. Between 200 and 300 were shot Saturday around Dennisville that he heard of. Messrs. Spicer, Leaming, of Cape May, and Edw. Wheaton, of Court House, shot forty-seven quail and eleven woodcock, three miles east of Dennisville the first day. Mr. Benezet killed eleven Wilson's snipe Saturday afternoon, in less than an hour, on the fresh meadows near the town; and a few days previously shot three in a few minutes for a sick person. He says the snipe are very thick all around the town, and he never saw them more abundant in his life.

There is a pond quite near Dennisville much frequented by large numbers of teal and wood duck. About the middle of October Mr. Benezet visited it at 4 P. M., and killed five. He got eight the preceding week, making thirteen. They are very handsome—four of them were males; and he had one stuffed by Mr. John Krider, of Philadelphia, and placed on exhibition in his shooting-gallery window at Cape May. Mr. Benezet killed seven mud teal, or short

necks. They were in the mill pond (at Dennisville), about 100 yards from the bridge.

Of rabbits there are countless numbers; but gentlemen from abroad do not waste time on them, although very many are shot by resident gunners.

Deer hunting became legal on October 15th, and Dennisville and Tuckahoe, six miles north of it, are famous points for shooting this graceful and fleet creature. As yet we have not heard of the capture of many, although venison is already plenty at Dennisville.

Men accustomed to all the game of the place are to be had at Dennisville for the sum of a dollar and a half per day; and the Gatzmer House, by Mr. Mackey Williams, is a very good hotel, at which particular attention is paid to visiting gunners. Mr. Williams is a long resident here, familiar with all the needs of sportsmen. The house is new, and has been put in fine order in readiness for the shooting season. It is widely known to visiting sportsmen of various cites, and the travelling salesmen of New York, Philadelphia, Baltimore, etc., can testify gratefully to the care all will receive who intrust themselves to its protection. CAPE MAY.

NEW JERSEY FOXES.—The mountains about Somerville and the Washington Valley are reported to be overrun with foxes. There is a corresponding diminution in the number of rabbits. Foxes and rabbits are both vermin. The New Jersey folks talk of organizing some old-time fox-hunts.

SPRUCE RUN CAMP.—*Centre Co., Pa., Nov. 22d.*—I advertised through your columns for one or two gentlemen to join my hunting party some time ago. I had several replies. I accepted two last season, and this season these same persons were ready to join my home party. We have had elegant sport; have nine deer at our camp. The crowd shot seven in one day. We lost two of the seven, but got five to camp in one day. We will put that shooting against any party. We expect to hunt three weeks, as the season will be out. We are anticipating fun in full earnest. We have discovered several bears in our hunting grounds since the snow fell. They confine themselves to the laurel through the day, and come out to feed at night; and, as we are all too smart to undertake to follow them, we went to the settlement and bought a horse and took him to the ground. The ceremony was short; and we left him expecting to see him on Monday. We have our traps ready, both spring and shooting, and will set them as soon as they commence to work on our bait. G. R. B.

MISSOURI—*Sedalia, Nov. 24th.*—The hunting here has been almost *nil.* Quail very scarce, so much so that we have about concluded to keep dogs and guns away from them. Few chickens coming in, and they are wild. Rabbits unusually scarce. One or two Huntington parties have gone for a from one to two weeks' hunt in adjacent hills of the Osages, but report game scarce and bag light. OCCIDENT.

INDIANA—*Indianapolis, Nov. 24th.*—Weather lovely. Last week Harry Bates, Will Sharpe and Charley Fletcher shot about two hundred ducks, most of them mallards, near Crown Point, this State. J. F.

OREGON—*Portland, Nov. 11th.*—Had a very fair day on the 9th. Went over to the Columbia Bottom, about seven miles from here, and although without a dog, brought to bag 14 ducks and 9 snipe; killed a number of ducks that I was unable to find in the tules. Game very plenty now—geese, duck and snipe in abundance, and occasionally a swan. MULTNOMAH.

—Earl Grosvenor, the eldest son of the Duke of Westminster, started from San Francisco for the Yosemite Valley a few days ago, and will take a turn at the deer and grizzlies—that is, if the grizzlies do not decide to take a turn at Earl Grosvenor, the eldest son of the Duke of Westminster.

FLORIDA—*Otter Creek, Levy Co., Dec. 4th.*—We are having some fine sport hunting and fishing. If there is a place in the United States that is full of game it is Gulf Hammock, where the Captain's house is located, and a finer stream of water never flowed than flows past here. It abounds with bass, sheepshead, and other gamey fish. While I write the Captain's colored man is coming across the lawn in front of the house, with a bear cub and deer on his back, the bear weighing 72 pounds and the deer 110 pounds. You have only to visit here to be convinced of what I say. S. Y. McF.

SHOOTING MATCHES.

MAINE—*Topsham, Nov. 27th.*—Riverside Club; Bogardus trap; 18 yards rise:—

Keyes	0 1 1 1 1 0 1 1 0 1 0 1 1 0 1—10
A. Q. Goud	1 1 1 0 0 1 1 1 1 1 1 1 1 1 0—12
Hall	0 1 1 0 0 1 1 0 1 1 0 1 0 1 0—8
Stetson	0 0 1 1 1 0 0 0 1 0 0 1 0 1 0—6
York	1 1 1 0 1 1 1 1 0 1 1 1 0 1 0—11
Winslow	1 0 1 0 1 1 1 1 0 1 1 0 0 1 1—10
C. Gourd	1 1 1 1 0 1 1 1 0 1 1 1 1 1 1—13

W. A. S.

STAMFORD GUN CLUB.—The Stamford Connecticut Gun Club had a pigeon match on Thanksgiving Day, in which the following parties took part and made the following scores:—

		Killed.
Graine	1 0 0 1 1 1 1 1 1 1	8
A. H. Smith	1 1 1 0 1 0 1 1 1 1	8
S. W. W. Smith	1 1 0 1 1 0 1 0 0 1	6
Burns	0 0 0 1 1 1 0 0 1 0	4
Oothout	1 1 1 1 0 0 0 0 1 0	5
Taylor	0 0 1 1 1 1 1 1 1 0	7

Tie shot off:—

Graine.......... 1 0 0 | A. H. Smith.......... 0 1 0
Divided.

NEW YORK GUN CLUB.—*Bergen Point, N. J., Nov. 27th.*—Sweepstakes of $25 each, 25 birds, handicap rise; five traps; New York Gun Club rules:—

E.G. Murphy	30	1 1 1 1 1 1 1 1 1 1 1 1 * 1 1 1 1 * 1 1 1 1 1 * 1—22
W. Murphy	30	1 1 1 1 1 1 0 0 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1 1—22
Dr. Wilson	30	1 1 0 1 1 1 1 1 1 1 1 * 1 1 1 0 1 0 1 1 1 1 1 1 1—21
J. Bond	25	1 0 0 1 1 1 1 1 0 1 1 1 0 1 1 1 1 1 1 1 1 1 0 1 1—20
E. S. Adams	27	1 0 1 1 1 1 1 1 0 * 1 * 1 1 1 0 1 1 1 0 0 0 wd.—14

The Murphy brothers divided.

Sweepstakes $2 each; 5 birds; handicap rise; five traps; New York Gun Club rules:—

W. Murphy	30	1 1 1 1 1—1 1 1 1 1 1 1	12
Reblin	29	1 1 1 1 1—1 1 1 1 1 1 1	12
E. S. Adams	27	1 1 1 1 1—1 1 1 1	9
J. Bond	25	1 1 1 1 1—0	5
W. Jackson	28	1 1 1 0 1—1 1	6
E. G. Murphy	30	1 1 1 1 *—1 0	5
King	25	1 0 1 1 1—0	4
Dr. Wilson	30	1 0 1 0 1 1	4
Cleveland	25	0 1 1 1—0	3
J. Long	26	0 1 0 0 withdrawn.	

Mr. W. Murphy and Mr. Reblin divided. Mr. Jackson took second and Dr. Wilson third money.

Sweepstakes, $2 each; 7 birds; handicap rise; five traps, and New York Gun Club rules:—

E. S. Adams	27	* 1 1 1 1 1 1—1 1 1 1 1	11
Dr. Wilson	30	1 1 1 1 * 1 1 1 1 1 1 0	10
E. Salmon	28	1 1 1 * 1 1 1—1 1 1 1 0	10
J. Bond	25	1 1 1 0 1 1 1 1 1 1 0	9
King	25	0 1 1 1 * 1 1	5
J. Long	26	0 1 1 1 0 1 0	4
Dr. Benjamin	25	0 1 0 1 * 0 0	2

The day's sport concluded with a sweep at 10 glass balls, revolving trap, that was won by Mr. Edgar Murphy breaking 9 out of 10. Mr. Murphy then shot a match with Dr. Wilson at 10 glass balls and won, breaking 8 out of 10, against Dr. Wilson's 6 out of 10.

Nov. 29th.—Regular Saturday meeting. Sweepstakes of 25 birds each; 30 yards rise, 5 traps 5 yards apart; Hurlingham rules:—Mr. Murphy killed 21, missed 4; Mr. Knowles killed 15, missed 10; Mr. E. Zabriskie killed 8, missed 8 and stopped.

The same men then competed in a ten-bird match for a pool of $30, Mr. Murphy again winning, killing 10 birds straight at 80 yards, Messrs. Knowles and Zabriskie killing 7 each.

A seven-bird sweepstakes, handicap rise, followed. Messrs. Zabriskie and Knowles, at 30 yards, killing all; Mr. E. Murphy, 30 yards, 6; Mr. W. Stone, 26 yards, 5; Mr. W. Godfrey, 30 yards, 5; Col. Butler, 30 yards, 5; Mr. M. Jackson, 26 yards, 5; Mr. Soule, 30 yards, 2. The tie shot off, "miss and go out," gave the first money to Mr. Zabriskie and the second to Mr. Knowles.

A sweep of five birds followed. Messrs. M. Soule, E. Murphy and R. Knowles, each at 30 yards, killing 5; Messrs. W. Godfrey, E. Zabriskie and Col. Butler, 30 yards, 4; Mr. M. Jackson, 26 yards, 4; and Mr. Stone, 26 yards, 3. The shoot-off resulted: First money to Mr. Soule and second money to Mr. Murphy.

The sport closed with a five-bird match between Mr. Jessie Dodd and Mr. C. Shields, for $20 a side. The birds were especially selected for the match. Each man shot at 31 yards, Messrs. Dodd and Shields killing 2 each. The shoot-off gave Mr. Shields the match.

FOUNTAIN GUN CLUB.—*Parkville, L. I., Nov. 19th.*—The fifth average monthly contest of the Fountain Gun Club, at 7 birds each; to shoot 3 birds at 21 yards; 2 birds at 26 yards, and 2 birds at 31 yards; 80 yards boundary; 1¼ ounces of shot; from two H and T plunge traps; the use of one barrel only allowed; club rules:—

		Killed.
H. Smith	1 1 1 0 1 1 1	6
J. Slane	1 1 1 0 1 1 1	6
Eddy	1 1 1 1 0 0 1	5

Oothout	0 0 0 0 0 0 0 0 0 0 0 0 1 0 0 0 0 0 0 0—1
Angell	0 0 0 0 0 1 1 0 0 1 0 0 0 0 0 0 1 1 0 0—5

Ties on 15:—

G. Raymond.......... 1 1 1—3 | Smith.......... 0 1 1
Stearns.......... 0 1 0—1 |

G. Raymond, wins first prize.

Ties on 14:—

J. Ward.......... 0 1 1 1 1—4 | H. Ward.......... 1 0 1 1 0—3

F. Ward wins second prize.

Butts wins third prize.

Ties on 13:—

Butts.......... 1 1 1—3 | Torrance.......... 1 0 0—1
E. Raymond.......... 0 0 0—0 |

Ties on 12:—

Briggs.......... 1 1 1—3 | Webb.......... 0 0 0—0

Briggs wins fourth prize.

BROOKLYN GUN CLUB—*Dexter Park, L. I., Nov. 25th.*—Regular monthly shoot for the Colt gun, shot for at 10 birds each; handicapped rise; 80 yards boundary. Club rules:—

Stevens	26	1 1 0 1 1 1 1 1 1 1 1 1	12
Leroy	24	1 1 1 1 0 1 1 1 1 1 1 1 * 0	11
Eddy	25	1 1 0 1 1 1 1 1 1 1 1 1 0	11
Barker	24	1 1 1 1 1 0 0 1 1 1	8

JERSEY CITY HEIGHTS GUNS CLUB.—*Marion, Nov. 28th.*—First event a $2 sweep; 10 entries; 5 ground traps; 5 yards apart; 5 birds each; 25 yards rise. $10 to first; $7 to second, and $5 to third; was won by Haddon who took first, Toffy, Hughs and Toffy second, Newbold and Heratage third; with the following score:—

	K.	M.		K.	M.
Haddon	11111-5	0	Heratage	11001—3	2
D. Toffy	11110—4	1	Thompson	00011-2	3
W. Toffy	11011—4	1	Hill	10100—2	3
Hugbs	10111—4	1	Dugan	00010—1	4
Newbold	10101-3	2	Walton	10101—2	3

Second contest.—Same conditions with 12 entries; $12 to first; $8 to second; $4 to third; won by Heratage, Cadmus, and Hughs, second; Hill and W. Toffy, third; score:—

	K.	M.		K.	M.
Hughes	11111—5	0	W. Toffy	01110—3	2
Cadmus	11111—5	0	Walton	00110—2	3
Heratage	11111—5	0	Newbold	10010—2	3
Haddon	10111—4	1	Thompson	00011-2	3
Hill	11011—4	1	T. Hughs	11000—2	3
D. Toffy	10011—3	2	Dugan	00010—1	4

The third sweep brought 13 shooters to the trap, a strong wind blowing across the field, and the birds were carried rapidly to the right, quartering from the trap, which gave a fine chance to decide the merits of the shooters. Heratage was the only one who succeeded in getting a straight score, which he did by grassing his birds in fine style, and taking first, $13; Hill took second, $8, and Thompson and Haddon third money, $5; score:—

Heratage	1 1 1 1 1—5	0	
Hill	1 1 0 1 1—4	1	1 1 1 1 1 1
Cadmus	0 1 1 1 1—4	1	1 1 1 0
Hughes	1 0 1 1 1—4	1	1 0
Saunders	1 1 1 1 0—4	1	1 0
Wilms	1 1 1 0 1—4	1	1 0
D. Toffy	1 1 0 1 1—4	1	0
W. Toffy	1 0 1 1 1—4	1	0
Haddon	0 0 1 1 1—3	2	1 1 1
Thompson	1 0 1 1 0—3	2	1 1 1
Bergen	1 1 1 0 0—3	2	0
T. Hughs	1 0 0 1 1—3	2	0
Newbold	1 1 0 1 1—3	2	1 1 0

RARITAN SHOOTING CLUB.—*Keyport, N. J., Nov. 27th.* Regular monthly shooting contest for the badge. Only six members of the club stood before the trap to compete for the badge. The following is the score; plunge traps:—

		Rise.	Killed.
Gus. Maurer	1 1 1 1 1 1 1—1	21	8
B. F. S. Brown	1 1 1 1 1 1 1—0	21	7
Robert Waitt	0 1 1 1 1 1 0—	22	5
W. Holmes	0 1 1 1 1 1 1—	21	6
H. J. McCabe	1 1 1 1 1 1 1—0	22	7
George Waitt	1 1 1 1 1 1 1-0	24	7
			40

The conditions of the contest were seven birds each, handicap rise; birds to be sprung from a plunge trap, and Raritan Rules to govern all other points.

PHILADELPHIA GUN CLUB.—*Andalusia, Nov. 27th.*—Closing contest for club cup. The prize is shot for four times during the year, and the member who succeeds in killing the greatest number of birds in those matches is declared the winner, and the cup becomes his personal property. The cup had previously been shot for on the 22d of February last, Good Friday, and on July 4th. Dr. Kinney was the winner, having killed in the four contests a total of thirty-six out of forty birds:—

Messrs. R. Carson and MacAllister divided.

	Yards Rise.	
Mr. F. G. Ellis	30	1 1 1 1 1 1 1
Mr. C. MacAllister	30	1 1 1 1 1 1 0
Mr. C. H. Townsend	27	1 1 1 1 1 1 0
Mr. H. Carson	28	1 1 1 0

Some time during the month of Dec. a match has been arranged between General E. Burd Grubb and Mr. C. MacAllister against two gentlemen from any part of the United States, whose names have not been announced as yet, to shoot at fifty birds each; thirty yards rise.

OHIO—*Cincinnati, Nov. 22d.*—Fourth contest between two of the members of the Cincinnati Shooting and Fishing Club for a club prize, Bates & Baum traps, with screen; rise, 18 yards; 20 balls:—

J. C. Whetstone	1 1 1 0 1 1 1 1 1 1 1 1 1 1 0 1 1 1 1 1—18
W. Caldwell	1 0 1 0 1 1 0 0 0 1 0 0 0 1 1 1 1 1 0 1—11

ABERDEEN GUN CLUB.—*Aberdeen, Miss., Nov. 13th, 14th, and 15th.*—The Aberdeen Gun Club held a pigeon shooting tournament, during the Fair of the Mississippi Exposition Association. The contests were open to all amateurs. The first day was fair, but a high south-west wind. The second day was very unfavorable. High wind with a storm, changeable with sunshine and heavy rain showers, but the boys stood it well. The third day a heavy storm

broke up the shooting. Glass ball shooting; 10 single rises; 21 yards; purse, $400; entrance fee, $7.50 :—

First tie at same rise :—

Herron.... 1 1 1 1 1 1 1 1 1 1* 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1* 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—41
Young.......... 1 1 0—2 } Second barrel.
Sessums.......... 1 1 0 2 }
Nance.......... 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1* 1—17
Howard... 1 1 1* 1 1 1 1 1 1 1 1* 1 1 1 1 1 1 1 1 1 1* 1 1 1 1 1 1 1 1* 1 1 1 1* 1 1 1 1 1 1 0 40
Saunders.......... 1 1 1* 1 1 1 1 1 1* 1 1 1 1 1 1 1 1 1* 1 1 1—20
Andrews.... 0—0

Second tie at same rise :—

Bird.......... 1 1 1 1* 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1* 1 1 1 1 1 1 0—25
Cady...... 1 1* 1 1 1 1 1 1 1 1 1 1 1 1* 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 1 37
Harrison.......... 1 1 1 1 1* 1 1 1 1 1 1 1 1 1* 1 1 1 0—17
Love.. 1* 1 1 1 1 1 1* 1 1 1 1 1 1 1 1 1 1 1 1* 1 1 1 1 1 1* 1 1 1 1 1 1* 1 1 1 1* 1 1 1 1—39

This is fine work for Mississippi marksmen. The Aberdeen boys have made a name for themselves.

Saturday.—Match at five pairs double birds; 18 yards rise :—

Bird	11	10	11	00	10	6	Love	10	11	01	11	10	7
Cady	10	11	01	11	11	8	Nance	11	11	11	11	11	10
Clay	11	11	11	10	11	9	Saunders	11	10	11	11	11	9
Dunham	10	10	10	01	10	5	Howard	10	11	11	11	11	9
Hudson	10	11	11	10	10	7	Dr. Scales	01	10	11	01	11	7
Kellerman	00	00	10	11	11	5							

L. M. Nance got first money.

Tie on second money :—

Clay	00						0
Saunders	01	11	11	11	10	11	8
Howard	01	11	11	11	11	11	11

Howard, won second money; Cady, obtained third money; the fourth money was divided.

Second match, miss and out; 31 yards rise :—

Bird	1	1	1	1—4		Hudson	1	1	1	1—4	
Cady	0			—0		Nance	1	1	1	1—4	
J. A. Evans	0			—0		Dr. Scales	1	1	1	1—4	
Howard	1	1	1	1—4		Saunders	1	1	1	1—4	

The heavy storm broke up the shooting, and the purse was divided among those who had not missed.

☞ On the return of the yachting editor from a three weeks' vacation, much contributed matter will receive attention, and numerous questions will be duly answered.

CHICAGO YACHT CLUB.—At a recent meeting of this club, the following officers were elected for the coming year: Commodore, H. F. Griswold; Vice-Commodore, George E. Weir; Rear-Commodore, J. W. Sayre; Secretary, C. E. Kremer; Treasurer, F. W. S. Brawley; Measurer, F. B. H. Bonter; Executive Committee, W. H. Barnum (Chairman), Henderson, Skillen, Paine, and Krause; Regatta Committe, James J. Wilson (Chairman), Jacobson, Engert, Band, and Ruff.

The retiring Commodore, Mr. T. M. Bradley, was highly complimented for his efficiency and valuable services, and his name was placed on the list of honorary members. Thanks were also extended to the retiring board of officers. At present there are sixty-six active and eleven honorary members in the club, owning a part interest in fourteen yachts of different sizes.

REGATTA OF THE LAKE GEORGE (FLA.) YACHT CLUB.—The first regatta of the season took place on Saturday, November 15th, on Lake George, in which the following yachts contested. The prize, an elegant pennant, presented by the friends of the club. Course, 2½ miles to windward and back.

Name.	*Owner.*	*Master.*	*Time. H. M. S.*
Forest and Stream	J. Hicks	H. R. Smith.	1 18 22
Clarence	C. A. Greenwood	Owner.	1 20 18
Magnolia	A. Hemenway	W. F. Reed.	1 30 25
Marie	T. Rogers	Owner	1 33 00

Judges: S. N. Hammond, L. Salinger, and G. Beal.

—Lord Dunmore is a hardy, brave yachtsman. Last month, off the Uist coast, he went out on a dark night, during a terrible storm, in his cutter-rigged fishing boat of about six tons, called the *Dauntless*. Three Scotch sailors were with him. After beating five hours with close-reefed topsail, they rescued the passengers and crew of the yacht *Astarte*, belonging to Mr. R. A. Napier, of Glasgow, who were wrecked on a small rocky island, eleven miles from the coast. Lord Dunmore first took three women and two children safely to the coast, and rescued the remainder. No other boat would venture out in the storm.

THE SHARPIE IN NORTH CAROLINA.—Mr. George N. Ives, formerly of New Haven, Conn., now in the wholesale fish business, at Beaufort, N. C., introduced the first sharpie into North Carolina waters about five years ago. Now there are over five hundred of these boats in that State.

KNICKERBOCKER YACHT CLUB.—The Knickerbocker Yacht Club boys passed a very pleasant day at their club house at Port Morris on Thanksgiving Day. The programme consisted of pigeon and glass ball matches. The first event was a glass ball match for the club medal, and was won by D. F. Caughlan with a score of 13 out of 15. The other scores were: W. Potter, jr., 11; T. N. Jacques, 10; A. Steinke, 9; A. A. French, 9; J. R. Cole, 8; F. B. Chedsey, 7; C. Baker, 7; T. T. Nixon, 6; A. E. Miller, 5; W. A. Stewart, 1. Some of these men had never shot at glass balls before.

The next event was a sweepstakes pigeon match; five birds each; 21 yards rise. This match was won by W. A. Stewart with five straight birds. T. N. Jacques, A. A. French, W. Potter, jr., A. Steinke and J. R. Cole killed four each, and divided second money. The remaining scores were: F. B. Chedsey and T. T. Nixon, 3 each; A. E. Miller and C. Baker, 1 each, and D. F. Caughlan, 0. The winner of each of these matches was last man in the other. At the conclusion of the pigeon match a recess was taken for dinner.

The afternoon was spent in shooting scrub team matches. The first one was made up as follows, each man shooting at ten balls :—

W. Potter, jr.	8	D. F. Caughlan	8
T. N. Jacques	9	A. Steinke	8
C. Baker	7	A. E. Miller	4
T. T. Nixon	7	A. A. French	8
Total	31	Total	28

Won by Capt. Potter's team.

The second team match was made up as follows, each man shooting at ten balls, as in the previous match :—

D. F. Caughlan	6	W. Potter, jr.	4
A. Steink	8	C. Baker	2
F. B. Chedsey	7	A. A. French	10
T. T. Nixon	5	T. N. Jacques	9
F. Potter	7	A. E. Miller	6
Total	33	Total	31

Won by Capt. Caughlan's team.

This brought the day's sport to an end. Messrs. F. Potter, A. Varian and O. R. Arnold relieved each other during the day, acting as referee and scorers. The contestants in the different matches tender these gentlemen their thanks for their kindness. SKIPPER.

National Pastimes.

THE GAME OF CRICKET.

THE VISIT OF THE GENTLEMEN OF IRELAND.

SUMMARY OF MATCHES—BATTING AND BOWLING AVERAGES.

The party above mentioned left Ireland at the end of August, and arrived in New York on Sept. 9th, where, three days later the opening match of the proposed series was entered upon. The team was headed by Sir George Colthurst, of Blarney Castle; captained by Mr. Nathaniel Hone, of Dublin; while the business affairs of the tourists were in charge of Mr. Charles Barrington (brother of the Lord-Mayor of Dublin), or as he facetiously put it, "he accompanied the team as guide, philosopher and friend." The majority of the players were graduates of Trinity College, Dublin, and members of the celebrated Phœnix and Stoics clubs. The team was also provided with an umpire, in the person of Rylott, one of the Marylebone Club's best ground men. Thus equipped they started on their triumphant march, commencing at the metropolis, journeying to Syracuse, then back to New York and Philadelphia, and afterwards through Canada, where they played four matches; beginning at Toronto and ending at Cobourg. Entering the United States again at Detroit they finished their series of games at that place. After a day's sojourn in New York, they returned home, Oct. 29th, on the *Scythia*, Cunard Line.

We are informed that they were warmly welcomed everywhere, and with but one exception their visit was a pleasant one. Of this exception we now intend to speak. Up to this time we have purposely refrained from alluding to what we, from the first, considered the very discourteous treatment of the Irish gentlemen by the Young America Club, believing that an untimely interference would only fan the flame of discord, while there was still a chance of oil being thrown on the troubled waters, and also believing that it might do harm to the game, which is yet in its infancy in this country. But since these gentlemen, our guests, have been allowed to return to their homes with feelings of dissatisfaction at their usage—and no one hand has been publicly raised to protect them in a country in which they were strangers, although there have been reports published as untrue as they were uncalled for, we deem it but just, as a chronicler of the noble game, to state most emphatically that in our opinion the Young America Captain acted in an injudicious manner, and that Mr. Hone very properly refused to play the match with the Young America Club. Of the charges which were brought against Rylott for infringing Law 42 nothing has been proven, nor is the source from which it emanated in any degree worthy of credence.

Had there been anything in it, we are sure Mr. Hone would have gone to the bottom of the matter, and if it was to be used at all against Rylott, why was not the charge made openly as the ground for the objection? For it would have been a valid ground and would have given the Young America Club the strong side of the case, which they certainly have not won.

Whether or not Rylott is fitted to fill the responsible position, is a horse of another color. His record at home has been a good one, and this is well known by those who live outside the pales of local cricket. If Rylott's decision in the Philadelphia match was known to be unfair, he should have been objected to and removed at the time of its occurrence, not opposed several days afterwards. The not doing so points to the evil of the gate-money system, for where there are a large number of spectators who do not understand cricket it seems to be the custom to consider their feelings and see that they get their "money's worth," rather than carry out the true spirit of the game.

We have received recently a large number of letters on this subject, and we know that the above is in accordance with the views of a very large majority of cricketers in the United States. Although every section of the country has had a word to say, yet we are gratified to record, that in no one place is this unfortunate occurrence more regretted and more severely condemned than in Philadelphia itself. We sincerely trust that the future will be free from difficulties of this kind, which only tend to injure the rise and progress of American cricket.

Before the Irish team left the country it was fully expected that it would play a match with the English eleven. Captain Hone had written to Captain Daft in England, before either team started on its trip; that he desired to meet the professional eleven in America. Never before was a match more anxiously looked for than was this one; this desire was not confined to cricketers alone, but was shared by the whole sight-seeing public. The Philadelphia trouble precluded the Irish team from returning to that city, where Captain Daft wished the match to take place, and it was not until after much correspondence between the heads of the two elevens, that it was at last agreed to play the match in New York, the Staten Island Club having offered their grounds for that purpose. The following telegrams received by Captain Daft tell the story why the match did not come off :—

NIAGARA FALLS, *Oct. 7th*, 1879.

Richard Daft, New Brighton, S. I.:—
Can play you at Staten Island, 21st and 22d; can only play one match, and not earlier. NATHANIEL HONE.

Three days later this one came to hand :—

TORONTO, Ont., *Oct. 10th*, 1879.

Richard Daft, Philadelphia:—
Cannot play on dates fixed; have previous engagements here; can play on 25th and 27th. NATHANIEL HONE.

As the English team had engaged passage for home on Oct. 25th, the foreigners did not meet in this country. This was a great disappointment to the many who had counted upon this match to see the Irish and English cricketers.

In all, thirteen matches were played by the Irishmen, in which they won ten, lost one, and had two drawn. We thus briefly recapitulate the tour, as the official scores of all the games have appeared in due course, in the cricket columns of the FOREST AND STREAM, and from which the appended summary of matches and the averages, both batting and bowling, have been carefully compiled, after first comparing them with the Irish score-book:

SUMMARY OF MATCHES.

Date and Place.	*Sides.*	*First Innings.*	*Second Innings.*	*Total.*
Sept. 12th, 13th, at Hoboken, N. J.	Gentlemen of Ireland, 11	184	—	184
	St. George's, 11	25	35	60
Won by an innings and 124 runs.				
Sept. 16th, at Syracuse, N. Y.	Gentlemen of Ireland, 11	57	—	57
	18 of Central N. Y.	16	38	54
Won by an innings and three runs.				
Sept. 17th, at Syracuse, N. Y.	Gentlemen of Ireland, 11	154	—	154
	18 of Central N. Y.	50	—	50
Decided on first innings.				
Sept. 19th, 20th, at Staten Island	Gentlemen of Ireland, 12	135	2*	137
	18 of Staten Island	34	102	136
Won by 11 wickets.				
Sept. 22d, 23d, at Hoboken, N. J.	Gentlemen of Ireland, 12	119	197	316
	United N. Y., 15	56	47	103
Won by 213 runs.				
Sept. 25th, 26th, at Nicetown, Pa	Gentlemen of Ireland, 11	58	82	140
	United Phila., 11	149	-	149
Lost by an innings and nine runs.				
Sept. 27th, at Nicetown, Pa	Gentlemen of Ireland, 11	122	—	122
	United Phila., 11	108	—	108
Decided on first innings.				
Sept. 30th, Oct. 1st, at Ardmore, Pa	Gentlemen of Ireland, 12	138	170	308
	15 of Merion C. C.	81	130	211
Won by 97 runs.				
Oct. 10th, 11th, at Toronto, Ont.	Gentlemen of Ireland, 12	159	—	159
	15 of Toronto ACC	29	45	74
Won by an innings and 85 runs.				
Oct. 13th, 14th, at Hamilton, Ont.	Gentlemen of Ireland, 11	81	60	141
	Hamilton C. C., 11	47	34	81
Won by 60 runs.				
Oct. 16th, 17th, at Whitby, Ont.	Gentlemen of Ireland, 12	396	—	396
	16 of Whitby	30	56†	86
Drawn.				
Oct. 18th, 20th, at Cobourg, Ont.	Gentlemen of Ireland, 12	102	52‡	154
	18 of Cobourg	137	64	201
Oct. 22d, 23d, at Detroit, Mich	Gentlemen of Ireland, 11	207	—	207
	11 of Peninsular	43	57	100
Won by an innings and 107 runs.				

* No wickets. † 12 wickets. ‡ 3 wickets.

—*Bell's Life* says: Rumor has it that another team of Australian cricketers will visit England next season.

ARCHERY.

THE NEW YORK ARCHERY CLUB.—The club had a field day at Mount Morris Square, 124th street and Fifth avenue, last Thursday. At 10:30 A.M., a goodly number of ladies and gentlemen being already on the ground, the shooting commenced and continued with undiminished spirit until 3 P.M. The western lawn of the Park, obtained through the courtesy of the Commissioners of Parks, and where the club will hereafter meet, is very well adapted for archery practice, and on that day presented a scene charmingly attractive, and which we hope may be oft repeated. The leading scores of 218 on the ladies' side, and 241 on the gentlemens', at the American Round, speak well for amateurs whose practice dates only two months back.

At the monthly meeting of the club held Saturday evening, November 29th, three ladies and four gentlemen were elected to membership, and the club voted that a handsome tassel be the trophy to be shot for by the ladies at their next prize match in December.

THE TOLEDO ARCHERY CLUB.—The gallant archers bold, of the Toledo (O.) Archery Club, gave a complimentary dinner to the lady members at the Hotel Madison, North Eleventh street. The handsomely engraved bill of fare affords conclusive proof that the committee having this special meeting in charge acquitted themselves with honor to their club. The occasion was thoroughly enjoyable throughout, and in its success was a most pleasing argument for archery, the pastime of gentlemen and ladies alike. Of all its many claims to popularity, the game has no greater one than just this adaptability to both sexes. It has all the merits of croquet in this respect, without any of the drawbacks of that still popular game. We have enough sports distinctively masculine; and sufficient, too, which should be distinctively feminine. Combining the two, archery is the game of the future.

The Toledo Club has thirteen lady members and ten gentlemen. The prize winners for 1879, with their scores, are as follows:—

Ladies—Double Columbia Round—First prize, Miss Helen Baldwin, 93 hits, 426 score; second prize, Miss Belle Messinger, 91 hits, 401 score; third prize, Miss Jennie Baldwin, 69 hits, 311 score.

Gentlemen—Double American Round—First prize, Mr. D. V. R. Manley, 155 hits, 839 score; second prize, Mr. C. R. Messinger, 141 hits, 651 score; third prize, Mr. H. M. Smith, 132 hits, 616 score.

WABASH MERRY BOWMEN—*Crawfordville, Ind.*,—On the afternoons of the 19th and 20th of Nov. the club shot the Double York Round, with the following result:

	100 Yds. Hits.	Score.	80 Hits.	Score.	60 Hits.	Score.	Total. Hits.	Score.
Will H. Thompson	78	336	81	337	47	257	206	940
Maurice Thompson	68	274	67	313	44	189	179	776
Theo. McMeehan	41	169	42	162	36	174	119	505
John A. Booe	33	113	36	142	34	174	103	429

In a handicap shoot on the same afternoon (the 20th) Mr. Will H. Thompson, shooting twenty-four arrows at 60 yards, scored 24 hits—160 score. The details were six golds: ten reds, six blues, and two blacks.

On the same two days Mrs. J. Lee and Mrs. M. C. Klein, shooting the English Double National Round, scored as follows:—

	60 Yds. 96 Arrows		50 Yds. 48 Arrows		Total.
Mrs. John Lee	54	246	44	198	98 444
Mrs. M. C. Klein	37	141	38	146	75 287

CHICAGO—*Nov. 23d.*—Chicago is not to be behind other cities in having an archery range for winter practice. Mr. Wilkinson has kindly given up his entire basement on State street for a range, and this has been fitted up so as to make it for all practical purposes almost as good as out of doors. The room is 160 feet long, and ceiling about ten feet high. At the front end stands the target, backed by three large mattrasses filled with baled hay. Near the target on one side is a lamp with large reflector, throwing a strong light on the target, while gas lights from above light the entire length of the range, so that the arrow is visible throughout its flight. The height of the ceiling being so low, a bow of much under forty pounds pull is at a disadvantage at the fifty-yard range, it being found that at that distance a thirty-five pound bow could not send an arrow so that it would strike the target as high as the gold. As there are no winds to perplex the archer, I shall expect to hear of some fine scores here this winter.

The range was inaugurated last Wednesday evening, and I give you the scores made; 30 arrows at each 30, 40 and 50 yards. But one scratch was made, and that was when one arrow glanced into the ceiling:—

	30 Yds.		40 Yds.		50 Yds.		Total.	
C. Conklin	30	102	28	164	22	124	80	480
Mr. Hope	30	208	30	176	28	132	88	516
H. B. Wilkinson	29	175	29	148	19	115	77	439
W. Conklin	25	160	27	145	21	117	73	422
Mr. Myers	30	190	29	153	27	145	86	508

The Messrs. Conklin shot with lemonwood bows of 40 pounds, Mr. Wilkinson with a 42 pound lance, Mr. Myers with a 57 pound Horsman beefwood and lance, and Mr. Hope with a 40 pound Horsman lance and hickory. At 50 yards the heavy 57 pound beef and lance had the advantage, as the archer could shoot without fear of having his arrows strike the ceiling.

E. L. GREER.

THANKSGIVING ARCHERY.—*Boston, Nov. 28th.*—The archers of Boston and vicinity have secured a hall and fitted it up for the winter practice of archery. The hall is 130 feet long and of a width to accommodate four targets.

Thanksgiving a meet was held. Sides were chosen and three rounds of thirty arrows each were shot, ladies at 30 and gentlemen at 40 yards, with the following score:—

	1st Round.	2d Round.	3d Round.
Mr. Plympton, Captain	117	125	120
Mr. Worthington	101	117	129
Dr. Dwight	92	110	148
Miss Worthington	119	127	114
Miss A. Ager	90	80	54
Miss J. Ager	105	100	107
Totals	664	659	681
Mr. Lethbridge, Captain	95	113	147
Mr. Brownell	179	172	153
Mr. Woodward	87	125	137
Miss R. Wilson	104	118	101
Miss J. Wilson	86	131	93
Miss Sprague	99	62	72
Total	622	721	692

A. N. DREW.

HIGHLAND PARK, *Ill., Nov. 25th.*—144 arrows at 60 yards:—

	1st '24.		2d '24.		3d '24.		4th '24.		5th '24.		6th '24.		Total
Mr. Kyle	21	113	20	88	22	114	15	77	18	86	21	111	117 580
Dr. Weston	21	95	19	91	21	91	23	93	22	103	19	97	125 575

—McHenry C. Carver, of Chicago, who, by his liberality in the expenditure of his own means, and in the lavish bestowal of his valuable time, and by his energetic management of affairs as, Corresponding Secretary of the National Association, deserves the unqualified praise of every lover of archery in this country, is now engaged in maturing, with the assistance of several other archers of note, a plan for the conduct of the next National which it is thought will guard against all mistakes of the last meeting, mistakes which of course are incident to all first meetings upon any large scale. Mr. Carver has great originality of mind as well as executive ability, and the archers of the country owe much of the success of their favorite pastime to his tireless work in behalf of archery the past season.

THE POLO CLUB HOUSE.—The Westchester Polo Club have leased a plot of ground at 110th street and Fifth avenue, where they will erect a club house and lay out grounds for their sport.

—Chicago, during the past week, held the first of the six-day bicycle matches between the great English team and well known American riders. At the end of the match, Saturday night, the score stood: Cann 855 miles, and Stanton 810—total, 1,665; G. Harrison 858 miles, and Rutland 800—total, 1,658. Thus the victory of the English pair was only 7 miles in 1,665, but a 100-mile handicap was placed on the Englishmen.

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

☞ *We make no charge for answering inquiries in this column.*

W. W. R., Street Road, Pa.—See our issue of Nov. 6th for full list of New York fur dealers.

PHILADELPHIA.—The correspondent who enquires about quail and partridges is referred to notice at head of this column. No anon's need apply.

W. E. H., Meredith Village, N. H.—Can you tell me where I can get directions and plan for building an ice boat? Ans. See FOREST AND STREAM, Jan. 27th, 1876.

C. H., East Saginaw, Mich.—If there is a book published on boat building, please inform by return mail where I can get such? Ans. Manual of Yacht and Boat Designing; Boat Building for Amateurs; for sale by Orange Judd & Co. N. Y.

H. B. P., Trenton, N. J.—Will you give me the name, price, and place where I can get the best published book on the keeping and training of the fox and rabbit hounds? Ans. "Notitia Venatica," by Robert T. Vyner. You will find it at Henry Millers', 83 Nassau street, this city, no doubt.

S. W. B., Vicksburg, Miss.—Please let me know where I can get a pair of thoroughbred harriers to raise from. I would prefer to have a pair already broken, but would take a pair of five or six months old puppies, if I could do no better. Ans. Probably none to be had in this country. You will have to import them.

D. H. S., Riverton, Conn.—I have an English spaniel that had the distemper about three years since, and for a year past there has a film appeared on his eyes, which partially covers the pupils. Please give method of treatment? Ans. Unless the film is cataract, it can be removed by blowing on it a little powdered burnt alum.

A. E., Bonnersville, La.—A party of three or four want to have a small boat built to hunt in and go South this winter to Louisiana. What will the law require that such a party shall comply with, the boat to be not over thirty feet long and run by steam? Ans. You require a regularly licensed pilot and engineer, and official inspection each year.

F. T. S., St. John, N. B.—I am of the impression that the migratory quail have been successfully introduced into parts of Maine. Do you think the experiment would be worth trying in this cold climate? Ans. Well worth trying. No one can tell how it would succeed until it has been tried. In Maine the birds have done well we believe. See back files.

T. C. Troy, N. Y.—I want to buy a gun for glass' ball shooting. Do you think a 10-guage gun would do more execution than a 12-guage, both guns being of equal weight? Would choking one or both barrels be necessary? Price, etc.? Ans. Capt. Bogardus uses a Scott 10-bore gun. It is customary to choke the barrel which you would naturally fire last. Cost of choking, $4 to $5.

H. P. S., Rahway, N. J.—Can you tell me where in New York can find the back numbers of the London *Field* on file? I wish to refer to them for the past three or four years. Ans. Of August Brentano, 27 Union Square, probably, or at the Mercantile Library; also at office of the *Clipper* or *Spirit of the Times*. We have them unbound at this office, but not arranged serially.

A. M. G., Washington.—Can you inform me where the meat meal which forms part of the ingredients and the important part of Metzdorf's dog food, mentioned in last FOREST AND STREAM, can be obtained in New York? Ans. We do not believe that meat meal can be procured here, for the reason that there is no large manufactory for the preparation of meat extract, such as that of Professor Liebig in Europe.

F. R., Bristol, Conn.—I have a half hound pup, two months old, that when he walks, walks on his toes with his knee bowed out in front and it seems to be very weak. Ans. Bow-legged dogs are sometimes cured by being put in splints. The best thing you can do with your puppy is to attend to his general health, keeping him dry and warm and seeing that he gets exercise. A tablespoonful of codliver oil twice a day will help him.

W. B. R., New York.—Is there any game on or around the Hackensack River, and what part? If so, what kind? Could I procure a chart or map of Hackensack River and vicinity, and if so, where and what would it cost? Ans. Yellow rail, sora rail, English snipe, yellow legs; black ducks, and teal can be found from the bridge up. We suppose General Newton, who has been blasting in the vicinity, has the only true chart.

DOUBTFUL.—1. Is it lawful, in a pigeon match, where the bird is wounded and falls within the boundary, for the shooter to go round the bird to gather it? or is it, as some say, the rule for the shooter to walk right up to the bird. 2. Inform me where I can get the complete rules of pigeon shooting. Ans. 1. The shooter is allowed to go around the bird? 2. There are a great many rules used by different clubs. Captain Bogardus' book, "Field, Cover, and Trap Shooting," contains most of them.

WILD, Red Bank.—Upon looking over a copy of a New York sporting publication I found an article entitled "Trout Fishing in Northern New Hampshire." I find this article in the "American Anglers Guide," by our late practical friend, Thadeus Norris. Is it not customary to give credit to such brilliant writers? Ans. The publication in question makes nothing of stealing its matter without credit, and in turn unjustly charging others with doing the same thing. We have long since cut it from our exchange list.

F. W., Danbury, Conn.—From your description of the symptoms it is impossible for us to say what is the matter with your dog. However, we should first give him a dose of aperient medicine, say one ounce of castor oil. If he can be fed with a spoon, we should give him beef tea, with say, two drops of wine of iron each time he is fed. However, if you have described the symptoms rightly he will probably be dead before this reaches you, and we should say he had been poisoned. This query was answered by mail, but a wrong address having been given the letter was returned.

S. H., Bucyrus, O.—Will you please give the rule by which a party ordering a gun may designate the desired curvature of the stock, without a diagram? I notice in advertisements the "inches drop," but to an amateur like myself it is enigmatical. It requires information to know from, and to, what points the measurements are made? Ans. You must by trying guns find one, the drop of which suits you. Then place along the rib a straight stick extending as far as the end of the stock; then measure from the stick to the top of the stock at the heel plate and you have the "drop" of the stock in inches.

CASHIUS, Matteawan, N. Y.—I own a valuable English greyhound who is greatly troubled in his breathing. The nostrils seem stopped up and the breath has a fetid smell. The tonsils are somewhat swollen, and occasionally after hot application of flaxseed poultice to the nose there is a bloody discharge. The lungs seem sound, and when breathing through the mouth, after exercise, there seems to be no trouble. The dog keeps in good spirits. Ans. In his present condition it is better that your dog should have rest. Give him at once the following aperient: Calomel, 4 grains; jalop (powdered), 10 grains; ginger, 1 grain; mix. Give him a Dovers powder three times a day.

W. E. H., Meredith Village, N. H.—W and N are playing cribbage. W plays a tray. N answers with an ace. W plays a deuce and takes three holes for the sequence of 1, 2, 3. N then plays another ace and takes six for double sequence. W then plays another deuce. Is he entitled to a quadruple sequence or not? Ans. N in playing the second ace is entitled to nothing, as the cards then played are 1, 3, 1. Neither is W entitled to a count when he plays the second deuce, as the play is then 2, 1, 2. You made but one correct count in your play, and that for the first sequence by W, viz.: three holes. There is no such thing as a double sequence in pegging, but only in counting your hand.

H. C. W., Westport, Conn.—I have a black-and-tan dog between four and five years old. About thirteen months ago he gradually lost the use of his legs, his hind ones giving out first, and for three weeks they were about useless. He was cared for in a box in the house. Afterwards he gradually improved, and in a week or so was on his legs again. Now he has a second attack. A few days ago I noticed that he drew up his legs in his sleep, and a day or so after, his hind legs began to grow weak, until now he cannot use them. Ans. It is difficult to determine from your diagnosis whether your dog is suffering from paralysis or rheumatism. If the former is the case, but little can be done for him beyond giving him small doses of nux vomica, say one grain twice a day. Attention to his general diet, and above all a perfectly warm and dry bed, are essentially necessary.

J. L., Jersey City.—My colley dog has some skin disease. He scratches himself so much that the hair is nearly all off some parts of his body. And all that I can see is small scabs or blotches scattered over him about the the size of a three-cent silver piece; the skin feels very hot to the hand. It has been coming on to him for the last two months and I keep washing him with carbolic soap. Ans. Stop washing him with carbolic soap at once. Give him one good washing with castile soap, and after drying well, apply the following ointment: Sulphur sub., 8 oz.; whale oil, 8 oz.; oil of tar, ½ oz.; ung. hydrarg, ½ oz.; to be well mixed and thoroughly rubbed in. Wash off and repeat in three days. You would find Glover's Imperial Mange Cure, to be had from Messrs. Conroy, Bissett & Malleson, of this city, an excellent remedy, and save the trouble of having the prescription made up. Feed as little meat and as many vegetables as possible.

MONTCLAIR HUNT, Montclair, N. J.—1. How often should we have our breeding bitches whelp? We imported our beagles at considerable trouble and expense and do not care to breed too much for fear it would deteriorate either bitches or their progeny? 2. How often should puppies be washed during cold weather? Last summer we washed our young beagles every day, and we attribute much of our success in preventing diseases of all kinds to this practice. All our litters turned out well, there being no case of sickness. By the way, through the medium of your advertising columns, we found purchasers for every pup whelped, and now have orders we cannot fill. Ans. 1. We should not breed oftener than once a year or every other time of coming in season? 2. We do not think it is safe to wash puppies in cold weather; they are liable to take cold, which would result in distemper; and the disease would probably go through the entire kennel.

Publications.

THE BRITISH WATER FISHES: By the Rev. W. Houghton, M. A., F. L. S. Illustrated with a colored figure of each species, drawn from nature by A. F. Lydon, and numerous engravings. London: William Mackenzie, 69 Ludgate Hill, E. C., Edinburgh, and Dublin.

This is an illustrated work in two volumes, comprising sixty-four portraits of the most desirable fish found in the fresh waters of Great Britain. It is of especial value to Englishmen, and will be examined with great curiosity and interest by anglers on this side of the Atlantic to whom most of the varieties delineated and described are entire strangers. It is well calculated to supersede the works of Yarrell and Couch, which have hitherto been the best illustrated books of reference, but which are now both expensive and scarce. The illustrations include seven kinds of salmon, six of trout, six of char, as well as pike, perch, barbel, gudgeon, burbolt, and also those very difficult fish to identify, namely, the gwynind, vendace, pollan powan, agurine, and dobnic.

FOR SALE.

FOX TERRIERS.

Rattler, winner of 1st special, Boston; 1st Philadelphia, and 2nd N. J., 1879. Nixen, winner 1st and special N. J. Minnie, winner 2nd N. Y., 1879. Nettle in pup to Rattler, and two puppies out of above. THOS. D. BURKE, P. O. Box, 2322. Dec. 1-t.

Lost.

A BEAUTIFUL lemon and white cocker spaniel bitch answering to the name of Lou. She was picked up in Forty-second street by a man named Donnelly, from whom she was stolen on Sunday, Nov. 23d, as he says. Any person to whom she may have been offered for sale will confer a favor upon me by communicating the facts to me by mail, or at my office, 206 Broadway.

Dec1-1t ROBERT SEWELL.

FINEST SELECTION OF YORKSHIRE terriers in the city, full-grown pugs; also pug puppies, six months old; also fox and small bull terriers. For sale at THOS. KEELAGHER, 61 Charlton street, New York. Dec. 4-2t.

The Kennel.

THE FOLLOWING PRICES will show I mean sell out:—

Victress, pure Laverack, full sister to the Great Countess, one of the best bitches that ever lived. She is by old Blue Dash I. and Moll III. Victress won two prizes—Manchester, H. C., Birmingham. To parties in want of a pure Laverack to breed this is a rare chance. Price $75, not one-half what she cost; was sold at public outcry in England for $200.

Irish setter Gipsey, red, and some white; hunted some on quail; very obedient and easy to handle; sire of Gipsy, Redman's Dash, who was the best Irish setter on game in the United States. She is a good brood bitch, and just served by my red Irish setter King Bee, who was sired by champion York; a perfect beauty, and if she fails to pup will serve her free next time, but she never missed. Price only $35.

France, a field trial bitch; a beautiful head; ears hung low; a good brood bitch; never hunted her; bought her in June; will guarantee her to stand a pigeon in yard for twenty minutes, and from her movements I think would be good in field. Price $25. Litter of pups worth four times that amount.

Llewellin setter bitch one year old, blue ticked; raised and bred by L. H. Smith, of Strathroy, Ontario, Canada; sire, Paris, and dam, the pure Laverack bitch Peeress; Peeress and Paris are both broken, and Paris is one of the best field dogs in this country, that money cannot buy; the Chicago *Field* of Nov. 8th, 79, gives a cut of the famous Paris and his field winnings and on the bench; parties buying will get pedigree and his winnings printed. Price only $50. These are bottom prices.

Address H. B. VONDERSMITH, Lancaster, Pa. Nov. 27-tf

IN THE STUD.

"RED GROUSE,"

IMPORTED IRISH SETTER.

GORDON ENGLISH, AND FIELD TRIAL SETTERS

OF PUREST STRAINS.

Imperial Kennel

Setters and Pointers thoroughly Field Broken.

Young Dogs handled with skill and judgment.

Dogs have daily access to salt water.

N. B.—Setter and Pointer puppies; also, broken dogs for sale; full pedigrees. Address H. C. GLOVER, Toms River, N. J

PINE LODGE KENNELS.—I am prepared to take a limited number of dogs, either setters or pointers, and train them thoroughly. I give my puppies seven months' work out of the twelve, and guarantee satisfaction, if the dog has all the natural instincts. References on application. Prices, $50 and $75, according to length of time I keep the dog, with discount to parties at long distances. A. WINTER, Cairo, Thomas County, Georgia. Oct 2,tf.

RATTLER.—In the Stud.—Blue belton, Llewellin setter, winner of three bench prizes, by champion Rob Roy, winner of five English field trials, out of the pure Laverack bitch, (Pickles). Will serve bitches at $20. Litters warranted. Inquire of L. F. WHITMAN, Detroit, Mich. jan 2tf

POINTS FOR JUDGING DOGS.

A PAMPHLET compiled from "Stonehenge's" new edition of "Dogs of the British Islands," and containing the "points" by which every breed of dogs is judged in this country and England, together with a description of the same. For sale at this office. Price 50 cents.

IN STUD—The two white imported Bull Terriers, Teddie and Viper; weight, twelve and twenty pounds; also English bulldog, Crib; weight, forty-two pounds. For particulars address "CRIB," 23 Myrtle-street, Boston. Orders taken for thoroughbred bull pups from the above Crib and imported Judy, to be whelped Nov. 28th. Portrait of Judy can be seen at this office. Nov20,1mo

ON SALE.—The celebrated English bull dog champion Gambler, K. C. S. B. 4549; color white, with brindled ears; weight 45 lbs. To describe his successful career on the show bench would be superfluous. Suffice it to say he has gained upward of 300 cups and prizes, both in England and on the Continent, and pronounced at the Great Bull Dog Show at Bath, where he received the Bull Dog Club Medal from the hands of Vero Shaw, Esq., the judge, to be the most typical specimen extant. He is at the present time in the most vigorous health and bloom, and capable of sustaining his prestige for many years to come. To execute an immediate sale £75 will be accepted. Also my entire kennel of pugs of both sexes; most of them winners at our leading shows. Prices, from £5 to £20, according to merits. WM. SEFTON,

Paradise Terrace, Blackburn, Nov27-2t. England.

FOR SALE.—If taken before the 25th of December, I will sell the following valuable setters at a bargain: Imported red Irish prize bitch Floss, who has taken prizes at the following shows: Cork Show, Ireland; Centennial, Philadelphia; St. Louis, Mo.; Baltimore, twice; New York, and Philadelphia. She is a No. 1 brood bitch, and a very quick dog in the field; she will also be in heat in about three weeks' time; price, only $65. Nora, a great, slashing, strong bitch, red Irish, out of champion York and Thompson's Belle; price, only $35. A handsome Llewellin setter bitch, lemon and white; a beautiful bitch, and a pretty good worker in the field; price, only $50. One handsome black, white, and tan bitch pup, whelped on the 12th of May; a large, strong healthy pup, out of A. Burges' celebrated champion Field Trial and Bench Show winner Druid, and the Llewellin bitch Leda; price, $25. For pedigree and particulars, inqure of C. Z. MILEY, Lancaster, Pa. Dec.4,tf

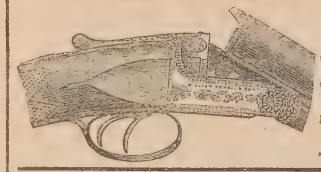
Thread-Wound, Long-Range Shot Cartridge Cases.

For Muzzle-Loading and Breech-Loading Cylindrical and Choke-Bore Shot Guns.

Any desired closeness of pattern made at 50, 70 and 90 yards, with penetration superior to that made by the best choke-bores at 40 yards.



INDISPENSIBLE TO HUNTERS OF ALMOST EVERY KIND OF GAME.

Ten and Twelve Gauge now ready.

This Cartridge consists of two semi-cylindrical cases, wound with thread, containing one ounce of shot, heavy in front and light in rear, to keep it from turning. When the thread is all unwound by the friction of the air, the cases fly apart, and the shot scatters. The cases are sold empty, to be filled by the purchaser with any size of shot.

Price, $5 00 per Hundred. 20 sent post-paid for $1 00. Address

"THE FISHING LINE."
TAKE THE
Grand Rapids & Indiana R.R.
Mackinaw, Grand Rapids and Cincinnati Short Line
FOR THE
Trout, Grayling, and Black Bass Fisheries,
AND THE
FAMOUR SUMMER RESORTS AND LAKES
OF
NORTHERN MICHIGAN.
The waters of the
Grand Traverse Region
and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.
BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in those waters.
The TROUT season begins May 1 and ends Sept. 1. The GRAYLING Season opens June 1 and ends Nov. 1.
BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory.
The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at many points.
TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful; the air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with
Hay Fever and Asthma Affections.
The hotel accommodations are good, far surpassing the average in countries new enough to afford the finest of fishing.
During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.
Dogs, Guns and Fishing Tackle Carried Free at owner's risk.
It is our aim to make sportsmen feel "at home" on this route. For Tourist's Guide (an attractive illustrated book of 80 pages), containing full information and accurate maps of the Fishing Grounds and Time Cards, address A. B. LEET, Gen. Pass. Agent, Grand Rapids, Mich.

TO SPORTSMEN:

The Pennsylvania R. R. Co.,
Respectfully invite attention to the
SUPERIOR FACILITIES
afforded by their lines for reaching most of the TROTTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.
THE LINES OF
Pennsylvania Railroad Company
also reach the best localities for
GUNNING AND FISHING
in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principle cities to KANE, RENOVA, BEDFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for
Trout Fishing, Wing Shooting, and Still Hunting.
Also, to
TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

GUNPOWDER.
DUPONT'S
RIFLE, SPORTING and BLASTING POWDER.
The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1801, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN,
Nos. 1 (coarse) to 4 (fine), unequaled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING,
Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.

DUPONT'S EAGLE RIFLE,
A quick, strong, and clean Powder, of very fine grain for pistol shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING," FFG and FFFG. The FG for long range rifle shooting; the FFG and FFFG for general use, burning strong and clean.

SPORTING, MINING, SHIFFING, and BLASTING POWDERS of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar, and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

F. L. KNEELAND, 70 Wall Street, N. Y.

N. B.—Use none but DUPONT'S FG or FFG Powder for long range rifle shooting.

THE HAZARD POWDER COMPANY
MANUFACTURERS OF
GUNPOWDER.
Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. *only.*

Hazard's "American Sporting."

Nos. 1 (fine) to 5 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration.* For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG in kegs of 25, 12½, and 6½ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist.* The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *rifle* Powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office,

Shot-Gun and Rifle-Powders Revolutionized.
DITTMAR POWDER.
Champion Shot Gun and Rifle
POWDER OF THE WORLD!
IS UNEQUALLED BY GUNPOWDER

for strength, accuracy, cleanliness, and gives little smoke, recoil, or noise. It is absolutely safer than gunpowder, as it cannot explode when not confined, and does not strain the gun or heat the barrels as much in rapid firing. CaptainBogardus, champion wing-shot of the world; Dr. Carver, champion rifle-shot of the world; Ira A Payne, and all the leading shots, use DITTMAR POWDER in their matches. Our challenge to shoot a long range rifle match, as published in our circulars, was never accepted, and is yet open to the world. Address

Selected.

THE MOUNTAIN OF GOLD.

A LEGEND OF ARIZONA.

IN the region of chartless land that lies
Far off in a dream of Hesperian skies;
By the rivers, that drifting golden ices,
Bear beauty and song to the Mexic seas—
I have sat in the miner's bivouac
When night with its stars like a psalm unrolled,
And heard, as he leaned on his grimy pack,
A miner discourse of the Mount of Gold.

And the howl of the wolf was faint and far,
As the moon, like a ship, from star to star
Sailed on—and the plain, with a sea-like sweep,
Lay silent and wide in its mystic sleep;
And the river below in an undertone
Sang sweetly, and chiming its cymbals sang
Of a sorrowful land and the wolf alone
Where oceans have marched and the old wars rang.

And the glorified peaks stood high and white,
Like kings that were called to the court of Night;
And voices of mystery seemed to swell
On the wind in the pines as it rose and fell;
For thus mid the audible throbs of earth
The tale of the miner was fitly told—
With never a sneer or a sound of mirth
From those who had battled and toiled for gold.

But the Mountain of Gold was said to stand
Away in the depths of a solemn land
Which the rivers explore as they bend afar
On the glimmering track of the evening star;
And ever, like dust of the unhallowed dead,
The sands of the desert do rise in clouds,
And gather and sweep with a ghostly tread
Around it, and rustle like dreary shrouds.

And a skeleton guard of mountains bleak,
Where the brown vulture dozes and whets his beak,
Defend it and hoard in their grizzly arms
The dazzle of splendor and virgin charms
That no one has seen but those priests of the Sun,
Who fled from the sword of the Spanish Knight,
And whose shadows still, when the day is done,
Kneel there on the steps of their altar bright!

'Twas sought—but the rider and horse were lost,
Their bones white still, and their ashes tossed
With the sands as they drift in eternal unrest,
Where their spirits yet rise in the hopeless quest;
But a glamor of mystery strangely shines
Where the dead have been strown and the living stray
And the gorges are rich with exhaustless mines—
Untouched as our hearts and our hopes decay.

And the robber Apache hovers far
On the thundering chase or the trail of war,
And the shark of the desert, gaunt and gray,
Slips by like a shade to his distant prey;
And yet and for aye, on the yellow breast
Of the dead and desolate waste, the prize
Of that Mountain of Gold is said to rest,
Like a star that has dropped from the dreaming skies.

Perhaps it is only a miner's theme—
The glint of some wandering Aztec's dream;
As clouds in the magical sunset shine—
Like islands of silver in seas of wine—
But may he not think, when the placer fails,
And poverty lurks on the olden trails,
That treasure barbaric and joy untold
Are shining beyond in a Mountain of Gold?

Portland (Oregon) *Herald.*

A Trip to Parmachene Lake.

WHILE waiting for a train in the Boston and Maine Station, in Boston, I bought a guide book of the Rangeley and Richardson Lakes, written by Mr. Samuel Farmer, of the Barden House, Phillips, Maine. The writer stated that the best route to Parmachene Lake was via Phillips and Farmington. Having found the route via Bethel, Upton, and Magalloway River tedious, I resolved to try this new way. Leaving Boston, July 5th, at 8:30 A.M., I reached Farmington, where the railroad ends, at five P.M. During the last two hours the ride was interesting because mountains were quite constantly in view. Near Jay Bridge you have a fine view of a pretty rapid in the Androscoggin River, just above which is an old fashioned covered bridge, now so rarely met with. The approach to Farmington is over a trestle-work, one-eighth of a mile long. Though the Sandy River, which it crosses, is but a narrow ribbon of water, winding among acres of grass, yet at certain seasons it fills the whole bottom, making this expensive structure necessary. At Farmington there was time for supper; then the stage started for Phillips, making the eighteen miles in three hours and a half. The drive between these towns was fine, as the road followed the Sandy River Valley, giving us excellent mountain views. The people of Phillips, although not exceeding three thousand, have a national and a savings bank; a telegraph line, erected at private expense, a newspaper, and a railroad nearly ready for the iron.

After supper, Mr. Farmer, the proprietor of the Barden House, took me in a light wagon to Rangeley Village, twenty-one miles west, arriving there at 2:30 A.M., July 6th. This drive into the mountains by moonlight, mounting higher and higher among them, was something to be remembered. At one point the tourist reaches an elevation of about two thousand feet. Then let him look about and see mountains on every side, while below the distant peaks show silvery as the moonlight shines on the mist upon their sides.

I found Mr. Samuel Farmer a very agreeable companion, learning many facts about the country from him. Several persons told me that the railroad now being made between Farmington and Phillips, owed its advent almost entirely to his energy and perserverance. Tourists who have the good fortune to enjoy a ride through this country with him cannot help being impressed with his manliness.

After a late breakfast I started down Rangeley Lake in charge of Mr. David T. Haines, whom Mr. Hinkley, the genial landlord of the Rangeley Lake House, had recommended as my guide to Parmachene. I afterwards had reason to thank Mr. Hinkley for making so wise a selection, as Mr. Haines proved to be a good woodsman. We enjoyed the trip in Captain Howard's steam launch, the *Mollychunkamunk*, exceedingly. When about three miles down the lake, the view was superb, the mirror-like water reflecting every mountain so perfectly as to make it difficult to realize that we were not sailing over another world. We passed on our way the Mountain View Hotel just beyond, being landed at the beginning of the portage to Cupsuptic Lake. This portage is in the shape of a letter V, the steamer landing at the point. One arm goes to Soule's Camp, the other to Rangeley stream, where it empties into the Cupsuptic Lake. The distance over the right arm, leading to this stream, opposite the buildings of the Oquossoc Angling Association, is about one and two-thirds miles. We arrived here in time for dinner, after which, Mr. Haines rowed me down Cupsuptic Lake to the Cupsuptic Stream, a distance of four miles. Old visitors will remember the extensive feeding grounds for moose at this point. They are now destroyed by the rise of water caused by a dam. Thousands of dead trees, stripped of their bark and bleached to an ashen grey, give a sombre feeling to the tourist, that is lightened only by the numerous black swallows (*Cotyle riparia*), which have built in the dead trunks—a curious instance of adaptation to the environment. The route to Parmachene lies up the Cupsuptic Stream; for four miles there is no current; then you walk around a rapid, while the guide wades the boat through it. This portage is about 1,100 yards long; it leaves the stream on the left bank, following an old toll road. The walking is good.

Beyond this rapid the stream is swift, crooked, and shallow for eight miles, then the portage to Parmachene Lake is seen leaving the west bank just opposite two small grass islands. On the way up the river a grass-capped rock will be noticed. This is called "Steve's Nunple."

A lumberman named Steve ——— stood here all one cold spring day, keeping the logs as they went past from forming a jam. As the river was high, he could not reach the shore, hence his only food was buscuit tossed to him—not very substantial food for such exhausting work. At night, after reaching shore, he started for home, giving as a reason that the "boss" had made him stay on "that darned numple till he was played out."

I have never seen the word "numple," so perhaps he was a "coiner of a word unknown to Keats."

Not wishing to travel rapidly, we camped before reaching the portage, which we crossed next day. Various estimates are given of its length.

Mr. Danforth, one of the most noted trappers in this region, thinks it five miles, while the pedometer gave as an approximate estimate seven and a half miles. There are very few windfalls on this portage, so a fair estimate may be got from the time required to cross, the shortest on record being that of two sportsmen who went over without baggage in two hours and ten minutes. The Parmachene, or west end, strikes the Magalloway River below the lake at Black Cat Brook. The portage is over the range of mountains dividing the Cupsuptic stream and Magalloway River, therefore it is steep in portions.

There is boating on the river up to John Danforth's camp on Treat's Island, in Parmachene, a distance of about three miles.

John Danforth deserves to succeed on account of his perseverance. A few years ago he attempted to build a camp on the Magalloway River below the lakes, but was prevented by the owners of the land, though Mr. Flint, another excellent guide, had been granted this privilege. As Mr. Danforth allows nothing to deter him, he got permission to cut lumber for a camp in the township north. Here he felled the trees, floating them down to Parmachene Lake, where he built a gigantic raft, on which he placed his camps.

These, to avoid weight, were constructed of a light framework of spruce, covered all over with thin strips of cedar. As the lake belonged to the State he possessed his camp in peace. He has since put the camps upon Treat's Island, and last winter built another camp in addition. In moving the two camps from the raft they had at their disposal only a piece of bed cord and some small iron pulleys taken from a sailboat. When we consider that everything about these camps, even the doorframes, bedsteads, and chairs, had to be made by hand out of trees rafted down the river, we cannot fail to be impressed with the energy of the man who almost single handed has accomplished all this, in a country where provisions can be carried only in winter on a hand-sled more than twenty miles through a pathless forest.

Parmachene Lake is a fine locality for the tourist or sportsman. On every side are mountains—Bose-Buck, West Kennebago, and one which Mr. Haines and the writer believe to be Snow Mountain, are the highest peaks seen. Snow Mountain forms one side of a chasm which is three-quarters of a mile long, and from ten to seventy feet high. Through this the Capsuptic stream rushes with great force, filling the bottom of the chasm entirely in many places in time of freshet. In one place the rock is free from trees, showing the sides of the chasm only about two rods apart, rising perpendicularly, and shutting out all the sky except a narrow strip overhead. This chasm is known only to two or three trappers. There is no trail to it, an accident to my knee having prevented our being out this summer from Lake Parmachene. It has been named Haines' Chasm in honor of the trapper who told me about it. Unless we are mistaken in the peak which I believe to be Snow Mountain, the chasm is in an east course from the shore of Parmachene Lake, and not more than four miles in an air line. It is hoped that some of the readers of the FOREST AND STREAM will cut this proposed trail during this summer, opening the chasm to tourists.

Next morning, July 8th, taking provisions from Mr. Danforth's, we started for a lake not yet visited. It had been seen by Mr. Haines while trapping in the surrounding mountains. Our plan was to go to Arnold's Bog, in Canada, then by keeping on the hills get round the bog, crossing the Boundary ridge west of Ox-Bow Mountain, hoping to strike the lake about two miles south of the head of the bog. Our route was up the Magalloway River. There is good boating to Little Boys' Falls, three miles from Camp Danforth. Here the boats are lifted over a fall about three feet high, boating being without interruption except in low water to Otter Creek, formerly called the First East Branch of the Magalloway. The trail made by John Danforth to Arnold Bog water leaves the right bank of the creek about three-quarters of a mile above the river. This excellent trail crosses the water shed between our country and Canada, five miles from Otter Creek, from which point it descends over smaller ridges to the bog, three and one-half miles. The trail crosses three quite large mountain brooks, named Moose Yard, Half-Way, and Red Maple.

At the bog we found a party of sportsmen who had that morning killed a moose as he stood on the shore. We took about twenty pounds of the meat in our packs, and after spending an hour with them started in a south-east course from the east side of the bog. This course was necessery to avoid the wet land which surrounds the water of the bog for miles. After travelling all that day we climbed a tree on the crest of a mountain to get our direction. As the lowest point in the hill seemed directly south, we decided to go in that direction. After descending the mountain camp was made for the night. I believe the writer consumed, at the least calculation, three rounds of moose meat. Wonderful what an appetite that mountain air and a fifty-pound pack will give one.

Next morning we kept our south course till we were bogged, being then obliged to make a long detour back into the mountains. After getting up the valley about a mile we again turned south, and this time were successful in crossing, though the walking was not exactly dry. At half-past ten the boundary line was crossed. The compass showed it to be running northwesterly and southeasterly. About the middle of the afternoon it became advisable to get our direction again. A view obtained from a tree on the crest of a convenient mountain showed our lake in a southwesterly direction, not over two miles away, while to the north the waters of Arnold's Bog looked like a narrow thread of silver lying in the middle of a green valley, which appeared to extend for miles until closed in by the rugged form of Saddle Mountain at Lake Megantic.

We struck the lake midway on its east side. As the shores were wet we turned east to higher ground, follow-

the valley until about opposite the outlet. While walking along this, many deer and caribou tracks were seen. At length the sound of running water was heard. Hoping to be able to cross on the rocks we went in the direction of the sound. This proved to be caused by water running over an old beaver dam, that made an excellent path, on which we crossed. As night was approaching Mr. Haines cut a spruce pole for a fishing-rod. With a hook baited with moose meat he caught twenty-five trout in twenty minutes. Indeed, the only limit to the rapidity with which they could be taken was my ability to remove them from the hook and fasten to a stick, after having severed the spinal marrow with a hunting knife. This seems to me the only rational method of fishing—land your fish immediately, and kill quickly by severing the spine.

Finding good water, we camped about ten rods from the dam. After a grand supper of trout and moose meat we travelled along the west shore of the pond. Never in Maine had I before seen such abundant indications of game. The shore and bog west of it were full of moose, caribou and deer tracks. All about were marks where lichens had been stripped off by caribou. Several plants grew here in great abundance. The beautiful *Sarracenia purpurea* had flower stalks eighteen to twenty inches high, capped with blossoms four inches in diameter. There were thousands of wild lily of the valley (*Clintonia borealis*), many flower-stalks with seven blossoms. *Iris versicolor* was abundant on the shore, among the high grass-blades. I was pleased to see many specimens of *Trillium erythocarpum* and *Erectum*, the former in blossom. The chief forest growth about this water, which I named Caribou Pond, was the silver fir (*Abrus balsamea*), though near the water were a few specimens of *Larix Americana*, the tamarack of the natives. When about half way up the west shore we came to a logan where we heard running water, probably flowing over a beaver dam, as the land was too low to suppose there were rocks.

This brook is the largest which empties into Caribou Pond. Standing at the logan at the mouth of the brook, the whole extent of shore can be watched; therefore, that is an excellent place to make a crow's nest. The pond appeared to be about three-eighths of a mile long, by one-eighth wide at the north end, growing narrow toward the south end, out of which Cupsuptic Stream starts, rushing and tumbling through thirty miles of unbroken forest, to Cupsutic Lake.

I desired to have a raft constructed, but Mr. Haines, the guide, did not seem willing to do it; I fear he did not know how. On this account I do not know the depth of water, but judging from Arnold's Bog water, it cannot exceed three feet. Finding our trail too long to be of value to sportsmen, I decided to try to reach Arnold's Bog by keeping on the hills east of Caribou Pond. Accordingly, next morning we started in a northwest direction until reaching the hills, then turned north, travelling till 1 P. M., when I climbed a tree on the crest of a mountain, hoping to see Arnold's Bog, but saw, instead, a high mountain directly in our course. Seeing a gap in the range, northeast by east, we crossed the valley, passing through the gap, again climbing the ridge to find no water visible—only another ridge in our course. After climbing this we were delighted to see the bog, so coming down we took a northerly course, camping on the hills midway of the length of bog. During the night a moose walked past our camp, having come to drink at a spring near us. Our course had led us through miles of forest, in which we were rarely out of sight of trees which had been peeled by these animals. Next morning we crossed the boundary line, finding ourselves again in Canada. We soon came to the Danforth trail from Otter Creek to Arnold's Bog, down which we travelled twelve hundred yards to the bog, after having marked a tree "Trail to Caribou Pond—six miles."

As I blazed the trail, sportsmen will find little difficulty in following it, though, until it is more used, they will be obliged to go slowly.

Next day being Sunday, we hung our tent from the cross-bar of Danforth's shanty at the bog, at which point there are some remarkable springs. About one-third of the water from one is carried through a spout. It was found that thirty hogsheads of water flowed from it every hour; therefore, one spring alone empties ninety hogsheads of water into the bog every hour, making for the four springs about three hundred and sixty hogsheads. The water is so cold as to make it impossible to hold the hands in it for even five minutes.

A few rods below camp, Arnold's River rushes down to join the outlet of the bog. We found the river full of small trout. We noticed the footprint of a man travelling down the river—a solitary and unusual place for such a sign. Not long after, I noticed a print from a moccasin, where the wearer had slipped in descending to avoid a rock. These tracks, occurring so unexpectedly in this solitary region, brought before me the image of the Indian maiden, who, travelling with her load of furs from Megantic to the settlements, was murdered in the forest. As the story goes, Jehiel Biffin, the greatest trapper of this region, the owner of three hundred traps, whose line extended thirty miles through the forest to the shore of the Megantic, won the heart of a beautiful Indian maiden in her home on the swiftly running Ohandiere. She, following him on his line of traps, never returned to gladden the eyes of her aged father. Her brothers, alarmed by this protracted absence, followed his track with great difficulty, only to find her murdered in the forest. Since this time, true to the traditions of their race, they have been seeking to kill Jehiel; indeed, almost succeeded not long ago, for they arrived in Madrid one morning only to find that their intended victim had left during the night, having been warned in time. His traps are yet in the forest, no one daring to collect them, fearing lest he should be killed by mistake. The imagination easily takes fire in the pathless forest; so it is not to be wondered at, that we should turn and follow in the direction of their footprints. We did not overtake those who made them; but in the morning, hearing five shots in rapid succession, an unusual sound so far from civilization, I could not but think this was the end of the tragedy—the death struggle between the trapper and his Indian foe. Great stories are told of this white man's strength. He would travel from Rangeley Village to the Megantic, between sun-up and sun-down, carrying eighty pounds in his pack. When you consider how short the days are in winter, we realize the great endurance necessary to make between forty and fifty miles on snow-shoes, with a heavy pack, in this time.

Sunday evening, hearing a noise in the forest, which I had never traced to its origin, I asked my guide if he knew the cause. He replied by taking me to a dead tree, from which the sound came, pointing to several small streams of minute bits of wood which were coming out of holes in the tree trunk. Then taking an axe, the wood was split away, layer by layer, revealing a white worm, one inch long. The sound could be heard one hundred feet. In character, it was like that sent through the bones of the head when chewing india-rubber. It was difficult to believe so small a worm could cut hard spruce so rapidly, and make so loud a noise with its minute jaws in doing this. No doubt the dead tree acts in some way as a resonator. By tapping the tree, the noise and stream of chips stopped, only to be resumed after a considerable interval of quiet. At this camp I noticed twenty specimens of a species of vanessa, in a space four inches square; so close together were they, that five were taken between the thumb and finger at one time. The surrounding mountains here, as well as at Caribou Pond and Parmachene Lake, contain great abundance of slate, some of which, from being exposed to the air, had turned as white as common limestone.

On the portage at Parmachene is some slata with so good a fracture as to warrant working, if civilization ever nears this point. The forest about Arnold's Bog, like that near Caribou Pond, is stunted—there is no timber. As one goes south toward Otter Creek it improves as the land becomes less elevated. We met with many fine specimens of betula, lutea, lenta, and papyracea, though the bark on the latter did not grow thick enough to make into canoes.

On this portage, I also saw a great abundance of our largest umbel bearer, *Heracleum lanatum*, some of the plants seven feet high.

On the waters mentioned in this article the white water lily, *Nymphea-odorata*, is conspicuous by its rarity, while in waters of similar elevation in the Adirondack region it grows in great abundance.

On our return to Parmachenee I saw large numbers of the wild quelder rose, *Veburnum opulis*, on the shores of the Magalloway, in full blossom. In a cove on Parmachene, were many specimens, a variety of *Nuphar luteum*, which differed from any described in Gray's Manual, the stigmas having fewer rays, no specimen being found with more than eight.

Seeing a hedge hog feeding on the roots of grass at the water's edge, botany was forgotten for a moment, while with silent strokes the skiff was paddled toward him, until, with one vigorous push, its square prow was bumped, with decided emphasis, against his nose. So far as astonishment could be depicted on his face, I saw it, for twenty seconds elapsed before he realized that he ought to leave that vicinity; even then, as if unconscious of man's presence, he only retreated about five feet, to the lower branches of a stunted spruce, where he stood with erected quills.

Before closing this already too long letter, two or three curious expressions ought to be mentioned,

If, for example, our trapper is telling some adventure, his listeners will show their satisfaction in having escaped such a scene, with remarks like these:—"Not any of that in mine, thank you," or "Not any for me," or "I don't want no part of that." The range of rounded hills on the Cupsuptic stream they call the "Cupsuptic Nubbles." A house, though it be two stories high, is called a "camp," if away from the settlement and used as a place for sportsmen.

The rest of this trip must be passed over in silence, saying only that the route to Parmachene, via. Philips and Farmington is much shorter than any other.

In past years, Mr. Treat and the writer usually spent four or five days in reaching Parmachene Lake with our canvas canoes by way of Bethel, Upton, and Magalloway River; while this year leaving Danforth's Camp on the lake at eight o'clock one morning, I reached Boston next day in time for supper. On the way, over the portage between the lake and Cupsuptic stream, was a patch of maiden hair fern, *Heracleum lanatum*, covering a quarter of an acre. WILLIAM HERBERT ROLLINS.

Boston, Aug. 17th.

Fish Culture.

FISH FUNGUS.

Saprolegnia ferax is the accepted scientific name of the micro-fungus which attacks salmon and trout especially, and other fish to a certain degree. Max Cornu, in the *Monographie des Saprolegniée*, says that the family of the *Saprolegnia* constitute a natural group of aquatic fungi, to which from time to time various species have been added. The chief writers on the subject have hailed from Germany; though a Frenchman, M. Muret, has given some good and very accurate drawings, which, as is evident to anyone, are better calculated to elucidate the subject than mere verbal descriptions. From them, as might be supposed, it is educed that the difficulty of studying their histology is great, for it is only in a living condition that they can be properly studied. No mounted specimens are capable of exhibiting the changes which so rapidly go on in the living organism. Speaking of the methods of reproduction and propagation—a most important point, by-the-bye, if the disease is to be checked—M. Cornu observes that the genus may be disseminated through the air or through water indifferently, thus showing that the vehicle of distribution is unimportant, the plasmatic (*plasmatique*) part alone being essential. M. Cornu says that he has watched the whole proceedings of fructification take place within an hour from the reception of the primal germ.

We have been for a long time carefully gathering testimony from all available sources, at home and abroad, in order to determine the true cause of that very prevalent and fatal disease peculiar to the Salmonidæ, which is known as fungus, and which has so long baffled the investigations of fish breeders. There seems no doubt whatever thatt originates from abrasions of any sort, whether from nets or from personal injuries inflicted by each other from struggles in ascending the streams from spear wounds or other causes. The disease having once fixed itself upon individuals, becomes infectious, and is rapidly communicated to the masses. One intelligent contributor to *Land and Water*, writing of salmon, says:—

It is now nearly forty years since I first began to watch their habits, and year after year I have witnessed the terrible fights carried on among the males for position. They are beautiful and strong when they first arrive, but in two or three days many become covered with ugly scratches, and back fin and tail torn to shreds by the teeth. In about eight days these wounds begin to fester and spread, assuming a whitish color. Hence, from their changed appearance the fish affected are vulgarly called scabbed. In about fourteen days a mould or fungus fully develops itself over the wounds, and then these fish generally sicken, and may be found in large numbers almost unable to move in the eddies and shallows of the river. I have again and again stood on the bank within a few feet of them in the stream, and so resolute and absorbed did the males seem in their hostile work that they were utterly oblivious to the presence of any one nigh them. That the wounds thus inflicted is the origin of the disease, I firmly believe, and what makes it more probable is the fact that I have only known of one female thus affected in the upper waters. From the evidence given it now seems that the disease attacks male and female alike. This may be explained by supposing that after the diseased fish have been swept down to the lower pools, and the sickly and healthy get mingled together, and the fungus fully developed, it becomes infectious, and seizes others in the lower waters. Again, the fact that all varieties of the salmon are not equally attacked, points to the same conclusion. The sea trout and what are called the little red fish come first, and male and female being nearly equally divided few fights or deaths occur. Next come the brown-nosed grey fish, and shortly after them the "buttoners," so-called from a spot below the neck. Among the two latter there are at least a dozen males for every female fish, hence bitter fights and widespread disease and death ensue. Lastly, about March, comes a small variety with snow-white bellies, and as the proportion of males to females among these is reversed, so also are the results. I observe that it is a popular theory with some of the witnesses that the disease arises from the salmon being unduly detained in the fresh water. This theory appears to me to be totally unsupported by reliable testimony. I may state as a fact that in a small pond in this district there has been a salmon kept for two years and another for one. Both continue lively and apparently in good health, catching both flies and minnows. Surely these observations go far to prove the origin of the disease.

The inference from the foregoing is, that the disease occurs chiefly after the spawning time, which occurs in autumn. In the spring it attacks the kelts, which are the spent salmon which remain in the upper fresh waters throughout the winter. At this time the kelts are known to feed ravenously upon the salmon fry, among which they not only create great havoc by the immediate destruction of immense numbers, but by the mutilation of such as escape from their jaws. The injuries which they thus inflict causes fungus, which at once communicates itself. It attacks the pectoral fins and tails chiefly. So also, drift or hang nets cause blisters and sores upon such fish as escape from their meshes. These several causes explain why the disease makes its appearance at different seasons of the year. Thus far, it seems to be the only remedy which has yet been discovered; and it is certainly very efficacious. It does not follow, however, that salmon when at sea are exempt because they are in salt water, but because those battles do not occur there, as they do at spawning time; also, that they have immunity from nets. It is apparent, therefore, that all dead and mutilated fish should be at once removed, if practicable, as soon as they are discovered in the rivers. A preponderance of male fish is also undesirable, and the proportion should be kept down.

It will now be important and interesting to discover how the disease is spread. For convincing proof we are again indebted to an intelligent and careful observer who communicates his views to *Land and Water*. We can do no better than to reproduce his written statements. He says:—

Any one who has examined an affected fish knows how easily the fungus growth is scraped off. A spawning fish is continually rubbing itself on the gravel, turning over, and generally scraping upon the bottom of the river. By so doing, when it has the disease on it most surely the fungoid growth will be detached from the fish and probably fasten upon some other healthy fish engaged on the same bed. Even the spawn itself may possibly be injured by the odious excrescence of the disease. A little higher up the river than where I noticed the above, close to the town of Kendal, in comparatively shallow water, there was a male salmon of about fourteen pounds in weight, and what a sorry object it looked! Instead of the bright, smart appearance of a newly-run fish, darting hither and thither to hide from the gaze of the on-looker, it lay a couple of yards from the side, and heeded not the scores of people who gazed in wonderment upon the pitiful creature. Poor thing! it was in the last stage of the disorder. In water running not more than at a rate of some three miles an hour it was scarce able to stem the stream. Gradually it "tailed" downwards, occasionally being washed half over on to its side. A mischievous urchin threw a stone at the fish, but it took no notice. Its large, particularly expressive eyes looked as if pain were suffered. But the color of the fish was that which attracted attention. I think I never saw one that had so much of the fungus upon it. Generally the diseased fish

are dark-colored, with blotches of white—the fungus—here and there. This one was almost covered, and quite three-fourths of the poor salmon was of that hideous whiteness which denotes where the *Saprolegnia ferax* has been at work. I left the poor fish, and in an hour repassed the spot where it had been. It was not there. Twenty yards lower down the stream it lay dead, but being some distance from the side, I was not able to take it from the river. Later the same day I wandered still lower down the Kent to where the noble hall and park of Levens are striking objects in the scenery. There were one or two trout with slight white marks upon them in the higher streams. Then I found a salmon of about thirteen pounds lying partly in and partly out of the water. I drew it to the side, and, although comparatively fresh, it might have been dead thirty-six hours; rats or herons, or both, had been making their meals upon it. A portion of one side lay open, and from it, with a slight pressure, oozed the spawn, for it was a female fish. On turning the fish over there was no difficulty in seeing what had caused death. The tail and body up to the ventral fin were covered with the disease (when out of the water the fungoid is the color of light dull brown paper, whilst in the water it appears white). The head also was attacked, as were the pectoral fins and the body for some distance round about them. The fish otherwise was fairly bright, and the disease must have made great progress, if it had not already been present when the subject left the sea, for this salmon had not been very long from the salt water. In other parts of the river I got three or four trout, which were lying dead at the side, all badly affected. I noticed several others still alive, but badly marked, and at least two of them, in darting from the side, took refuge in the weeds. Now, here again have you a cause as to the spreading of the disease, for is it not likely that some of the fungoid may become detached from the fish and attach itself to the weed? Being of a vegetable nature itself, probably the weed may take the infection, and then in turn communicate it to other fish, or perhaps to other matter with which it may come in contact. However, there can be no doubt that *Saprolegnia ferax* is very easily spread, and just now in the river Kent it is worse than it has ever been at so early a period in the year. In other seasons it was more noticed in the very early spring, or after the fish had spawned; and now that unspawned fish are attacked I consider it a very bad sign indeed, and the fact of fish spawning whilst in that unsound state is likely to be very deterimental to both trout and salmon.

SHAD IN TENNESSEE.—The shad which were deposited in the Cumberland several years ago, have never made their appearance in sufficient numbers to call the experiment a success. It is the opinion of a good many out here, that the long trip from the mouth of the Ohio to the Gulf, through the muddy and turbulent waters of the Mississippi, makes the attempt a necessary failure.

GERMAN CARP IN TENNESSEE.—*Nashville, Nov. 30th.*—The test of propagating the German carp in our State is now being put in practice. Professor Baird shipped some 500 to this place, and they arrived safely and in fine condition about ten days ago. They were handed over to Col. Geo. F. Aken, our State Fish Commissioner, for distribution. There is no doubt but what they will succeed admirably in this climate. The growth of aquatic plants, and the immense quantity of insects and worms which throng around our ponds and water courses, will furnish them an abundance of their favorite food, while the temperature of the water must suit them exactly. There were any number of demands for the finny strangers; but, as Col. Aken would not give them to any persons who were not willing to draw off the water from their ponds, and take out every other species of fish that might be in them, the process of distributing was a little slow. Where the experiment will be most thoroughly made, is at the Asylum, a few miles from Nashville. Here there is a pond covering a space of several acres; from this all the water was drawn, and every vestige of living matter removed from it, when the pond was refilled, and the "carp" placed in it. Dr. Callender, who is the Superintendent, is a gentleman of rare culture, and his treatment of the precious charge will be purely scientific; and, if they are to be a success, it will be under his care. The others were sent to different places, where the applicants had the proper means of doing justice by them.

A rather amusing incident occurred, a few days after the "carp" arrived. The local press noticed the fact, and stated they were to be given away to persons having suitable places to put them. An old farmer drove up to the office of the Fish Commissioner, having in his wagon a whiskey barrel filled with water. Said he: "Wall, Kernel, I have cum to get a few of them new kind 'er fish."

"How many do you expect to get?" replied the Colonel, "and what have you to take them away in?"

"Reckon I don't want mure 'n three or four hundred; and that barrel in the wagon is full o' water, which 'll do to take 'em to the pond in."

"But," said the astonished Commissioner, "only five hundred fish were sent me for the whole State, and, of course, I can give no such number to any one person; besides, do you know that they cost, at least, $10 each?"

"Wall, that settles it," said the farmer, as he drove off. "Got no use for sich high-toned minnow as them; so good-bye. J. O. H.

SETH GREEN'S HYBRID TROUT.—*Rochester, Nov. 29th.*—In your issue of Nov. 20th I notice in Dr. Garlick's address he says: "It is not very long since a prominent fish culturist announced in a sporting journal that he had bred hybrids from the *Salmo fontinalis* and another species of trout (I forgot its name) found in California or among the Rocky Mountains; I do not remember which place. Now the *Salmo fontinalis* spawns in the fall of the year, October and November, and this California trout spawns in the month of March, so said this person who accomplished this astonishing feat in fish culture, there being five or six months difference in the time of spawning. How he accomplished this feat I do not know, unless he adopted the Rev. Dr. John Backman's plan, that of drying the eggs of the perch for ten days, from which he obtained a considerable number of young perch. I have not the lest doubt that eggs that have dried for ten days, would be as sure to hatch in five or six months or five or six years. Such statements are pernicious, and tend to lead beginners astray."

As I made the above announcement in regard to crossing the California mountain trout with our native brook trout, to which I still adhere, I will say in my defence that as a rule the Eastern brook trout do spawn in October and November, but the trout of Caledonia Spring Creek, on which the New York State Hatching Works are established, commence to spawn about the middle of November and continue until about the middle of March. Last season the last spawn we took were 3,000 on the 12th day of March. I have taken them as late as March 20th, and could undoubtedly have taken a few up to April 1st, but as there are so many fish to handle it does not pay.

The California mountain trout commence to spawn March 1st, and continue until about the middle of April. There is no trouble in crossing these two kinds. I have never published the results of any experiments except those I have made myself personally, or which have been made under my immediate supervision, and therefore know what I am talking about. I am very sorry to see that Dr. Garlick, or any one else, should doubt me in this matter, and feel sure had he been better posted he would not have made the above remarks. SETH GREEN.

Sea and River Fishing.

FISH IN SEASON IN DECEMBER.

FRESH WATER.

Black Bass, *Micropterus salmoides*; *M. nigricans*.
Sea Bass, *Sciænops ocellatus*.
Pike or Pickerel, *Esox lucius*.
Yellow Perch, *Perca flavescens*.
White Perch, *Moronc americana*.

THE REDFISH OF IDAHO.

In some of the large lakes of Idaho and Washington Territories is found a peculiar fish called the "redfish," which has no place in the catalogues of science, and no specimen has been placed in the Smithsonian Institute. It is probably a distinct species of the salmon family, which includes every variety of trout and salmon. From what is said of it, we believe, says the Chicago *Field*, the redfish must be one of the most valuable of food fishes.—[*Germantown Telegraph.*

The above paragraph illustrates one of the very pleasant and encouraging (?) modes in which one's assiduous labor is performed. Here has the editor of FOREST AND STREAM been engaged for four years in the investigation of the haunts, habits and identity of this particular fish, publishing our progress from time to time, as we gathered new information, chiefly through the instrumentality of that persistent naturalist, Capt. Chas. Bendire, of the 1st U. S. Cavalry; and when at last specimens of male and female had actually been procured and sent to the Smithsonian Institution, and portraits of the same printed in FOREST AND STREAM (issue of Nov. 13th), with full description of colors, habitat and characteristics—lo! we have the above comprehensive paragraph concocted by the combined labors of two astute journals, who constantly beg recognition for their enterprise, honor and thoroughness in all matters especially pertaining to fish; while at the same time their reluctance to give credit to an industrious contemporary permits them to summarize so important a subject in a brief paragraph, in every line as erroneous as error itself!

Now let the mantle of Elijah fall upon these two worthies, for none others so deserving can be found in all the land.

LAKE REGION OF FLORIDA.

THE time is approaching when the disciples of the rod and gun and paddle will be directing their flight southward to escape the chilling attentions of Old Boreas. As canoeing has become a popular source of amusement, and as it is a pleasant as well as a healthy source of enjoyment, I am disposed to direct the attention of canoeists, and even boatists, to a section of Florida that has hitherto escaped extended notice. I refer to the lake region of Florida, *par excellence*. To those who can enjoy life on salt water, with consequent adventures, I would say, try Indian River, or the southwest coast, as they offer all that can be desired; but to those who prefer quiet and retirement among attractive lakes, I will say, spend a holiday in the section about to be described.

Black Creek empties into the St. Johns River, twenty-miles south of Jacksonville, and some weeks since I wandered across lots from Middleburgh, situated at the junction of the north and south forks of this stream, to a pond on the Suwannee River, twenty-five miles from the Gulf. To my surprise I found *en route* one of the most interesting sections of the State. To the east, and within fifteen miles of Waldo, a thriving town on the Cedar Keys and Fernandina Railroad, will be found at least forty beautiful lakes, varying from 200 yards to seven miles in length.

These lakes are generally deep, with pure water, and here and there will be found clear sand beaches. As a general rule, they are surrounded by high land, covered with large pines. In the neighborhood of Sand Hill and Five Mile Lakes and Number Eleven Pond the country is high and rolling. The altitude of Santa Fé Lake is one hundred and twenty-one feet above tide-water, and the remainder of the lakes range from sixty to one hundred feet. Owing to the elevation of the lakes, and the hilly nature of the adjoining country, the wanderer and the invalid can have a guarantee of pure air and health.

These lakes are stocked with bream, bass and perch, and furnish admirable sport for the bait fishers, the troller, or caster of the fly, with light tackle, small hooks and worms (known as sawyers) from dead wood, or shiners (small minnows). During the winter months ducks in variety are plentiful. Where marshes or savannahs exist snipe can be found. Herons, gannets and cranes are plentiful. About four miles north of Sand Hill Lake I passed a pond covering probably ten acres. Growing in the pond were numerous large cypress trees, and they were literally covered with gannets and white herons. Never having been disturbed, they were very tame, and allowed me to approach within thirty yards. In the woods and fields quail are tame and in quantity, awaiting a visit from sportsmen. The hammocks, which are timbered with live and white oak, hickory and magnolia, will at all times furnish the material for a squirrel stew. It has been my lot to see a great deal of Florida, but for beautiful lakes, fine views, good roads, and sporting attractions, this section, taken as a whole, certainly excels.

To reach the lake a canoe or boat can be transported to Waldo by rail, and from thence, a distance of four miles, to Santa Fé Lake. From the westerly end of the lake to Melrose, a new and growing town at the easterly end of the lake, is a row or sail of seven miles. There are several hotels on the bank of the lake, and an excellent boarding-house at Melrose where tourists can obtain good accommodations and a square meal.

Another route is to ascend the St. Johns River to Glen Cove Spring, and from there, to the lakes by wagon, a distance of twenty miles. The Bellamy road passes through the lake region, and it is an excellent one, and boats and impedimenta can be easily transported. Etoniah Creek empties into the St. Johns River, twelve miles below Palatka, and we have been assured that this stream can be ascended to the lakes. This statement we give as information received, and not as the result of personal observation.

Settlers reside here and there among the lakes, and a Florida contraption, denominated "keerts," can be obtained to transport a light boat from lake to lake, whenever a change of base becomes desirable. At Melrose, they have doctors, a drug store, and three general stores, where numerous doses of groceries can be obtained; and, in addition, a post office, and, I believe, a daily mail, where letters can be received and answered. If it should be deemed necessary to visit the post office, or recruit your stock of eatables, a marsh tacky (pony) and keert can be chartered on very reasonable terms, and the end attained by a slow, but sure and primitive process. Or, if the party is supplied with a gentlemen of the colored persuasion, whose services can be secured for about twelve dollars per month, he can be utilized as mail carrier and provision toter, if he is not addicted to imbibing corn juice.

I found the residents of this section hospitable in the extreme, and I recived a hearty welcome everywhere. In this section the sportsman will find much to interest and amuse him, and the invalid would secure fresh air, retirement, and numerous sources of enjoyment; the taxidermist could secure specimens of numerous birds, and even the artist could find many beautiful spots worthy of his pencil. To me, the navigation of creeks and small lakes is too tame, but if I had a weakness for quiet sailing I would select the region referred to.

Having referred to canoes and boats, I may remark that they can be cheaply forwarded to Jacksonville by sailing vessels leaving New York weekly. If they are consigned to Peter Jones, Jacksonville, Fla., he will pay freight and take care of them until owners arrive—and I may remark that his charges will be reasonable. If desired, new and second hand boats can be purchased in this city at about New York prices. Everything in the way of fishing tackle (flies and fly rods excepted,) and ammunition, can be obtained on as reasonable terms as in the North.

To those who intend visiting this State, and who enjoy fly fishing, I will say, bring rods with you. Fly fishing in many portions of the State is all the most enthusiastic fisherman can desire—more especially on the southwest coast. AL FRESCO.

FISH SWALLOWING FISH.

WATERTOWN, N. Y., *Dec. 2nd.*

Editor Forest and Stream:—

Twenty years ago my wife stood on the shore of Lake Ontario, at a point where Heald's farm borders the lake, about six miles west of Oswego. Some fishermen were cleaning fish that had been taken in a seine, and among them was a twelve-pound catfish. After taking off the head they proceeded to disembowel it, and found in its stomach to their horror, a baby's hand in a partially decomposed state. It was off at the wrist. It is perhaps needless to add that there is at least one lady in the world who for twenty years has had no especial hankering for catfish.

I believe in your edition of Nov. 13th ult., something is said about a leviathan fish-hook. Well, the account above is a horrible fact—beat it who can. JONAH.

WASHINGTON, D. C., *Dec. 6th.*—While fishing in bayou Tache in Louisiana, during the war, I baited my hook with a minnow about three inches long, and fastened the end of the line to an overhanging branch of a tree. I then went after mud hens for an hour or so; when I returned to my line, I saw the branch bending and moving from side to side in quiet a violent manner. On attempting to pull in the line I found that some large fish was hooked, that would probably break hook and line if I persisted in my efforts to land him. I went to the residence of a gentleman near by to borrow a fish spear, stated my case, and he accompanied me back to the stream with a three-pronged hay fork, in lieu of spear, which was mislaid. After considerable trouble I succeeded in pulling within striking distance my supposed fish, which proved to be a young alligator, thirty-eight inches long. The fork was thrust into him and we landed him. As hooks were scarce at that time I concluded to recover mine, and after dispatching the saurian cut him open and found that he had swallowed a five and a half pound trout. In the trout was a "cotton mouthed" moccasin snake twenty and a half inches long; in the snake was a soft shelled turtle two and a third inches in diameter; and in the mouth of the turtle was the hook. The minnow we did not find.

Now, Mr. Editor, this sounds *rather steep*, but if necessary, and if Gen. Mouton is still living at Centreville, La., I can prove what I have written by his affidavit. If Mouton is not available, Col. Tom Ochiltree of Texas, who will soon be here, will certify to it. L. L. R.

We should be pleased to see the affidavit, properly attested before a notary public. "I. L. R." is just a few inches ahead, so far. But next week we shall hear from Professor Gill again, and then perhaps that affidavit may not be necessary after all. Competitors for the prize fish-hook (it is a big one) are admonished to send in their little stories at once, as the contest was originally announced to close Jan. 1st, 1880. There is a man in Indianapolis, Ind., whom we want to hear from; one in Albany, N. Y.; two or three down in Kentucky, and a score of tried and true contributors who are just now displaying a modesty most unusual.

FIRST SHAD OF THE SEASON.—We have to record the receipt in our markets of the first Savannah River shad of the season. They came in last week. By reference to our files of last year we find that their earliest then was Nov. 29th. Strange to say, a roe shad was caught on Nov. 19th last year in the Hudson River, near Peekskill, and three male shad off West Hampton, L. I., on the 23d of the same month. As the season for shad is popularly supposed to end about the 1st of July, the period when they can be found in our markets seems to extend over seven months.

A GIANT PIKE.—Talk about great pike! Why the *Esox lucius* of Great Britain can't shine beside our *nobilior* for weight, game and flavor. We are this week in receipt of a photograph of a muscallonge which was referred to recently in our columns. That the size of the fish may be appreciated, the artist has pictured it as held up between two tall men, whose shoulders it reaches. The weight is forty-five pounds and the length four feet. This is a *big* fish. Minnows have no chance in a school of such fellows.

CARP AS A GAME FISH.—Now that we are to have carp in all (?) our waters, it will be interesting to our readers to know in what estimation they are held abroad as a game fish. In *Pisatorial Reminiscences* we find the following:

The carp is a very wary fish, and requires the angler's utmost patience to ensnare. The biting time of this fish (particularly of large carp) is very early in the morning. They delight in still waters, where there are large flags and weeds, with broad leaves. One of the best methods of angling for carp is to gently drop in a line leaded with a single shot only, which will be sufficient to sink the bait. Do this in the following manner: Let the bait so tall that itself and a few inches of the line, with the shot, may rest on one of the large leaves, the bait itself hanging within the water, over the edge of such a leaf; this bait must be red worm, with a gentle to cover the point of the hook; when you observe the shot drawn from the leaf, give the fish time to swallow his bait. But if you are fishing with paste or boiled green peas, etc., strike instantly; let your tackle be strong, for the carp will afford you sport. You are enabled to judge of their haunts, when you hear them smack, or suck, as it is sometimes called. Throw in some slices of bread as ground-bait on the over night; and cast in, while angling, some small pieces, like peas, if you use paste; but the ground-bait is sufficient to entice them to the place. Carp exhibit more or less of color according to their age and the waters they inhabit; those taken from ponds will be greatly benefited in taste by being put into river water for ten days or a fortnight. Carp feed upon the larvæ of insects, worms, spawn and young shoots of water plants, for which reason it is found beneficial to carp ponds, when the water is low, to sow grass-seeds round the edges, etc. They will live a long time out of water, and, with proper care in changing their litter (keeping it moist), they may be transported to a great distance. Dr. Block says: Seven ships are employed in this trade to a great extent, from Polish Prussia to Stockholm, and are said to produce an ample profit. Carp were introduced into England in the year 1514.—[*Pisatorial Reminiscences.*

MOVEMENTS OF THE FISHING FLEET.—Only five fishing arrivals have been reported at this port the past week—four from Georges with 44,000 pounds codfish and 24,000 pounds halibut, and one from the Banks with 3,000 pounds halibut.—[*Cape Ann Advertiser, Dec. 5th.*

VIRGINIA—*Leesburg, Dec. 5th.*—I saw a black bass just now weighing five pounds and a quarter, caught by an old colored man named Johnston. Bass caught this fall have been unusually large, but have not been taken in great numbers. T. W.

DRESSING FOR LINES.—To a quarter pint of "double-boiled cold-drawn" linseed oil add about one ounce of gold size; gently warm and mix them well, being first careful to have the line quite dry. While the mixture is warm, soak it therein till it is fully saturated to its very centre, say for twenty-four hours; then pass it through a piece of flannel, pressing it sufficiently to take off the superficial coat, which enables that which is in the interior to dry well and in time to get stiff. The line must then be hung up in the air, wind or sun, out of the reach of moisture for about a fortnight until pretty well dry; it must then be re-dipped to give an outer coat, for which less soaking is necessary. After this, wipe it again, but lightly; wind it on a chair-back or towel-horse before a hot fire, and there let it remain for two or three hours, which will cause the mixture on it to "flow" (as japanners term it) and give it an even gloss over the whole. It must then be left to dry as before; the length of time, as it depends on the weather and place, observation must determine upon. By this means it becomes impervious to wet, and sufficiently stiff never to clog or entangle, the oil producing the former quality, and the gold size (which is insoluble in water) the latter; while the commixture prevents the size becoming too hard and stiff. A trolling-line should be thus dressed every season at least.

DO GRILSE SPAWN?—I have been asked by a gentleman interested in biology whether grilse spawn, and whether they return to the fresh water the same year they go down as smolts, and whether they remain a year in the sea. In my opinion some may return the same year they go down as smolts, but some certainly stay one, if not two years in the sea. As regards the female grilse making its nest and depositing its eggs, I am not quite certain. When collecting salmon eggs for Australia and New Zealand I do not recollect having caught a grilse with eggs in her. I should be very grateful to our correspondents if they can produce any positive evidence that they do spawn. By a grilse of course is meant a fish running up from its first return from the sea.—FRANK BUCKLAND, in *Land and Water.*

There is no doubt that the male grilse in America come to maturity, but we do not learn that the females ever do. Many male grilse contain full milt

Natural History.

SHOWERS OF SPIDER'S WEBS.—Since Mr. Geo. A. Boardman's note, under the above heading, was sent to the printer, we have remembered Dr. G. Lincecum's interesting article in the American *Naturalist* which explains the phenomenon observed by Mr. Boardman, though further observations on the question raised are needed. Dr. Lincecum's article is entitled The Gossamer Spider, and it is to be found in Vol. VIII of the publication cited, p. 593, October, 1874. Additional information on this subject is given in Emerton's Structure and Habits of Spiders.

THE CABBAGE WORM PARASITES.—All, or nearly all, of the cabbage that was raised in this part of the country the past season was entirely destroyed, or badly injured by the green cabbage worm, after the heads were well developed; and as our own cabbage shared the same fate, I have had an opportunity to study some of the habits of this pest. Several weeks ago, I noticed that the full-grown worms left the cabbage and sought shelter in an old building near by. They came in such numbers that the building is almost lined with them. They would crawl up to a good safe place and attach themselves very securely in three places, at either side and at the posterior extremity, to the wood, by a tenacious white thread-like substance. When fastened thus, I noticed that they were preyed upon by a tiny four-winged yellow-legged fly. A glutinous liquid issued from the larvæ in several places, and I supposed the flies were feeding upon it. In a few days a thin crust—the color of the wood upon which they were fastened—would form upon, and encase the worms. I noticed, also, that after this casing was formed upon the worms, they were never moby the flies.

I opened one of the cases to examine the moth, and to my astonishment, found it literally crammed full of the tiny white larvæ (fifty in number) of these flies. I opened perhaps a dozen others, and found them the same, except that in some the young flies had developed and were making their way out through little perforations that they had, perhaps, gnawed in the casing.

The glutinous liquid that I had noticed upon the worms, had, I presume, escaped through the perforations that these insects had made, in which to deposit their eggs.

How wisely nature guards against excess, and keeps most things within proper bounds. Had all the larvæ of the cabbage moth developed, their numbers would have been almost startling.

I send you one of the perforated cases from which the young flies have escaped; also one containing the young larvæ, and a specimen of the fly and cabbage worm.

Coralville, Johnson Co., Iowa, Nov. 17th. W.

The observations made by our correspondent are extremely interesting, but require to be supplemented by a few remarks by us. With the note, which we publish, were received several specimens of the pupae of the cabbage worm, two of which were brown and evidently dead, and proved, on examination, to be filled with the larvæ of the "fly." A specimen of the "fly," examined, shows, as might be inferred from our correspondent's statement that it is four-winged, that it is not a fly, but a chalcid hymenopter, belonging in the same order with bees, wasps, etc. The specimen appears to be *Pteromalus puparum*, an insect which has been known to be a native of the Hudson's Bay Territory since 1844. The pupae appear to belong to the cabbage butterfly, *Pieris oleracea*, though it is possible that they may be those of another species (*P. rapæ*).

The history of *Pteromalus puparum* was first made known to science by Mr. A. G. T. Richie, of Montreal, who reared many of them from the caterpillars of the cabbage butterfly. The value to the farmer of the services of the little insect is very great, and its general dispersion over the United States is very desirable. We had not, previous to the receipt of our correspondent's note, heard of it in the west, and we shall be interested to learn if it distribution there is general.

Our correspondent, who is evidently a close observer, is to be congratulated on having noticed the interesting facts which she communicates, and upon having furnished such full description and material as to render the identification of the parasites an easy matter.

CANADA GROUSE.—The writer of the article on the "Drumming of the Canada Grouse," published in our issue of November 20th, wishes us to state that the ocular observations referred to were not his own, but those of Mr. John Nelson of Cap Rouge, to whom he wishes to give the proper credit.

THE NATIONAL MUSEUM.—Hidden from sight by the noble trees which make the Smithsonian grounds the pleasantest retreat in Washington, is a large but modest brick structure, which, when it shall be completed and filled with the treasures now hidden away in packing boxes, will be one of the finest museums in the world. For the past three years Professor Baird has worked for this building with great energy and perseverance, and last winter Congress rewarded his efforts with an appropriation of $250,000. A model of the new building, which is displayed in the main corridor of the Smithsonian Institute building, shows a square, red-brick building, all but the central part one story high. "The idea of the building," writes Professor Baird, "is due to General Meigs, although the details and special adaptations were worked out by Messrs. Cluss & Schultz, the architects, the principal feature being the arrangement of everything on one floor of a square building of great extent, in which there shall be no interruption to the drainage of the water from the centre of the roof to the exterior. I do not know an edifice constructed precisely like our new building, and I am confident that it will make a new era in public architecture in its economy of space combined with a minimum of expense, being at the same time entirely fire-proof."

The building is relieved by the straw-colored Milwaukee and blue-faced brick, and the Ohio sandstone lintels and cornices. Between the arched windows are bosses of stone with foliated ornaments. The supports of the roof are substantil brick columns, and the interior is arranged to utilize all the space possible for the exhibition of specimens. It is intended that the new building shall be devoted more particularly to industrial exhibits, the natural history objects being retained in the Smithsonian, where they now are. Special space will be given to the display of mineral wealth arranged by States, counties and mines.—*Christian Union.*

THE ENGLISH SPARROW ONCE MORE—*Quebec, Canada, Dec., 1st.*—The common house sparrow is fully established in Canada (but it is terribly slaughtered by the great Northern shrike, commonly called the butcher bird). It is, however, a powerful assistant against insects, and will soon become an object of sport for small boys and an ingredient for sparrow pies. I have already eaten the sparrow at the Palace Hotel in San Francisco, and I have no doubt it will become a delicacy in other great hotels.

Some of your writers I note, are afraid these European birds will, like the white man, drive the red man's birds out of the country. This is likely enough; the civilization of the Old World has destroyed everything purely American, and apparently will not stay its hand. It does, however, feed the the Irishman's sparrow; and we must hope it will respect the farmer's quail. W. RHODES.

The Kennel.

THE N. A. K. FIELD TRIALS.

SATURDAY morning Nellie and Bow were put down to run off for second and third places, but after a short run their owners took them up again. The record for the whole trial being this:—

In the Free for All, Lincoln won first, and the honors of second and third were divided between Nellie, Bow, and Dash; but the latter wins the money for the third prize ($100), while Bow and Nellie divide the second money ($150).

Then came the Brace Stakes; of the five braces entered, Mr. Smith withdrew his Paris and Lass O' Lowrie, and Mr. Sanborn also withdrew Macbeth and Desdemona. The remaining braces were Bow and Faust, Nellie and Dan, and Lincoln and Fred.

Bow and Faust were put down by Whitman, and immediately exhibited good work, quartering and ranging in good style. Faust made the first point, and was well backed by Bow, the covey flushing and both dogs dropping to wing. Two false points for Bow followed, Faust backing him each time, Bow also discovering his error and moving on. The subsequent count of the heat was for Bow, a point, a back, and a second back; for Faust, four points. They were down fifty-five minutes.

Nellie and Dan, handled by Sanborn, were then put down, both dogs opening the heat with magnificent work. There score was, for Nellie, four points and one bird retrieved; Dan, three points and one bird retrieved time, forty-five minutes.

Dan then put Lincoln and Count Fred down, Lincoln showing to the greatera dvantage in ranging. The work done was a point for Lincoln, backed by Count Fred, the latter retrieving the bird. Then Lincoln pointed again in fine style, Fred again backing him; the brace being taken up: time, forty minutes. The committee retired for their decision, ballotting for the position that each brace should occupy, the result being that Nellie and Dan were first, Lincoln and Count Fred second, Bow and Faust third. It was the general expression that Bow and Faust deserved first in the braces.

THE YELLOW DOG AND THE ASTROLOGIST.

THE "Lost and Found" and "Rewards" columns of the daily papers always have their complement of lost dogs, for the return of which the anxious owners are willing to pay liberally. Last Sunday's *Herald*, for instance, advertised among amethyst ear-rings, watches, pocket-books, seal-skin sacques, seal rings, and law papers, a blue skye-terrier, named Jack, reward $5; a black spaniel shepherd dog, collar marked "Hubert," suitable reward; a setter dog, roan color, short tail, reward $5; Scotch terrier dog, lost on Broadway, blue ribbon on neck, reward $5; a black-and-tan, long-haired bitch, lost in Fifth avenue, reward $10; white and red setter, Dash upstanding, light nose, small dark wart on eyelid, reward $20; a black-and-tan dog, ears cut, collar edge scarlet $75 reward. There are seven dogs in one day's paper We once began to make clippings of these notices for a summary at the end of the year of New York's lost dogs but we tired of it. There is a deal of romantic adventure in metropolitan dog life—romantic as viewed from the dog's standpoint. A certain unsavory novel, by a more popular than proper writer of fiction, narrates the adventures of a lost dog and of the various classes of society in which he finds himself. To follow the fortunes of a pet or a valuable field dog strayed, lost, or stolen in New York would involve the description of some interesting phazes of city existence. We have some memoranda for such a story. Possibly when the winter evenings are here we may take our readers through the devious windings of these very crooked paths. Of course we should come across the fortune tellers and astrologers and the wonderful child gifted with second sight. A writer in

the Detroit *Free Press* tells us of his experience once upon a time with one of these omniscient old frauds :—

The writer of this article once lost a dog ; it was far removed from beauty, and not even ugly enough to attract attention. It was a "yaller dog," too, and possessed all the vagabond instincts of its worthless race. From being an unwelcome intruder in the household, it became tolerated and at last commanded a certain degree of respect by having in a spasm of fright routed a burglar ; its short, snappy bark was the terror of ragmen and grocers' boys. One morning the yellow dog was gone ; days passed, it did not return, and the owner really missed it. "Advertise it," said a friend, and forthwith a card appeared, with a description of the canine and the usual indefinite offer of a liberal reward. A week passed, and another advertisement that appeared in juxtaposition with the one for the missing dog, suggested a fortune teller. Why not ! The idea was so well received that no time was lost in seeking the reader of the past, present, and future, who could fortell speedy marriage and restore lost property. The home of the prophet was not palatial and did not indicate any remarkable success in reading her own fortune. For the sum of $1—which amount would buy yellow dogs by the hundred—the dog's owner was admitted to a sitting in a small apartment, dimly lighted and poorly ventilated, and sat down in a dilapidated easy chair with the feelings of one entering a scene of enchantment. The seeress was old and brown as parchment, and had a weird voice.

"You would know the future," she said, in gloomy, measured tones ; "I will read it for you ; I can tell you everything." Then, after a prolonged stare : "You will marry the one you love, and cross the water, live in a white house, with green blinds, have seven children, and—"

"No, no ! You are quite mistaken. It is something entirely different. You say in your advertisement you find lost property, and—"

"Yes, I see now. I was mixing you up with the last person that came ; histories cross each other ; did you ever spekilate enny ?"

"No ; I have lost——"

The countenance of the seeress became luminous with wisdom. Contracting her features as if going into a trance, she asked monotonously :—

"Did you ever lost yer father ?"

"No."

"Did you ever lost yer mother ?"

"No."

"Did you ever lost a dorg ?"

"Yes, oh ! yes."

"Was it a white dorg ?"

"No."

"Was it a black dorg ?"

"No."

"Was it a yaller dorg ?"

"Yes ! yes !"

"I thought so. I can read the future. Ther's a dark-haired woman and a light-haired man, and the dark woman—no, it's the fair man—has the dog, and you'll never see him no more, but the dark-haired woman—"

But that was enough ; the fate of the dog was manifest, and its owner went home sadly musing on the vague improbabilities of the future, as revealed at a dollar a head, and fell over some obstruction on the home door mat, and was immediately overwhelmed with a series of caresses from muddy paws. The yellow dog had taken his day, and has staid contentedly at home ever since.

CITIZEN VON CULIN ON DISTEMPER.

Delaware City, Del., Nov. 21st.

IF you believe, as I do, that distemper is highly contagious, upon the first sign of the disease remove the patient to the quarter best suited to treat him, as I have described. If you fail to do this in time, your kennel will soon be a general hospital. Both in the general and medical treatment of distemper we greatly simplify matters by dividing it into forms, as indicated by the symptoms. First, mild distemper so-called or classed, is when the early symptoms do not progress to severity, but subside from treatment or otherwise.

The first stages of distemper are always mild, and that we must watch carefully the development of each symptom, and administer the proper remedy promptly. I cannot too often remind you, and upon which depends its progress and development into the more serious form. As in other similar diseases, the dog is kept lying down a long time, and especially in warm weather, sores on the hips, hocks, shoulders and sides of the heads are apt to appear, called bed-sores.

To remedy this, bathe the parts, morning, noon and night, with strong alcohol, to which is added tincture of aconite root, thirty drops to the ounce of alcohol. A long continued inactive recumbent position in all cases of illness aggravates prostration, and had he not the fearful drain of the disease upon his vitality, he would, from this cause alone, when he commenced to exercise of his own accord, stagger, pant, and otherwise show his debility. Consequently, because he is convalescing, do not consider him safe, nor relax one particle of your vigilance ; rather, if anything, increase both your medical and dietetical invigorating treatment. Medically, remedies Nos. 2 and 3, alternate every two or three hours, and for diet all of the different food I have recommended. Be *very* careful how you allow him to return to regular kennel diet—gradual, gradual, gradual. In warm weather flies and fleas are a source of greater annoyance to a sick dog than the common observer would credit, the remedy for both of which is flea and insect powder, rubbed well on the dog and thrown in the bed. Tobacco stems or leaves scattered on the bed are also good, but are very repugnant to the dog. I do not wonder at this, as one drop of the oil of tobacco on a dog's tongue will kill him in one minute. Old carpet, bags or such material is preferable in warm weather to hay or straw, from its being cooler, and not so good a harbor for vermin. With the dog the eye is almost as good an indication of his condition as his pulse. A congested blood-shot eye, full and standing out, indicates an overcharged system. The above eye, with a wild, restless look from one object to another, unable to keep it fixed, indicates a confused mind ; the congested eye, with a dull, sleepy look, indicates a congested brain, overcharged with blood or symptoms of apoplexy ; a watery eye indicates languor, debility, or the nervous condition felt after fever ; sunken, shriveled mucus eye denotes extreme debility. Can the pulse speak plainer ? I venture to say it does not.

In cases of high-bred dogs I caution you not to be deceived with regard to their condition by the degree of spirit they may show. In distemper I have seen them display a degree of will power second to no human deeds of valor, where a glorious death was counted next to victory. One case I will always remember. A lemon bolton bitch (setter), by Rock (Adams), out of Pickles, eight or ten months old, had run through six weeks of distemper, and was without doubt convalescing, when she took a cold and diarrhœa came on again, as is usually the case, worse than before. This bitch belonged to a friend for whom I was raising and training her. She was a great favorite, as she gave great promise. I scarcely left her an hour at a time for two days and a night. The last morning I very unwisely called her out of her kennel, more to see how much strength she had than anything else. She staggered out on the grass. I not only acted unwisely in this, but foolishly threw a pad for her to fetch, which she did three times, but oh, so feebly. I sat on the grass to see what she would do when she went to her kennel. Just at this moment Mrs. Von Culin called me to breakfast. I ate my breakfast and went out to give her a dose of medicine, and to my astonishment she was dead in not less than half an hour. Another is the case of the champion Irish setter bitch Fire Fly, which I have since sold to Mr. H.W. Gause, of Wilmington, Del. She and her litter brother—Champion Rufus II.—both had distemper in my kennel at the same time and kenneled together during their illness. Fire Fly being very affectionate and intelligent, I favored her as a companion, and often allowed her to go with me to the store or post-office. On such occasions she was not satisfied until I gave her something to carry. About noon the changing of my coat and hat was the signal for going for the mail. Before going I always looked in at the sick dogs to see that all were comfortable as possible, and Fire Fly seeing the change in my clothing was never too ill to show signs of her readiness to go, though for a week or more she was unable to rise without assistance. Rufus II. also gave evidence that he was obedient unto death.

Poor old fellow ! he received an injury which disfigured him for life, and he was sold and passed through several hands until I have lost sight of him, which I hope some day to recover. Distemper emaciation is next to wonderful ; I mean that of such a rack, such a disfigurement of his former grace and beauty. In making post-mortems of distemper cases we have seen them when it would be impossible to scrape half a pound of flesh from the entire body, with not sufficient blood in the entire circulating system to properly fill the heart so that it could expand and contract for a single final struggle for life. The wonderful part is, that so extreme an emaciated condition of the body will sustain life so long ; in fact, much longer than in any other known disease. He staggers ; and the wonder is that he stands at all. In head distemper he is more apt to stagger easily than in the other forms ; convulsions also are more frequent in this form of the disease. Distemper convulsions differ in different forms of the disease, and in different dogs, some being almost as violent as the convulsions of epilepsy, and others so mild as scarcely to be discernible as a convulsion ; varying from a slight twitching of the eyebrows and lips to violent contortions of the entire body, with frothing at the mouth, biting of the tongue and lips until they bleed, making the saliva bloody. The dog will also often vomit, purge, and urinate while in the convulsion. Often repeated convulsions are a bad indication. From the convulsion they are apt to grow into a drowsy state, from which they are hard to arouse, and which ultimately ends in coma and death. When he recovers from the convulsion he will stare vacantly, sometimes wildly, around him for several minutes before he becomes composed. Almost every one who owns a dog thinks he has a sovereign remedy for all his ailments, and you will be offered advice and medicine from many quarters, with the kindest intent ; but I warn you, as you value his life, firmly but kindly to reject them all. If you have concluded to adopt my plan of treatment you must adhere to it strictly, and I promise you success. Blisters, seatons, bleeding, plasters, and ointments, powders, and pills of calomal jalap, rhubarb, opium, aloes, turbiths, mineral, syrup of buckthorn, etc., and a host of other poisons which will be urged upon you as positive cures, must be strenuously avoided. Some of these are useful in their places, but can you select the proper place ? Bleeding is worse than out of place in any and all stages of distemper. In the earliest stage of the disease, on the first approach to inflammation, had we no better remedy, bleeding would be beneficial in reducing the circulation ; but in number two we have a remedy which subdues the inflammation without the extra prostration caused by loss of blood. Constitutional debility being the leading feature of the disease, we must be on our guard from the beginning to build up the system, to not tear down. Number two, given more or less frequently, by reducing the circulation subdues the fever without leaving a worse condition of the system to be restored. The only way I ever resort to phlebotomy is, by cupping where there is some organic trouble, such as inflammation of the substance of the lungs, liver, etc., which is frequently present in violent cases. Even then dry cupping answers most cases equally well (which any person can do), and should never be neglected when called for. In order to tell when the substance of the lungs is inflamed, if the distemper comes on with a chill, followed by fever, inflammation of the lungs or liver, or both may be looked for. The temperature of the body will be found high, especially on the fourth or fifth day, often as high as 105—6 Fahrenheit. (I wish to state just here, that no man who owns dogs, and expects any of them to ever get sick, can afford to be without a proper thermometer). These organic complications are the alarming features of distemper and must be closely watched.

After the high temperature is discovered, place your ear over each lung, and, if you hear a crackling sound, very similar to that made by rubbing a portion of your hair between the thumb and finger, when held close to the ear—the sound is only heard during inspiration—the technical name for this sound is crepitant rale, or fine crepitation of pneumonia, which is a positive sign of pneumonia. Upon the first indication of inflammation of the lungs or liver, as a complication, give No. 2, at intervals, longer or shorter, according to the emergency of the case. Should the symptoms not yield rapidly, use a mixture of equal parts of mustard and flour, mixed to a proper consistency with vinegar (thick as molasses), and apply to the side nearest the inflammation. Cover well, until it raises a blister ; then, let it dry. Do not undertake to wash off, as the dog may take cold ; when dry, it will comb out. This is a severe remedy, but it is far better than the cantharidel blister. Instead of raising a watery blister like cantharides, the skin thickens, and pus forms under it. Oftentimes the skin breaks at the proper time ; if it does not, you should puncture it. In extreme cases, you should blister it both sides, if it were not for the difficulty the dog would experience in lying down. In case of inflammation of the brain and kidneys, and in extreme sore throat, I also use the mustard. As I stated above, convulsions, more or less violent, are almost sure to be present in any but a very mild case of distemper. One of the most popular remedies for these convulsions is an anesthetic, or anodyne injection ; sulphuric ether and opium stand first—such injections often prove the indirect cause of death. The theory which led to the use of these injections is good enough ; besides the anodyne effect of the ether and opium, they are a powerful nervous stimulant ; and when once you start this artificial stimulant, it must be kept up until the system recovers sufficiently to sustain its own nervous energy, or the system sinks into such a state of nervous prostation that speedily terminates the case. Should the injection be repeated, say, every two or three hours, the termination of the case in this way would be avoided ; but, on the other hand, there is nearly as much danger from congestion of the brain. During the convulsive state, No. 3 should be given not less than three hours apart.

Another complication in distemper, is inflammation of the kidneys. The urine will be scanty, with high color, usually saffron color, and frequent ineffectual attempts to urinate, only a few drops passing at each attempt. For this, No. 2 is the remedy ; also apply the mustard blister over the loins. It sometimes happens that the bladder becomes so distended with urine, so as to cause the most excruciating pain, and if not rapidly relieved will terminate fatally. In this case the water must be drawn off with a catheter. With the male this operation is very simple, but with the female a knowledge of the situation of the mouth of the urethra is necessary. There are quite a number of (to me) absurd popular notions about distemper. Yes, without reason, they are simply notions. One is the absurd idea of burning feathers or tar under his nose ; plasters of shoemaker's wax on his nose, the administration of large doses of salts, violent emetics, purges, etc. Dog and man in many of their symptoms are so near alike that the same remedies will act alike upon both. But it will not answer to put the slightest confidence in untried remedies. One of the distinguishing features is the dissimilarity of the action of the drugs in the case mentioned. It is a well-known fact in medical science that some drugs, upon man, are what is called accumulative in their actions—that is, the drug will apparently be dormant in the system for a time, and the practitioner seeing no effect from the drug, repeats the dose, when suddenly, without warning, the drug sets forth its most violent action, such as would be produced by an over or poisonous dose. The dog is highly susceptible to this accumulative action of drugs, and one needs to be well posted who would throw physic to dogs. And, again, drugs which are the most virulent poison to man are almost inert when given to the dog, and *vice versa*. Arsenious acid, the man poisoner's weapon, can be given to a dog in quantities sufficient to kill a whole family with impunity. Tobacco, the master of otherwise strong men, in quantities sufficient to settle a man's dinner, in the way of a chew or smoke, would kill the largest dog instantly. Calomel, in the ordinary doses for man, would purge a dog almost to death. Opium sufficient to kill a man can be taken by a large dog with little or no inconvenience. The continued smell of turpentine or carbolic acid will nauseate a dog sufficient to throw him off his appetite.

M. VON CULIN.

HINTS ON CARE OF DOGS.

Washing Dogs.—Do this only on a sunny, or at least a dry day, and give a long run afterwards. Once a fortnight is often enough to wash, but groom at least once a day. We greatly like the patent Ashworth metallic brush. Rough towels should be used on the dog's coat after washing, then the grooming should be performed, with or without a little hair oil. After it is all over, feed ; not before.

Distemper After Dog Shows.—We often hear of many cases of distemper among dogs that have been recently exhibited. We, ourselves, have frequently seen unmistakable cases of this terrible fever on the benches ; and we think even in cases that simulate the disorder the veterinary inspector should give the public the benefit of the doubt, and at least place the suspected animal on a quarantine bench, if he did not care to refuse it an entrance. One large show, we allude to Brighton, has just passed, and we would take it as an especial favor if some of our readers would report to us the state their animals returned in, whether good, bad, or indifferent.

Tonics.—We have once more to call attention to the indiscriminate administration of tonics. People who keep dogs usually think that any time their animals are low and a little out of sorts they can be pulled together again by the use of tonics, whereas, when there is any irritation of the mucous membrane of an acute or even subacute character, tonics do positive harm. Small doses of rhubarb, from two to five grains, with from three to ten grains of the trisulfrate of bismuth, given twice a day, is a capital medicine for getting the secretions in order. After a week of this you may add a little quinine, from a quarter to two grains.

A Word About Aperients.—The weather is now sensibly colder, and when it is necessary to give dogs aperients, the milder kinds should be administered, and not those that lower the animal heat. Castor oil with buckthorn syrup is, therefore, to be preferred to Glauber or Epsom salts or Pulna water, all of which are better suited for summer. Rhubarb, either in powder or extract, is a nice warm aperient. Dogs that are at all weakly in constitution should have as little opening medicine as

possible; their bowels may be kept free with a due admixture of boiled liver and green vegetables. Parsnips can be had cheap in country places, and they are very good indeed for dogs.

Puppies.—Take the very greatest care of them now, for the weather is very trying. They cannot have too much bedding, nor too much exercise when it is dry weather. Their coats should also be attended to. Kennels ought to be kept clean, but as dry as possible, and every inmate of the kennel should be dandy-brushed every morning, those with long coats being also combed. The healthiest puppies, and those likely to make finest dogs, are those that are best fed, warmly housed, groomed, and kept amused. A puppy when not asleep (which he ought to be very often), should be romping, and never out of mischief. Boil everything you give them, and they will not be troubled with worms.—*X. Perience, in Live Stock Journal.*

A DOG'S TOMB IN GREENWOOD.—Two or three Sundays ago the body of a large Newfoundland dog was buried in a family plot in Greenwood Cemetery. The dog had been in the family some fourteen years: had grown from puppy-hood to helpless old age, and dying full of honors, was mourned by master and mistress, and accorded the funeral rites of the day. All this was very natural. It seems hard to thrust out the dead pet for the gathering up of the bone boiler and the soap man. A dog may be only a dog; but only a dog means so much to some people, that human means little more.

It is no unusual thing for a dog to be buried in Greenwood; and in many other cemeteries as well the marble effigies attest regard and affection for the poor brutes whom they commemorate. Sometimes the dog belonged to a lost son or husband, and on that account is carefully treated during its life and decently interred after death. We remember well a silver haired patriarch in a New England village who, in his morning and evening walk to and from his office, was always followed afar off by a sadly aged old yellow brute of a dog, unable to keep up even with the slow steps of his master, but always faithfully laboring along after him as best he could. Pity would have suggested that the animal be killed, but the old man would not do that. The dog had long ago been the companion of a son, and when they brought the boy back to be buried in his native village the young dog came too, and attached himself to the father. Both are gone now, and the three sleep together.

Frederick the Great's will provided that the favorite dogs of that sovereign be buried in the royal vault. An old man who died in New York not long ago left a similar injunction concerning his faithful canine friend, and the wish has since been observed.

The dog monuments of the world are neither few nor undeserved; but with dogs as with men—many a rude head-board of wood tells a tale more eloquent than marble.

RIVERS-WILSON'S BULL-DOGS.—The bull-dog is not just the brute to please the eye of one who does not understand him. His place in the canine world is still somewhat unsettled. We have sometimes thought of him as sharing with the donkey, the fretful porcupine, the camel and some of the wonders of the vasty deep, the niche of grotesque ugliness in the creation. Homeliness, pure downright ugliness, so that it be not deformity, is pleasing in an artistic sense at least.

According to Mr. Rivers-Wilson, the great English financier, the bull-dog has never received his deserts. He is not only superior to other dogs in courage, but in sagacity and tenderness as well. A bull-dog is not generally known as a water-dog, yet few dogs known for their aquatic instincts can swim with anything approaching his speed and power. How Mr. Rivers-Wilson himself came to appreciate the breed is told by the London *World*:—

Long celebrated for his peculiarly choice strain of bull-dogs, Mr. Rivers-Wilson was originally one of their most violent opponents, and from his list of canine friends excluded John Bull's cherished companion. Perhaps an intimate acquaintance with the French language and manners may have been responsible for the abhorrence of the *bouledogue*, but, be this as it may, the aversion existed. It chanced, however, that an intimate friend was a great breeder of bull-dogs, and begged to present one of his favorite strain to Mr. Rivers-Wilson. The gift was refused; but the bull-dog fancier, filled with the true proselyting spirit, would not be denied, and brought one day a small pinkish-hued puppy out of his coat pocket. In that condition it could hardly be described as a thing of terror. Its orthodox patches of brindle had not yet developed; its under lip hardly appeared to project; it had not yet acquired the almost hairless look peculiar to very high breed. Finally, it was "a very little one." The animal was introduced into the family, and gradually grew upon its members as they declare only a bull-dog can grow. It increased in weight some forty-five or fifty pounds; but this rate of increase was slow compared with that of the favor it found in the eyes of beholders. It is true that the head grew large, and the upper lip fell back, not exactly like an *arc de Cupidon*, and that the fore legs assumed a Chippendale contour; but these points seemed marks of beauty to the puppy's new owners. The animal became the darling of the house, and the ancestress of a race which shed lustre on her owners. At dog show after dog show the scions of this celebrated creature took prizes, until her strain waxed famous in the land, and secured the suffrages of all true connoisseurs of the genuine bull-dog. Thinned out at last by repeated gifts, the kennel was reduced to one member, and the owner determined that his affection for this perfect dog should remain untouched by rivalry; and when the animal went down, full of years and honor, to the grave, gave up bull-dogs forever as a "fancy." Now he has a few fox terriers, good dogs and true as far as they go, but not bull-dogs. Speaking of his present kennel, he confesses, somewhat sorrowfully, that he has "come down to fox terriers," much as "old Bill George" some years ago, before the breed was in fashion, declined to procure a collie, on the ground that he had not "come down to sheep dogs yet."

MASSACHUSETTS KENNEL CLUB.—At the annual meeting held December 3d, 1879, the following officers were re-elected for 1880: President, J. Fottler, Jr.; Vice-Presidents, F. B. Greenough, J. F. Curtis; Treasurer, T. T. Sawyer, Jr.; Secretary, E. J. Forster.

ROSE TREE FOX HUNTING CLUB.—For the season of 1879-'80, the regular hunting days will be as follows, from the kennels: Monday, 9 A. M.; Wednesday, 7 A. M.; Saturday, 7 A. M. Members wishing to hunt on bye-days can claim the place and time of meeting, by notice, at least one day previous, to Geo. W. Hill, M. F. H., Media, and to Benny Rogers, Rose Tree (Media P. O.), where the notice will be placed on the bulletin board.

W. H. CORLIES, Secretary.

TRANSMISSIBILITY OF HYDROPHOBIA.—It has been an obscure point hitherto whether human rabies is transmissible by inoculation to lower animals and to men. With much contradiction, there has been little scientific observation of facts. We lately recorded M. Galtier's interesting observations on transmission of rabies from the dog to the rabbit, and the shortness of the period of incubation in the rabbit (rendering it a useful re-agent) was remarked on. M. Raynaud has recently taken an opportunity of ascertaining the effects of inoculation of the rabbit from man in the hydrophobic state. A man in that state was brought to the Lariboisière Hospital, having been bitten in the upper lip by a dog forty days previously. He had had the wound cauterised two hours after the accident, and had thought himself quite safe till some of the usual hydrophobic symptoms appeared. The day before his death, in a quiet interval, he yielded himself, with the best grace, to the experiments in inoculation which were made with his blood and his saliva. The result of inoculating the rabbit with the blood was negative (as in the great majority of previous cases of inoculation with blood of animals under rabies). But with the saliva it was otherwise. A rabbit inoculated in the ear and abdomen on October 11th began to show symptoms of rabies on the 15th, being much excited and damaging the walls of its cage, while it uttered loud cries and slavered at the mouth. Then it fell into collapse and died the following night. The rabbit's body (it so happened) was not dissected till thirty-six hours after death, and further experiment was made by taking fragments of the right and left sub-maxilliary glands and introducing them under the skin of two other rabbits respectively. These two rapidly succumbed, one on the fifth, the other on the sixth day (becoming visibly ill on the third); neither passed through a furious stage, however, and the predominant feature was paraplegia (a form of paralysis). The important practical result is that human saliva, such as caused rabies in the rabbit, is necessarily virulent, and would probably have corresponding effects on man; so that it should be dealt with cautiously, and that not only during the life of the person furnishing it, but in post mortem examinations.—*Times.*

RATES FOR DOGS.—The Illinois Central Railroad has issued the following circular relating to the transportation of dogs:—

One or two dogs in charge of owner will be entitled to free transportation in baggage car.

On each dog over and above that number, owned by or in care of one person, the following charge may be made: for any distance up to 99 miles, 25 cents; for any distance, 100 miles up to 249 miles, 50 cents; for any distance, 250 miles and over, 75 cents.

Baggage masters will collect only to the end of their runs and retain the amounts collected.

A copy of this will be posted in baggage rooms and baggage cars for information of the public.

W. P. JOHNSON, Gen'l Pass. Agent. J. N. STINSON, Gen'l Baggage Agent.

EPH'S CHICKEN DOG.—A very indignant man, leading a dog stalked into Uncle Eph's house yesterday, and said: "Eph, you black rascal, here's your dog; give me back the $3 I paid you for it."

"What's de matter wid de dog?" asked Eph, calm and unruffled.

"You warranted it to hunt chickens, didn't you?"

"And don't ee?" asked Eph.

"No, he isn't worth a cuss at it."

"Did you try de dawg?" said Eph, taking his pipe from his mouth and knocking the ashes from it.

"Certainly I did, and he's a first-class fraud."

"How was de chickens cooked?"

"Cooked?

"Yes, was dey biled?

"Of course not."

"Did you ros' 'em?"

"Why you old idiot, they were alive—prairie chickens."

"Dat 'splains it," said Eph, "I tought der was suffin wrong. You jis' cook de chickens and gib de dawg half a chance, an' see how he'll hunt for 'em. Folkses ispect too much," he added, as the gentleman kicked the dog into a corner and rushed out, "dey spects 'tirely too much from de cullud people. If dat man was fool 'nuff to 'spect dat he was gwine to git a dawg for free dollahs dat would hunt live chickens, he was fool 'nuff to bleeb dat we's square in de middle of de milleenyum, an' everybody knows how big a fool dat am!

DE GUSTIBUS.—The Chinese will eat anything. The more "anything" it is, the better they like it. The dog is a much valued friend of the Chinaman when properly cooked. In China it is related of an English diplomat that, being unacquainted with the nature of the dish before him, but believing it to be duck, he looked at his host and asked interrogatively:

"Quack? Quack?"

"No-ee," said the smiling Celestial, "Bow-wow."

—A dog show will be held in connection with the exhibition of the Hudson, N. Y., Fanciers' Association, in the City Hall, Hudson, December 25th to 27th.

—Mr. Erastus Corning, Jr., of Troy, N. Y., claims the name of Nora O'Neil, for a liver and white English cocker spaniel bitch, by Captain out of Beauty: obtained from McKoon's Kennel, Franklin, Delaware County, N. Y.

—Mr. N. Elmore, of Granby, Conn., claims the name of King for his white, black and tan English hare beagle pup, by Victor, out of Lucy, whelped Sept. 30th.

WHELPS.—L. F. Whitman's (Detroit, Mich.) roan belton bitch, Fly, whelped November 25th, eleven—six dogs and five bitches; four black and white and ticked, three lemon and white and ticked, two lemon ticked, and two blacked ticked, all by same owners, Rattler, (Rob Roy-Pickles).

—The champion pointer bitch, Grace, owned by L. H. White, of Bridgeport, Conn., whelped on the 1st inst. twelve strong and beautiful pups, seven dogs, and five bitches, sired by Sensation. The litter gets along splendidly so far.

—Mr. John H. Meyer's black pointer bitch Rena (Pete-Mab) on December 3d whelped eight pups—two dogs, and six bitches, by Mr. Fisher Howe's Rex (Grafton's Jim-Whiskey).

—Capt. Chas. D. Vielé, U. S. A., writes from Fort Davis, Texas, that on the 1st of Nov. his pointer bitch, Posie, by Sleaford, out of Whisky, whelped seven puppies, four dogs, and three bitches, sired by Scout, by Sensation, out of Daisy II. Scout and Posie were bred by and purchased from the Westminster Kennel Club.

—Mr. H. Hedeman's imported pointer bitch, Gip, has been bred to E. F. Mercilliott's prize pointer, Sport.

—Our readers' attention is invited to the advertisement of W. T. Irwin, of Topeka, Kansas, who offers some fine dogs for sale, including Brissel's (Leicester-Dart) Livy, sister to Lincoln and Leicester; Jenny Lind (Rake-Fanny), and Rose (Rock-Pickles), and four well-broken bitches and puppies by Sleaford.

THE PAST YACHTING SEASON.

THE close of September, as a general rule, sees the majority of yachts on our seaboard laid up. Some men, however, who believe in "keeping it up," will not dismantle until late in October. A friend of mine—an enthusiast, of course—kept afloat one year until the snow, which came in November, warned him that pleasure sailing was over; and I know of one yacht, away up in Halifax, which was kept in commission throughout the whole winter, and lots of capital cruising did her owner and friends enjoy. For my own part, I hate laying up; it seems such a pity to abandon all hope of "one more sail," and the poor barkie looks so forlorn and sad, housed over for the winter, that I keep afloat as late as I can. Then, when at last the unpleasant operation can no longer be delayed, I like to get it over quickly; the ship stripped, the sails and rigging stowed away, the spars lashed up in their proper resting-place, and the numerous "fitments" of the cabins deposited where they can be easily come at, once the first mild days at the end of March fill one's head with longings to be once more afloat. I speak, of course, as one of that numerous section of yachtsmen who are not in a position to "go foreign" during the winter months, and cruise in West Indian seas, as our English brethren do in Mediterranean waters. That sort of thing is, to my mind, the acme of yachting enjoyment; and my idea of complete happiness is racing all summer and cruising all winter. However, as I can't get it, I e'en make the best of things as they come, get all the racing I can scrape in for, as much "outside" cruising as I can manage, and worry through the close season with the help of a well-stocked library and a really fine collection of yacht pictures. My "den" is calculated to make the average visitor think he has stepped on shipboard by mistake; it is a small crib, about the size of an ordinary cabin, and what with charts hung on the walls in neat rolls, yacht cabin lamps, pictures, diminutive bookcases, marine glasses, models, lead-lines, compasses, and what not, it has a highly comfortable sea-air, and looks very much like the real thing, bar the motion, which I cannot imitate. In such a snuggery as this I can, at least, recall the fun of the past season, and with FOREST AND STREAM open at the page headed "Yachting and Boating," while away many an hour meditating over the performances of our yachts, and leisurely following the grand controversy anent deep versus shallow models.

I fancy a good many of my fellow sailors will bear me out in saying that one of the chief pleasures of a race lies in the talking it over; why Brown did this, Jones that, or Smith the other thing. How Robinson cut out the *Stella*, and how the *Superb* carried on, and why the *Lightning* belied her name; all afford matter for pleasant converse and not unfrequently heated argument. Now, during the past few months, we have sailed lots of races in all kinds of weather, and FOREST AND STREAM has carefully chronicled them, so that the accounts thereof may be a perpetual source of delight to those wise men who bind the volumes and keep them handy for reference. But to read through all these accounts *seriatim* may by

some be accounted a task not to be lightly undertaken, and the editor, aware of this, has kindly consented to let me spin a yarn about the racing of the year.

Taken all round, the past season was good, though some of the great regattas were by no means so well attended as they should have been; the cruises in squadron, with lively spins from post to post, fully made up for this. Besides, the numerous clubs on seaboard and lake shore kept the ball rolling tidily, and the smaller yachts, as usual, afforded abundance of sport. These little beggars deserved encouragement, for they are the backbone of yachting; in them are trained the future masters and crews of larger vessels, and through their agency hundreds of men are taught to love the sea. There were plenty of predictions, of course, at the beginning of the season, that this yacht and the other, in the large classes, would not fit out, and *Dauntless*, *Active*, *Vinder*, and a number of others, were positively named as sure to be absentees from all races and cruises. Luckily matters mended, and most of the ships were commissioned. Other crafts had been altered and improved during the winter, *Viking* getting bigger sticks, *Undine* and *Orion* provided with more canvas, and some new vessels built, so that, on the whole, there was plenty to arouse interest.

As most of our yachts are apparently built to "turn turtle" as well as to sail, the season was fittingly inaugurated by a series of capsizes among the small fry at the Southwark regatta, on the 26th May, and the custom was carefully adhered to throughout the year. It would astonish many to see a complete list of capsizes made out; but as that might frighten intending amateur sailors, I shall say no more about it. On that same 26th May, the Southern Yacht Club of New Orleans had a capital race for small craft in a fresh south-southeast breeze: *Susie S.*, *Ex-Bella* of New York, *Lady Emma*, another New Yorker, formerly the *W. R. Brown*, and *Pluck and Luck*, all of them well-known mosquito clippers, being present. *Susie* led her class all the way, and won easily, with the *Lady* second. *Pluck and Luck* being beaten by *Cydnus*, a local boat. Two days later, however, *Lady Emma* turned the tables on *Susie*, and beat her handsomely in smooth water, with a steady east by north wind blowing, and great thenceforth was the rivalry, and many were the matches sailed to decide which was the better yacht. The Dorchester Yacht Club had a stiff southwest by west wind on the 30th May, for their racing, and started three classes of yachts. Mr. Gpaff's sloop, *Adrienne*, landing first prize in first-class, Mr. Keith's *Syren* in the second, and Messrs. King and Clark's *Waif*, in the third. The best sport that day, however, was had at the Union, or open regatta of the South Boston Yacht Club, when there was such a string of mishaps and such a "butcher's bill" for spars as are not often seen on our coasts. The whole of the third-class keels were disabled. *Fearless*, lost her mast; *Veronica*, her bowsprit; *Chiquita*, her topmast; and *Posy*, worse luck, was leading when her boom played her false. There were no starters in the first-class centre-boards; but *Gael* secured first place among keels; *Thisbe* among second-class centre-boards. *Posy's* misfortune putting an end to her chances of the prize, and *Fancy* getting the prize for third-class centreboards; *Clara*, *Sunbeam*, *and Wildfire* gave up, and every body in the race had a good time. The Seawanhakas, more power to them, opened their season the same day, having an enjoyable cruise in which spinnakers were set for the first time in United States waters, the Nova Scotians having for the past three years used them exclusively. *Volante* performed admirably this day, and *Regina*, to add to the novelties, came out with a cutter's head rig, and worked so well that one can't help regretting she should have subsequently shifted back to the big jib of a sloop.

The Brooklyn Yacht Club regatta, which should have come off early in June, was "indefinitely postponed" for lack of entries. What are the Brooklynites about? Is the love of yachting dying out among them? The Atlantic made amends, however, and their fourteenth annual regatta was in every respect a success; somehow the Atlantic manage to get their events off in good style. There was a fine entry to begin with, and both old favorites and new aspirants to fame contending for the prizes. The elements were favorable, a good topsail breeze blowing from north-northwest. *Regina* had her sea rig on, and cutter like turned to windward beautifully, going clean to weather of *Sadie* and *Undine* in the smooth water. Three famous schooners had their battle flags aboard—*Peerless*, *Agnes* and *Triton*—and the performance of the former was something to make yachtsmen stare, as she caught up her rivals, and as soon as sheets were hauled aft she fairly squandered her fleet, coming in 18m. ahead of *Agnes* and 45m. ahead of *Triton*, the latter having hunted in the western board for a streak of luck and not getting it. *Regina* sailed just as marvellously; she was 10m. behind *Undine* at the light-ship, where that sloop cleverly cut out *Triton*, and 1m. behind *Dolphin*; but that was working her, as she at once collared the latter, and having got her and *Orion* comfortably tucked under her lee, she went off hot foot after *Undine*, suffered a foul, screwed clean out to windward and hopelessly distanced her, a performance of no mean merit, considering the qualities of the craft she beat. That exceedingly handsome sloop, *Winsome*, disposed of *Pirate*, *Lizzie L.*, *Genia*, *Schemer*, and *Kaiser*, and *Nimbus* gave *Alma* an awful tanning, beating her so badly—1h. 5m. 25s. over a twenty-five mile course—that after making all allowances it is plain the latter was not sailing as she ought to have been.

June 9th saw a moderate breeze from south-southwest blowing for the Hudson River Yacht Club; *Annie G.* winning in the first class, *Irene* sailing over in the second, and *G. B. Dean* winning in the third. The Quincy Yacht Club had some racing the same day, the wind at east, and the winners *Muriel*, *Elf* and *Dandelion* in their respective classes. The next day *Mignan*, *Dash* and *Tulip* won the prizes offered by the Salem Club, which rightly insisted on fixed ballast; and at New Orleans the Southern Yacht Club Challenge Cup was won by *Albertine*—a boat of many names, having been called successively *Bella* and *Susie S.*, emulating in this respect the English schooner *Diana*, alias *Intrigue*, alias *Blue Bell*; and a very bad fashion it is, altering names of yachts so frequently, unless they are so wholly unknown to fame that it does not matter what they are called.

The Bay of Quinte Yacht Club—a spirited organization, with its headquarters at Belleville, on Lake Ontario—held a union regatta on the 13th of June, when two new tonners, *Sylvie* and *Gracie*, made their appearance, but their trim not having been found, they did not perform over well. The two old rivals, *Katie Gray* and *Surprise*, both built by Cuthbert, met and had a fine race, *Katie* carrying her canvas better, and winning the prize.

There was plenty of sailing last summer on the lakes, and yachting seems to have taken strong hold on the dwellers by the inland seas. ROUGE-CROIX.

(To be Continued.)

Answers to Correspondents.

No Notice Taken of Anonymous Communications.

☞ *We make no charge for answering inquiries in this column.*

J. B. T., Catskill, N. Y.—We can send you "Dogs of Great Britain and America," which is an American reprint, on receipt of price, $2.

H. P., Waterford, Me.—The next time your bitch comes in heat send her to another dog. She will probably then breed and you will have no trouble hereafter.

W. P. G., Madison, Ind.—Can you inform me where I can purchase a pair of genuine Maltese cats or kittens? Ans. In New York, of F. Bigot, dealer in fancy pets, 37 Fulton street.

RAPIDAN, Henrico, Va.—You will find in your State one of the best strain of spaniels ever imported into the country. Address, Capt. McMurdo, a retired English officer, at Evington, Campbell Co., Va.

G. F. A., Gambier, O.—Will you give me the best place or places in Florida for duck shooting? Ans. The ducks generally raft in the inland lakes of the upper St. John. There is often good duck shooting at Cedar Keys. See Hallock's "Camp Life in Florida."

F. C., JR., Troy, N. Y.—Careful attention to diet, with moderate exercise, is all you can do for your cocker puppy. The legs will come all right if she is kept in a dry, warm kennel. A tablespoonful of cod-liver oil every day will be good for her.

G. E. P.—Will you kindly inform me in your columns what is the best book on orange culture? Ans. "Cultivation and Economic Uses of the Orange in New South Wales—(Bennet); "Histoiri naturelle des Oranges—(Risso), for sale by S. W. Silver & Co., 67 Cornhill, London, E. C.

F. N. R., Philadelphia,—In getting a gun full choked does the gunsmith make any portion of the barrel much thinner than it was previous to having been choked. Ans. Yes, the barrels are necessarily made thinner. You can have a heavier pair of barrels fitted to the stock.

MARTINSVILLE, IND.—1. What gauge, length of barrels, and style of bore, make the most effective squirrel gun? What strain of dogs is best for squirrels? Ans. 1. 12-gauge, 7½ lbs., 30-inch barrels. 2. Unless a dog can climb a tree, we do not see how one can be used in squirrel shooting.

A. M. S., North Dunbarton, N. H.—Would Kay's chips or any long-range cartridge improve the shooting of a Parker (full choke) at 75 or 100 yards with No. 10 B shot? Ans. The thread wound long-range shot cartridge cases manufactured by H. H. Schieber & Co., Rochester, N. Y., will give good results at long ranges.

J. F. G.—Have you any back numbers in which pin-fire guns are discussed? If so, please inform me. I have a Barclay pin-fire, and wish to know if the cartridges are safe to carry in the pocket? Ans. In our issue of Dec. 6th, 1877, the comparative merits of the central-fire and pin-fire are discussed at great length. The matter of safety is included therein.

G. H., Pittsburg,—I noticed on page 612 of the "Gazetteer," that a St. Louis firm manufactured artificial angle worms. Please give me the address of said firm? Ans. We have mislaid the address of this firm. The inventor is Wm. H. Gregg, St. Louis, but he is not the dealer in this commodity. However, a letter addressed to him will probably secure what you want.

QUAIL, New York.—Please give me the names of the sire and dam of the renowned Gordon dog known as Polhemus's Duke? Also the Gordon bitch Queen Bess, and their owners' name? I believe Queen Bess was owned in Massachusetts. Ans. Cannot find these pedigrees in the Stud Book. Some of our readers perhaps can supply the in formation.

DR. C. S., New York.—Is there any kind of a dog except a foxhound (my objection to a foxhound is the baying at night) that could be used for raccoon, fox, or rabbit hunting? If so, what kind? Where could it be found? and what would it cost? Ans. Yes, a beagle would answer. They are frequently advertised in this paper. Cost probably about $25 each.

J. R., Nelsonville, O.—The Baker gun is a most excellent gun, and we have repeatedly commended the combination of shot gun and rifle for special services. Of course the $35 guns which you speak of must be inferior in quality and mechanism to the $150 guns: they will shoot as well, probably, at first, but would not last as long. The pattern you speak of is excellent.

J. K. L., Camden, N. J.—You have no use for a rifle on the Blue Ridge Mountains in June. You may carry one for protection, but it is against the law to shoot game at that season. There are squirrels and raccoons in the region you name. You can buy maps of Maryland and Virginia from Colton, the map publisher, 176 William street New York, for about $1 for the two.

H. M. H., Cincinnati.—I have a fine Scotch terrier which has lost all his hair, and so far have been unable to do him any good? Ans. Give your dog Fowler's Solution of Arsenic, commencing with three drops twice a day and increasing to five. The chances are that your dog has surfeit. Change his diet, giving him as much vegetable food as possible, and rub him well with crude petroleum.

J. R. S., Powell, O.—I have one of the Daly breech-loaders, but think it does not fit me. In ordering stock for same, as I have a very short arm and neck, should it be short and a great deal of crook, or short with but little crook? The stock as it is, is 14½ inches in length; 3½ inches drop, but it don't come up right. Ans. The gun undoubtedly has two much drop for you, and is also probably too long in the stock.

J. H. FITCHET, West Troy, N. Y.—Is it an established fact that the Messini quail do migrate? Have those that were imported by Judge Evarts and others, after leaving in the fall, returned in the spring to the same grounds or vicinity which they left? If true that they do return, there are parties here who will import a large number. Ans. The birds unquestionably migrate, but whether they return to the exactspot where they were turned out is a question which we think has not yet been decided.

WM. H. BATES, Bedford, N. Y.—Give your dog for worms a powder compounded in the proportion of fifteen to twenty grains santonine, six grains quinine sulphate, one grain sloin; mix intimately, divide into three powders, and administer three times a day or three alternate days. On the morning of the day when no powders are given, the dog is to have a dose composed of best salad oil, two ounces; oil of turpentine, two drachms; oil of cinnamon, one grain; dose three-quarters to one and a half teaspoonful.

A. K., Williamsport, Pa.—Some years ago I added a pair of quail to my collection. The birds were sent from St. Marta, Central America, but never could identify them from any mark of natural history. Have made a colored drawing of male bird and taken the liberty to send the same to you, in hope that I might receive some information. Could it be the Massena quail in young plumage? Female is marked almost like male, but not bright, and rather smaller in size. Do not wish drawing returned. Ans. Your birds are the *Cyrtonix massena*, a common variety in Texas and the southwestern country. For full description see Hallock's "Sportsman's Gazetteer." Your drawing is very perfect and beautiful.

J. L. S., Boston.—I see in the FOREST AND STREAM of Nov 27th, something in regard to carp, page 846. Can you tell me who to write to for a few to place in a pond of fifty acres that I have stocked with black bass? Three-quarters of the shore of this pond borders on my farm and I have the exclusive use of its waters for fish culture for fifteen years under our State laws. From what you say of carp it seems to me to be a desirable fish to propagate? Ans. Address Prof. S. F. Baird, U. S. Fish Commission Smithsonian Institution, Washington, D. C., or Fish Commissioner T. B. Ferguson, 1237 M. street N. W., Washington, D. C. If you are to raise carp in your black bass pond you had better select a weedy shallow and fence it off.

SORE SHOULDER, Mobile, Ala.—My breech-loader shot gun, 10-bore, 8-lbs., gives a bad recoil with 3¼ drachms powder and two wads and 1¼ oz. of shot and one wad. The shoulder, or space occupied by cartridge when in gun, appears to be about three inches. I use 2½ cartridges and crimp them down to, I suppose, 2½ inches. Does this unoccupied space probably cause the recoil? And do you know of any way to counteract it? Ans. The crimping down makes no difference providing you do not cut off the ends of the shells, but they should be the same length as the chamber. Your gun should not scatter with the charge you name. Perhaps your wads are not down tight on the powder.

C. E. F., Catawissa, Pa.—I saw a testimonial in your paper some time ago, in which it was stated that "it is a characteristic of the choke-bore to show its greatest superiority in the large sized shot." Not long since I was informed by a celebrated firm, manufacturing breech-loading guns, that the more a gun is choked the less satisfaction it will give in the use of the large sized shot. Who is right? Ans. Different manufacturers have different modes of choke-boring, and these modes may each be of such a character as to cause one to throw large shot better and another the smaller sizes. We are inclined to think that the *best* method of boring will show a uniform excellence as far as the different sizes of shot are concerned.

AL GIC, Lake Village, N. H.—My dog is troubled with a kind of humor that breaks out on his body and has a thin scaly scab; also he keeps shaking his head as if his ears troubled him, and they have a strong smell, as a Newfoundland dog does when he wets his coat in a warm day. He is an Irish setter and very fat, weighs ninety-two pounds, and is nine years old; has not been used in the field for three years? Ans. Your dog has surfeit. Limit his diet and give him as much vegetable and as little animal food as possible. Give him Fowler's Solution of Arsenic, commencing with eight drops twice a day and increasing to twelve. Wash him well with castile soap and afterwards rub him with crude petroleum. He has also canker of the ear. Wash them thoroughly and after drying, pour in them a little of the following: Goulard's extract, ½ oz.; wine of opium, ½ oz.; sulphate of zinc, ½ drachm; water, 8 oz.; mix.

C. W. E., Bowling Green, O.—I contemplate a visit to western Texas and wish to ask you what rifle to take? I want a turkey call such as you once spoke of in FOREST AND STREAM, made of Cedar wood? Ans. Take a Winchester rifle. The turkey call is a little cedar box 2½ inches long; ⅝ to ¾ wide; and 1 inch deep; with a piece of smooth slate fitted nicely in the box. Have the top smooth and even, and no rosin will be needed. Put together with brass pins, as glue or brads spoil the sound by checking vibration. If made from part of cigar box, see that no pieces of paper adhere to them, and use the thinnest portions. Another call consists of a short piece of Spanish cedar with a good sized nail driven through it: draw a piece of slate accross the head of the nail. To operate either call, hold the slate between the thumb and middle finger of the right hand, while the call is made by the thumb and middle finger of the left. Above all things, do not make over five strikes for a single call—oftener four—as turkeys can count.

O. M. B., Washington, D. C.—Will you settle an agitated question among the the gunners of this city? Do pheasants go in flocks? *i. e.* after the young brood has become grown, paired off and separated? Of course all sportsmen know that one or more pheasants are often found in thickets, or at a certain feeding place; but in such cases—or under any other circumstances—can they be termed a "flock"? Ans. The pheasant (properly ruffed grouse) is naturally a solitary bird, and is seldom found in packs. Unlike the quail, which assists his partner in hatching and rearing her young, the ruffed grouse deserts his better half after she has completed her laying. The eggs are usually all deposited by the middle of May, and the cocks club together until the latter part of August, when they all again join the hen with her nearly full grown brood. In the mating season, each cock generally has from two to six hens under his protection. It therefore depends upon the season of the year whether these birds are found singly or in flocks or coveys.

W. A. A., Rushville, Indiana.—I want to get away from our terrible winter climate and go where it is more genial weather, and where an abundance of game is to be found. I have been thinking of Texas and Louisiana, but do not know which State would be preferable. Can you enlighten me in regard to the subject, and give points in either State probably suitable? Would like to be put in correspondence with some reliable gentlemen in either State? Ans. For comfort, and for variety of game as well as scenery, we would recommend the country west and north of San Antonio, Texas. There are not as many ducks, woodcock and snipe, or bears there as there are in the sloughs, marshes and canebrakes of Louisiana, but more of some other kinds of game. The climate is preferable. There is more upland and less water in proportion to area. Address N. A. Taylor, Houston, Texas, or buy his book entitled "One Thousand Miles Through Texas," published by A. S. Barnes & Co., New York, price $1.75.

FOREST AND STREAM
ROD AND GUN

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCULCATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY:

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

—AT—

No. 111 FULTON STREET, NEW YORK.

[POST OFFICE BOX 2832.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpariel type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

***Any publisher inserting our prospectus as above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, DECEMBER 11, 1879.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of mail service if money remitted to us is lost.

☞ Trade supplied by American News Company.

TO THE LADIES, GREETING!—When woman comes of her own accord and without any coaxing, she comes to stay. A Woman's Department in the FOREST AND STREAM may therefore be considered a permanent feature of the paper. We did not invite this, we simply accepted it when thrust upon us. And we must confess to very great satisfaction at this turn of affairs.

The FOREST AND STREAM is a man's paper; conducted by men, for men, about men. It is not, however, nor has it ever been, a journal without interest to the fairer part of the human race. Sportsmen read it, and so do sportsmen's mothers and sisters and wives and daughters. We have always tried to make a clean paper of it, and we may point with pride to our success. Now that woman has expressed her approval of us by asking for a corner to be devoted to herself, what can we do but grant her request, partition off a space, and so add to our strength as a family paper?

This journal goes into thousands of homes, where its fair readers will welcome such an innovation designed for their benefit. Let us define just what we propose to do, or rather have them do. The Woman's Department is to be practical. To make it such we invite from our lady readers recipes for cooking the game brought home by their husbands and sons; methods of household home-made decoration and adornment; discoveries in botany and care of house plants; indoor family recreation for winter evenings; out-of-door study and recreation in summer; gardening; housekeeping, and a thousand and one other topics.

Contributors to this department are requested to observe the following suggestions in sending in their matter:

1. Say all possible in the least number of words. This will make your own communication readable, and give some one else a chance to say something too. Twelve short papers are better than six long ones. Skip the introduction. Come right to the point.
2. Don't attempt fine writing and highfalutin, but write plain prose.
3. Write only on one side of the sheet.
4. Don't abbreviate.
5. When you are through, stop!

THE PARMACHENE LAKE COUNTRY.—The paper published elsewhere, descriptive of a trip to Parmachene Lake, contains very much most valuable information about that wilderness country. We call attention to it as a well written article.

THE TROUT OF THE PAST.

WHEN we had occasion, last September, to make the sweeping assertion that "all the combined science of fish culture seems to have been unable to rehabilitate fresh waters which have passed within the precincts of civilization, or to produce by artificial propagation, more than a flabby and insipid counterfeit of their natural denizens," we at once provoked a disclaimer from gentlemen who had not seriously enough contemplated how very nearly the wild mountain trout of our primitive forests (not to mention other species) have become extinct. That such is the lamentable fact, however, is readily attested by the spread of human population and the occupation by settlements and farms of nearly the whole of what was a wilderness domain two hundred years ago.

Even within the memory of men not old, nearly all the brooks of New England teemed with speckled trout, and a hundred fish could easily be caught in a single day in streams which do not now contain a solitary survivor, and so also of the Middle States. In far-off Michigan and Wisconsin, once famed for their abundant trout streams, and in the remoter regions of Canada, there are waters almost barren, which but *five* years since readily yielded an overflowing creel. It is only in the almost inaccessible seclusion of a few isolated regions that these beautiful representative of a once universal family are now found in any abundance. Even the Yellowstone does not insure the same return to the adventurer as it did years ago. If the angler would be sure of his quest he must go to the far-off streams of Idaho and of Utah, to Coeur d'Alene Lake, and the noble mountain streams which are traversed by the covert trail which the stealthy Indian seeks to hide from the search of the intruding white man. Thirty years ago the Mormon immigration was flowing in full tide into the recesses of the uttermost western wilderness, where great trout in liveries unknown to eastern eyes sported everywhere in countless myriads. At present the angler who debarks at Ogden, or other central points, must needs drive twenty miles before he can find unalloyed sport with rod and line.

Where in the valleys of the San Joachin and the Sacramento, in California, are the quiet places which we used to fish in younger days? Where are the great salmon of the Russian River? The salmon trout of Kings River, and the Fresno? There are champagne corks and empty peach-cans strewn along every accessible channel-way throughout the State, and although at Merced and Pilarcitos we can still get good fishing, with good cheer and a welcome hand from brother anglers who minister there, the localities lack the primitive wildness which once made them charming and enchanting. In the Big Woods of Wisconsin the steam tramways of the loggers have driven the game into densest cover, and the autumn drives have scraped the river bottoms of every trout. Where are the barrels of fish which used to lie in rafts on the bottom of the Kinnikinnik and the Rush River? Where are the trout of the cold and pellucid Jordan, in Michigan, which only five years ago seemed to swarm in exhaustless hosts? Where in the mountains of Pennsylvania and Virginia shall we look for those choice places where the hunter built his solitary cabin when we were boys, and the sight of five *fresh* cat skins pinned to the axe-hewn walls greeted our wondering eyes as we emerged from the forest into the little clearing? Where are the speckled denizens of the pastoral streams of New Jersey? where are the wild trout of the Racquette and the pre-empted pools of the Adirondacks? where, indeed, are the big trout of Maine? the four-pound fish of the Tabusintac, in New Brunswick, where fifteen years ago 450 trout fell to two rods in a single day's fishing? the glancing fins of the upper Jacques Cartier? the big strings of Muskoka? and the great yields of the hundred lakes and streams of Nova Scotia? Where, indeed, are the trout of our own silvery Bronx, flowing at our very doors, whose bucolic charms were extolled in verse by the lamented poet whose contemporaries still enjoy a vigorous old age? Let those of us who have passed the age of forty-five search the whole country through and see how many of their favorite boyhood haunts remain intact or undepleted; then let them challenge our initial position and answer if the trout of America is not essentially "A Thing of the Past." There are others beside ourselves who sensibly appreciate these truths. Quite recently there fell under our notice a letter written from the pineries of Wisconsin by the Rev. Myron H. Reed, of Indianapolis, whose pen catches the inspiration of the foaming brooks; and it repeats to the echo our own convictions on this subject, when it says:—

> This is probably the last generation of trout fishers. The children will not be able to find any. Already there are well-trodden paths by every stream in Maine, in New York and in Michigan. I know of but one river in North America by the side of which you will find no paper collar or other evidences of civilization; it is the Nameless River. Not that trout will cease to be. They will be hatched by machinery, and raised in ponds, and fattened on chopped liver, and grow flabby and lose their spots. The trout of the restaurant will not cease to be. He is no more like the trout of the wild river than the fat and songless reed bird is like the bobolink. Gross feeding and easy pond-life enervate and deprave him.
>
> The trout that the children will know only by legend is the gold-sprinkled, living arrow of the Whitewater—able to zig-zag up the cataract, able to loiter in the rapids—whose dainty meat is the glancing butterfly.

This apostrophe of our sympathetic friend is uttered with the spirit of the last red man, in whose veins flows the full, untainted blood of his race, and who overlooks, from a commanding cliff, the squalid camps of his half-breed followers pitched in the suburbs of a border town. We do not declare that the finny representatives of the ancient family of *Salmo fontinalis* will speedily become extinct in America. No doubt, when every one of the older States shall become as densely settled as Great Britain itself, and all the rural aspects of the crowded domain resemble the suburban surroundings of our Boston; when every feature of the pastoral landscape shall wear the finished appearance of European lands; and every verdant field be closely cropped by lawn mowers and guarded by hedges; and every purling stream which meanders through it has its water-bailiff, we shall still have speckled trout from which the radiant spots have faded, and tasteless fish, to catch at a dollar per pound (as we already have on Long Island), and all the appurtenances and appointments of a genuine English trouting privilege and a genuine English "outing." In those future days, not long hence to come, some venerable piscator, in whose memory still lingers the joy of fishing, the brawling stream which tumbled over the locks in the tangled wildwood, and moistened the arbutus and the bunchberries which garnished its banks, will totter forth to the velvety edge of some peacefully-flowing stream, and having seated himself on a convenient point in a revolving easy chair, placed there by his careful attendant, cast right and left for the semblance of sport long dead. Hosts of liver-fed fish will rush to the signal for their early morning meal, and from the centre of the boil which follows the fall of the handsful thrown in, my piscator of the ancient days will hook a two-pound trout, and play him hither and yon, from surface to bottom, without disturbing the pampered gormands which are gorging themselves upon the disgusting viands; and when he has leisurely brought him to hand at last, and the gillie has scooped him with his landing net, he will feel in his capacious pocket for his last trade dollar, and giving his friend the tip, shuffle back to his house, and lay aside his rod forever.

Fish such as these will ever reward, pecuniarly and industrially, the labors of the fish culturist; they will amuse the rising angler, who has read the legendary accounts of old-time trout fishing, and titillate the uneducated palates of young men in whom the instinct of angling is inherited and ineradicable; but he who would indulge the ecstatic pastime of which great pens have written and noble poets sung, must fish *now*. Those to be born hereafter will never have the privilege of fishing for the trout as it was—the "trout of the past." It may be, possibly, that in some favored Caledonia creek, where the descendants of a master hand like Seth Green's hold perpetual watch and ward—whose waters have never been wholly depleted of their native stock since the beginning, and whose natural food both gods and men have permitted to grow upon its banks for their constant supply—it may be that some remnants of the ancient family will long be found in days to come, but they will be regarded as the relics of a Pompeii exhumed, or the strange golden creatures dug up from the ruins of the Aztec race.

Let us not be supposed to discourage even the feeblest effort to cultivate fish-food; we have assiduously encouraged this industry from the beginning. But we may be pardoned for the tears we shed over the coming doom of a glorious race of aborigines, as graceful and wild as the native Indians themselves.

TWO INTERESTING EXHIBITIONS.—The International Dairy Fair, which was so remarkably successful last year, is repeated this season. The Exhibition was opened last Monday night, with a large display of domestic and foreign products, methods, and machinery.

Madison Square Garden has a show of prize American birds, Durham cattle, and sheep. The herd are from the farm of R. W. Gillett, near Springfield, Ill., and have already made their fame in the live-stock world. Among the sheep will be some of the celebrated Southdown breed, the Leicester and Cotswold breeds, and some extra-fed Canadian sheep. The Garden will be open every day from 9 A. M. till 10 P. M., under the management of John W. Hamilton.

RESIGNATION.—We regret to inform our readers that Mr. Wm. M. Tileston, who for the past five years, with the exception of a short interval, has been connected with this paper, has resigned his position as associate editor. The cause of our loss is, that Mr. Tileston has other interests which require his undivided attention, although we hope that the work of his pen, which produced such pleasant sketches as "Santa Monica," "Safety Valve," and others, depicting life and sport in California and the antipodes, may still be seen in our columns. Mr. Tileston leaves us with the very best wishes of all our Company for his future success.

INDIAN FARMING IN IDAHO.

IN the southeastern part of Idaho Territory, there is a reservation for certain tribes of Shoshonee and Bannock Indians, called the Fort Hall Reservation, and including about a thousand persons, where farming has been introduced and is carried on to a considerable extent. They are rather good Indians, none too good to do any sort of mischief if they dared, but more prepossessing in appearance, and less troublesome in small matters than the majority of red-skins I have seen.

The Shoshonee family of Indians embraces two leading tribes, the Bannocks and the Utahs. The country of the former, before they were disturbed by civilization, included southeastern Oregon, Idaho, Western Montana and the northern portion of Utah and Nevada; the Utahs occupied Utah, Nevada, and the Upper Colorado Valley. The Bannocks were a homogeneous division, but the Utahs are divided into many sub-tribes: Utahs proper, inhabiting Utah and Eastern Nevada; Washoes, at the Eastern base of the Sierra Nevada, between Honey Lake and the West Fork of Walker's River; Pah-Utes (or Pi-Utes, the word meaning "water Utes") in Western and Central Nevada, Northern Arizona and Southwestern Utah; Pah-Vants, in the vicinity of Sevier Lake; Pi-Edes, South of the preceding; and the Gosh-Utes, about the Gosh-Ute Mountains in Utah. The Northern tribes are far more intelligent, energetic, strong and wealthy than the Southern bands. They are in better homes, dress better, are cleaner and more courageous.

The word *Shoshonee*, (accented on the second vowel) means "snake," and the Snake tribe are the Shoshonees proper. Their habitat was this Southern half of Idaho. They are fine looking Indians, not so tall as the Sioux, whose men are the best built in the West; nor are the women so handsome as the light faced girls one meets and is tempted by down on the Gila and Colorado Rivers; but all have a healthy appearance, and seem to be pretty well off in worldly goods. They are exceptionally skillful in handicraft, and out of the raw materials furnished by the Government, and the skins of the animals they kill, they make a great variety of utensils and ornamental clothing. The bead-work of the Shoshonee squaws is renowned for its excellence.

Their faces show the oval outlines, flat front-face, protruding cheek-bones, and dark, copper-colored skin characteristic of the race; yet one may find some heads with a facial angle nearer the perfect type than many an Eastern community could show. It is the chief of a band of these Snakes having their homes at Camp Brown, Wyoming, who is celebrated as the finest looking Indian in the Rocky Mountains. This is old Washakie, whose education, sagacity and good nature, friendliness toward the white people, and firmness of government, have won the respect even of these frontiersmen, who really consider it little more harm to kill an Indian than a coyote, denying him the possession of any soul or hope of immortality, at least any future which they care to share with him.

Washakie's band go westward every summer in the great Gros Ventre Hills and Green River Valley to hunt, and are met by the Snakes from here; but the Bannock's rarely go over there, standing in too much awe of the Eastern Shoshonee's, I am told, to make campanionship pleasant.

On these long hunting expeditions in summer the Indians take their families with them, but travel with light luggage, expecting to be heavily laden with dried meat and hides on their return. Wherever they camp, and this ordinarily is among the willows along the margins of the streams, they build for themselves rude huts of boughs, by simply binding together the tops of adjacent bushes, or by standing up toward a converging centre over head a number of leafy saplings, whose sharpened butts are stuck in the ground in a circular shape. Inside are put their rude home-made saddles, with a pile of robes and heavy blankets, and their home is complete.

The furniture of such a *wick-y-up* partakes so much now-a-days of the appurtenances of civilization that it takes the interest which attaches to the outfit of the savage *pure et simple*. Even Cooper would have seen small romance in "U. S. I. D." black blankets, and long strips of greasy flannel or poor calico; in piles of battered tin cups and plates; in bake-ovens and frying pans; Sheffield knives and New York axes; boots from Massachusetts, and sombreros from California. Yet all these are taking the place of the ancient implements of the Indian, and do little to better him. For with the new labor-saving conveniences he finds left on his hands more time to be lazy in than formerly, and everyone knows "the devil finds some mischief still for idle hands to do."

Their houses on the reservation are more permanent abodes, and exhibit a more substantial wealth. Yet these fixed homes are nothing but conical tents, known as lodges or tepees, twenty feet high and twelve or fifteen in diameter, on the ground, the poles protruding in a bunch at the top, where as much of the smoke from the lodge fire as is able finds exit in a bewildered cloud—what can't get out there staying within, or creeping out at the low opening in the side which serves as a door to the lodge. This smoke begrimes the apex of the tent, and the sooty-brown tint extends downward, softening to the white of the base, and furnishing a beautiful gradation of color. But the unfortunate side of this artistic effect is, that the smoke rots the cloth of which the lodges are now-a-days made, until the first heavy squall tears it into ribbons, and leaves Mr. Indian tentless. The wide spread of thalmic troubles also, among the Indians, is due to this arrangement—or want of it—for smoke.

Often the lodges are made of bundles of osiers set up in tiers, and thatched with sage-brush; or of young trees, untrimmed, leaning together at the top, and thatched with straw and brush. There are also arbors of boughs and small wick-y-ups always clustered round the central dwelling.

The dress of these Indians is of that nondescript character worn by all reservation Indians: seatless breeches of buckskin or blanket, with fringes along the outer seam; a hickory shirt worn outside; a blanket dragged across one shoulder and hitched under the other arm: and two great braids of straight hair, heavy with ornaments of shell or German silver, and plaited with strips of otter's skin. Their faces are painted thickly with vermilion, their hair is banged in front, and from their ears depend huge coils of brass wire or pieces of oyster, or *haliotis* shell, three inches square, procured, through a succession of barterings, from the Pacific Coast. Many of their blankets are imitations of the far-famed Navajo robes, striped, red, white and black, or worn in zig-zag patterns of these colors with blue and green. Let one, dressed in such a clown costume as this, with his barbarous accoutrements slung about him, his gun in one hand and triple-thonged whip in the other, dash up to you on the plains at the fullest speed his crazy pony can command, and you will either be frightened or think how picturesque he is. Watch a group of young squaws, too, as with gay, uncouth dresses of red and blue and white flannel, or Dolly Varden calico, as they race up and down hill, playing shinny, their coal-black hair tossing about their swarthy faces, and their gleeful laughter echoing like the hilarity of a flock of blackbirds, and you will say this also is very picturesque.

But the artistic, romantic aspect of these Indians is rapidly losing. They are becoming farmers, and their natural dirt is increased by the sweat of toil and the mud of irrigation ditches. We are told it is civilizing them, and that it is best, but—*quien sabe?* I suspect that, as a class, they are totally unable to survive civilization.

When, three years ago, the present manager, William H. Danielson, took charge of this agency for a second time, four families made some pretence of cultivating the ground. The next year twenty-four families were tilling, and this year seventy households, representing 450 Indians, are farmers. Their main crop is wheat, two hundred acres being devoted to this grain, while potatoes and other vegetables occupy fifty acres more. On his field last year more than one Indian raised from one hundred to one hundred and forty bushels of wheat, which was ground at the Government mill, and kept him in flour all winter. But the most fortunate ones last year are poverty-stricken this, for the grasshoppers came down "like the wolf on the fold," and utterly ruined a large portion of the young grain, clipping it close to the ground. All this is their own work, the Government furnishing implements, seeds and advice, but no labor. The agency itself runs a farm of forty acres by hired Indian labor. After fencing this patch the Indians concluded to fence their great farm, and did it rudely, but effectually, by coöperative labor, hauling the posts and poles for rails more than eighteen miles, and lashing them together with split willow-withes.

There is no trouble in getting the Indians to work in this way for themselves, if only they could get tools. Few agricultural implements have as yet been provided; but with the extra appropriation for this purpose lately granted, Mr. Danielson hopes next year to have twice seventy familes raising their winter's subsistence. The supply of food and annuity goods furnished the Agency is totally inadequate to keep all the 1,500 Indians during winter and summer; and in the distribution the Agent gives the advantage always to those members of the tribe who stay at home and farm, thus adding great inducements against roving. How willing they are to work, and how advantageous it is to use them, is shown by the fact that last fall Mr. Danielson hired them to cut, haul, and pile 125 cords of wood from the mountains, and the cost to the Government was only $90. I have forgotten to state that twenty-five miles away, on Bannock Creek, twenty-six families of Indians are residing permanently, and cultivating farms in contentment.

Nevertheless, this does only a little toward civilizing the Indians, not to say Christianizing them. They still live in their rude and dirty teepees, worship their savage deities with superstitious regard, and cling to their ancient customs with inbred tenacity. The squaws, especially, it does not seem to effect, and their persistent opposition or restlessness will often impel an Indian to leave his half-grown crop and go off on some idle ramble or useless hunt. Even the children seem to gain nothing, wandering naked through their father's wheat fields with tiny bow and arrow, shooting the blackbirds as unconcerned for A B C as though no Methodist Church beckoned them to its fold—*corral*, they'd call it here. Really, the only way you can make a white man out of an Indian, the only way, I say, is, to take the pappooses away from their mothers and keep them away; then get these young Indians to inter-marry, and start life on this high plane. You may educate an Indian girl until (under your eye) she is perfect in household accomplishments; but let her go back to her people, and she will drop into the slatternly manners and slavish attitudes of her untutored sisters in sixty days. You may graduate an Indian boy at a Princeton or Harvard; send him to his tribe, and he will only become an ambitious chief (and a renegade one at that) using his knowledge against his teachers. Socrates said a chip basket was "good," in that it would carry chips; and I suppose an Indian is good to keep Government rations from spoiling, but for little else. But that is not at all the working theory of the Agent at Fort Hall, who takes pride in the progress of his Indians, and trusts that the boys' and girls' boarding-school he is going to establish next year will bear noble fruit.

ERNEST INGERSOLL.

GAME PROTECTION.

MIGRATORY QUAIL.

I HAVE looked in your paper for some months past for information of an encouraging nature with respect to the migratory quail, as I wish to make an importation for this neighborhood, especially as we are just on the edge of the great Northern Forest, where so many migratory birds arrive for the breeding season. I am sorry to say your columns have been very bare of news on this subject. Somebody has ventured to state that one or two nests of eggs have been destroyed by grass mowers, and I think one distinguished gentleman ventures to predict that migratory quail will become as numerous in America as it is in Europe; but none of the dog hunters write about training their young dogs over the bevies, neither do the shooters ever mention killing (accidentally) any of these birds. In fact, I write for migratory quail news.

Quebec, Canada, Dec. 1st. W. R.

We are very greatly pleased to learn that Mr. Horace P. Tobey, of Boston, by whose aid a large number of the migratory quail were imported into this country last year, proposes to introduce another batch if he receives sufficient orders from sportsmen to encourage the undertaking.

The total importation thus far has been about 6,000 birds, of which more than half came last year. The number thus far is rather small to stock such a country as ours, although even 6,000 of such tough, hardy, little fellows will in time make a showing, widely distributed a they are. But 6,000 more will diminish by one-half the time within which they will become plenty. It is to be hoped that the prices may be kept down, but advices are not very encouraging upon this point. The large English and French demand for birds, and the war of the Sicilian sportsmen against the exportation, united with the increased charges for licenses for catching the birds, all tend to increase the cost of them. High prices would be a misfortune, as the lower the rates the larger doubtless would be the importation. Below we print a letter giving a description of these birds, which will be read with interest:—

BOSTON, *Nov. 29th.*

DEAR SIR—As many sportsmen in the North are on the watch to detect the presence of the migratory quail, and as, doubtless, many of our Southern fraternity also have their eyes open to see if this new citizen of the United States in its migrations touches upon their territory, it may not be amiss to give some facts which may assist in its identification, when only brief glimpses can be obtained of it in its rapid flight, or before its quick disappearance into the protecting obscurity of the shrubbery or tall grass through which it is, perhaps, running when first seen. As it is not a trait in the quail's character to allow itself to be picked up and examined feather by feather, a description of its general appearance and more striking peculiarities will be more useful to the sportsman than a detailed scientific description of its anatomy and plumage.

To begin with, then, the first time anyone sees this bird running, standing, sitting or flying, he will know it is a quail. There won't be any doubt in his mind on that point. The form and actions of the bird are too familiar to admit of any question, and the first thought is simply, "There is a quail." But continuing to look at it, the observer, if within say fifteen or twenty yards, is suddenly struck with the idea that it is an odd kind of a quail—that he never saw a quail like that before. It is in fact a *faded* quail—a *washed out* quail. It lacks the vivid colors of the native quail. The dark feathers are too light, the light feathers too dark; the colors run together; there are no strong contrasts; the prevailing tint is slate color, varying in shade from light slate or ash color to dark slate. The spotless white or yellow bars upon the sides of the head of our native quail (male and female) are to be seen upon this bird only indistinctly as an ashen tint, a shade or two lighter than the surrounding slate colors. The breast is the color of cigar ashes, with often a yellowish cast, and is more or less marked with dark spots, like the spots upon the breast of the partridge woodpecker, but not so dark nor so regular in form and distribution. Around the front of the neck is a collar varying with the age of the bird from ash color to almost black. In some specimens this collar is hardly visible, in others not visible at all. In some works upon natural history I find it stated that the sex of the bird is marked by the presence or absence of this collar. It is, however, in some cases so faintly marked that it is difficult to decide whether there is or is not a collar. I trust the birds themselves have other methods of determining their respective sexes, otherwise very embarassing mistakes must sometimes occur.

There is a peculiarity in the flight of the migratory quail which, when it is seen, appears to me to give an unmistakable means of identification. The bird has two kind of flight—one which it uses

when, badly frightened, it is escaping from enemies and seeking safety. In this case its flight means business. It is bold, sharp, vigorous, straight as an arrow flies, and precisely like the flight of our native quail, from which it cannot in any way be distinguished. Its second style of flight is quite different, and appears to be used only when the bird is leisurely flying from one spot to another, and is not badly frightened. The flight is made up of a succession of sharp half strokes of the wings, with a momentary glide between each stroke. The wings do not complete the stroke, but are stopped when upon a horizontal line, held for an instant in that position, and then raised for another quick and similar stroke. The whole operation is that known as "flicking," and is very similar to the flight of the marsh quail or the little shore bird known as the "tip up." It is to be observed, however, that there are no undulations in the line of flight, which is straight or in a long sweep. So far as my own observations extend, this style of flight is never used by the American quail, and I hazard the statement, subject to correction by any whose observations may have been closer and more accurate, that a quail flying in this peculiar style is unmistakably a migratory quail. I should add, however, that this flight is not to be confounded with the setting of the wings and "skimming" of the American quail when in the act of settling down or alighting, at which time it will scale for a considerable distance, but without, so far as I have seen, the flicking of the wings above described.

Passing from the question of identification, I will give my experience in reference to two points which have to do with the value of the migratory quail as a game bird, namely: Will it lie to dogs, and is its scent readily taken and recognized by dogs?

After releasing my importation of last year I was naturally curious to know whether the birds remained near the places at which they were released. I, therefore, went out occasionally with a dog to find them. I never found them running before the dog, and never knew them to rise out of distance. On the other hand, I have seen them lie in an open field, in short grass, within four feet of the dog's nose, and remain there until I walked up to the dog and flushed them. The dog took their scent readily at long distances, and stood as firm and with as much evidence of zeal and excitement as upon native quail. Before releasing my birds I put a few into a large pen, and these I kept for several months after the others were released. Being desirous of ascertaining just how strong a scent was given out by the birds, I took one from those in my pen and put him into a small iron cage, concealing him in the woods. I worked the dog towards him from down wind—that is, I worked up wind. At a distance of forty yards (subsequently measured) the dog threw up his head, drew cautiously about five yards nearer, and stood firm as a rock, remaining staunchly in position until I went to the hiding place and took out the cage and bird, and called him in. The bird was subsequently concealed in other places, and the same experiment tried several times, with about the same result. It is not, therefore, too much to say that under favorable circumstances a dog can scent a single migratory quail forty yards.

HORACE P. TOREY.

VIOLATION OF GAME LAWS IN NEW HAMPSHIRE.—We wish to call the attention of the New Hampshire Fish Commission to the following note from a correspondent who has just returned from the Winnipisceogee Lake:—

Trout are being speared by the boat load on ledges, spawning. Our Fish Commissioners have neglected their duty in this direction, I am sorry to say, very much. In fact, no attention has been paid to it whatever.

THE NEW YORK ASSOCIATION.—The first meeting of the New York Association for the Protection of Game was held last Monday evening, the Hon. R. B. Roosevelt, President, in the chair. Secretary Cuthbert reported that he had received during the year a great number of communications from parties requesting information about the game laws and also relative to the formation of similar societies. In supplying such information the usefulness of the association has been very great. The venison question was discussed at some length. Under the old law the restaurant-keepers were allowed the month of December in which to dispose of the venison killed in November. Under the new law no provision is made for this. Whether or not to prosecute dealers in enforcement of the law was, after some discussion, left to the discretion of the association's council. It was proposed at the next Legislature to secure the passage of the law providing for the appointment of ten State Game Constables; and the destruction of fish by steam fishing craft in the Sound was adverted to, a United States law being advocated as the only practicable method of suppressing. The progress of the various suits undertaken by the association was reported to be satisfactory.

—The Board of Supervisors of Livingston County, N. Y., have passed an Act prohibiting the killing of quail for a term of three years.

THE TALBOT COUNTY ASSOCIATION, MARYLAND.—At the annual election of officers of the club mentioned the following gentlemen were unanimously chosen:—President, Col. Sam Wetherell; First Vice-President, Captain J. G. Morris; Second Vice-President, T. J. Smithers; Recording Secretary, Oswald Tilghman; Treasurer, Robert Hough. It is the intention of the officers elected to make the club what it is in name, an association for the better preservation and protection of game and fish.

HOUNDING VS. STILL-HUNTING.—Speaking of the difficulty of successful still hunting as compared with hounding deer, our correspondent in Bethel, Me., who has had an unusually extensive experience, says:—

There are a great many hunters and but a few that are good still hunters. I have killed between one and two thousand deer, and the majority I still hunted. The lumbermen and deep snow deer slayers were continually howling about that still hunter, and saying among themselves that he would kill all the deer, so when the snow got deep they could not get any. They used to steal my deer until I made a mistake one day, when I thought I saw a deer in the bushes and shot at it, and it happened that it was a man, and the ball went through his hat, shaving the hair close to the skin; and it was one of the men that used to follow my tracks for the purpose of stealing my deer. I hunted in that part of the country for several years after that, and when I killed a deer and hung him up, even if he was in sight of those camps, when I went after it, it was sure to be where I had left it. That bullet seemed to tell them that it was best for them to let my deer remain where I left them.

I have killed sixty deer in a month's still hunting; and a hundred sportsmen with their hounds would not get that many in a month before the lakes and streams were frozen up. My being a successful still hunter don't prevent my being an expert with my dog and canoe. But what kind of a law do we want? Do we want one for the selfish still hunter? or do we want one for the good of the whole country?

If for the good of the country, give us one only allowing us to kill from the 15th of Sept. to the 15th of Dec., and during that time to kill them any way we prefer; and a fine, or imprisonment if the fine is not paid, for killing out of season. If we enforce such a law we may use all the dogs in the country during the hunting season, and our deer will increase. I do hope that our Legislatures will be well posted and make a law that will be for the benefit of the country, and not for the selfish still hunter alone. Let them know that a large majority of the sporting men can't still hunt, and that they are not afraid to put out their money for the privilege of getting a deer with the use of dogs; and they put it out among the poor class as a general thing, employing guides, etc.

I suppose it is the same in the Adirondacks as it is in some parts of Maine. I have had parties to whom I have furnished several guides to take them up to the lakes, and if we should kill a deer for every hundred dollars the party pays out, we will hear some selfish still hunter howling about it, or some March slaughterer threatening to shoot the dogs; but if I should hire them to go with us as guides, they would jump at the chance and think hounding deer was splendid.

The Rifle.

STICKING SHELLS.

Editor Forest and Stream:—

I have noticed a number of articles in FOREST AND STREAM in regard to the expansion of rifle shells, and have not as yet seen any satisfactory explanation of the cause; so will venture to state a few facts, brought out by experiments in rifles and with shells of different thicknesses of metal (brass).

It fell to my lot not long since to make a rifle, and for certain reasons wished to use a thick shell, so I ordered some made five-hundredths thick, using about 70 grains powder and 300 grain bullet; shell five-thousandths of an inch smaller than chamber, shell perfectly straight. Result: after first fire, shell expanded so as to completely fill chamber, and all the shells used for experiment, burst after third or fourth discharge. Conclusion: thick shells a failure. Next tried a thin shell of two-hundredths thickness, as much smaller than the chamber than the other; shell drawn as hard as possible; (that is, forced through the dies as many times as possible without annealing), which makes the brass very hard and elastic; same amount of powder and lead used as before. Shells have stood all tests, and will drop out of the chamber by holding the gun muzzle up.

Now, the reason of this is, that thick shells cannot, from the very nature of the case, have the same elasticity as thin ones, because they cannot be drawn as hard, and, being thick, cannot have the same amount of elasticity; the result is, that they will swell, and give the same trouble "Bexar" and others, as well as myself, have had with the Ballard "everlasting" shell, which has very thick sides and is of very soft brass, or brass that has not been drawn much after annealing.

Solid head shells are also more liable to this trouble than what are called folded head, because the solid head is made by upsetting, or squeezing the base of a shell into a die, that is, a matrix for shaping the head; and hard brass is so severe on the machinery that softer brass is used. Folded head shells are made of thinner brass and of finer quality, because rolled more in the sheet from which the blanks are cut, and when made as the Union Metallic Cartridge Company make the Russian Berdan musket shell, by putting their reinforced cup in the bottom, are better than any "everlasting" shell ever made. "Subscriber" says in your last issue, that he has a Maynard that uses very heavy charges, and he expected trouble from sticking, but found none.

This is explained by the fact, that the Maynard shells are all made from sheet brass, are of very fine quality of material, and are drawn very hard, and have a solid head riveted to them, the steel anvil answering the purpose of a rivet; so the shell is made in reality of the same grade of metal as a folded head shell, is very elastic, and will not stick or swell.

Another source of trouble with reloading shells (and it is a thing that ought not to happen with the intelligent class of men who use the rifle, but nevertheless does sometimes happen,) is this: makers of first-class rifles, as a rule, make first-class reloading tools; but no matter how well made, if the user does not take all possible care in loading his shells and in the casting of the bullet, he can use up the best shells that were ever made.

To illustrate I saw not long since some bullets cast from moulds; that I knew were of the right size. The person who cast them did not take sufficient care to see that the moulds were perfectly closed, and, of course, the bullets were not round, and, when forced into the shell, expanded it to such a degree that it would not enter the chamber. Now, he thought the trouble was wholly with the tools, until it was explained to him.

Trying to get more powder into the shell than it was intended to hold, and forcing the bullet on to it, will cause enough expansion of the shell to prevent its entering the chamber readily. Melting up old tea-pots, pewter spoons, and other old metal, one can get hold of, without knowing its composition, is another cause of trouble, and all laid to the gunmaker, because the tools are not right, and the gun will not shoot well.

A person should be absolutely certain what metal he is using. One part tin and fifteen of lead, is an excellent composition, and is not liable to lead the barrel if well lubricated. Cartridge makers use the greatest care, and the most perfect machinery in their business; and one has no idea of the perfection of their machinery, and the precision and uniformity of their work, unless he has had to inspect their product, or is acquainted with the business in its details. They make thousands upon thousands of bullets that will not vary a grain in weight, or a quarter of a thousandth of an inch in diameter, and shells that are of the same degree of perfection.

Now a person who takes less care than he knows is necessary to make perfect work, with the tools furnished by the gunmaker, and then curses the gun, and the maker, too, because he cannot shoot well, is "barking up the wrong tree," and ought to suffer for his stupidity.

To sum up, hard drawn brass shells are more durable, will extract easier, and are more elastic than soft brass.

Use the greatest care in moulding your bullets, and be sure your moulds are perfectly closed when doing so; and, if you have the tools, swage the bullets. Do not try to put more powder in the shell than it was intended to hold, and, after loading, wipe them clean and I think your troubles will be reduced to the lowest limit. MAGAZINE.

—From the official reports of the Naval Department, published November 30th, we are pleased to see that the Hotchkiss magazine rifle, calibre .45, has been adopted for the naval service, and is now issued to ships. It is an arm of remarkable simplicity and efficiency, not likely to be soon superseded by later inventions, and is one to which detachable magazines hereafter devised may be applied.

It gives us great pleasure that an arm manufactured by a private corporation is adopted by our own Government, and we can heartily congratulate the Winchester Arms Company on their great success.

MASSACHUSETTS—*Medford*—The winners in the handicap matches, recently closed at the Bellevue Range, are under the conditions of 10 rounds at 200 yards, three scores to count as follows: First prize, J. S. Bennett, 46, 47, 56—149; second prize, W. Charles, 47, 47, 47—141; third, D. Kirkwood, 48, 46, 46—140; fourth, E. James, 43, 43, 42—128; fifth, J. R. Teele, 45, 43, 44—132; sixth, E. Sears, 44, 44, 44—132; seventh, J. F. R. Schaefer, 44, 42, 44—130; eighth, E. Bennett, 43, 45, 42—130.

The handicap subscription glass-ball match resulted as follows, the conditions calling for 30 balls—10 single, 10 double and 10 rotary—aggregate of three scores to count:—

O. F. Belcher, 30, 30, 30—30; G. B. Blanchard, 29, 29, 30—88; W. B. Witherell, 28, 29, 29—86; D. Kirkwood, 27, 27, 27—81; W. H. Harrison, 29, 28, 28—85; J. R. Smith, 24, 24, 24—72; L. E. Johnson, 29, 28, 28—85; W. Charles, 25, 25, 25.

Medford, Dec. 4th.—Bellevue range. Distance, 200 yards; rounds, 10; the aggregate of three scores to count; Medford target count; open to all comers. Mr. W. Charles heads the list of seven scorers with a 56 and a 54 out of a possible 60. The summary:—

W. Charles	6	6	5	6	5	5	6	5	6	6	56
Re-entry	5	5	6	6	5	5	6	5	6	5	5—54
J. F. R. Schaefer	6	5	6	4	6	6	4	5	5	6	6—53
Re-entry	5	5	6	5	5	5	5	5	4	6	5—51
C. J. Gleason	5	6	4	5	5	5	6	5	5	5	5—51
Re-entry	3	5	5	6	5	5	5	6	5	5	5—50
W. B. Witherell	4	3	6	3	4	6	3	6	3	5	4—43

Hopkinton—The following good scores were made by the "Vagabonds" Nov. 29th at Claflin's Grove with a pistol at 6 rods:—

J. Gregory	5	5	5	5	5	5	5	5	5	5	5	5	5	5	4—74
J. Shurtliff	5	5	5	5	4	4	5	5	5	5	5	4	5	5	5—72
W. Smith	5	5	5	5	4	5	5	5	5	2	5	5	5	4	5—70

—The Hopkinton Rifle Club had a match, it being the final match for the prizes offered by Rose brothers. The weather conditions were bad, the wind blowing in gusts from 10 o'clock, and was hard to manage. The light was very unfavorable. The match was at 200 yards, off-hand. The prizes were given to those making the first, fourth and seventh best scores, and were awarded to N. Jewell, F. S. Phipps, and C. A. Frost, respectively.

O. Wood	4	4	4	3	5	4	3	5	3	4	4	4	4	5	—55
N. Jewell	3	4	4	4	4	4	5	4	4	4	5	5	3	4	—56
F. S. Phipps	3	4	2	4	3	5	4	4	4	4	4	4	4	4	—53
O. C. White	4	4	3	3	3	5	4	4	4	4	4	4	4	4	—52
J. Wadsworth	4	2	3	2	4	4	3	4	3	4	5	5	3	4	—50
O. H. Smith	4	4	3	3	3	4	2	4	3	5	4	4	3	4	—50

MAMMOTH RIFLE GALLERY.—*Boston, Dec. 6th.*—The regular monthly prize shoot has commenced, with some very brilliant shooting for the first week of the month, excellent scores being made by Pollard, Richardson, Staples and Robbins. Although no clean score was made, the shooting for the first week was remarkable. The following is the standing of the competitors to date, 150 feet; rounds, 8; possible 40:—

U. A. Pollard	5	5	5	5	5	4	5	—39
E. F. Richardson	4	5	4	5	5	5	5	5—38
A. C. Staples	5	5	5	5	5	4	4	5—38
A. E. Robbins	4	4	4	5	5	5	5	5—37
N. C. Stone	4	5	4	4	5	5	5	5—37
G. J. Seabury	5	5	5	4	5	4	4	5—37
E. F. Russell	5	5	4	5	4	5	5	4—37

For last month Mr. Maltoon, with a clean score of 8 consecutive bull's-eyes, won the first prize, and Messrs. Pollard, Whittier and Pickering tied for the second and third prizes, which will be shot off soon.

Boston, Dec. 4th.—There was a good attendance of the members of the Massachusetts Rifle Association at the Walnut Hill to-day. The weather conditions were good, the wind, which was light, ranging from 3 to 4 o'clock, and varied in intensity from one-half to three-quarter points. The "Silverware" Matchwas the only contest entered upon, and the following scores were made:—

F. Earnest	5	3	4	5	4	4	0	—25
J. Nichols	4	3	3	4	3	4	4	3—24
C. R. Griffing	4	4	5	3	3	3	3	2—24
G. D. Curtis	4	4	3	4	4	3	3	3—24
F. C. Connell	4	4	4	4	3	2	2	2—23
J. H. Williams	4	5	5	5	5	5	5	—34
W. H. Jackson	5	5	4	5	5	5	5	—34
C. R. Griffing	4	6	5	5	4	4	5	—33
J. Nichols	5	4	4	4	4	5	4	—31
W. E. Garrier	5	4	4	5	4	5	5	—31
F. C. Connell	4	4	5	4	4	5	4	—30
G. O. Curtis	5	4	5	4	5	4	4	—30
F. Earnest	4	4	3	4	5	4	4	—28

WASHINGTON, D. C.—The Columbia Rifle Association shot three matches at their range at Bennings', Saturday, the 6th inst. The day was decidedly unfavorable to good shooting. It was raining much of the time while the long-range and military matches were being shot. Mr. W. M. Farrow was present and took part in the off-hand match. It was regretted by the members of the Columbia Association that Mr. Farrow did not come prepared to shoot with them at long range, as they believed he could not carry off the honors so easily there. The off-hand match, which began at 11 o'clock, resulted as follows:

W. M. FARROW.

200	5	4	5	5	5	5	5	4	4	4	5	—46				
300	4	4	5	4	5	5	5	3	0	4	—39	—85				

J. O. P. BURNSIDE.

200	4	4	5	4	4	4	4	4	5	4	41					
300	4	3	3	4	4	4	5	4	5	4	—39	—80				

C. H. LAIRD.

200	4	4	4	4	4	5	5	4	—42							
300	3	4	4	4	4	5	4	0	4	—36	78					

BENJAMIN CHAMBERS.

200	2	3	4	4	4	4	4	3	4	4	—36					
300	3	4	4	4	4	4	4	3	3	5	—37	—73				

Mr. Farrow was scored a "miss" at 300 yards, but it was afterwards learned by questioning one of the markers that the shot should have been scored a bull's-eye, but as Mr. Farrow did not claim it at the time, under the rules of the National Rifle Association the score could not be changed.

The long-range match begun at 1 o'clock and stood:—

J. O. P. BURNSIDE.

800 yards	5	4	5	5	5	5	0	5	5	5	5	5	5	5	2—66	
900 yards	3	5	5	5	5	5	4	4	5	5	5	5	5	5	5—71	
1,000 yards	4	5	3	5	4	5	3	4	5	3	5	5	4	5	5—67—204	

P. J. LAURITZEN.

800 yards	5	5	5	5	5	5	5	5	5	5	5	5	5	4	—73	
900 yards	3	3	5	3	5	4	5	5	5	5	5	5	3	5	5—66	
1,000 yards	4	5	5	5	5	5	4	4	4	5	5	4	3	5	—63	—204

Colonel Burnside's miss at 800 yards was made just as a heavy shower was breaking over the range.

The last match was the military match at 200 and 300 yards, which began at 2 o'clock and continued while the long-range match was being shot over the other range:—

Lieut. Hobbs, 2nd. U. S. Art.	200 yards	42	79
	300 yards	37	
Sergeant Thomas Hutton	200 yards	39	78
	300 yards	39	
L. Almond	200 yards	38	72
	300 yards	34	
Mr. A. A. Adee	200 yards	38	69
	300 yards	31	
Sergeant Daniel Kirby	200 yards	36	67
	300 yards	31	
Corporal George Gray	200 yards	34	59
	300 yards	25	
Thomas Templeton	200 yards	33	55
	300 yards	22	
Corporal John Conner	200 yard	32	45
	300 yards	13	

—The Winchester Arms Co., have just prepared some fine pink edge felt gun-wads, which have been chemically prepared to prevent any leading of the gun. Those who have tried them declare that they are equal to any of the English standard, and it is likely that American sportsmen will now supply themselves with this American manufacture.

—The Remington Co. have taken another good step and kept themselves in the lead of their class by the issue of the new Hepburn model rifle. It has a solid breech block worked by a side action. It is certainly substantial, and Mr. Hepburn should, of all men in this country, be able to produce a good shooting arm, as he is one of the few who can manipulate a rifle either in the shop or the range.

OHIO—*Cincinnati, Nov. 29th.*—The following is the score made by the Cincinnati Shooting and Fishing Club in their third competition for the Baker Medal; distance 200 yards; position, off-hand; number of shots, 15; target, Massachusetts-Creedmoor:—

															Mass.Cred.	
M. Gindelin	10	10	11	4	9	12	10	11	11	9	8	11	9	12	11	148	99
W. Caldwell	9	10	10	12	11	11	8	9	10	10	12	10	8	11	7	148	65
J. Weston	10	12	11	10	9	12	9	9	9	9	9	10	9	9	10	147	63
G. Hensen	7	12	8	8	8	10	12	12	10	9	10	10	10	11	9	141	61
A. Koehler	10	8	5	8	6	12	10	10	12	10	11	11	10	9	10	142	62
D. T. Disney	5	8	8	8	9	8	10	8	10	9	12	10	11	10	9	135	61
W. Hall	8	8	11	10	8	12	10	9	5	9	11	7	7	10	9	134	62
O. Topf	8	9	11	10	11	7	9	7	9	10	7	9	7	7	11	133	63
L. Feuder	9	7	8	10	11	7	10	9	11	9	9	9	10	12	10	132	59

On tie:—

M. Gindelin	11	12	—31
W. Caldwell	8	11	12—31

Game Bag and Gun.

GAME IN SEASON FOR DECEMBER.

Moose, *Alce Americana.*	Pinnated grouse or prairie chickens, *Cupidonia cupido.*
Caribou, *Rangifer caribou.*	
Elk or wapiti, *Cervus canadensis.*	Ruffed grouse or pheasant, *Bonasa umbellus.*
Red or Va. deer, *C. virginianus.*	
Squirrels, red, black and gray.	Quail or partridge, *Ortyx virginianus.*
Hares, brown and gray.	
Wild turkey, *Meleagris gallopavo.*	Woodcock, *Philohela minor.*

Swans, Brant, Wild Ducks, Geese, &c.

☞This table does not apply to all the States. It is meant to represent the game which is generally in season at this time. State regulations may prohibit the killing of some species of game here mentioned.

—Another man killed by trying to draw a gun muzzle foremost out of a boat.

YE ANCIENT GUNNER.—An old friend of ours, who resides in Mott Haven, and wishes us to understand that he does not give up sporting yet, although he is *eighty-five years old*, went over into Monmouth County, N. J., the other day, and in three hours shot five nice quail over his dog in good form. The old gentleman called in at our office last week, up three pairs of stairs, and told us this; but he prohibits us from mentioning his name, because he considers his exploit a trifle. He is going to Florida next week to fish and shoot.

A NEW RUST PREVENTIVE.—A correspondent in New Westminster, British Columbia, recommends the oil obtained from the liver of the *Chimæra Monstrosa*, locally known as king of the herrings, rabbit-fish, rat-fish, silver dog-fish, etc., which fish may be said to be abundant in British Columbia waters. He writes:—

After trying out the oil no preparation is necessary beyond putting a few strips of lead, some shot, or rusty nails in the vessel containing the oil, which has the effect of clearing the oil from impurities by collecting them on the metal, when the pure oil may be then poured off. For lubricating the locks, joints, etc., of guns this oil cannot be beaten, and for keeping the barrels and all other parts free from rust I have never seen its equal. It is not of a gummy nature, and never clogs or becomes stiff, even in the coldest weather. I have used it for a matter of ten years or more, and consequently speak advisedly concerning it.

How guns are affected by damp and salt water on other sea coasts I am not aware, but on this northwestern one of ours the greatest care and attention is required to keep a gun in good shape. And the ordinary oils used in other countries with good effect, such as olive oil, etc., will not answer here. My attention was first directed to its properties by some whalers (who at that time where engaged in the pursuit of hump-back whales in the Gulf of Georgia and vicinity) who used it for oiling their harpoon and bomb guns, harpoons, lances, spades, etc., with the best results; and profiting by their experience I have since then been able to keep my guns in good order.

If oil was a mailable article I would take pleasure in forwarding some of this to you, that you might test and add your testimony to its efficacy and worth.

MOWITCH.

Our correspondent has unquestionably put our sportsmen in a way to secure a long-sought desideratum for use in cold weather and cold climates; and as the "Rat-fish Lubricating Oil" cannot be easily obtained by sportsmen east of the Cascades, we are endeavoring to arrange with Mowitch for its sale by some firm in this city, whose address will be given in due time. There are many very fine oils in use which cannot be surpassed for use in men weather, but which clog and solidify in cold weather.

KENTUCKY TURKEY SHOOTING.—The following notes are particularly timely just now, when the attention of the whole world is turned to Turkey, and the cable dispatches are headed in bold letters, "Who is Turkey's Friend?" "Turkey's Peril," etc. Some people are prone to hang up their guns, and bewail the extinction of American game. The fact is, that there are in this country more localities full of game undiscovered, and yet to be explored and worked up, than will suffice to keep the American sportsman busy for a great many decades yet. One by one these choice spots are being made known through the columns of the FOREST AND STREAM. But a sensible man, if he appreciates how thoroughly such reports are read and noted, does not write up his favorite locality. Now for the turkey: Our correspondent, "J. D. H.," whose initials are familiar to our readers, writes from Nashville, Tenn.:—

Some years ago I was afforded an opportunity of watching a severely contested combat between two ordinary turkey gobblers—an amusement I was, until then, unaware that they indulged in with such savageness. In conversing with a gentleman from Kentucky a few days ago, we were speaking about the game in his county (Trigg), of that State, when he, among other capital narrations of his sporting experiences, described a desperate conflict between two wild turkey gobblers, which he personally witnessed, until his desire to bag them overcame his curiosity in the combat, and he ended it with his gun. He stated, however, that they had fought for nearly thirty minutes, dealing some terrific blows with their spurs, and displaying their intense rage by constant attacks with their powerful bills. When he fired they were "clinched" with their bills, so that one shot killed one and wounded the other severely. The survivor seemed to have accepted his antagonist's death as the result of his own efforts (apparently paying no attention to the report of the gun), and after the lifeless body lay before him continued to peck at it, as though he was not sufficiently avenged.

He reports turkeys in great abundance in all the hill country in the county and neighborhood. The mode of hunting them there is to have a well trained dog, which will make the circuit of the woods in which the game is generally found, be the while keeping up a fierce barking, at last frightening them so as to make them take to wing. He says they invariably light in the trees, and seem so much preoccupied by the doings of the dog that a good, quick shot can bag a number before they fly away. Last year he killed a gobbler which, when dressed, weighed twenty-two pounds. In his craw were found thirty odd chestnuts. They are in best condition after the corn is gathered, as they go to the fields and find a quantity of scattered grain, upon which they fatten rapidly, especially if the "mast" has been plentiful, this seeming to form a foundation upon which they improve much better than when they have had grain alone. That section of country is generally known as the Colon. It is equally noted for its abundance of other game, particularly deer and foxes. The people are wonderfully hospitable about there; and no doubt many of the readers of the FOREST AND STREAM who go West for their amusement during the winter, would do well to pay the little village of Cadiz a visit, and be largely rewarded in the way of sport.

NEW HAMPSHIRE—*Lake Village, Dec. 4th.*—Have just returned from two weeks on Lake Winnepisseogee. Ducking fine. Grouse not very plenty; some squirrels and pigeons. H.

MASSACHUSETTS—*Salisbury.*—Quail are found near the village in fairnumbers. Two of us went out on Thanksgiving Day, and bagged five. J. O. F.

DUCK SHOOTING IN NEW HAVEN.—About September 1st ten members of the New Haven Gun Club sent their duck boats over to Branford waters to Captain Geo. Landfeer's wharf. Since that time there has been about two lines a week, and several hundred coots have been shot. On two days there were nine boats which brought in to the dock over three hundred coots each day. There has been great improvement in several of the young members in coot shooting, and they bid fair to show a good record another season. Thanksgiving was the last day for coot shooting in line.

Prospects are good for old squam shooting next month, as they are feeding now between New Haven and Branford Harbor by the thousands and tens of thousands. Night before Thanksgiving several members of the club went down to Capt. Landfeer's Hotel and stayed all night, and started out Thanksgiving morning at 6 A. M. A line was formed, and they commenced to shoot about seven. The day was fine, and the water was very smooth until three, when it commenced to blow from the southwest. At four the sea was running so high that most of the boats dragged their anchors, and the boats commenced to ship sea—soon all the boats were headed for the wharf. There were 209 coots and 92 old squams. The members who sat down to help eat them were as follows: Capt. Waterhouse, Falsom, Jorey, Whitlock and brother, Salisbury, Sanford, H. Thompson, A. Thompson, Hutton, Smith, Hanson.

There have been a great many broad-bill and butter ducks shot at Branford this fall by the New Haven team. If any party or parties, who wish to have a few days good shooting, and have no boats and decoys, we take pleasure in recommending Capt. Landfeer's Hotel as a good place to find boats and decoys. Broad-bills have commenced to come very plenty, and no doubt next month there will be a great many shot, or shot at. SQUAW.

VIRGINIA—*Washington, D. C., Dec. 6th.*—I have just returned from Milford, Va., where I spent a few days' quail shooting. The birds were remarkably scarce. All with whom I spoke agreed that they had never known so few birds in that locality. About the time the young were hatched there were heavy rains—floods, in fact. These are believed to have drowned the young birds. These floods were followed by a long, severe drought, and that is supposed to have proved fatal to a large number of the survivors. The lands are nearly all posted.

C. B.

Owensboro, Nov. 28th.—Charles McAdams and George Boyd, both of Hawesville, Ky., while hunting on Green River recently, killed sixty mallard ducks, besides quails, squirrels, etc. TENNESSEE.

TENNESSEE—*Nashville, Nov. 30th.*—A party of gentlemen returned yesterday from Redwood Lake, where they had grand sport. The weather was a little too warm, but the quantity of game and fish was beyond description. In addition to ducks, quail and turkeys, several deer were killed. Every day I hear of large bags of quail made within a few miles of the city, and an evidence of their being plentiful is that in market they command from one dollar to one and a quarter per dozen. The outrageous practice of taking them in nets is still practiced in many places, but as that means does not seem to deplete the breed much, an attempt at legislating against that cruel mode of hunting them could be urged to advantage. Quite a number of deer have been brought to market within the past week. Squirrels are exceedingly abundant, as are also rabbits. The sportsman, in fact, has as much game to shoot at as he can desire. J. D. H.

FLORIDA—*Jacksonville, Dec. 1st.*—Our first class hotels are open. Visitors are arriving in numbers, and much earlier than usual. Several sportsmen have already left for the Indian River country. Geese are flying to the southward. Ducks have appeared in the river; on Friday two friends shot sixteen in a short time in front of this city.

THE GULF HAMMOCK HOTEL, FLORIDA.—*Mr. Editor:*—Through your columns I have brought to the notice of sportsmen several localities in this State, and I wish to direct their attention to Wingate's Sportsman's Retreat, in the Gulf Hammock. His large and well-kept house is located in the edge of the Gulf Hammock, distant seven miles from Otter Creek station, on the Cedar Keys and Fernandina Railroad. All who have visited Capt. Wingate's speak in the highest terms of the Captain, his better half, house and sporting attractions of this locality.

Two weeks since Captain B——, of the Second Life Guards, and his brother called, and stated that they had spent the summer hunting and fishing in Wyoming Territory, and that they had concluded to have a look at Florida before returning to England. They requested me to recommend them to some accessible point, where they could spent a few days, and I advised them to go to Wingate's. They did so, and as they are competent to judge of the sporting attractions of the locality, I append a copy of a letter, received from the Captain a few days since:—

GULF HAMMOCK, Otter Creek, Fla., *Nov. 23d.*

MY DEAR SIR.—I write a line to say that my brother and myself are very much obliged to you for your recommendation to come to the Gulf Hammock. The fishing and shooting are both good. There is a great variety of game, which is the great charm. Deer especially are very plentiful. Captain and Mrs. Wingate have done everything to make our stay here pleasant. We intend remaining here another week, and my brother will probably stay some time longer. I remain, with kind regards, yours very truly, R. B.

Parties can leave Jacksonville at 11 A. M., and reach Wingate's at 9 P. M. His charges are two dollars per day, twelve dollars per week, forty dollars per month; dogs, boats and hunters free.

My friend, Mr. H——, of Tasmania, spent eight months in the neighborhood of Wingate's, and on his return from England in January will go to Wingate's, and remain there. AL FRESCO.

INDIANA.—If the Indianapolis papers are to be relied upon, the Rev. Myron W. Reed, of that city, whom our readers will remember as the bright author of the sketch entitled "Locusts and Wild Honey," did some effective gunning among a lone widow's flock of the *Anser domesticus* just before Thanksgiving. The geese probably deserved their fate for having strayed off to the rice fields of

Lannegan's Lake, where only wild ducks ought to be found. Besides, the whole story may be only a figment of the reportorial brain.

MICHIGAN—*Detroit, Dec. 6th.*—John E. Long, of this city, was out to South Lyons, December 2d, 3d, and 4th, and bagged thirty-three partridges. S. F. W.

DAKOTA—*Pembina, Dec. 4th.*—Hunting not better for years than this season. Grouse, or, as we call them, prairie chickens, were to be found everywhere, and my boys kept us supplied with them so much and so often that when I went on the street every pointer I met would point for me. There were thousands of ducks. My oldest boy, Ned, killed over six hundred ducks himself, and did not go over six miles from town to do it. So you see we have sport here, besides we have some good sportsmen. Chickens are now plentiful, as also are rabbits; and the picking of the bones of either of them is not an unpleasant operation. OLD JUDGE.

TWO DEER WITH ONE SHOT.—*Washington, D. C., Nov. 21st.*—*Editor Forest and Stream.*—In a recent number of FOREST AND STREAM I read an article entitled "Deer in New Mexico," which brought to mind one or two instances of deer shooting that may be interesting to your readers. As I was not the principal in either of the incidents related below, I will not be accused of egotism in giving them to the public.

My father was noted in our section of South Carolina, as being an expert and "lucky" hunter, and I suppose in the course of his life he bagged more game than any three or four other non-professional hunters of his acquaintance. He was successful because a diligent and intelligent hunter.

On one occasion while I was quite a small boy, I saw him making preparations for a turkey hunt, or rather, a visit to a turkey-blind. It was always my delight to accompany him, and after some solicitation he consented that I might go on this occasion. Preparations were made over night, and when he called me up next morning I found it had snowed in the night. After we started we found that the snow had been followed by a slight rain, which had frozen, forming quite a hard crust in exposed situations plenty strong to hold my weight without breaking through. My father's steps could be heard hundreds of yards as he crunched through the frozen crust, and he expressed some anxiety as to whether the trip would pay for itself that day.

Arriving at the blind, and having scattered the bait, we sat ourselves down as comfortably as the cold would permit, to await the appearance of daylight. We had not very long to wait, for presently we heard the turkeys flying from their roosts. My father produced his "bone," and after yelping a few times we had the satisfaction of hearing a number of answers. Father had his gun ready, and expected confidently to have an opportunity of using it in a moment more, when we heard a noise like a regiment of cavalry approaching. Of course, the turkeys disappeared at once, and father arose to go. He was not a very patient man, and was quite angry because of the disturbance. At my urgent solicitation he concluded, after ascertaining the cause of the noise to be an ox-cart on the way to mill, to try again.

Waiting a considerable time after the noise could no longer be heard, he again began to yelp, and before very long the turkeys were again approaching the bait, and he had the prospect of a good shot. Just as he was preparing to raise his gun (I forgot, by the way, to mention that it was a single gun, English, imported about 1807 or 1808), we heard another noise, apparently from the direction in which the cart had gone. Of course, the turkeys were off again, and father, throwing down his gun, began to wrap himself up for a start home. I was glancing up in the direction of the noise, and instead of the cart, I saw two large deer coming toward us at a rapid gait. I called father, who, at a glance, raised his gun and fired. They were both bucks, and were running one in advance of the other. One fell dead in his tracks, and the other ran some two hundred yards before falling. Father declared them to be the largest bucks he had ever seen. After all, we were compelled to get the ox cart to take our game home for us.

The second incident was as follows: A party of gentlemen were out hunting, and each had taken his "stand," while the driver had put the dogs into the run. Stationed about two hundred yards from me, but in open view, was Dr. James McG——. He had probably the best stand on the run, and as it proved, was the right man in the right place. In a reasonable time a "jump" was made, and deer and dogs came like the wind down upon the Doctor. Two deer, a buck, and doe, had been jumped and were running together. When within eighty or ninety yards they divided, the buck going to the right and the doe to the left. Waiting till they were about abreast of him, the Doctor raised his gun and fired, and I saw the buck bound into the air and fall dead. Almost, without losing a second of time, the Doctor wheeled and fired, and the doe rolled over—the neatest thing in deer shooting I ever saw.

THE CALIFORNIA QUAIL.

THE following sketch of quail and quail shooting on the Pacific coast, is so interesting, and contains so much that will be new to many of our readers, that we take pleasure in printing it complete as it appeared in the San Francisco *Bulletin*. It is interesting to know that the quail are so useful to the vine growers of the greatest wine State of the Union:—

The California quail is held by all sportsmen to be the game bird *par excellence*, the hardest to hit, the hardest to bring to bag, and the most wily of the feathered tribe. The quail is a native of the length and breadth of California from Siskiyou to the Mexican line, and from the Pacific Ocean to the extreme limits of the State. In certain counties they are found in an extraordinary abundance, particularly in San Diego, San Buenaventura, San Bernadino, and in other of the southern and midland counties. Some ten or twelve years ago quail were very numerous in Alameda and Contra Costa Counties, but the vast army of San Francisco sportsmen found these places easy of access, and have almost annihilated the large packs of quail that so abounded in these Bay Counties. Still quail exist in a fair proportion in those localities where some attempts at their preservation have been made. Their remarkable fecundity has defied the persistent efforts of pot-hunters and the trapper. In regard to this fecundity it is alleged by many close observers of the habits of these birds that they bring up two broods, the last in August or about the early part of September, which are of course unfit for the gun.

In the southern portion of the State a quail, which is called the *Ortyx Gambelli*, or Gambel's partridge [*Lophortyx*—ED.] is found. It is similar in plumage to the valley quail; but it is not a partridge. No true partridge ever roosts in trees, and the Gambel partridge follows the example of his valley sisters and seeks his rest at night on the spreading limbs under the protecting foliage. It very closely resembles the valley quail, and requires a very close inspection to distinguish between the varieties.

The sportsmen's first piece of furniture, necessary in the pursuit of the California quail, is a good, steady dog. That he should be a retriever is a matter of the utmost importance. He must also work within easy shooting range of the gun, as the wide ranging dog of Europe and the East would be altogether unfitted for this sort of sport. The quail is easily flushed, and is the most restless of all game birds. They, on most occasions, do not lie well to dog; and this is particularly the case before the pack is broken. But when they are flushed and broken twice or so in succession, they lie comfortably well, and it is no uncommon thing, or, rather was not, some years ago, for a couple of good shots to kill from a hundred to a hundred and twenty-five out of a single pack. After the opening of the season these birds pack very similar to the Scotch grouse, hill-side bred beveys getting together in packs of from three to four hundred birds. No bird in all the range of game birds possesses so much vitality as the saucy little California quail. In "Ways that are dark, and tricks that are vain," it is most peculiar. Their worst habit is running before a dog, making him unsteady, often spoiling a good dog by making him liable to flush. A slow, pottering dog, with a good nose, is the best adapted for quail shooting, but his retrieving qualities must be perfect.

The gun used for quail shooting should not be larger than a twelve bore, and some prefer fourteen and sixteen. It should be light, handy and a hard hitter. The charge of a twelve bore should be three drachms of powder and one ounce of No. 9 shot. For smaller bores a lighter charge is desirable. What pleasure a man can have in shouldering a nine-pound, ten-gauge gun, and tramping over a dry hill-side in pursuit of California quail, seems a singular question, when he can so much enhance his enjoyment and improve his shooting by the use of a lighter weapon. Some of the best shots in the State are using sixteen-bore guns, and have been wonderfully successful with them. That small bore guns, with light charges, will be the fashion next season, is evident. These guns give an actual test of skill, unlike the cannon so much in vogue at present.

A few years ago it was no uncommon thing for a sportsman to start from San Francisco in the morning and return the same evening with a nice bag of fifty, sixty or seventy-five birds, but over the same ground at the present day it is difficult to bring a dozen birds to bag in a single day's shooting. To reach the prime quail grounds now necessitates a long and tedious journey, requiring from a day to a day and a half to get on the ground, and for a couple of days' shooting the expenditure of four days is demanded. In the southern counties, where no restriction is placed on quail shooting, grand sport can be obtained. There the birds exist in thousands, and are as tame as chickens in a farmyard. In Tulare County, on the Huggin & Carr estates, where irrigation has been introduced, quail have bred in myriads. In shooting over this section before, it was necessary to pack water along in demijohns for men and dogs; but now, as water can be obtained in every ditch, all this is done away with.

Squirrel poisoning has had much to do with the destruction of quail in Alameda and Contra Costa counties. In other places where they once existed in thousands they are completely cleaned out, and the call of this beautiful bird is now unknown on many hillsides where they formerly animated every cover. But not by squirrel poison alone have the quail suffered. A more destructive agent is the wholesale trapping which is practised with impunity in many counties. The birds are caught both in and out of season, and all prospects of propagation are ruined. The trap technically known as the figure four trap is used, and one with half a dozen of these traps, well attended, will clean out a whole county side of quail, where a hundred guns in a season could not accomplish as much, for a large percentage of the birds will escape from the most expert sportsman. The trap is deadly. It is sure and noiseless, and does its work in the most effective manner. It certainly devolves on the next Legislature, in view of the great destruction of quail in traps, to pass stringent anti-trapping laws that will be strictly enforced to prevent the total annihilation of this noble little game bird.

It is charged that in grape-growing counties, Napa, Sonoma, etc., quail do a vast injury to the crop. But this, like many other allegations against the quail, is greatly exaggerated. In place of injuring the vineyard, it has been ascertained that quail do a vast amount of good by devouring the insects that infest the vines, and their destruction of the fruit is a mere bagatelle in comparison with their removal of these vine parasites. A gentleman who owns a large vineyard has encouraged the visits of a pack of quail with the object of assuring himself if they were guilty of the misdemeanor of which many viniculturists accused them. He ascertained that the birds pick the insects from the vines and fruit, and examining the crops of those that were shot, found that they contained but a single grape skin. To green crops, such as peas, beans, etc., quail are very destructive, devouring the sprouts with avidity as they appear above the ground.

To obtain a day's good quail shooting the sportsman, in the majority of cases, must get a permit from the agents or owners of the lands. In Marin, Napa, Solano, Contra Costa, and San Mateo counties the farmers have posted their lands, and strictly preserved them from the ravages of the pot-hunters. Sportsmen, however, can always obtain permission for a day's shooting by making proper application to the proper persons. The farmers have been driven to rule out the great army of hunters on account of the destructive tendencies and general cussedness displayed by pot-hunters. They will tear down fences, leave gates open, and set fire to the grasses, damaging property to a considerable extent. So great was the annoyance caused by this obnoxious class of shooters that special legislation was called into requisition for the above-named counties, making it punishable by fine or imprisonment, or both, for persons to enter on enclosed lands with dog and gun in pursuit of game without special permission from the owner or agent.

The majority of sportsmen consider quail shooting the most difficult of all branches of the pursuit of game, and very justly so. To bring the California quail to bag requires the exertion of the very acme of the gunner's skill. The great fault with most sportsmen is shooting too quick, and before fairly covering the bird. This does not mean that a man should follow the bird with his gun until it is almost out of sight, but there is a happy medium in the time for pulling the trigger, neither snap shooting nor poke shooting. The whirring of a quail's wing has a tendency to disconcert the shooter, and this is particularly the case with young sportsmen, who will then, on flushing a bird, throw up the gun and fire almost before the gun reaches the shoulder. The consequence is, a waste of powder and shot, and some sound swearing at the frequent misses. In shooting over a dog, as the bird flushes the gun should be kept at the ready, and when it has reached a distance of fifteen or twenty yards the gun should be raised, a quick and decided aim taken, making due allowance for the velocity of the bird, and the trigger pressed gently, with the gun in motion. This lateral motion is called "swing," and to be a good shot at any game this swing is absolutely necessary. Some use swing in all shooting, and others fire as the gun reaches the shoulder, and these are called "snap" shots. Of course there are occasions when one must snap shoot in order to get a bird flying in heavy cover, but the perfect quail shot is the man that can adapt himself to the kind of shooting that presents itself—who, if a bird gives him but a yard of sight will cut him down, and when shooting over his dog in the open will be deliberate.

The combination of these different styles of shooting is the grand one to attain. Practice is absolutely necessary to obtain proficiency in any sport, but some may practice a lifetime and never go beyond mediocrity. To be a crack shot is a good deal of a gift, and requires an aggregation of qualities rarely seen in one individual. California, however, can boast of possessing the best field shots in the world, which is owing, in a great measure, to their practice at quail. Finally, all sportsmen should bear in mind that game should not be killed in wantonness, or with the view of making extraordinary bags, but that their skill should be used in moderation, and their coöperation given in all cases where the preservation of game is concerned.

SHOOTING MATCHES.

—Mr. S. A. Tucker, agent for Parker Brother's guns, is a capital shot. At the late tournament held at Kansas City he killed 179 birds out of 190 fired at, of which 115 were killed in the main shoots, and 64 in shooting off ties at all distances. In ties he missed but two birds out of 66 shot at, which is a difficult score to beat.

NEWSPAPER CHALLENGES.—The publication of sporting challenges in newspapers, now so common, is only a natural outgrowth of the modern system of publishing in the daily paper whatever is of interest in every branch of pursuits. The daily paper and its weekly supplemental issue contain more art than the art journals, more horse than the turf journals, more religious news than the religious periodicals, more fiction than the story papers, more sporting news than the sporting journals. If a man thinks he can jump higher than any other man in the world, he says so in the daily paper, and straightway finds the other man. So if Captain Bogardus thinks that he can shoot more glass balls in less time than any other shooting man in the world, he puts his belief into print, and may, or may not, find the other man. Some experts have made a name for themselves in the newspapers, who, without these pen and ink matches, would never have been heard of. They usually fail to come to time. It must be said to the credit of Captain Bogardus, however, that he is always more ready to plank down his money than to spill much ink over it. The shooting lights of the world have come to understand that when Bogardus says a thing he means it. Hence there is very little of the newspaper bickering, brag, and bluster so common in other forms of shooting matches.

ANOTHER GREAT SHOOTING MATCH.—The next great shooting match will take place at Captain Bogardus' Shooting School, November 20th, when the Captain will attempt to break 5,500 glass balls, sprung from two or more traps, distance not less than fifteen yards, loading his own gun, within 450½ minutes. The match will be for a purse of $1,000 deposited by the Dittmar Powder Company. The shooting will begin at 3 o'clock, P. M. This feat is to be undertaken for the purpose of eclipsing Dr. Carver's record of 5,500 balls in 450m. 30s.

BOGARDUS' SHOOTING-SCHOOL.—Capt. A. H. Bogardus has at last opened his long-talked-of shooting-school in this city. The location is the old Tivoli Theater, Eighth street, between Second and Third avenues. The hours are from 2 to 5 and from 7 to 11 P.M. At the opening last evening Capt. Bogardus performed almost all of his famous feats.

MASSACHUSETTS—*Medford, Dec. 5th.*—Bellevue range:

	Double Trap.	Rotary Trap.	Total
O. F. Belcher	10	10	20
Re-entry	10	10	20
J. S. Sawyer	10	10	20

A. Marsh	5	6	11
J. E. Nason	6	5	11
L. C. Greco	3	8	11

NEW YORK—*Franklin, Dec. 1st.*—The first Wednesday in November a few members of the Onleout Sportsman's Club had a contest for the gold badge, with the following result; using Card's rotary trap and Bogardus' rules for glass ball matches. Gay Kellogg, manager; Jack Harriff, referee:—

W. Rutherford	1	1	0	1	1	1	1	1	1	1—9
W. Hamilton	1	1	1	1	1	1	1	0	1	1—9
F. Ingolls	0	1	0	1	1	1	1	1	0	0—7
J. Buell	1	1	1	1	1	0	1	1	0	0—7
D. Bartlett	1	1	1	1	1	1	0	1	1	1—9
J. Rutherford	1	0	1	1	1	0	1	0	0	0—5
D. Hanis	1	1	1	0	0	1	1	1	1	1—8
L. Hiere	1	1	0	1	0	1	1	1	1	1—8

Ties:—

W. Rutherford	1	1	1	1	1—5	D. Bartlett	1	0	1	1	1—4
W. Hamilton	1	0	0	1	1—3						

This makes twice Mr. Rutherford has won it within the year. We have members who do not contest for the badge. A short time ago Mr. M. P. McKoon, the cocker spaniel man (the "Blue Star Kennel" proprietor), broke twenty straight, and then had to stop on account of recoil of the gun, as he is in feeble health. G. K.

NEW JERSEY—*Bayonne, Dec. 6th.*—Match at 26 yards, single barrel, H. and F. traps; misty weather:—M. Dixie, of Philadelphia, killed 18 out of 25; W. Thomas, of New York, 16 out of 25.

PENNSYLVANIA—*Bradford, Dec. 2d.*—The clubs of the oil region shot a match at 100 glass balls each man, 15 yards rise, Card trap, straightaway. Another match is arranged for Christmas. The score was as follows:—

A. B. Smith, *99; John Dinman, 96; A. E. Lineman, 95; Geo. Babcock, 93; V. Wevel, 93; A. Smedley, 92; J. C. Lineman, 91; B. Patent, 83; E. B. Dodge, 87; H. Harkness, 81; F. Olmstead, 79; M. Bradley, 74; P. J. Chamberlain, 27 out of 70, withdrawn; Geo. Abbey, 68; M. A. Chamberlain, 73; C. McKevitt, 76.

* Missed the eleventh bird.

KENTUCKY—*Munfordville, Dec. 4th.*—Glass-ball shooting is getting to be a favorite pastime with the sportsmen in this part of the State. A club was organized of five members here about a month ago, and at their fourth shooting forty-five balls were broken out of fifty-five, an average of nine out of eleven. The club use the improved Parker & Greener breech-loading shot guns.

E. H. Chapline	1	1	1	1	1	1	1	1	1	1—10
J. W. Smith	1	0	1	1	1	1	1	1	1	0—8

R. O. Hughes	1	1	1	1	1	1	1	1	0	1—9
W. B. Green	0	0	1	1	1	0	1	1	0	1—7
Total										45

NIMROD.

KENTUCKY—*Owensboro, Nov. 30th.*—On Wednesday, Nov. 19th, a turkey and glass ball shooting match was given under the management of Messrs. Seth Palmer and Richard White, in Griffith's Woods, south of this city, which brought together a goodly number of the sporting fraternity, both of the city and county. All kinds of fire-arms were used, from the "navy" up to the long-range army gun, with a good sprinkling of breech-loaders and occasionally a silver-mounted Smith & Wesson. The day was bright and clear, and the sport was excellent, as the fellowing summary of the scores will prove.

Glass balls; shot guns; 18 yards rise:—

J. T. Griffith	1	1	1	1	1	1	1	1	1	1—10
Charles Elder	1	1	1	1	0	1	1	1	1	1—9
Joe Gray	1	0	1	1	1	1	1	1	1	0—8
James Herr	1	1	0	0	1	1	1	1	1	1—8
Fred Herr	1	1	0	0	1	1	1	1	0	0—7
H. Long	0	1	0	0	0	0	1	1	1	1—5
J. Smithimer	0	1	0	1	1	0	1	0	0	0—5
J. Shanklin	0	0	0	0	0	0	0	1	1	1—3

Glass balls; 18 yards rise:—

Claude Harris	1	1	1	1	1—5	Dr. Bedford	0	0	0	1	1—2
Joe Gray	1	1	1	1	0—4	Dick White	0	0	1	0	0—1
Wm. Barron	1	1	1	1	0—4	Dr. F. F. Conway	0	0	1	0	0—1
Joe Fugna	1	1	1	0	0—3	Ike Palmer	0	0	0	0	0—0

Third match; 18 yards rise:—

Wm. Barron	1	1	1	1	1—5	Louis Carter	0	1	0	0	0—1
Joe Gray	1	1	0	1	1—4	Allan Gilmour	1	1	0	1	1—4
Joe Fugna	1	1	1	0	0—3	Seth Palmer	1	0	1	0	1—3
Dick White	1	1	0	1	1—4						

Turkey shooting; rifles; distance, 200 yards:—

Turkeys.		Turkeys.	
John Spoerri	5	Frank Debo	2
F. B. Fowler	5	Ed. Goodwin	1
B. L. Aner	3	F. J. Clarke	2
Dr. John Head	2		

Shot gun; 11 yards:—

Turkeys.		Turkeys.	
Fred Herr	1	S. Calhoun	1
James Herr	1		

Pistols; 50 yards:—

Lorenzo Farrell, 3 turkeys.

Joe Gray, of the *John A. Woods*, gave an exhibition of his skill with the shot gun by breaking twenty glass balls, without missing a single shot.

On Wednesday, Nov. 26th, a large number of sportsmen again assembled in Griffith's Woods, and tried their hands at glass ball shooting.

First match; 10 balls; 18 yards rise:—

Wallace Herr	9	Josh Griffith	7
Dick White	9	Seth Palmer	7
W. Barron	8	F. J. Clarke	7
Ben Hopkins	7	James Herr	4

The first money was divided between Herr and White. The second money was won by W. Barron. The tie for the third money was shot off, and was won by Griffith.

Second match; 5 balls; 18 yards rise:—

Dick White	3	Claude Harris	4
W. Barron	1	Seth Palmer	2

Harris won the first money in shooting off the first tie with Barron. Dick White won the second money.

Third match; 5 balls; 18 yards rise:—

James Herr	3	C. Elder	2
Henry Herr	3	Claude Harris	5
Dick White	3	W. Barron	5
Seth Palmer	5	A. Boyd	2

The tie between Harris and Palmer for first money was won by Harris. Barron won second money.

Fourth match; 5 balls; 18 yards rise:—

C. Harris	5	W. Horr	3
Seth Palmer	4	Dick White	2
W. Barron	5		

The tie for first money was won by Barron. Palmer won second money.

Fifth match; same distance; 2 balls:—

Elisha Adams	0	Allan Boyd	1
J. Smithimer	2	Louis Carton	1

Sixth match; same distance; 3 balls:—

J. J. Hill	0	Tom Owen	3
Louis Carter	0	A. Winter	0
Ed. Crook	2	Lorenzo Ferrell	0

Seventh match; same distance; 5 balls:—

Allan Boyd	0	Lorenzo Ferrell	1

Eighth match; same distance; 5 balls:—

Seth Palmer	3	Dick White	5

TENNESSEE.

Furs and Trapping.

CURING SKINS OF LARGE ANIMALS.—Not an atom of salt should ever touch a skin. A skin treated with salt will inevitably "sweat" in very moist weather anywhere, and will soon rot and spoil. I should very much like to hear Ward's opinion on this point. A very experienced sportsman told me once that Ward would not undertake to make a good job of a skin which had been cured with salt. I would not peg out a skin in the sun if I could possibly help it; but it would take a pegged-out skin five or six days to dry in the shade sufficiently to make it safe to take it up, and one cannot always afford to halt so long in one spot when on the war path. When I can, I pitch a small tent over the skin while it is pegged out; and in any case I do this at night to save it from the dew. But when there is no time to dry the skin in the shade, I let it have the full blaze of the liberal sun, and thus melt out all the fat, so that it can be mopped up. A skin so treated is throughly desiccated in forty-eight hours, and can be made soft enough by an expert to make a lady's glove of afterwards. I have had very many skins so treated, which are now splendid specimens of the currier's art. I carry a hundred nails, about six inches long, made of quarter-inch round, smooth iron, and with these and a pot of arsenical paste I prepare my skins for the currier. My *modus* is thus; First I shoot my tiger; then I have him skinned; the skin is then carefully washed in running water, if possible; if not, in several changes of water, until it runs off quite uncoloured. A quantity of dry straw, or grass is spread on a smooth piece of ground, all stones and such like having been first carefully removed. Two pegs are driven into the ground, twelve feet or thirteen feet apart, and a string is tightly stretched between these, so as to lie three inches above the straw, and over the center of it. The hair on the skin has by this time been thoroughly dried with a sponge and relays of clean dusters, particular care being taken that the hair around the ears and in the interstices between the toes is perfectly dry. This is a most important process, as, if the skin is pegged out with the hair wet, you will never throughly save the hair. The skin is then laid hair down on the straw, under the tightened string, and an iron nail is firmly driven through each nostril, one on either side of the string, and the head is filled with a mound of cotton wool or dry grass. Begining with the head, and working backwards evenly from both sides of the body at once, the skin is then gently stretched longitudinally and laterally, and pegged out tightly with the iron nails in such a position that the exact center of the back, and so on to the end of the tail (you can see the arrowhead marks through the skin to guide you), lie underneath the tightened string. The extent of stretching to be given can only be learnt by practice. It is a mistake not to stretch a skin at all, because it will have always shrunk a little from its natural size during the process of washing and drying; but it is a worse mistake to over-stretch it, as in that case the hair always starts more or less. The nails should be four or five inches apart all round the body, and closer about the feet. Only one nail is required in the tail at the tip, the skin of the tail being kept flat open by placing bricks or stones on it at intervals, and constantly shifting them. Nothing is so unsightly as a tail ornamented (?) with pegholes along both edges. Having thus pegged out the skin, I have all bullet marks neatly sewn together. As a rule I have only one (ahem!), and that a small one, made by my Henry 450. All bits of false skin, fat, flesh, etc., are now carefully removed, and the nose, lips, eyeholes, ears, pads, and bullet marks are liberally smeared with arsenical soap. The skin is now left to itself, save that every now and then the fat which melts out of the skin is wiped off. As soon as the skin is perfectly dry, and like parchment, it is taken up and the pegs drawn, and the skin may then be loosely rolled up in a cloth or blanket, and will keep for any length of time, until you are at leisure either to cure it yourself, or send it to an expert. But, however cured, let it not be *cum grano salis*! ROHILLA.

HABITS OF MINK AND OTTER.—In your issue of Oct. 23d I noticed a short article headed "Can a Mink be Drowned." Certainly they can be, and when caught in a steel trap will voluntarily drown themselves just as sure as they have length of chain sufficient to allow them to get under water. They will do it even when they can get only head and shoulders under water. At least that is according to my experience, and I have caught hundreds.

That remarkable statement of your correspondent, that a mink caught in a trap lived under water ten hours, surprises me beyond measure. I am not disposed by any means to contradict the assertion, but I would have confidently asserted that a mink caught in a trap and held under water ten minutes would come out a dead mink. My humble opinion is that a mink, otter or muskrat cannot live fifteen minutes under water under any circumstances. A brook trout, when closely confined by the gills under water, will drown in a few minutes' time.

I have often watched the manœuvres of a tame otter, which would follow like a dog and was as playful as a puppy. I used to let him follow me to a creek about a mile distant, and sometimes when the snow was light and nearly two feet in depth, he would slide along under the surface a distance of two or three rods, and then pop out, looking as though he had been oiled and varnished, and then pitch in for another slide. The creek was a slow stream, with numerous deep holes fed by springs, and was generally clear of ice during the winter and was well stocked with fish, principally suckers, from a quarter to one-half pound weight. Here the otter would slide in and swim slowly around over the deepest water, just under the surface, without causing the slightest ripple, his nose occasionally coming up to the surface when two or three small bubbles would roll off on the top of the water.

After manœuvreing in this way for a short time he would dive to the bottom and go for the suckers, which he would bring out on the bank, and when taken from him would go for another, until five or six had been taken, when he would refuse to bring out more, but would eat them as fast as he brought them to the surface and continue doing so until he was completely gorged.

His movements in the water were very supple and easy, and at no time would he remain under water more than three or four minutes at one time. The otter, like the mink, is a great eater, but does not eat such a variety of food, living mostly on fish, frogs, clams, and lobsters, while anything in the shape of meat is greedily devoured by the mink.

In some one of your back numbers I saw a communication in which the writer claimed that the rabbit was a carnivorous animal; that he or some one had set traps for mink or foxes around a dead carcass and had caught rabbits; that they had decided that the flesh of rabbits was offensive on account of their carnivorous habits. Now, Mr. Editor, I beg leave to say that rabbits are just as carnivorous as a sheep or a deer, and no more so.

When nature's laws are reversed we may look for rabbits to feed on dead carcasses, and for sheep to kill and devour wolves. ANTLER.

Piney Falls, Tennessee, Nov. 24th.

National Pastimes.

ARCHERY.

THE DAYS AND PLACES OF ARCHERY.

WHILE the nervous condition of the shooter doubt less has more than any other thing to do with the making or unmaking of scores, yet there are many outside influences over which he has no control, which more seriously affect his shooting than most archers are aware of. That there are some ranges difficult to shoot over, and that there are days seemingly propitious wherein every archer falls below his standard, I cannot doubt, and yet it is a most difficult task to attempt to explain the reason therefor. If each archer of a year's experience will consult his memory he can doubtless recall at least one day when the wind was still, the weather mild and everything apparently favorable for the making of high scores, and yet every archer fell far below his usual average, though shooting in good form. The only plausible reason that can be given for such results is that the day, though apparently favorable, was in fact the very worst possible. Those peculiar days are generally found to be bright, warm days after a week of dull, cold weather, and the most probable cause of poor scoring lies in the fact that the glare of the unusual light affects the eyes to the prejudice of the aim. Another reason may be that the shooters having had their nerves stiffly braced by the preceding cold find themselves insensibly relaxed and weakened by the unaccustomed warmth, and are really, without their knowledge, in unfit condition. A poor result may also be reached because of the inconstancy of the light produced by floating masses of clouds. But even when every imaginable cause has been sought there will often remain no clue to the mystery of the air and sky, and it will still be true that not every mild and fair day when the winds are at rest is fit for the attainment of high scores in archery.

There is a vast difference also in the success achievable in shooting over different ranges. Of course much depends upon becoming accustomed to the particular range, but even when the practice is equal over several ranges the shooter will find a very strong per cent. setting against some particular range, and the same effect will be noticed as against every shooter. An unerring index of a favorable or unfavorable range is found in the appearance of the targets. If they appear unusually small and distant the range is bad, and on the contrary, if they appear unusually large and near, the range is favorable and the scoring will be high. The state of the atmosphere and the time of the day have great effect in apparently enlarging or diminishing the size of the targets, but the physical features of the particular range have a still stronger influence. Every attending archer at the National Meeting at Chicago last summer will remember the shrunken and excessively remote appearance of his target. He no doubt imagined that his own nervousness at his first great public meeting was the cause of the unsatisfactory appearance of his target; but while this may have assisted it was not the principal cause of the illusion. Many of us who have shot over the same ground before and since the meeting know that no length of practice over that field will enable one to realize that his target is four feet in diameter and only the regulation distance away. The Wabash Merry Bowmen have had the same experience with a certain beautiful plot of ground, the property of Mr. P. C. Summerville, which the owner kindly invited them to use in all their club meetings. No more perfectly formed range can be imagined, with the exception of the lack of shade, the ground being absolutely level, the turf green and extremely close, and not an object to attract the eye from its true aim. And yet no member has ever in any weather or under any circumstances succeeded in getting even a fair score upon the range.

Most of the members soon declared the range bad and protested against shooting over it, but the writer, somewhat sullenly refused to believe in their "superstition," as he termed it, and stuck to the range faithfully for a long time, but never succeeded in getting but one good score in all his practice, and that at the short range of the York Round—sixty yards. Now the low scoring of the club was not caused by their want of form, for during the same period whenever an adjournment was taken to another range the scoring would be satisfactory. At the time the writer regularly scored from 820 to 950 at the Double York Round he never was able to get 700 points

over the Somerville Range. That other archers have suffered from the evil of a bad range appears to me to be evident from the lists of "highest scores" made at the four great annual meetings of the archers of Great Britain.

At the Leamington and Midland Counties' meetings held at Leamington, scores of over 1,000 points have six times been made, and twice 1,100 has been passed, while at the Crystal Palace Meetings, no score of 1,000 points has ever been reached, although Ford and Fisher and Brandhall and Spottiswoode and Moore, shot there in the days of their glory. At the Grand National Meeting, although held at a different place each year, scores of over 1,000 points have four times been passed, once by Fisher, and three times by Ford; and at one meeting the splendid score of 1251 points was achieved by Mr. Ford. The Grand Western Meeting which is annually changed to a different locality, has several times witnessed scores of over 1,000 points, and the only possible reason why no such score is recorded in the annals of the Crystal Palace meetings is, that the beautiful grounds there are not favorable for good scoring.

In choosing grounds for a great public meeting, it should be the care of the committee to get such a range as gives prospect of fine scoring, for nothing adds more to the enjoyment of a meeting, than the fact of every archer scoring well up to his standard.

All grounds in proximity to large buildings as are the Crystal Palace grounds, and the Base-ball Park, at Chicago, are bad, as the huge walls dwarf the appearance of the targets, and give an uncertain look to the distances. Grounds in the vicinity of green trees are very favorable, as the back ground is soft to the eye, the targets are in fine relief, and the wind is usually less severe than in open fields. From experience I have found that it matters very little whether the ground be level or not, provided one target be not greatly elevated above another. It would not seem possible that the variance of grounds should materially effect the scoring, but that such is the fact few archers will doubt, and it is to be hoped that the gentlemen who shall choose the grounds for the next National meeting will look to this fact in making their selection.

WILL H. THOMPSON.

ARCHERY IN THE WINTER.

SINCE the fine weather of October is past, and in most parts of the country it is becoming so cold that shooting out-doors is exceedingly uncomfortable, especially for ladies, we must try our ingenuity in devising means to prosecute an indoor campaign against the target. In most of our cities a hall can be obtained where ranges of from thirty to sixty yards may be laid out, and much fine sport had, while the muscles can be kept in training throughout the winter, and the usual "let down" in the spring avoided. Where a hall is obtainable, the target should be well raised, say four feet from the floor, so that the shooting at even thirty yards will be with the left hand, so much raised as to somewhat resemble the greater elevation of sixty yards. The wall behind the target should be well padded to preserve the arrows, and the target, instead of being placed upon an easel or tripod, should be suspended by four ropes, two running, one to the right, one to the left from the target to the ceiling, and two running, the one to the right, the other to the left, from the target to the floor. If these ropes are stiffly drawn, the target will be suspended in good form, and the breaking of arrows upon the legs of target stands avoided. For the ladies the short ranges indoors will be found ample for winter practice, and while the gentlemen will not derive so much benefit from the short range practice, they will keep up their control of the bow, and the fingers of the drawing hand will not forget their cunning. To any gentlemen, however, who have the hardihood of the writer, we would advise the open field practice over the same ranges used during the summer. Last winter the writer paid little regard to the weather, shooting many a York Round when the snow was six inches deep upon the ground, crusted with an icy surface, the thermometer nearly down to zero, and the wind whirling the frost in his face. It is true he lost many good arrows under the snow, but they all came to light this spring again! Mr. H. C. Carver, the Hon. Secretary of the National Association, did likewise, and many indeed were the pleasant letters received from him in which he related his experiences in the snow. In England several winter practice clubs were formed this year, and next spring will show the great improvement of the members. One winter practice club formed last fall, shot through last winter though the weather was of unexampled severity. Two meetings were held when the snow was twenty-two inches deep! Their winter practice is controlled by certain rules which would certainly work well with us. They permit any one of the ranges of the York Round to be shot upon any day, and the balance of the round to be shot at any other time and place, provided, however, that every arrow shot shall be counted upon the round. Thus one may shoot 24 arrows at 60 yards one day at Kokomo, Indiana, a week after he may shoot 24 arrows at 80 yards at Highland Park, Illinois. Three days later, while visiting the Brooklyn Archers, he may shoot 24 more arrows at 80 yards. A fortnight later, upon his own grounds, he may shoot 72 arrows at 100 yards, and thus complete a single York Round. The club offers prizes for best average during the winter, for best individual round, for best score at 100 yards, at 80 yards, at 60 yards, and for most golds. Also for greatest gross score for the entire winter, for greatest number of rounds shot, and other similar prizes. No archer being allowed to take more than two prizes. It seems that such a society upon a large scale might be formed of the leading shots of America, and the results given periodically to the FOREST AND STREAM. Such a society should be composed of not less than fifty archers, and as many more as should desire to shoot through the winter. Such a society would be of vast advantage to American archery, as the comparisons of results, and the interest occasioned by the publication of the scores would create a healthy rivalry, and produce by the next national meeting several archers capable of commanding 800 points at the Double York Round. Every member could shoot his rounds at home, upon his own range, and report the same to the FOREST AND STREAM, and thus every other number would at once be apprised of the result. Or all scores could be sent in to the secretary of the society, and he could report them weekly to the FOREST AND STREAM. There can be no doubt that every member would be greatly benefitted by the association with other archers, and much friendly competition would be thus provoked. The result of the four great meetings in England this year demonstrated the vast advantages possessed by those who had braved the snow and wind of an unusually severe winter, and came into their spring campaign at a point where their less timorous competitors could only stand after two or three months practice. Who will join the Winter Practice Club? Let us try the long winter together. The winds will be cold, but the joy of the energetic leap of the bow, and the scurrying of the arrows will temper their bitterness. WILL H. THOMPSON.

THE PROOF OF THE PUDDING.—*To the Editor of Forest and Stream.*—I noticed in your issue of November 13th, an article by Mr. Aldred respecting the superiority of his yew bows. There have been quite a number of very interesting articles in your paper during the past season, in which the comparative merits of English and American bows have been fully discussed, and it seems as though nearly every argument, pro and con, had been employed, and probably without making many converts on either side.

It is a familiar old adage that the best proof of the pudding is in its eating, which is equivalent to saying that the cook's arguments in favor of his pudding are not as convincing as the pudding's own performance. Now, there is no argument that a buyer can make in favor of his bows which will be as satisfactory as a good bow.

In the various public archery entertainments given during the past summer, the American bows did as well in every respect, as the English bow of the same material. It is nonsense to compare an English made bow of Spanish yew, with an American made lance or snakewood; the woods are totally different in texture, toughness and driving power. Of course, those who can afford it, would prefer a fine Spanish yew to a lancewood or a snake bow.

But this season two new kinds of bow, peculiarly American, have appeared in the field (I refer to Malleson's split bamboo and Sutton's rawhide backed bow) which bid fair to give our English brethren no little trouble in maintaining themselves, even with their yews. Of the two, I have had greater experience with the bamboo, and can therefore speak of it with the more confidence, having shot one for over nine months. This is a fifty-one pound bow, and it has shot upwards of 8,000 thirty inch arrows during the past summer, yet it still seems good for as many more. For smoothness, elasticity and power, I would like to compare it with any of Mr. Aldred's yews of the same weight.

Now, Mr. Sutton and Mr. Malleson show their confidence in their bows in a manner that our English friends, I believe, do not. *They guarantee them.* Will Mr. Aldred, or any other English maker do the same? Will Mr. Aldred make a yew bow, any style, between forty and fifty pounds in weight, which he will guarantee to shoot 5,000 thirty inch arrows, not to say 8,000, and agree to re-place the bow or return the money if it fails?

If not, it will be hard for him to compete with the gentlemen named.

Archers in this country will hardly care to pay $50 or $100 for a bow which may go to pieces in a week, when they can get a bow substantially as good in every respect for $20, which will last for years.

Will Mr. Aldred put his pudding to the test of eating?
New York City, November 20th. W. C. BEECHER.

THE SPLIT BAMBOO BOW.—*New York, Nov. 28th.—Editor Forest and Stream:*—In answer to Mr. Will Thompson's very interesting article on bows, we wish particularly to explain somewhat the action of his split bamboo. The one Mr. Thompson mentions was one of the very first we made; we found the great difficulty was in getting them to bend evenly, for the split bamboo differs from the wooden bow insomuch it can not be altered after it has been once put together. Now, we have no trouble in this respect, as experience has taught us to gauge them perfectly. Mr. Thompson's bow was faulty from this defect, and not from the giving out of the glue as he supposes; for the cement used in construction is the same as in the split bamboo rods, which can be used day after day in the rain without injury, and soaking in water will not affect them, much less standing against a damp wall. In regard to the bow mentioned by the gentleman in Marietta, we would like to state that he ordered it backed with snakewood, a material we do not approve of, and however disastrous it may have been to the bow, it certainly was not to him, as we have never been paid for it.
CONROY, BISSETT & MALLESON.

Highland Park, Ill., Nov. 27th.—Several of our archers found time, after giving thanks and paying their respects to the turkey, to engage in a contest for a fine Spalding cedar and hickory bow, offered by Mr. H. C. Carver.

The shooting was done over Mr. Carver's range, with a target at either end.

The weather was not all that could be desired, it having rained hard during the morning, making the ground very muddy. The last 24 arrows were shot in the dark, it being after five o'clock and the sky overcast.

Each archer kept his own score; but a few were too modest to furnish your correspondent with theirs. Mr. Street did not complete his, but shot well for one commencing this season, and having practiced but little. Score:—

	1st 24	2nd 24	3d 24	4th 24	5th 24	6th 24	Total.
Mr. Gray	18–94	22–96	19–103	17– 79	18– 96	19–73	113–541
Dr. Weston	19–81	17–83	22–108	22–104	22–104	15–47	117–527
Mr. Carver	16–84	18–88	20– 94	21– 85	21– 85	20–82	116–518
Mr. Street	14–40	12–56	17– 73	19– 85	15– 46		

Range, 60 yards; number of arrows, 144.

Several of the FOREST AND STREAM correspondents have argued that American made bows are better than English, because those using them have been able to win in some contests, notably at the Boston meeting of the Eastern Archery Association.

By such a line of argument it is certainly easy to decide which maker's bow is best. For instance, it will be seen by the above score that Mr. Gray won. Now, Mr. Gray's bow was the poorest used in the contest. It was an Aldred lance, and there were several Aldred yews used. Therefore, a lance will not break as readily, and shoot stronger, in a word, is a better bow than a yew. Wouldn't it be well to give the shooter a share in the credit for some victories won?

THE GAME OF CRICKET.

AVERAGES FOR 1879.

OTTAWA CRICKET CLUB.

SUMMARY OF MATCHES.

During the season the Ottawa Cricket Club played eight matches, two of which were inter-club games between sides selected from Old Countrymen and Canadian members. Out of the six against foreign teams it won three, lost two, and had one drawn.

May 3d, at Ottawa, Lords and Commons vs. Ottawa Cricket Club:—

Lords and Commons, First innings, 57; Second innings, 17.
Ottawa Cricket Club, First innings, 170.
Won by Ottawa Cricket Club in one innings and 96 runs.

Messrs. Daly and Deerdney, M. P.'s for the Lord and Commons, played well for 20 and 11 respectively. The Marquis of Lorne scored 0 and 5, and bowled, despite of an injury to his ankle, 5 overs, 2 maidens, 5 runs, 2 wickets, besides catching two others in the field. The Hon. C. Harbord, A. D. C., played a splendid free innings of 40. Brophy, 23; Richards, 21; Powell, 17; G. Brunel, 16; Baker, 13; Gill, 11, were the other double figure scorers.

May 17th, at Ottawa—Club match—Old Countrymen vs. Canadians:—

Old Countrymen, First innings, 105; Second innings, 49—for 2 wickets.
Canadians, First innings, 152.
Drawn in favor of Canadians.

For the Old Countrymen, Baker scored 34 and 23 not out; Macfarlane, 27; Russell Stephenson, 23 not out. For Canadians, Nutting, 35; May, 26; Brophy, 15; G. Brunel, 15; J. Brunel, 15; Jarvis, 11, were the principal scorers.

May 27th and 28th, at Montreal, Ottawa Cricket Club vs. Montreal Cricket Club:—

Ottawa Cricket Club, First innings, 96; Second innings, 94.
Montreal Cricket Club, First innings, 132; Second innings, 67—for 3 wickets.
Won by Montreal Cricket Club by 7 wickets.

For the winners, Gordon, Gough, and Galt, 35, 26, and 31, respectively in the first; and Hare and Gough, 39 not out, and 20 not out, in the second innings, were the principal scorers; and Brodie, 24 and 25; Powell, 8 and 35; Baker, 0 and 22; Brophy, 14 not out and 3; Smith, 11 and 1, for the losers.

June 14th and 21st, at Ottawa, Ottawa Cricket Club vs. West End Cricket Club:—

Ottawa Cricket Club, First innings, 237.
West End Cricket Club, First innings, 60; Second innings, 55—for 7 wickets.
Won by Ottawa Cricket Club on First innings by 167 runs.

For the Ottawa Cricket Club, Smith, 58; Richards, 42; Brophy, 35; Brodie, 34 not out; G. Brunel, 17, were the chief contributors, and for the losers Rev. T. D. Phillipps, 23 and 16; and S. A. Macfarlane, 12 and 15.

July 1st and 2d, at Ottawa, Ottawa Cricket Club vs. Montreal Cricket Club. (Return):—

Ottawa Cricket Club, First innings, 81; Second innings, 101.
Montreal Cricket Club, First innings, 117; Second innings, 134.
Won by Montreal Cricket Club by 61 runs.

For Montreal Cricket Club, Gough scored 50 and 14; C. McLean, 16 and 55; J. Smith, 23 and 3; Badgley, 0 and 24. For Ottawa Cricket Club, Brodie got 18 and 28; Jarvis, 4 and 20; and Himsworth, 14 and 7.

Aug. 3d, at Ottawa, Ottawa Cricket Club vs. West End Cricket Club. (Return):—

Ottawa Cricket Club, First innings, 136.
West End Cricket Club, First innings, 66—for 8 wickets.
Drawn.

For Ottawa Cricket Club, Smith, 61 not out; Brophy, 18; Brodie, 16; J. Brunel, 11; and for West End Cricket Club, Rev. T. D. Phillipps, not out 27; and Paine, 16, were the chief scorers.

Aug. 5th, at Ottawa, Ottawa Cricket Club vs. Upper Canada College:—

Upper Canada College, 91—for 2 wickets.
Abandoned on account of rain.

Aug. 7th, 8th, at Ottawa, Ottawa Cricket Club vs. Toronto Cricket Club:—

Ottawa Cricket Club, First innings, 95; Second innings, 78.
Toronto Cricket Club, First innings, 50; Second innings, 56.
Won by Ottawa Cricket Club by 67 runs.

For the winners G. Brunel, 51; Smith, 24 in the first; and Fellows, 26; Brodie, 12 not out; and Smith, 10, were the scorers. For Toronto Cricket Club, Behan, 14; Townsend, 12, in the first innings; and Sproule, 25; Adams, 13, in the second innings.

Brophy's bowling in this match was remarkable.

First Innings.

Overs.	Balls.	Maidens.	Runs.	Wickets.
21	85	11	18	5

Second Innings.

25	102	12	24	6

Oct. 6th, at Ottawa—Club match—Old Countrymen vs. Canadians. (Return):—

Old Countrymen, First innings, 65; Second innings, 54—for 4 wickets.
Canadians, First innings, 110.
Won by Canadians on First innings by 45 runs.

The Marquis of Lorne scored 7 and 1, and fielded admirably. Dickie, 14; Baker, 12; Rev. T. D. Phillipps, 14 and 16 not out; and Harbord, 11, were the chief contributors for the Ottawa Club, and for Canada, Richards, 25; Brophy, 18; Himsworth, 15; Gill, 12; and Powell, 10.

NEWARK CRICKET CLUB.

This old New Jersey club, which was re-organized during the early part of the year, played eight matches during the season, of which, four were won and four were lost. This is a very fair showing, when it is taken into consideration that the club was composed of many members totally unacquainted with the game, and that it struggled on without a proper ground upon which to practice. Cricket, however, has met with such universal patronage in Newark, that the managers have leased a large tract of ground covering thirty acres, near the junction of Johnson and Alpine avenues. In the centre of the plot, five acres have been levelled, a part of it sodded, and the remaining portion sown with grass seeds that are certain to procure a close velvety turf. The already goodly list of members insures the success of the club in every way, and the club intends having out next season a first-class professional from England. Appended is the season's summary of matches with batting and bowling averages:—

SUMMARY OF MATCHES.

Date and Place.	Sides.	First Innings.	Second Innings.	Total.
June 26th, at Staten Island	Newark	63	56	119
	Staten Island (2d)	143	—	143
Lost by an innings and 24 runs.				
July 9th, at Prospect Park	Newark	49	22 (7 w'kt's)	71
	Manhattan (2d)	48	89	137
Won by one run on first innings.				
August 4th, at Orange, N. J.	Newark	56	—	56
	Orange	40	31 (3 w'kt's)	71
Won by 16 runs on first innings.				
August 28th, at Paterson.	Newark	37	14	51
	Paterson	67	73	140
Lost by 89 runs.				
Sept. 5th, at Orange, N. J.	Newark	24	50	74
	Young Am. (2d)	127	—	127
Lost by an innings and 53 runs.				
Sept. 25th, at Newark	Orange	114	28	111
Won by an innings and 72 runs.		14		42
Oct. 9th, at Newark	Newark	56	12	68
	Paterson	32	35	67
Won by 6 wickets.				
Oct. 21st, at Stenton, Philadelphia.	Newark	61		61
	Young Am. (2d)	95	34 (3 w'kt's)	129
Lost by 34 runs on first innings.

W. R. Williams	3	3	60	36	3	3	18-0

In one match only: E. Boote, 19-0.

[The bowling analysis of the second innings against Manhattan Club is omitted from the above. Wide balls are charged against the bowlers, and are included in the column of "runs."]

YOUNG AMERICA (2D) VS. NEWARK.—The return match between these clubs was played on the grounds of the former, at Stenton, Pa., on Oct. 21st, and resulted in favor of the home club by 31 runs on one innings play. The Newark eleven was a very weak one, Wolters, Kerr, and Wilkinson being absent, while the Young America played several first eleven men. The following is the score:—

YOUNG AMERICA.

First Innings.		Second Innings.

Total	61

ENGLAND'S WICKET-KEEPERS.—It is a singular circumstance that the names of five of the best wicket-keepers in England should commence with a *P*—namely, Plumb, Pinder, Pooley, Filling, and Phillipps.

FLYING BALLS.—In October Geo. Giles, jr., of the New York Club, struck an off ball with such force as to send it through the air the distance of twenty-eight yards, two feet. Hamilton, the fast bowler of Gentlemen of Ireland eleven, in the Whitby match hit the wicket so violently that a bail fell thirty-eight measured paces from the wicket.

PHILADELPHIA ATHLETES.—The athletic sports of the students of the Bryant and Stratton Business College, Philadelphia, held at the Young America Cricket Grounds, December 3d, resulted in the following scores: 100 yard dash, first heat, W. C. Herbert, 13s.; second heat, H. H. Lee, 12s.; third heat, J. R. Thompson, 13s.; final heat, H. H. Lee, 10½s. Standing broad jump, H. G. Geisse, 9ft. One mile walk, W. N. Lore, 11m. Running high jump, W. C. Herbert, 4ft. Running broad jump, J. R. Thompson, 14ft.; H. B. Woolston, 13ft. Two hundred and twenty yard run, first heat, C. J. Young, 32s.; second heat, H. Greenfield, 30½s.; final heat, Greenfield, 32½s. Throwing base-ball, W. C. Herbert, 281ft.; J. W. Robinson, 271ft. Standing high jump, H. H. Lee, 4ft., 3in. Throwing hammer, H. Greenfield, 41ft.; W. A. Hamman, 40ft., 8in. Tug of war, won in 48s. by Capt. F. B. Davis' team: J. A. Louchheim, M. F. Hochstadter, T. O. Harris, V. J. Donnelly, W. G. Ullman, W. Packer, F. H. Rhodes; against Captain J. W. Robinson's team: W. C. Herbert, H. Heiligman, H. Greenfield, R. Degelow, C. F. Young, H. M. Morris, H. K. Buck.

COLLEGE BASE-BALL.—Members of Harvard, Yale, Dartmouth, Brown, Amherst, and Princeton Colleges, met at Springfield, Mass., last Saturday, and organized the American College Base-ball Association. The playing rules of the National Association were adopted, except as regards foul-bound catches. Each club is to play two games with every other. Collegians are not to be allowed to play with college nines while members of professional clubs. The Judiciary Committee is to decide disputes as to what games shall count. The officers elected were: President, Howard Townsend, of Harvard; Vice-Presidents, Will S. Stewart of Amherst, and L. Warren, of Princeton; Secretary and Treasurer, J. F. Shepley, of Yale.

JOIGNEREY, THE STRONG MAN.—The good people of Berlin are nightly besieging the doors of the Vaudeville Theatre to witness the wonderful performance of an athlete, Joigneray, whose feats surpass anything of the kind witnessed in modern times. Huge cannon balls are the merest feathery playthings in Joigneray's hands. His star exhibition is the "Horse and Rider" act, in which his ankles are fastened to a trapeze so that he swings head downward a few feet above the surface of the central stage, and in full view of every one in the house. A horse, covered with gay trappings and begirt with a broad leathern surcingle, to which two strong loops are attached, is then conveyed to the stage, and there mounted by a full-grown man. Joigneray seizes the loops in both hands, and by sheer muscular strength lifts the horse and rider some inches off the stage, sustaining their combined weight in the air for several seconds, and letting them down again as slowly and evenly as he had raised them. Upon the occasion of his first performance, the horse selected for the experiment was so panic-stricken by being lifted off its feet, that when it was lowered to the level of the platform its knees gave way under it, and the attendants had a great deal of trouble to make it stand up again.

—Capt. Thid Grandin, of Jamestown, N. Y., weighs 246 pounds. Warren, Pa., is twenty-one miles distant from Jamestown. The road is very muddy. A bet was made that the Captain could not wade through the twenty-one miles of mud within eleven hours. He did it in seven hours and pocketed $100.

Women's Column.

A SENSIBLE WOMAN.

Editor Forest and Stream:—

In my husband's absence I found an unfinished communication (also new subscriber's name) for FOREST AND STREAM. I had no intention of meddling with his papers until I read the last number of your interesting paper. I was so much pleased with the letters from sportsmen's wives that I ventured to steal a march on him; he will read my letter for the first time in FOREST AND STREAM; that is, if you think it worthy a corner in your paper. As a sport loving sportsman's wife I enjoy reading your valuable paper very much. Old and pleasant memories are revived, of happy days spent with my brother in hunting and fishing in some of the wild and picturesque parts of Canada, where my taste for rod and gun were first cultivated. Much has been said about true and good wives entering fully into the joys and sympathies of their husbands. I admit there is something to be said on the other side of the question. The true husbands realize that their wives also are capable of enjoying change of scenery and recreations in many forms, and confer a blessing on their debilitated constitution by frequently indulging them in whatever enjoyment or recreation they may choose.

Some sportsmen say that camp life and field sport is not suitable for ladies; that archery, croquet, or some simple lawn game is better and more suitable for the weaker sex. Such lords of creation belong to the small-souled class.

I remember, on one occasion, of my arrival being the means of driving off half a dozen sportsmen (all married men) from a bottom where snipe shooting was good; one retreated a few rods and sat down on a railroad track. After watching us shoot for a short time, he said, "Well, that beats all, I never saw a lady shoot before." He sauntered off after his companions on a three mile tramp to another bottom. I was at a loss to know whether it was gallantry or cowardice which prompted them to leave. However, my husband and I were left alone in our glory. The ground was marshy, but I was well protected with high arctics.

Whenever circumstances permit, I accompany my husband on his hunting trips. When game is scarce we drive out of town a short distance and practice shooting feather filled glass balls. My husband has a Parker's double barrel breech-loader. I have a single barrel breech-loader.

My husband, true sportsman like, prides himself on keeping the best dogs. He has at present only ten pups in his kennel; they are the cutest, plumpest little creatures I ever saw—all red Irish setters. I am cook for the canines, and their silky coats and good condition is sufficient reward, and evidence that they are not improperly fed.

I was pleased with Ruth's picture of her husband and club's preparation and start for camp life, but it is a query to me how twenty sportsmen packed all their belongings pertaining to camp life in one wagon. My husband and two brother sportsmen took a three weeks' hunting and fishing trip this fall. After their large covered wagon was packed with tent, stove, cooking utensils, buffalo robes, blankets, mess chest, fishing tackle, and everything complete for comfort and pleasure, (except Spratt's dog biscuit which was overlooked in the excitement of getting started) there was no room to spare.

Three sportsmen with three horses, three dogs, (each one the best) and three guns, started October 25th for Spirit Lake, 210 miles north. Never did three schoolboys with a half holiday at their disposal, go nutting with sweeter anticipated pleasure. None were disappointed. Their first camping ground of note was on the banks of Wall Lake, a charming little lake, said to be one of the best in Northern Iowa for pike and pickerel. They next stopped at Storm Lake, properly named; its waves are high and never still, its banks are low; surrounding prairies, level, and a beautiful little town built down to the waters' edge, with railroad facilities, make it a most desirable resort for sports. Sixty miles farther north they arrived at Soux Rapids and Grass Lake, one of the finest lakes for duck and goose shooting. Owing to the exceedingly mild weather duck shooting was not good. They next camped and remained one week at Oakoboji Lake, five miles west of Oakoboji. These lakes are the best in the State for pike, pickerel, bass, perch, and buffalo. My husband enjoyed his trip so much that he intends taking his family over the same hunting and fishing grounds next fall.

Assert the contrary as you may, there are but few, comparatively speaking, who understand the true art of enjoying the health restoring exercise of field sport and camp life. Our children inherit their parents' love of hunting; never are they happier or enjoy life more than when out with us in woodland or meadow. We all love, dearly love, nature; landscape, forest, lake, and stream, possess for us such a power of enchantment. The enchanting gypsy-like encampment in some sheltered nook on the banks of lake or stream, away from the bustle of life, with the enjoyment and companionship of our happy children, all help to make life purer and happier, and the time thus spent is naught but pleasure so perfect in all its joys. Who would exchange such joys for a kid glove party? Not I, R. T. S.

HOW TO MANAGE THOSE HUSBANDS.—*Editor Forest and Stream*:—I am a reader of your paper, and I am also an upholder of the sporting fraternity; that is, I mean shooting, which, of course, means that my husband is one of them. Many a time have I gone out in the cold and done the chores, and then got supper ready for him and his friends, and perhaps waited until nine or ten o'clock, always seeing that everything should be in palatable order, no matter at what minute he should drop in; for I knew they would enjoy their supper with a sportsman's appetite, and I have never thought of grumbling. I knew he would not come reeling home when he did come, as I have heard that husbands do sometimes,

Here let me add that I love to read the sportsmen's letters, but I think it is a shame that they should even mention the long necked bottle or the cheering pipe, even for the benefit of the coming generation. I should prefer Zena's dog under my bed or at my table to one of the smoking or drinking sportsmen. I am not a pot-hunter, but have shot a bird off a tree, and with sufficient practice I believe I could kill one flying. I mean to try sometime, and if I succeed I will tell you about it. I can load a gun and clean it, and know the whole mechanism of one as well as I do of my sewing machine. But of all the troubles I ever had, it was to learn to draw a bow; but I can do that know so well my husband praises me, I expect by another season to be able to try my skill with the rest.

I think Zena's husband must be a very selfish man mine takes me to places of amusement, even in the hunting season. Perhaps a little advice would be of service to some of my sisters. There is nothing like knowing how to manage these husbands without letting them know they are being managed.

You have been wishing to make a visit to a particular friend. Husband thinks we can hardly afford it this season: "Times are rather hard, he has'nt the time to spare, and, of course, could not spare you to go alone." You write a letter to that friend, and accidently remark, "How's fishing?" In reply you receive such glowing accounts of the fishing interest in that county that they at once put husband on his mettle! You can just assert here that if he goes you will go with him. Money is plenty, business is laid aside, and you take that long wished for journey. Don't you enjoy it just as well as though you had never said fish? You have been wishing for a new bonnet or dress or some article of wearing apparel. Husband belongs to the club, of course; he gets an invitation to go to some city to shoot with another club. You mildly hint your desire to go, but you would like such and such articles before you go. Ten to one there will be a way provided; for if he is a kind husband he will like to see his wife presentable. Of course if you make a practice of going with him it will be a little more expense; he will not be able to go as much, and will be at home more; another point gained. Not long since I went through with Ruth's tribulations in the pack-

ing up and starting off of the hunters for a few weeks hunt, and do you suppose I will mind the unpacking and scouring? Not much; I will kill the fatted calf and listen to his adventures with the patience of a Job, no matter how oft repeated. I may, perhaps, sometime tell my dog experience; it differs very materially from Zenas' or Dianas'. Suffice it to say, I would be alone now were it not for my bodyguard in shape of as fine a setter as ever pointed a quail. NAOMI.

THREE MEN AND A BLOODHOUND IN A FIGHT.—The New York *Sun* recounts the incidents of a recent tussle on a Brooklyn ferryboat, in which three men, a pistol, and a bloodhound were conspicuous. It says:

A man on horseback, followed by a large bloodhound, took passage on the ferryboat which left the slip at the foot of Broadway, Williamsburgh, at 8¼ on Friday night for Roosevelt street, this city. After the boat had got out into the stream the man began to lash the horse and hound with his heavy riding whip, and caused such an uproar that the male passengers rushed out of the cabins to see what was the matter. One of them, an athletic young fellow, remonstrated with the man, who seemed to be excited with liquor, and threatened to have him arrested when the boat landed if he did not desist. "I'll lash you, too, if you don't mind your own business," was the reply. "You'll find that you've got your match if you undertake that job," the passenger retorted. Hot words followed, and then the man let go his horse and struck the young fellow with his fist. The blow was quickly returned, and then the two clinched, the other passengers, numbering about twenty, gathering around to watch the struggle. Seeing that the young fellow was getting the best of him the man called the bloodhound to his assistance. The animal sprang upon his master's antagonist and would have quickly decided the fight had not Mr. Vervoord, the deck hand, come upon the scene armed with a club and kept the hound at bay. The fight went on, the man all the time calling for the dog, and the deck hand driving the animal away with his club. At length the owner of the dog, who was rapidly getting whipped, reached behind him, drew a revolver and pointed it at his antagonist's head. Mr. Vervoord saw the movement just in time to drop his club and grasp the man's wrist. As he did so the hammer of the revolver came down on his thumb. He wrenched the weapon from the desperate man's grasp, and then sprang away to protect himself from the hound, who was about to spring upon him. With the pistol in his possession, Mr. Vervoord kept the dog and his master at bay until the boat reached Roosevelt street slip, where he turned the man, horse, and dog over to a policeman. The man and dog were locked up in the Oak street police station, and on Saturday the man, who gave his name as Bowman, was taken before Justice Otterbourg on a charge of assault with intent to kill. He was held for the action of the Grand Jury. In the court room the young man who fought Bowman stepped up to Mr. Vervoord, grasped him by the hand and said: "You have saved my life, and I thank you."

INCOMBUSTIBLE FABRICS.—The following preparations are given as the results of a series of experiments made in France. The first composition, which may be applied to all kinds of fabrics without deteriorating them in any way, consists of:—

	Parts, by Weight.		Parts, by Weight.
Sulphate of ammonia (pure)	8	Borax (pure)	1.7
Carbonate of ammonia	2.5	Starch	2
Boracic acid	3	Water	100

It is simply necessary to steep the fabrics in the hot solution until they have become thoroughly impregnated, after which they are drained and dried sufficiently to enable them to be ironed or pressed like ordinary starched goods. A second composition, to be used for theatrical scenery (or the mounted but unpainted canvas to be used for this purpose), and also for woodwork, furniture, door and window-frames, etc., is to be applied hot with a brush like ordinary paint. It is composed of:—

	Parts, by Weight.		Parts, by Weight.
Boracic acid	5	Gelatine	1.5
Hydrochlorate of ammonia, or sal ammoniac	15	Size	50
Potassic feispar	5	Water	100

To which is added a sufficient quantity of a suitable calcareous substance to give the composition sufficient body or consistency. A fourth composition, applicable to all kinds of paper, whether printed or not, including securities, books, etc, is formed of:—

	Parts, by Weight.		Parts, by Weight.
Sulphate of ammonia (pure)	8	Borax	1.7
Boracic acid	3	Water	100

The solution is to be placed in a vat heated to 50 deg. C. (122 deg. Fah.) at the end of the paper-making machine, and the paper as it leaves the machine is passed through the solution in this vat, so as to be completely impregnated therewith, after which it is dried upon a warm cylinder, and then wound upon a reel. If the paper be in sheets or printed, it is simply immersed in the above solution, heated to 50 deg. C., and spread out to dry, and afterward pressed to restore the glaze destroyed by the moisture.

QUICKLIME A WOOD PRESERVATIVE.—The *Builder* states that M. Lostal, a French railway contractor, recommends quicklime as a preservative for timber. He puts the sleepers into pits, and covers them with quicklime, which is slowly slaked with water. Timber for mines must be left for eight days before it is completely impregnated. It becomes extremely hard and tough, and is said never to rot. Beechwood prepared in the same manner has been used in several iron works for hammers and other tools, and is reputed to be as hard as iron, without the loss of the elasticity peculiar to it. According to the *Kurze Berichte*, lime slaked in a solution of chloride of calcium is used at Strasburg as a fireproof and weather-proof coating for wood.

PUBLISHER'S DEPARTMENT.

IMPROVED BATHING.—The insufficiency of the ordinary bath is conceded. Let those who have just taken their ordinary bath rub their skin with the tips of their fingers, and it will be seen that the scarf skin will come off in dirty granulations, thus proving the insufficiency of the simple bath. The pores are yet clogged. To remove this dead skin (so to speak) something is necessary. After much investigation and numerous experiments, the desired result has been reached, and we are able to recommend to the use of the public, who desire an enjoyment of healthy action of the skin, and especially those whose sedentary occupations results in imperfect action of the pores, the wonderfully efficacious article, Weston-Rowellene, which tones and invigorates the entire system, lessening liability to ill-effects of sudden changes of temperature natural to our climate. A sample will be sent to any one by addressing, enclosing twenty-five cents, 381 Sixth avenue.—[*Adv.*]

THE EVIDENCE ACCUMULATES.—H J. Footner, of Toronto, Ont., certifies that Warner's Safe Pills have cured him of biliousness and sleeplessness. G. A. J. Gadbois, of Brookville, Canada, certifies that the Safe Pills and Safe Bitters have cured him of malarial difficulties contracted in Texas. E. J. Campbell, of Philadelphia, certifies that the Safe Pills and Liver Cure have nearly cured him of a bad chronic liver complaint. And like testimonials keep coming in.—[*Adv*].
